Now, I consider this as practically finished and it is "peanuts" compared to what is going on in the rest of the world in the building of ships, tankers, repair plants, and so forth. What I think we should do, Mr. Speaker, is to give the west coast, the gulf coast, the east coast, and the Great Lakes a real differential in building ships, so we can compete with all of the foreign nations that have more business than they can handle. Congressman GARMATZ and I visited many shipyards, and everywhere we went in England, France, Italy, and Scotland, these yards—these yards that the United States had helped them build—had more business than they could handle, and we were told in many instances they had a backlog that would carry them over until 1965.

Our committee has just passed a resolution to grant a 33⅓ percent subsidy to fishing boatbuilding. I am sure we will have no trouble in passing this bill when it is finally voted out of our committee, and I believe it will be voted out on our return from our Easter recess. What we did for harassed fishermen who had been told they should have their ships built in Japan and other foreign countries, we should do for the builders of cargo ships and all other ships; even if it takes more than 33⅓ percent—say 40 percent—this should be done, and at once, if we expect to survive as a shipbuilding nation.

I believe that Chairman Clarence Morse and his Maritime Board would go along on this a thousand percent, because Chairman Morse and his Commissioners accompanied us on the trip above referred to, where we found the shipyards in every country we visited loaded with work and in every instance it was ships and tankers for our great firms in this Nation—the United States of America.

The statement follows:

Mr. Chairman and members of the committee, we are, indeed, grateful to the members of the Merchant Marine Subcommittee that they have scheduled these hearings on H.R. 8205 and similar bills, to eliminate the 6-percent differential applying to certain bids of Pacific coast shipbuilders.

As long ago as 5 years, we knew that the need for this differential no longer existed, and at that time I introduced the same bill as H.R. 8205, but the subcommittee did not reach it on the agenda. In the meantime, the situation continues to improve in favor of the west coast shipbuilders, until now, the point has been reached where the 6 percent proves to be a subsidy to them.

In its report on this legislation last August, the Navy Department stated, and I quote:

"It now appears, however, that Pacific coast private shipyards are gradually overcoming their previous competitive disadvantage through increased efficiency, application of improved industrial techniques and because of expanded west coast production of basic materials. During recent years, Pacific coast shipyards have been quite successful in competing for naval ship work.

The Department of Defense has no convincing evidence that west coast shipyards are now at a significant disadvantage. The Department of Defense, however, is not in a position to state whether or not some degree of subsidization is still required to enable those shipyards to participate in ship-construction programs on a competitive basis."

Mr. Chairman, the Defense Department may not be in a position to state whether such subsidization is still required, but facts and figures available prove that it definitely is not required, and they will be presented by other witnesses during these hearings.

If there ever was justification for a differential in favor of the Pacific coast shipyards, it no longer exists. The Pacific coast shipbuilding industry is not an infant industry, but a thriving giant. During the Second World War over 44 percent of all tonnage built in this country's recordbreaking shipbuilding effort (embracing Atlantic, gulf, Great Lakes, and Pacific shipyards) was constructed in Pacific coast yards. Today 36.5 percent of all tonnage under construction for the Maritime Board is in Pacific coast yards.

One of the justifications offered for the 1936 differential was the higher cost on the Pacific coast of material and components, which were believed to be more costly because they were manufactured in the East and had to be shipped by rail to the West. Today this is not true. Whereas in 1936 only 3 percent of the Nation's steelproducing capacity was in plants west of the Rockies; today 9 percent of all steel capacity in the United States is west of the Rockies. By contrast, only 1½ percent of our steel production today goes into shipbuilding, so that there is enough steel capacity west of the Rockies to supply our entire shipbuilding industry nationwide many times over. Certainly there is enough to supply the Pacific coast shipyards, without any need on their part to purchase it in the East, or pay transcontinental freight rates. And the prices of steel sold by plants west of the Rockies are fully competitive with those of eastern steel manufacturers.

What is true of steel is likewise true of the other major components of shipbuilding. We are all aware of the tremendous growth of manufacturing on the west coast since the Second World War. West coast manufacturers now produce substantially all of the component parts used in shipbuilding and do so at prices competitive with those of the east coast manufacturers. Indeed, in many instances, the west coast manufacturers of major components are so competitive with east coast manufacturers, that shipyards on the east coast have found it cheaper to buy components from west coast suppliers, and have them shipped by rail across the country, paying transcontinental freight, than to buy from eastern suppliers.

For example, Maryland Shipbuilding & Drydock Co., a major shipyard in Maryland, recently purchased, after nationwide competitive bidding by suppliers, six cargo cranes at a price in excess of $1 million from a supplier in Alameda, Calif., for installation on two ships under construction in Baltimore.

Similarly, the same shipyard, after competitive bidding, placed an order for two main propulsion engines with the Sunnyvale, Calif., plant of the Westinghouse Electric Co., as the low bidder.

Such examples, which could be multiplied many times over, demonstrate that the west coast yards have not a disadvantage, but an actual cost advantage.

Even in the occasional instance where the west coast shipyards may look to the East for material or components, in almost all instances, the suppliers will deliver the components laid down at the shipyards, at the same delivered price, regardless of location. In short, the suppliers will absorb the rail freight. These facts suggest that any difference in cost which may have existed in 1936, is now wholly illusory, or, indeed, favors the west coast shipyards.

And the results bear out this view. Only the other day a west coast shipward outbid east coast and Great Lakes competitors on a major contract for the construction of Navy vessels. In that bidding no 6-percent differential was involved. The west coast yard was the low bidder.

Results like these made clear that whatever economic justification may once have existed for a differential favoring Pacific coast shipyards has now disappeared.

At the time section 502(d) was enacted, the proponents of the legislation acknowledged that the differential could only be considered as temporary. A continuation of this differential at this time is unjust, unfair, and discriminatory.

If west coast shipyards believe it should be continued, let them come forth with some facts to prove it.

Coming from a district in which the shipbuilding industry is a vital part of the city's economy, I would be interested in having some concrete facts and figures to pass on to my constituents, who find it difficult to understand why the west coast should receive such favored treatment at their expense, especially so, since such preferential treatment exists in no other area of procurement.

I am confident that when all the facts and figures have been submitted to your committee, you will see the fairness and necessity for favorable action on H.R. 8205 and similar legislation.

National Space Goals

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1960

Mr. WILEY. Mr. President, to us as a nation, and to a world poised on the brink of a new frontier—outer space—the future promises great new illuminations, experience, discoveries, and progress for the human race.

Historically speaking, our space exploration accomplishments of today—impressive as orbiting satellites, moonshots, and other accomplishments may be—will, in all likelihood, be topped by even greater discoveries, advancements, and accomplishments of tomorrow.

As in all fields, the Nation, meaning not only the leaders, but also the people as a whole, needs to crystallize, insofar as possible, a concept of just where we are and where we are going in the space age, if we are to progress at maximum speed.

The challenge, of course, is highly complex. Realistically, however, we are in a space race, whether we like it or not.

The clear establishment of a program of national goals, supplemented or modified as required by time and changing events, would serve, I believe, to, first, give greater direction to our national efforts to explore space; second, create greater confidence of what we are shooting for in space; and third, provide a program to encourage trained and aspiring individuals to enter the field vocationally, and provide us with space engineers, scientists, technicians, astronauts, and other skilled personnel needed for the future.

Recently, I outlined a series of recommendations which, I believe, could well serve as a foundation for our new venture into space, both for defense and for peaceful purposes. By no means would I consider this an all-comprehensive program. In the days ahead, the space exploration efforts of all nations—still in infancy—will unveil new mysteries and unknowns of space environment, vehicles, instruments, and knowledge.

Based upon moderate experience, however, I believe there are fundamental programs and objectives which can now be crystallized as space goals. At this time, I ask unanimous consent to have my suggested 12-point program printed at this point in the Appendix of the RECORD.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

TWELVE-POINT SPACE PROGRAM

In the interest of our national progress and international prestige, I believe we must go "full speed ahead" with an independent space program—not attempt to imitate, or even match one for one, feats by the Soviets. The U.S. goals should include:

1. Successfully manned space flights by 1961.

2. Establishment of a communications-satellite system, including transmission of radio, telephone, teletype, and television.

3. Further improvement of the weather satellites—and maximum utilization of its information data—for improved weather forecasting.

4. Hitting the target date of 1964—or, if possible, earlier—for completion of the Saturn booster of 1½-million-pound thrust and early followup development of a second-generation Saturn with a 15-million-pound thrust.

5. Effective accomplishment, as planned by NASA, of the following: Lunar impacts (reconnaissance), 1961–62; planetary probes to Mars and Venus, 1962; and lunar soft landings, 1963–64, carrying television, seismograph, radiation-detection devices to observe and analyze the surface and subsurface of the moon.

6. For scientific purposes, blasting of successive satellites, sounding rockets, and other launchings, including astronomical observ-

ance satellites to make observations from the obscuring and blanketing effect of the earth's atmosphere; through directed spectroscopes and other satellite instruments, to determine, among other things, the role the sun plays in natural events upon the earth; and, with satellites, investigate the upper atmosphere, ionosphere, the earth's magnetic field, the aurora and radiation phenomena, and the measuring of gamma and cosmic rays, and gathering other scientific data.

7. Adapting scientific and technological knowledge for creating a more effective space arsenal, including ICBM's, and military satellites, as needed, to act as a deterrent power, until safeguarded international agreements are reached—if they are—for inspection of armaments to carry out policies of dedication of space for peaceful purposes.

8. Creating an adequate national warning-tracking system—i.e., radar system, sentinel satellites, etc.—to provide us with a "space guard" against surprise attack.

9. Setting up an international traffic-control system, including exchange of information among nations on launchings and flights of satellites, and other space vehicles, to prevent unidentified flights from being interpreted as possible attacks and triggering a war.

10. Development of nuclear, ion, or other types of rocket power for flight control of space vehicles.

11. Establishing a Space Academy—similar to the Army, Navy, Air Force, Coast Guard, Merchant Marine—to provide an adequately trained Space Corps.

12. Establishment of space law, through cooperation of nations, the United Nations, and other international organizations, to assure protection of peaceful flights, to avoid unnecessary clashes of interest, and to attempt to assure nonviolation of rights of nations in space.

SPACE LEADERSHIP—OR FOLLOWSHIP?

Will this program be expensive? Yes. According to present planning, the Nation is expected to spend $12 to $15 billion in the next 10 years. For the future the cost will, in all likelihood, be even higher.

However, the question is not whether we will shoot for these and other objectives. Rather, I believe the big question is when will we do it—now, or later? Will we run ahead of—or lay behind—the Communists?

NEEDED: FLEXIBLE PROGRAMS

We recognize, of course, in a new exploratory field, the adoption of such national goals must be flexible to accommodate new developments and discoveries in vehicles, instrumentation, space environment, and other factors that may affect the program. Nevertheless, these goals, I believe, will—and should—serve as a "solid pad" for the national program for the immediate future.

PRACTICAL BENEFITS OF SPACE EXPLORATION

What will be the practical benefits of our space program? Among others, these should include: (1) A stronger defense; (2) improved radio, telephone, teletype, and television communications; (3) more effective weather forecasting to minimize loss from tornadoes, hurricanes, and other storms, and benefit agriculture and conservation programs for preservation of our natural resources; (4) further man's efforts to utilize heat and light from the sun and other natural forces of the universe; and (5) generally gather other data and information about the elements and forces of space for harnessing them to serve mankind.

WHY A SPACE PROGRAM?

In man's eternal quest for knowledge, space provides the new frontier for exploration.

During normal times, the exploratory efforts probably would go forward at a slower pace. However, communism—the foe of freedom—is "up there."

Consequently, we need an effective program to pursue our fundamental interests, to protect our rights, to assure to ourselves the benefits of space potentials—many of which are yet unknown—and to counter any attempt by communism to use space vehicles as a tool for conquest by that international conspiracy.

What is at stake? Our survival.

Water Conservation Stamp Termed Public Testimonial by Soil Service Administrator Williams—U.S. Chamber of Commerce Natural Resources Committee Chairman David L. Francis Discusses "Industry's Contributions to Water Conservation"—Watershed Congress

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1960

Mr. RANDOLPH. Mr. President, it was my privilege to have been present today along with my diligent colleague from Texas, Senator RALPH YARBOROUGH, at the luncheon meeting of the Seventh National Watershed Congress. Its sessions will continue through Wednesday, April 20, 1960, at the Statler-Hilton Hotel here in the Nation's Capital City.

Toastmaster for the occasion was James B. Craig, editor of American Forests, representing the American Forestry Association. Donald A. Williams, administrator of the U.S. Soil Conservation Service, delivered the keynote address on "Water Conservation."

Following the luncheon session, the watershed congress devoted the afternoon to a panel discussion on the "Need for Cooperation and Cosponsorship in Watershed Development."

This informative panel period was presided over by John H. Jones, of Fairmont, W. Va. Mr. Jones is secretary-treasurer of the American Watershed Council and a member of the National Watershed Congress steering committee. A member of the panel who represented the business and industry viewpoint was David L. Francis, of Huntington, W. Va. He is a well known coal company executive and is chairman of the Natural Resources Committee of the Chamber of Commerce of the United States.

When the Watershed Congress progresses to its Wednesday morning session for a discussion of financial limitations, a member of the panel will be Gov. Cecil H. Underwood, of West Virginia, who is scheduled to present views on "Local Projects Require Federal Assistance."

Chairman C. R. Gutermuth of the Seventh National Watershed Congress steering committee, and vice president of the Wildlife Management Institute of Washington, D.C., formally opened the 3-day sessions today following the invocation by Chaplain Frederick Brown Harris of the U.S. Senate.

Mr. President, on November 4, 1959, at Jackson's Mill, W. Va., I was privileged to address the 18th annual meeting of Soil Conservation Service district supervisors of our State. My topic was "This Land of Ours." I said on that occasion that freedom is not license, and I added that the right to use natural resources does not confer the right to abuse them. We must devise, therefore, a body of State and National laws which will preserve the national heritage and the public welfare from the effects of private misunderstanding and private neglect.

But such laws must be only part of a national awareness of the need for increased effort and planning in the wise utilization of our material resources. Government has an inescapable responsibility to help initiate, support, and sustain this effort. Private interests must accept their stewardship of natural resources as a public trust, with an obligation to future generations. And, as individuals, I concluded, we must reexamine our purchasing habits so that use and function govern our consumption of precious resources.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, highlights and a summarization from the keynote address at today's water conservation stamp luncheon of the Seventh National Watershed Congress by Soil Conservation Service Administrator Donald A. Williams.

There being no objection, highlights and a summarization from Mr. Williams' speech were ordered to be printed in the RECORD, as follows:

HIGHLIGHTS OF ADDRESS BY D. A. WILLIAMS, ADMINISTRATOR, SOIL CONSERVATION SERVICE, AT SEVENTH NATIONAL WATERSHED CONGRESS, WASHINGTON, D.C., APRIL 18, 1960

1. The commemorative water conservation stamp and the Watershed Congress are public testimonials that the Nation recognizes water as a resource of primary concern to us all. That it is fitting the water stamp should follow immediately after the soil stamp for these two—soil and water—are the foundation of all life and they are so interrelated that the conservation of one requires constant consideration of the other.

2. Water conservation means managing the water available to us at any time or in any place to provide for maximum benefits from its use including enjoyment of its recreational and esthetic values, control of its destructive energy, and equitable distribution for legitimate needs.

3. Water management begins with land management, that this is a fundamental truth rooted in the nature of the hydrologic cycle itself. Our water supply comes to us as precipitation falling on the wide expanse of our land. The first arbiters of our water supply, therefore, are the farmers and ranchers and the public land administrators and users who decide the kind of crops, the degree of grazing, the forestry policies, and the conservation and water control practices that prevail on the country's watersheds.

4. People everywhere need to know more about our water resource: where water comes from, who it belongs to, and the opportunities for its management and use. The current study by the Senate Select Committee on National Water Resources is making an important contribution to that understanding. The National Watershed Congress is another valuable means to that end.

5. Vigorous and positive action for water conservation needs to move in step with our national program of soil conservation. Some

principles to guide us in establishing policies include: The first use of water on the land is to support the biological function of the soil and make possible the use of land within its capability. Every water user—agricultural or urban—has an obligation to return as much water as possible to the common supply with the least impairment of quality. Property rights in water must be respected, and the States not only are responsible for determining those rights but have an obligation to adapt their water laws and the administration of them to modern requirements. Watersheds are the natural management units of the water resource, and watershed projects should give full consideration to future needs and multiple uses of water.

6. These principles can be effectively carried out within the concepts of our American democracy through private initiative and the aggressive cooperation of local, State, and Federal Governments.

Mr. RANDOLPH. And, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a speech by David L. Francis on "Industry's Contributions to Water Conservation."

There being no objection, excerpts from the speech were ordered printed in the RECORD, as follows:

INDUSTRY'S CONTRIBUTIONS TO WATER CONSERVATION

(Excerpts from address by David L. Francis, chairman, Natural Resources Committee, Chamber of Commerce of the United States, Washington, D.C., to the Seventh National Watershed Congress, Panel on Watershed Development, Washington, D.C., Apr. 18, 1960)

Businessmen in the natural resources industries should be grateful to the steering committee of the National Watershed Congress. Thanks to this committee, business and industry have been given equal listing on this program today with other segments of our economic system in sharing responsibility for watershed development. I hope the results of this panel presentation will demonstrate that industry is a willing partner with others who want our vital water resources protected and conserved.

I appreciate this opportunity to speak for the Chamber of Commerce of the United States in behalf of business and industry. The national chamber believes in the objectives of this congress, and is one of the original sponsors of the congress.

It is not an idle statement to say that industry is interested in water conservation. The Chamber of Commerce of the United States, which represents all business, has a well-developed body of policy declarations on the subject of water resources. These policies reflect the informed views of a majority of the chamber's voting members across the country. The declarations are put in writing for all to see, and are used as the basis for frequent expressions of the business viewpoint to the Congress, the executive departments, and the public as well.

* * * * *

CONSERVATION AND ECONOMICS

Conservation is more than sparing trees and saving soil. Such efforts are important, but conservation cannot be practiced without regard for economic laws. A forest manager, for instance, knows that he cannot cut a path ahead of himself to infinity; he is a conservationist because he must think about new trees to replace those removed for useful purposes. He must practice forest conservation or else someday go out of business for lack of resources. With the forester, therefore, conservation is an economic necessity.

The farmer faces an identical situation with his replaceable topsoil. And the rancher needs the renewable grasses to feed his livestock year after year. In the various fields of mining, also, business managers are working to produce the greatest economic value from nature's store of raw materials. The laws of economics apply to low-grade deposits, thin seams, and recoverable reserves. And every prospector and mine operator learns to be a practical conservationist.

As the resource developer applies conservation to his own business, he also discovers that what he does may affect others—and what others do may affect him, too. For example, improper land management upstream can produce serious damage to downstream water supplies. Good forest cutting practices can reduce erosion and save reservoirs from ruin by siltation.

What this amounts to is a recognition of the public interest in resource management, whether the resources are privately owned or publicly owned. Watershed development requires contributions from the owners, and the developers, and the users of the natural resources. Conservation and economics must be combined to a maximum degree in order to produce the greatest public benefits.

The key word is motivation. In our economic system the primary motivation is provided by incentives which reward the doers and the risk-takers. There is no reason to disregard the basic principles of private enterprise, local initiative, limited government, and responsible citizenship.

Businessmen will cooperate with others in cosponsoring needed programs whenever the incentive is present and the reward becomes apparent. And I don't mean this in a strictly monetary sense, either. Because the typical businessman—such as a member of our natural resource committee—realizes that whatever is good for his community is also good for his business. His reward, heretofore, may be rather indirect, but it is not thereby less real to him.

So, I suggest that business executives in your community are good prospects for leaders in watershed associations. Give them a good incentive, and you'll have your cooperators and cosponsors.

Many business organizations are already busy with water conservation programs. They are helping create public awareness of important conservation concepts. They are helping improve industry's concern with resource use in general and watershed programs in particular. They are voicing more responsible recommendations to government.

* * * * *

ORGANIZED ACTION PROGRAMS

Water shortages can be prevented. The upstream watershed program is one way of helping to smooth out the uneven flows resulting from floods and droughts. Better land-use practices, storage dams, and retention reservoirs release excess water gradually, thus reducing flood-season runoff and increasing dry-weather flows. This upstream method helps to cut losses and to supply the water needs of cities, industries, and farms.

Urban water shortages can be avoided by keeping the local public supply ahead of demand. Expanding the municipal water system takes time and money. Those communities that are planning ahead are able to build new facilities. Those which begin planning now, before serious shortages hit, will be ready to meet future demands for water.

Numerous problems beset our public water supply officials: politics, public apathy, ceilings on bonds, low-water rates. These are a few. Solutions must be found in each community, and a local chamber of commerce may be the source of help. Business leadership often is needed to overcome inertia, correct past mistakes, and put the management of the local water utility on a sound basis.

Pollution of streams and other bodies of water decreases the amount of usable water. Hence, correction of pollution is the same as adding to our available supply. Municipalities and industry are instituting waste treatment where none is now provided. They are expanding their present facilities. Industrial research is moving ahead to find out how to prevent pollution from new products, chemicals, atomic wastes, and the like.

These programs contribute to better water supply conditions for all. Solutions begin at the local level—often in the very headwaters of our streams. Everyone is involved.

CONCLUSION

There is good evidence that business and industry are vitally interested in the watershed movement. My 4 years on the Natural Resources Committee has brought me into contact with hundreds of businessmen who who are not only thinking but also doing something about their communities' water problems. These businessmen—and thousands more like them—are serving in many ways, as private citizens and in organized groups.

The objectives of the watershed development program are sound. Business organizations and industrial enterprises are going to continue to participate in promoting this program and other economically sound methods of improving the Nation's water resources. They are realizing that the public interest is basically their own interest.

Both educational and action projects are expanding in this field as business and industry learn of the incentives and of the opportunities. Cooperation and cosponsorship are opening up new opportunities, and industry in general is willing to be accepted as an equal partner wherever its particular contribution can be effective.

Social Security Health Insurance

EXTENSION OF REMARKS

OF

HON. CLEM MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1960

Mr. CLEM MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution sent to me by a group of my constituents who are among the many in my district who support social security health and hospital insurance:

Whereas due to the present high costs of medical and hospital nursing service and surgical services, many old people find it impossible to meet the costs; and

Whereas the Ponce De Leon Club, composed of 180 persons over 60 years old, finds that this excessive cost has brought a lot of hardships to many of its members; and

Whereas the House Ways and Means Committee has rejected H.R. 4700, the so-called Forand bill, to amend the Social Security Act, so as to provide against the costs of hospitals, nursing homes, medical and surgical service for persons eligible for old-age and survivors insurance benefits and for other benefits; and

Whereas Representative A. J. FORAND has filed a petition asking the House to bypass the committee and bring the measure to a vote of the entire House, said petition re-

quiring 219 votes or signatures: Therefore be it

Resolved, That the Ponce De Leon Club of Santa Rosa, Calif., in regular monthly meeting, calls upon the Representative from this district, namely the Honorable CLEM MILLER, to sign this petition of Mr. FORAND, and do all in his power to advance the action on this bill, and to work for its passage. And be it further requested that the Honorable CLEM MILLER insert this resolution in the CONGRESSIONAL RECORD.

Signed at a regular meeting of the Ponce De Leon Club held in Santa Rosa April 6, 1960, in the State of California.

LILLIAN EAVES,
Secretary.

SANTA ROSA, CALIF.

Salisbury Article in New York Times Slanders Birmingham

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1960

Mr. HUDDLESTON. Mr. Speaker, on April 12, 1960, there appeared on the front page of the New York Times an article written by one Harrison E. Salisbury, datelined Birmingham, Ala., and headlined "Fear and Hatred Grip Birmingham." This article purported to be an accurate account of the current racial situation in Birmingham, Ala., my district.

The article is, in fact, one of the most vicious slanders of a community of decent people that has ever come to my attention. No doubt, many of the Members of Congress read Salisbury's article and, not knowing what the real situation was, naturally concluded that it was a truthful objective report.

In an effort to correct some of the damage which has been done, and irresponsible journalism always does damage, I insert herewith in the CONGRESSIONAL RECORD, under leave heretofore granted, a copy of an editorial which appeared in the Birmingham Post-Herald of last Thursday, April 14. The editorial was headed "Another Slander."

ANOTHER SLANDER

If the New York Times were out deliberately to promote race friction and to brainwash its readers into the belief that hate and fear and lawlessness are rampant in the South it could not have done better than print the story which appeared on page 1 of its Tuesday edition and is reprinted on page 4 of today's Post-Herald. It is not the first time this newspaper has printed a twisted picture of the South.

Written by Harrison Salisbury and under the heading "Fear and Hatred Grip Birmingham," Tuesday's story leaves the reader but one conclusion:

That mob rule has displaced law and order; that Negroes and white alike live in an atmosphere of fear and hate and that at any moment rioting might start blood flowing in the streets.

We do not know with whom Mr. Salisbury talked but it is quite evident that among his contacts were those who gave him the story he came to find.

As a reporter he brings no credit to the profession. As a propagandist he is an expert.

The pity is that thousands who will read him have no way of knowing what great injustice he does to a community and a people who, despite problems, pressures, and endless aggravations from the outside, have maintained and continue to maintain remarkably good relations between the races.

Fear and hatred do not grip Birmingham. Mob rule has not and we are determined will not take over. And if violence should erupt it will come only because those who profit from promoting racial strife light the fuse.

Annie Applegate Kruse: A Wonderful American

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1960

Mr. PORTER. Mr. Speaker, the game of American politics at the grassroots level never had a more active player than Annie Applegate Kruse. Annie Kruse died April 11, 1960, following a short illness. She was 84.

Annie was a Democrat by choice and a Democrat by action. She was an example to others. She was born in Scotts Valley near Yoncalla, Oreg., November 15, 1875. She was the granddaughter of Charles Applegate and the great niece of Lindsay and Jesse Applegate who came to Oregon in 1843.

The Roseburg News-Review has commented in its news story that, "In her long and colorful life, Mrs. Kruse was very active in the Yoncalla community and has written two books on this area." It was always amazing to me how Annie Kruse managed to do so much while other people wondered how they could get anything done.

Annie Applegate Kruse could be praised for many things. She and her late husband, John, raised a fine family. Her sons, Elmer and Homer, live in Yoncalla. She was a first-rate precinct worker because she believed politics was as good as the people in it. She was willing to speak up on issues and tell why she supported or opposed them. She made her opinions known to all of her many admiring friends—including Senators and Representatives.

Hers was the kindness of the pioneer sort—straightforward, unassuming, without glitter. There was no affectation, but a lot of heart and good commonsense.

Annie kept up with world and national affairs.

She had an active interest in matters before the Congress. One of her special interests was the proposed Youth Conservation Corps. More than a year ago she wrote to me about this legislation, which she strongly supported.

The other body has approved S. 812. It and many House bills are to be considered this week when hearings are held by Representative CARL ELLIOTT's Subcommittee on Special Education.

I want to put in the RECORD at this time part of my friend Annie Kruse's letter in which she strongly spelled out her reasons for supporting such legislation:

YONCALLA, OREG., *February 15, 1959.*
Hon. CHARLES O. PORTER,
Washington, D.C.

DEAR CHARLIE: One of the most interesting TV programs to our community was when you and Senator HUMPHREY appeared speaking for the reactivating of the CCC. Many a parent of teenage boys are praying for its inactment. The progressive educational system has filled our schools with young people who cannot read, write, or spell. As you can well appreciate, they were taught finger painting and how to get along with people in the grades and now they have been promoted when their teachers got tired of fooling with them until, in high school, they are a cumbering nuisance. Yet I know that some of them, for the most part, I will say, are intelligent, good in math and science, but are not allowed to go on because they cannot read. It is appalling. If your projected law goes into effect, I am also sure that from among these boys will be found scientists, inventors, and scholars in other lines that will help America back into world leadership again.

One hundred and fifty dollars is not near enough; neither is 1 year's service. And not only the hills of the Northwest or the reclaiming of the Southwest, to say nothing of our National Park System—all of it. Alaska, the land of the young, calls for the hardy and especially well-trained young people. I say again, begin with the youth of this generation or we will wake up to find the hordes of Asia overrunning our hemisphere. Taking the backward youngsters out of high school will in a measure overcome some of our sex troubles—going steady, marrying too young, too many children, divorce, absentee fathers—all a potential danger to our country. Your projected program will also relieve some of the schoolroom congestion, make room for those who are capable of going on to college. I wish to call to your attention that Thomas Edison could not learn at school. I have heard them say that his teacher, after 3 months, took him home, telling young Edison's mother that there was no use to send him; that he was hopeless. John Locke was expelled from college because he could not learn, so was William Penn. And a long list of others who, in time, not only became famous, but contributed greatly toward the civilization we now know.

Where is the money coming from to finance this plan? You might print it, or set up a U.S. bank between the Treasury and the Federal Reserve System in which to handle our Government bonds. An investment of this kind would pay itself out sooner than any other. This is not hurting your popularity—everyone, Republican and Democrat alike, are saying the same thing—get our youngsters to work, give them something to do.

My best of love to you, Priscilla, and the youngsters.

ANNIE KRUSE.

In her 84 years Annie Applegate Kruse worked to make this a better country. Her efforts will be bearing fruit for a long, long time.

Under the leave to extend my remarks in the RECORD, I include the following story from the March 12, 1960, issue of the Roseburg News-Review:

APPLEGATE DESCENDANT DIES AT YONCALLA HOME AT 84

Annie Applegate Kruse, 84, a lifetime resident of the Yoncalla area died at her home Monday morning following a short illness.

She was born November 15, 1875, in Scotts Valley near Yoncalla. Her husband, John Kruse, whom she married in 1893, preceded her in death in 1949.

She was the granddaughter of Charles Applegate and great-niece of Lindsay and Jesse Applegate who came to Oregon in 1843.

In her long and colorful life, Mrs. Kruse was very active in the Yoncalla community and has written two books on this area. Her first was titled "Yoncalla, Home Of The Eagles" which dealt with the history of the community and people of Yoncalla and her second was "Roseships, A Tale of Southern Oregon," a story of the Yoncalla tribe of the Umpqua Indians.

She was active in the Yoncalla Saddle Club and Civic Club, a charter member of the Women's Club and a past master of the Elk Creek Grange.

Mrs. Kruse was responsible for developing West Park Place in Yoncalla, where over 100 homes now exist. She also donated to the city a sum of land for a park and playground.

When Gladys Workman, author of a book on Oregon history, appeared on "This Is Your Life," Mrs. Kruse was there as one of her close associates.

She is survived by two sons, Elmer and Homer, of Yoncalla; two brothers, John, Portland, and Charles Applegate, Yoncalla; three sisters, Mrs. Bertha Stock, Yoncalla, Emma and Suzie Applegate, Portland; six grandchildren, eight great-grandchildren, and numerous other relatives.

Funeral services will be held at the Yoncalla Methodist Church Thursday at 1:30 p.m. The Reverend Roy Knight will officiate with vault interment in the Yoncalla cemetery. Mills Funeral Service is in charge of arrangements.

Soil Conservation Service—Quarter Century of Achievement

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1960

Mr. COOLEY. Mr. Speaker, all Americans will want to join in a salute to the Soil Conservation Service on its 25th birthday. SCS is the evangelist of the gospel of the conservation of our most vital resources—soil and water. Through its leadership we not only are blessed with abundance of food and fiber in our time but we also are bequeathing plenteousness of the land to the generations to follow us.

As a part of the celebration marking this quarter century of achievement, Mr. Speaker, and by permission of the House, I am placing in the Appendix of the RECORD the text of remarks I made over radio station WKIX, Raleigh, N.C., on April 17. These remarks follow:

CONSERVATION

(By HAROLD D. COOLEY)

During this month of April we celebrate a date important to all Americans. This Nation marks the 25th anniversary of the establishment of the Soil Conservation Service. On April 27, 1935, the Soil Conservation Act was signed into law. In the last quarter century, the Soil Conservation Service has influenced not only our farming operations but also the lives of millions of Americans. The work of our farmers, healing and protecting the land under the guidance of this service, will mean better lives for the generations that will follow us. I salute the men of the Soil Conservation Service who do credit to the Nation they serve.

The people of North Carolina have a special interest in the 25th anniversary of the nationwide program of soil and water conservation. Chiefly, this is because it is the home State of Hugh Hammond Bennett. And you literally can't think of Hugh Bennet without thinking of soil conservation—nor can you think of soil conservation without thinking of Hugh Bennett.

Since his graduation from the University of North Carolina in 1903, he has devoted his entire life to a study of the soil. In 1905, as a member of a soil survey party in Louisa County, Va., he first discovered the cause and true significance of soil erosion. From that point on, Bennett's life became a crusade for conservation.

In observing the 25th anniversary of the Soil Conservation Service, we have an opportunity to take stock of accomplishments. We are prone to forget, after a quarter of a century, the problems and the obstacles that had to be overcome in soil and water conservation. We forget the gullied land, the barren acres, the overgrazed pastures that were commonplace only 25 years ago. Today North Carolina, like much of the rest of the Nation, is a green and fertile land because of Hugh Bennett, the wisdom of a forward-looking Government, and because of the devoted and dedicated work of thousands of our farmers.

We forget, too, the rehabilitation of the thousands of young men who worked in CCC camps in those early days. Many of us can remember the great depression and the hordes of distraught young men riding on freight trains across the country, looking for work and finding none. The CCC camps gave them jobs on the land that made possible a quick demonstration of conservation measures.

In demonstration projects throughout the country, farmers learned that gullies and wasted land were not the inevitable result of farming. They learned that the land could be rebuilt, pastures could be improved, crop yields and farm income could be increased, timber and pulpwood could be produced through sound conservation farming. In North Carolina we had demonstration projects at High Point, Wadesboro, Greensboro, Reidsville, Franklinton, Charlotte, Burlington, and Lexington.

Another major event in the progress of soil and water conservation was the establishment of soil conservation districts. Bennett had felt from the beginning that the farmers themselves should take over the soil conservation movement. And it was significant that the Brown Creek Soil Conservation District, the first soil conservation district in history, included Hugh Bennett's home county, Anson. The Brown Creek Soil Conservation District was set up on August 4, 1937.

Soil conservation districts were established under State laws. The first such law was passed on March 3, 1937. By the end of that year, 22 States had enacted such laws authorizing creation of soil conservation districts, with legal status. They were created by action of farmers to assure continuance and progress of soil and water conservation throughout the Nation.

By July 1, 1945, all 48 States had enacted soil conservation district laws. Puerto Rico and the Virgin Islands passed such laws in 1946, and Hawaii and Alaska in 1947.

The soil conservation movement quickly took on international aspects. Agricultural leaders from countries all over the world came to America to get the inspiration and the know-how that farmers in this country had developed. Hugh Bennett himself traveled to many foreign countries to help them get underway conservation programs that would conserve their resources of soil and water. Soil conservation services, patterned after our own, were set up in many countries.

In our own country, June 9, 1947, was observed as Billion Acre Day. On that day the San Juan Soil Conservation District in Colorado was chartered, bringing the total farm and ranch land in soil conservation districts to 1 billion acres.

From the beginning, Bennett had insisted that the fundamental principle of sound soil and water conservation was the use of each acre within its capabilities and the treatment of each acre in accordance with its needs for protection and improvement. There was on September 9, 1946, an occasion of special significance to the people of North Carolina. It was the celebration of Hugh Bennett Day arranged by the Brown Creek Soil Conservation District.

Thomas Wolfe, one of the greatest writers North Carolina has ever produced, was the author of a novel titled "You Can't Go Home Again." But Hugh Bennett came home to North Carolina that day to a welcome in which the whole State joined. The principal speaker on that occasion was another great North Carolinian, Jonathan Daniels, author, journalist, and former Presidential secretary. I should like to quote briefly from the speech that Jonathan Daniels made on that occasion:

"In wartime," Daniels recalled, "we were fed from acres which, when Hugh Bennett began as Chief of the Soil Conservation Service, were producing only duststorms for dark skies. But any people who think that Hugh Bennett's science is a mere matter of water and wind, soil and plows, have only the slightest understanding of the meaning of the man. What he discovered was the carelessness and blindness of man.

"What Hugh Bennett taught us," Jonathan Daniels continued, "was that in our ignorance and blindness and almost in secrecy, the treasure of our lands and our lives can slip from beneath us—and suddenly be gone forever."

That was a great tribute to a great man and to the relentless force of a personality that awakened America to the danger of the wasteful, careless road we were following with respect to our soil and water resources. Once awakened, we have remained alert to the needs of the land.

We have made tremendous progress in soil and water conservation in the past 25 years. We think today of soil conservation as a way of life. We have learned to think in new terms about the land. We realize that our present bounty can be as fleeting as a desert mirage, unless we guard continuously our precious heritage of soil and water.

Conservation farming is efficient farming. It includes such practices as irrigation to assure production when droughts occur; drainage to prevent damage to crops during wet years. It means growing trees, pastures, and row crops on land where these crops are best adapted, where they can be grown with less damage to the land. It means the preservation of the very source of life itself. It means a good life in our time and, above all, a priceless heritage for our children and for our children's children.

Truly, this is a momentous event that we shall commemorate on April 27—the 25th anniversary of the establishment of the Soil Conservation Service. I should like to quote again from the speech by Jonathan Daniels:

"This earth and its promise are ours," he said. "And upon it we shall measure ourselves and the future. The good earth is hacked but not lost. The hope of the Garden is not gone. But suddenly—very suddenly—in surprise and chagrin, we could face a desert where we hoped to behold fulfillment of our dreams. Blindness is not restricted to agriculture. Indeed they are blind who see what Hugh Bennett has taught us only in our fields. He has been talking and teaching not about our soils but ourselves. We need to contemplate not only our fields, but our old fears."

Justice Douglas Attempts to Defend 1954 Desegregation Decision

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1960

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I am inserting herewith in the CONGRESSIONAL RECORD an article by David Lawrence which appeared in the Birmingham News of Wednesday, April 13, 1960. Mr. Lawrence comments upon an address which Justice William O. Douglas delivered before the Cornell Law School a few days ago, in which Justice Douglas discussed the desegregation decision of May 17, 1954. I urge that the Members of Congress read Mr. Lawrence's remarks with care.

A JUSTICE DEFENDS THE DECISION—DOUGLAS BREAKS CUSTOM TO TRY TO JUSTIFY COURT'S 1954 ACTION ON SCHOOL SEGREGATION

(By David Lawrence)

WASHINGTON.—It is a rare thing for a Justice of the Supreme Court of the United States to discuss publicly at any time afterwards a case in the decision of which he has participated. It has always been the custom for justices to stand on what they wrote in the opinion itself no matter what criticism came later.

The address, therefore, that Justice William O. Douglas delivered before the Cornell Law School at Ithaca, N.Y., a few days ago has begun to attract attention, particularly because it reopens and, in a sense, supplements the text of the famous desegregation decision of May 17, 1954. It revives debate, too, on whether the Supreme Court in that case decided a question of constitutional law or a question of psychology.

"Judges," said Justice Douglas, "like the cases with which they deal, are more than statistics. The electronics industry—resourceful as it is—will never produce a machine to handle these problems. They are delicate and imponderable, complex and tangled. They require at times the economist's understanding, the poet's insight, the executive's experience, the political scientist's understanding, the historian's perspective."

JUDGE HAND FEARED "THIRD LEGISLATIVE CHAMBER"

This view will be disputed by those who feel that the Founding Fathers set up a Supreme Court to decide not what the law or the Constitution ought to be but what it really is, based on written acts of Congress and written provisions in the Constitution. This is why Judge Learned Hand, retired, America's most outstanding jurist, expressed in his famous lecture to the Harvard Law School 2 years ago the fear that the Supreme Court of today might become a "third legislative chamber."

But it is in relation to the desegregation decision that Justice Douglas' new comments will be widely debated. He gave to the Cornell law students this concept of the present-day Court:

"There is the myth that has received great impetus since *Brown* v. *Board of Education* (347 U.S. 483). It is that the Court made an exception in those school segregation cases and picked them out as the occasion to rely on sociological data, not on law or precedents. Yet those who work in constitutional law know that business facts, economic data, institutional practices, and social materials often are relevant to enlightened decisions on constitutional issues. The Brandeis brief, filed in 1908 in *Muller* v. *Oregon* (208 U.S. 412), and containing vast citations to economic and social data bearing on the hours of work by women, is the classical example."

But Justice Douglas missed the main point of the criticism that has been made about "sociological" data. Nobody has objected to the introduction of data of any kind in a formal brief filed prior to the argument before the court. What is objected to is the lack of an opportunity to the other side to present a rebuttal or even to cross-examine the experts or "authorities" before they are cited for the first time in a decision of the Supreme Court of the United States.

The 1954 desegregation cases, moreover, involved precedents that had allowed the States from 1868 to 1954 to establish schools with "separate but equal" facilities. Indeed, contrary to a general impression, the famous case of *Brown* v. *Board of Education of Topeka, Kans.*, involved a State law, passed in 1949, that permitted but did not require cities of more than 15,000 population to maintain separate school facilities for Negro and white students. The Topeka board set up segregation only in elementary schools and operated all other public schools on a nonsegregated basis. The lower court ruled that the facilities in both kinds of schools were equal and that the 14th amendment wasn't being violated.

SIMILAR DATA AVAILABLE IN OTHER, SIMILAR CASES

The Supreme Court of the United States, however, based its judgment on a number of citations of a sociological nature, even though similar data were also available for use in the many cases decided in the period between 1896 and 1954 by eminent justices, including Charles Evans Hughes and Oliver Wendell Holmes. Yet the 1954 decision said:

"Whatever may have been the extent of psychological knowledge at the time of *Plessy* v. *Ferguson*, this finding is amply supported by modern authority. Any language in *Plessy* v. *Ferguson* (1896) contrary to this finding is rejected."

When does authority become "modern"? The separate but equal doctrine was upheld by the Supreme Court as late as 1950. The very fact that the Supreme Court did reverse decisions and precedents of long standing and base its judgment on psychological data is the reason why it has been severely criticized as having opened the way for a nine-man judicial autocracy to function. If there is to be a scrapping of the written Constitution and the substitution of an unwritten constitution to be formulated out of the doctrines of poets, historians, economists and even business executives, there are many citizens who would favor a system such as prevails in Great Britain, where the Parliament, elected by the people, is the body that writes the law of the land.

Presidential Poll—15th District of Ohio

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1960

Mr. HENDERSON. Mr. Speaker, each year for the past 5 years, it has been my privilege to conduct a poll of public opinion in the 15th Congressional District of Ohio which I represent here. The poll this year, taken during the last 6 weeks was based upon a questionnaire containing 22 questions dealing with a broad range of public issues which will occupy the attention of the Congress during the current session.

In the preparation of the questions, every effort was made to eliminate wording which would influence responses. The questionnaire was distributed throughout the seven counties of the district in southeastern Ohio without regard to the political philosophies held by those receiving it. It was also reprinted in a number of daily and weekly newspapers of the district. Many of those participating in the poll obtained their copy of the questions from these publications. Schools using the questionnaire as a basis for the discussion of current issues reported the results of classroom debates. None of these student reports indicated unanimity of thinking on any of the questions. I am convinced, therefore, that this poll represents a broad and representative sample of the thinking of the people of the district.

The tabulation of the results includes all of the replies which I received prior to April 2. This number totaled almost 6,000 replies. Although the expression of affirmative or negative opinions on each of the questions is a valuable gage of popular attitudes, the detailed and thoughtful comments I received on the various questions multiply the value of this survey. Although it is not possible to reduce these remarks to statistical terms, I should like to explain some of the reactions I received to several of the questions.

The importance of Government economy and the need to balance national spending and income was perhaps the most important single issue according to the several thousand comments included in the questionnaires returned. It was generally recognized that increased Federal spending is a temptation of popular government which can often cause disillusion through resulting inflation and increased taxation affecting those who were to be benefited most.

A total of 46 percent of those responding expressed opposition to legislation for an additional temporary one-half cent per gallon gasoline tax. The temporary character of the proposed tax was often doubted and the question was asked in return, "Is there such a thing as a temporary tax?"

Perhaps the most perplexing question proved to be that regarding defense spending. The text of the question was "Do you feel that the $45½ billion requested for defense next year is sufficient for our national security?" Of those responding, 66.2 percent expressed their feeling that the amount was sufficient. However, 21.4 percent did not answer the question with a categorical "yes" or "no." Many persons cited the complexity of technological developments in defense weapons as their reason for failing to answer. Large numbers insisted that the Nation must provide whatever funds are necessary for this

program vital to our survival. At the same time, they stated the belief that a careful balance must be struck and that blank check policies for defense would be both ineffective and uselessly costly. Veterans were particularly vigorous in stating their opinion that service rivalries, duplication, and waste in our Armed Forces remain major obstacles to both defense strength and efficient management.

The question pertaining to providing medical benefits under the Social Security program received considered comment. Few persons doubted the seriousness of the problem. A majority of the 36.7 percent favoring the proposal were outspoken in their support of such assistance to older persons. Among the 57.4 percent opposing the plan, many pointed out difficulties of financing, entry of Government into the field of medical care, and a feeling that such a program would prove inadequate for real needs after years of investment.

The following is a tabulation of the results of my 1960 poll:

	Yes	No	No answer
1. Do you believe it advisable that the Federal Government balance its budget and reduce the national debt?	87.5	8.0	4.5
2. Are you in favor of providing Federal tax benefits to companies which will employ greater numbers of persons over 50 years of age?	50.2	43.7	6.1
3. Do you believe that the Defense Education Act should be changed to eliminate the requirement that students receiving Federal loans take loyalty oaths?	20.8	75.9	3.3
4. Would you favor Federal aid for school construction even though it would require tax increases or deficit financing?	28.3	66.4	5.3
5. Do you feel that the $45½ billion requested for defense next year is sufficient for our national security?	66.2	12.4	21.4
6. Would you favor granting the President the power to veto parts of appropriation bills passed by Congress in place of the present system requiring his acceptance or veto of entire bills?	64.4	30.3	5.3
7. Do you support a temporary increase in the Federal gasoline tax of ½ cent per gallon to pay for the highway construction program?	46.0	50.8	3.2
8. Do you favor changes in the Taft-Hartley Act to eliminate the power of States to enact their own right-to-work laws?	24.2	68.4	7.4
9. Are you in favor of the United States greatly increasing spending in its program for the exploration of outer space?	23.2	69.1	7.7
10. Do you believe Communist China should be admitted to the United Nations?	11.9	81.5	6.6
11. Are you in favor of proposals to give up U.S. ownership of the Panama Canal in favor of international control?	12.9	81.1	6.0
12. Do you feel that Congress should enact legislation to give the Federal Government greater power in negotiating settlements of prolonged nationwide labor-management disputes?	71.3	24.4	4.3
13. Do you support a national fair trade law whereby a manufacturer could require that his product be sold to a consumer for a stated minimum price?	32.1	60.5	7.4
14. Do you favor increasing the hourly minimum wage from $1 to $1.25?	51.5	43.7	4.8
15. Do you favor ending agricultural controls and the termination of price supports?	73.2	18.3	8.5
16. Do you favor legislation to provide medical benefits under the social security program financed by an increase in the tax? (Present social security law provides that the combined employee-employer tax will become 9 percent on incomes up to $4,800 in 1969.)	36.7	57.4	5.9
17. Would you favor the Federal Government exercising greater surveillance over practices in radio and TV programs and advertising?	58.7	35.1	6.2
18. Do you believe Congress should pass civil rights legislation providing Federal guarantees of individual voting rights in Federal elections?	73.9	17.5	8.6
19. Are you in favor of policies which seek to fight inflation through increases on interest rates for installment credit buying?	50.8	40.5	8.7
20. Do you feel that the chances for world peace are better today than they were 10 years ago?	51.6	38.6	9.8
21. Would you support legislation to provide a Federal pension of $100 per month for all World War I veterans at age 65?	46.2	48.1	5.7
22. Are you in favor of continuing our present policy of purchasing sugar from Cuba at prices higher than those prevailing on the world market?	5.3	91.1	3.6

Rockefeller Wisely Repudiates "Stop Nixon" Drive

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1960

Mr. MICHEL. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD of August 25, 1959, I extended my remarks, emphasizing the fact that the public relations being produced by Rockefeller's aids smacked of Stassenism and was a disservice to the Governor.

Even now there are forces at work trying to prevent the nomination of Vice President NIXON by intentionally misinterpreting current political trends, but I am happy to say, Rockefeller is not buying any of it. Just last week in my own State of Illinois, Republicans took the most joy in the showing of Vice President RICHARD M. NIXON, who ran unopposed in the presidential primary. Though he did not campaign, NIXON piled up 725,000 votes and approached the 1956 total of 781,000 received by President Eisenhower, but NIXON's record was better percentagewise.

I am sure that NIXON's total vote in Illinois, as well as in the Nation, next November, will be second to none. Furthermore, as is so comprehensively and effectively explained in the following editorial by David Lawrence, NIXON will not compromise with his conscience as to the proper moment to begin his drive for the Presidency even though he has been getting all kinds of free advice these days.

I include the editorial at this point:

[From the Evening Star, Apr. 15, 1960]

MEDDLING IN THE GOP CAMPAIGN—SOME OBSERVERS ARE CRITICIZED FOR USE OF ROCKEFELLER'S NAME TO BLOCK NIXON

(By David Lawrence)

Many people, among them some editorial writers, who haven't the slightest interest in the success of the Republican Party, are nevertheless trying to tell that party it should turn down Vice President NIXON for the presidential nomination this year.

The wish is father to the thought, and the attempt right now is to use the name of Governor Rockefeller—without his consent—to try to prevent the nomination of RICHARD NIXON. The New York Governor has said explicitly that he does not intend to become a candidate for either the Presidency or the Vice Presidency. But the folks who don't like Mr. NIXON keep up the rhubarb as a means of discrediting the Vice President.

Thus, every now and then, a movement to draft Governor Rockefeller is squelched and then bobs up again. The other day one of these abortive attempts was wisely repudiated by the Governor himself. He saw it as an effort to involve him in a "stop NIXON" drive.

Why do these meddlers in Republican politics want to stop NIXON? They themselves wouldn't vote the Republican ticket anyway, as they are mostly leftwingers or so-called liberals or persons who still resent Mr. NIXON's part in catching Alger Hiss and other Communist stooges.

No candidate of the Republican Party this year—who, to win, has to rely on the support of a largely conservative strength—would throw such support away in a misguided effort to lure the imaginary strength of so-called independents or liberals.

The Republican Party has enough potential votes on the conservative side to elect a President this year. If, however, the so-called liberal or leftist group succeeds in influencing the selection for the Republican nomination of someone who is going to enter the campaign suspected of being at heart a radical or a spender, many conservatives will be tempted to stay at home and let a full-fledged Democrat have the responsibility of steering the Government as between liberal, radical, and conservative practices.

One of the reasons the Republicans have had a hard time getting their voters to the polls in recent years is that some conservatives have been alienated by the Eisenhower administration on particular issues. In the last 2 years, however, many of these conservatives have rallied behind the President because of his policies at home, which have helped to stabilize the economy of the country, and his policies abroad, which have helped to keep us out of a nuclear war.

As for Governor Rockefeller, he has played his cards well to date. He has an attractive personality and is rapidly getting worthwhile experience by his service in Albany. It will stand him in good stead in the future. He would immeasurably aid the national ticket if the convention drafted him for the vice-presidential nomination, but only if the vast majority of the Republican voters were disabused of any idea that he is just another "leftwing liberal."

Governor Rockefeller is the kind of man who, if he someday becomes President, would make a fine Chief Executive. He is young yet, and if he accepts the vice presidential nomination now and does all he can to try to elect the ticket in November 1960, he will be the logical choice of his party in 1964 should Mr. NIXON be defeated this time. He would then, of course, remain in office as Governor of New York, as did Governor Dewey after his national contest.

If, on the other hand, Mr. NIXON is elected, and Governor Rockefeller were to become Vice President, he certainly would be young enough in 1968 to step from the Vice Presidency to the Presidency on the same path that Mr. NIXON would have traveled.

Vice President NIXON is being given all sorts of advice these days about how he should conduct himself in the preconvention campaign. It is said he isn't getting enough publicity because he isn't making any active campaign.

Someday the politicians themselves will discover the true secret of Dwight Eisenhower's success. He has ignored the so-called political rules. He has never compromised wtih his conscience. He has done what he thought was the right thing—the honest thing. Strangely enough, even when some of his official acts aroused widespread criticism—and some of them were properly criticized—the public nevertheless thought them to be honest mistakes of judgment.

All that RICHARD NIXON has to do is to be honest with himself and honest with the American people. Whether he becomes the nominee of his party should be less important to him today than whether he preserves his own self-respect. And that's the best rule in politics—never to be "political". The people like it, because politics today is regarded as the art of hypocrisy.

The Greek Ambassador Knows

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1960

Mr. PORTER. Mr. Speaker, Trujillo has forced 47 Greeks, 217 Spaniards, 52 Yugoslavs, and other Europeans to enter his armed forces. He tricked them into coming to Santo Domingo. Now he mistreats them.

The following letter was brought to my attention by the Ambassador of a great Latin American democracy. It is authentic.

"Does the Ambassador from Greece know about this?" I asked.

"He knows," my friend replied. "And so does the Organization of American States."

How long can this kind of gross violation of human rights continue?

The OAS peace committee has been refused entrance to the Dominican Republic but its members can gather plenty of evidence outside Trujillo's borders.

Marines will not be needed. Indignant public opinion, expressed in boycotts, strikes, and other ways, will rise up and smite down Rafael Trujillo.

Here is the letter that was smuggled out of Trujillo's prison:

DEAR SIR: We are writing to you from the Dominican Republic from the prison Victoria. We came here on the 16th of August, 47 Greeks to work. We were imprisoned by force for 17 days and on the 5th of September we yielded to the threat of hunger and accepted to go to the legion at Konstandja. Life here was unbearable, some escaped. They had forced us to join the legion. In the legion there were 217 Spaniards, 52 Yugoslavs and some other Europeans who were all deceived as we were. On November 5 they told us that they were going to send us back to Europe, but instead they brought us here to the prison where we are dying slowly from hunger. Our food is merely a black rice water and a piece of the worst quality bread. We all have become shadows and are dying slowly like the prisoners in the concentration camps of Germany. Our families in Greece don't know where we are. For 3 months now we have not written to them. The Spaniards and the Yugoslavs are also with us in the prison. It is of great importance that the Greek Government be notified as soon as possible in order to take action to free and save us from a sure death. On such a small paper we cannot write our real miserable condition. We are giving you our names to be published in the free press, so that our families see them and take action to save us from the hands of death. This present note is our S O S. Send it to Demetrios Psathas, newspaper Ta Nea, Athens, Greece.

A Brook That Failed

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1960

Mr. METCALF. Mr. Speaker, one of the most moving sermons I have ever read relates a water shortage in Israel during Biblical times to the water problem in America today.

This sermon, by the Reverend Frederick Brown Harris, Chaplain of the U.S. Senate, as it appeared in the March 12, 1960, issue of the National Rural Letter Carrier, follows:

A BROOK THAT FAILED

(A sermon by the Reverend Frederick Brown Harris, D.D., Chaplain of the U.S. Senate)

"And it came to pass after a while that the brook dried up."—First Kings 17:7.

Parched and thirsty lips make all humanity kin. There is a modern song which to the ears of the mid-20th century epitomizes the age-long, plaintive plea for cool, clear water:

"All day I face a barren waste
Without the taste of water—cool water.
Old Dan and I, with throats burnt dry
And souls that cry for water—cool, clear water.

The shadows sway and seem to say
Tonight we pray for water—cool water,
And 'way up there He'll hear our prayer
And show us where there's water—cool, clear water."

There is a Biblical story of a stream that failed, the ancient record of a water shortage which has gripped the imagination of the long centuries. It tells of a prophet who prayed for water. In the famine which was scourging the land, Elijah had been safe by the side of a babbling brook, his needs of drink and food supplied by water and wings, the pinions of ravens. The scene is adorned with all the brilliant colors of an old-fashioned Sunday school card. And just as those gayly illumined tokens of juvenile attendance carried always a "golden text" beneath the scriptural portrayal, so here is the sentence which tells the ominous conclusion of a fascinating tale of the prophet and the brook—"And it came to pass after a while the brook dried up."

The little stream which was a lifeline for the prophet was one of the few left in the drought-plagued land. There was much suffering among the people, because for so long the rain had failed to fall on fields and forests. When in his panic Elijah discovered the brook he seemed bent on just saving himself. His was a solitary escape. At first, apparently the plight of others did not disturb his own peace of mind. He is pictured as comfortably stretched out on the green grass by the water's edge. Surely, in a dry and thirsty land the lines had fallen to him in pleasant places. Perhaps as the rainless days passed he noticed that the volume of the stream was diminishing. But still there was plenty to allay his thirst. But one fateful morning the prophet was aghast to find that his oasis of refreshment had vanished like a mirage of the desert. Where sparkling water had made the murmuring music of salvation there was but cracked and dier earth. With a wild fear clutching at his hears, Elijah found himself at wit's end, for it came to pass that the brook dried up.

What was he to do? Seek another crystal spring somewhere up in the solitudes, and save himself? Divine guidance, so he thought, had led him to the hidden place of his selfish safety. But there he had time to meditate. Let us believe that even before his brook failed his conscience had begun to trouble him. How often the love that followest us all the way brings its lesson in pain and loss. Elijah's heart began to go out to those who were suffering the pangs from which he fled alone. The brook that failed sent him forth to join himself with others in need, and with them face the water and food situation in cooperation and partnership. He had come to sense that the authentic call of God is never to hide his servants away in selfish comfort oblivious to the afflictions which have smitten others. There crept into the heart of the prophet a new feeling of oneness with all who were cowering under the pitiless pall of the rainless skies. With a compulsion, before conspicuous for its absence, he crossed the boundaries of his own country and found himself face to face with those who, to him, were heathen—a woman and her son. They, in the midst of the universal want and woe, were barely able to keep their bodies and souls together. The woman, too, was at what the Psalmist called the place of desperate extremity—wits' end. Her cupboard was bare. But no miser, coward soul was hers. With the stranger who came to her door she shared her last crust—Then a miracle happened. How the partnership of need solved the dreadful problem is not part of the story now. Suffice it to say, it did. And whole the selfish brook had failed, the shared barrel did not.

This lovely old etching is telling us that only together can humanity win. A dear preacher friend of mine whose once eloquent lips are stilled now, in dwelling upon this story, did not go into a long explanation of how it came to pass, that by pooling their efforts the trio found salvation. But, commenting about the dried-up brook and the

never-empty widow's cruse, he said simply: "Faith in God is not a condition to be hidden in some sacred canyon, as a personal security policy. It is rather an endowment to carry into the midst of life, with which to sustain desperate need. When woe was running down every road, Elijah joined himself to others who were in trouble. Here is a prophet who, because a brook failed, found himself. The unwasting meal, shared with others, is of far richer significance than the hidden brook alone."

But what does this water shortage in Israel so long ago have to do with water in America in this year of our Lord 1960? Answer: Very much. Even with all the ministry of rain it has come to pass that the brooks of our water supply are drying up across this favored land. It is not that the vagabond clouds, with their precious cargo of refreshing moisture, like white-sailed barques have failed to float across the sea of azure blue. They have delivered their priceless elixir, though unequally, to the land.

Now when the distilled water is drawn from the sea it is but being taken on a journey—for sometime, somewhere, it turns again home. The wise observation of Holy Writ is: "All the rivers run into the sea, unto the place where the rivers come." There would be no rain were it not for the sea and the winds. Every raindrop is the child of the sea, drawn from that mighty and unfailing reservoir of the great deep. The grasses know nothing of the sea save as they discover the ocean and the rainfall; but without the sea it would never come. The rain is the sea come to the plants, not in the majesty of the tides but in such little ways as even a grass blade or a flower's petal can harbor it and grow thereby.

The lake from which we channel the water to drink is fed by rains which visit continental spaces. But the refreshing boon, without which we die, reaches us in the cup of cool, clear water we lift to our thirsty lips. As one who stood refreshed by showers of blessing gratefully bore witness, "The harvests of life are sure when we win from cosmic tides their drops of rain."

When we, whose mortal bodies are three-fourths water, take into our hands a loaf of bread Maltbie Babcock reminds us of what is back of the snowy flour—

"Back of the flour is the mill,
(Perhaps a mill run by water)
And back of the mill is the wheat,
And the shower—yes, the shower—
And the sun, and the Father's will."

But even in our America there have continued, year after year, sounds of abundance of rain—that is, taking the vast expanse of the country as a whole. Yet the brooks of our water supply are drying up. One solemn reason is that like all the other riches of this continent, so prodigally endowed, man has been wasting his substance in riotous living. Senator Richard Neuberger gives a vivid bird's-eye view of this wasted substance in one sweeping paragraph: "The gutted forests of the Lake States, a dozen silty dust bowls, half a thousand polluted rivers, the vanished passenger pigeon, and the slaughtered bison of the plains, migratory fish runs choked off from their spawning grounds by chemical wastes and unscreened irrigation ditches, all bear tragic witness to our failure in stewardship." In these latter years America has been sobered and alerted by the warnings, sounded by men who see, about the bird life, the animal life, the river life, and the life of the land itself, denuded and eroded, as riches piled up for thousands of years run off to the sea.

And now the Nation is compelled to face the dire implications of a growing water shortage. From various parts of our vast domain is being lifted the agonizing cry—Water, water, cool, clear water. For now it has become evident that the national brook is running dry. Of course we know that there are no brooks or rivers in the Sahara and other deserts. They are dry and thirsty lands where no water is. But who would expect any concern regarding the limitless water supply of a land that has the Hudson and the Mississippi, and the Columbia, and a thousand refreshing streams which make of our continental expanse, except for a few spots not irrigated—a watered garden? By tapping waiting water many miles from arid land, the parched places blossom as the rose as man commands the magic liquid to come hither. And if other sources fail, man has already taken the first steps, startling in their results, to wring out the salt from the boundless deep and separating it also from other ingredients make it pure and fresh, to quench thirst and quicken the parched land.

But, listen America. With all our vast water supply the situation is not as rosy as a superficial appraisal might suggest. The fact is that in 1957 more than 1,000 communities endured water shortage to some degree. In some cases there was not enough water for lawns, and in some towns not enough to drink. Reports are disturbing with regard to the underground reservoirs of water. The levels are going deeper and deeper. In a number of States wells have to go down from 100 to 500 feet deeper than they did some years ago. Need of water is a powerful and dominating influence, and the need is pressing, everywhere between the Rocky Mountains and the Mississippi Valley.

The Governor of one of our great Western States recently declared that "every drop of available water must go to agriculture and industry. To be sure, at least for the present, there is enough water if fairly distributed. But the problem is to get it where the people are and where the need is imperative. Golden southern California is thought of as a land flowing with milk and honey. But it is a startling fact that 50 cities in that enchanted region get much of their water from the Colorado River, nearly 500 miles away.

The mushrooming population of our entire country and the higher standards of living have meant an enormous increase in bathrooms and in all sorts of household machines. Every person is using 60 more gallons of water per day than our grandparents required at the dawn of the century. Industry demands 12 times more water than it did threescore years ago. Rayon, for instance, is a modern product; but like all other new things it calls for more water. A ton of rayon takes from 200,000 to 300,000 gallons of water to make. What is a mere ton of steel as it is lifted to its place in a rising building? But it takes 65,000 gallons of H_2O to fashion it. We blithely buy our bulging newspapers never realizing that a good sized papermill needs 22 million gallons of water a day. When you stop at a gasoline station to "fill it up," every gallon registered means 7 to 10 gallons of water for processing. Cities are discouraging industrial concerns from building factories, saying, "We haven't the water to spare." What the use of water for human projects is doing to wildlife was indicated some time ago when 3,000 dead ducks were piled on the lawn of one of our State capitols in a dramatic protest against the pollution of their great river and the draining of marshes.

Some time ago the brook of water supply of New York City so nearly dried up that careless people were fined even for having leaking taps, and the use of water was sharply curtailed. All these symptoms could be increased at least a dozenfold in emphasizing our growing water shortage and the constantly mounting demand upon the supply.

This urgent problem cannot be solved by just lamenting about the brooks that fail. Like Elijah, we must join others facing the same problem. The water solution is a cooperative task. We, the people, must tackle it together. Water resources, without any more regard to geographical lines than Elijah showed, must be protected, conserved, and transported to assure adequate supplies for all the needs of our expanding industrial economy, as well as to assure adequate supplies for public recreational purposes and for the conservation of precious wildlife.

It is in the spirit of Elijah, driven from his selfish brook, to take into consideration the needs of others that Congressman CHESTER BOWLES in his recent, challenging book, exhorts what we must do now to coordinate the powers of Federal, State and local government. He declares, "We must tap new water sources and provide for the more efficient use and reuse of existing water resources." We must make an all-out attack on water pollution. And, above all, we must develop institutions which can handle land and water problems on a regional basis, including irrigation, land reclamation, and flood control projects which will correspond not to our official political boundaries, but to the special aspects of each region's watershed and water resource needs.

And so it came to pass when the brook dried up that Elijah went out to join his strategy of salvation with that of others. And so today, in our America, the brooks that are failing are driving us, with a sympathy for others, to face the problems that can be solved by the strength that is found only in unity of purpose and endeavor. Thus do we become workers together with God. And are we not assured regarding the Father God, from whom all blessings flow, that "He shall come down like rain," answering in the oceanic amplitude of His grace the cry of those who hunger and thirst after righteousness—for as the hart panteth after the water brooks, so panteth my soul after Thee, O God. And, as Longfellow tells us:

"As torrents in summer, half dried in their channels,
Suddenly rise though the sky is still cloudless,
For rain has been falling, far off at their fountains,
So hearts that are fainting grow full to o'erflowing
And they that behold it marvel, and know not,
That God at their fountains, far off, hath been raining."

Presidential Poll—Fourth District, Oregon

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release from my office and the results of a poll of choices for President which I included on my recent questionnaire sent to 131,000 of my constituents:

Senator WAYNE MORSE and Vice President RICHARD NIXON are the favorite presidential primary candidates of residents of Oregon's Fourth Congressional District. They led the field of presidential hopefuls in the postcard questionnaire mailed to 131,000 constituents by Representative CHARLES O. PORTER, Democrat, of Oregon.

Senator JOHN F. KENNEDY and Adlai Stevenson placed third and fourth. Steven-

son's name will not appear on the Oregon primary ballot.

A total of 17,831 persons named their choices for President. NIXON received 5,883 votes (33 percent of that total). MORSE got 2,957 votes (16.5 percent). KENNEDY received 2,536 votes (14.2 percent). Stevenson received 2,179 votes (12.2 percent).

A total of 10,423 (58.5 percent) voted for Democrats. A total of 7,407 (41.5 percent) voted for Republicans.

Oregonians in the Fourth District also had other favorites. Senator HUBERT HUMPHREY received 1,160 votes (6.5 percent). Senator LYNDON JOHNSON received 817 (4.6 percent). Senator STUART SYMINGTON received 746 (4.2 percent). Gov. Nelson Rockefeller received 1,477 (8.3 percent).

A total of 76 miscellaneous votes (0.5 percent) were cast. Two votes went to "none of your business."

Senator MORSE was the leading Democratic candidate in five of the seven counties in the district. Senator KENNEDY outpolled him in two (DOUGLAS and JACKSON).

The presidential preference question was 1 of 13 in PORTER'S questionnaire. Results on the others, which deal with Federal issues, are now being compiled. In all, 20,419 people in the district responded to the poll.

PORTER said his wife, Priscilla, tabulated almost all of the returned questionnaires.

A complete breakdown of the presidential-poll results follows. It lists figures and percentages for the district and for each county:

Analysis of votes for President in the 4th Congressional District of Oregon on questionnaires distributed by Representative Charles O. Porter

	Morse	Kennedy	Stevenson	Humphrey	Johnson	Symington	Nixon	Rockefeller	Miscellaneous	Total Democratic	Total Republican	Total votes

Postal-Rate Hike Is Not Justified

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. MOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, which appeared recently in the columns of the San Francisco Examiner and was reprinted in the Sacramento, Calif., Bee.

Despite protestations of the administration to the contrary, there are millions of users of first-class mail across the length and breadth of America who strongly share the views expressed in this editorial. These people are unalterably opposed to taxing first-class mail, which makes a profit, to make up for the heavy losses that occur in second- and third-class mail. As a group, they may not be too articulate, but what they lack in this direction they more than make up for in overwhelming numbers.

There is no doubt in my mind but that the public generally would like nothing better than to stymie Mr. Summerfield's efforts to thwart the will of the Congress and make the Post Office Department a self-sustaining business.

Unfortunately, first-class mail users have neither the expert public relations assistance at the command of the Postmaster General nor the latter's acknowledged wizardry with postal cost ascertainment figures.

The editorial from the San Francisco Examiner follows:

POSTAL-RATE HIKE IS NOT JUSTIFIED

President Eisenhower's special message to Congress urging another postal-rate increase presents one of those seemingly plausible arguments which is easily demolished by facts. Let's consider the facts.

In essence the President says the Post Office is losing a lot of money. Therefore mail rates should be raised to wipe out the loss, or at least come close.

This position, which apparently came to the President special delivery from Postmaster General Summerfield, is based on a fallacy.

It is the error of assuming the Post Office is a business. In reality, in historical precedent, and in every day fact, it is a public service. It cannot possibly be conducted as both.

True, it costs taxpayers money to run the Post Office Department. It also costs taxpayers money to run the White House, the Commerce Department, the Federal Judiciary system, the FBI—almost every Federal activity.

The costs of such public services are taken for granted. But the costs of the postal service are labeled "deficit" and become an issue.

Why? The answer is that the Post Office takes in a great deal of money, about $2,500 million a year. No other Government department produces anywhere near as much revenue. But because the postal establishments costs more to operate than it takes in, and because a law requires annual reports comparing receipts with costs, the Post Office is singled out and charged with operating at a deficit.

Finally, the theory that the Post Office is a business doesn't make sense. Would a business charge the same fee to deliver a message across the street as it does to handle a letter from Florida to Alaska? Would a business operate a branch office in every hamlet in the Nation, most of them losing money because of slight patronage? Would a business take on sideline jobs without remuneration, like selling duck stamps or registering aliens?

The Post Office is an essential public service, worth what it costs to operate.

We suggest Mr. Summerfield ought to stop proclaiming (and complaining) how much his Department has lost and concentrate on getting the mails delivered as speedily and economically as possible.

And Congress ought to ignore the request for another boost in rates.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Rule By Big Businessmen

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. McCORMACK. Mr. Speaker, under permission to revise and extend my remarks I am placing in the CONGRESSIONAL RECORD an article entitled "Seven Years of Rule by Big Business" by Philip Stoddard Brown. Perhaps the most significant statement in this excellent article is:

It is increasingly evident that the present administration has performed best in those areas from which businessmen have been excluded, and worst where they have taken over. Surely the record of the Treasury, Commerce, and Defense Departments and many regulatory agencies is a disappointing and, in some cases, sordid one. The administration has not done well in developing missiles, in atomic powerplants, in administering foreign aid and regulating gas companies, airlines, broadcasting companies, and drug firms.

To my mind this article emphasizes the point which should be understood by all and that is that governmental matters are becoming so complex, involved, and important that they must not be placed in the hands of untried businessmen whose first loyalties may not be in the public interest. It also should be abundantly clear that there must be a genuine program to strengthen the career civil service system particularly in the upper grades.

The article follows:

[From the Washington Post, Apr. 18, 1960]

OUR CHANGING ECONOMY—SEVEN YEARS OF RULE BY BIG BUSINESSMEN

(By Philip Stoddard Brown)

Years ago I used to patronize a bank whose head teller was a whiz. He could count money faster than anyone I've ever seen. His every movement had a flourish and dexterity that was high art. Not only that, his whole manner was masterful, almost lordly * * *

Then one day I saw, and scarcely recognized, this man in a restaurant. Gone was his proud and confident manner. Inaudible was the crisp reply to a customer's question or the curt instruction to another teller. The deft and rapid flick of fingers and wrist was not visible. He was just a mousy little fellow in an ill-fitting sport jacket.

Longer in memory is the glimpse of the foremost bass singer of my hometown, playing craps in a country club locker room. Except as his turn came to roll, his companions took no notice of this pudgy drab man. Yet how commanding a figure he was in his white surplice, standing in the back row of the distant choir, his powerful voice rising in equal concert with the massive organ music. All other voices were shallow and as nothing compared with those deep rich tones that engulfed life, like eternity itself, and chocked me with emotion. Then it was that the great Jehovah seemed very near.

Life is like that. A man may play one role brilliantly and another drably. Last summer, my young son and I listened to a baseball game, during which his favorite player visited the broadcasting studio and was drawn into a running commentary on the game. His remarks ranged from "that was a real nice play" to "he's a real good fellow." By the time he had drawled "real good" for the 20th time, my son was amused, but I could see that he was also let down.

My mind went back to the dull gray pain I remember feeling years ago when I read about Bill Tilden, my great hero, standing pitifully in court waiting to be sentenced for conduct so jarringly incongruous with my memory of him at Forest Hills: His cannonball service, his giant strides, his flat deep drives and his imperious impatience with ballboys, linesmen, and umpires.

We never get accustomed to these let-down feelings. The boy in us cries "Say it ain't so, Joe."

Well, what prompted all this musing is reflection upon the long succession of prominent businessmen appointed to high office in Washington in recent years, whose ineptitude in public affairs has been embarrassingly exposed and whose exodus, in some cases, has been so undignified.

Most of these men had been successful in some field of business and I guess I have an inordinate respect for entreprenurial ability. Besides, many of these appointees were well-meaning, good men.

Yet, as the time for summing up approaches, it is increasingly evident that the present administration has performed best in those areas from which businessmen have been excluded, and worst where they have taken over. Surely the record of the Treasury, Commerce, and Defense Departments and many regulatory agencies is a disappointing and, in some cases, sordid one. The administration has not done well in developing missiles, in atomic powerplants, in administering foreign aid and regulating gas companies, airlines, broadcasting companies and drug firms.

The successful transfers of recent years have been those of civil servants and military people into business; the unsuccessful ones, in the main, those of businessmen into Government.

Why is this? Why did many businessmen (William Batt, Robert Lovett, Paul Hoffman, and others, perform so successfully in Government under former administrations not remembered for their cordiality toward big business?

Today, the business world has many more men and women who have thought seriously about social and political problems than it had 20, or even 10 years ago. Why have they not been the ones called to Washington?

The mistake, I think, has been in assuming that any head of a large corporation can administer any public agency wisely, and that administration is an art divorced from any profound knowledge of the jobs which any agency is set up to perform. Time and again, corporation executives with no understanding of the complicated problems at issue have been appointed to high office—sometimes to serve only a couple of years and then be replaced by others with an equal lack of understanding.

To be sure, heads of great corporations are more than private businessmen. They are rulers of vast nonstatist organizations and, to a large extent, of society itself.

These men should have reflected profoundly upon the public aspects of their activities. Many have. But the quality and tone of much advertising, much behavior toward regulatory agencies and legislative bodies and the frequent unconcern for the public domain are clear indications that many corporate executives have no more understanding of public issues than the run-of-the-mill professional boxer has.

When a great steel company, one of the world's largest, allows the management of a huge plant in the South to side with, and support, over a long period, the most irresponsible and reactionary political faction in the State, surely this reveals that political immaturity (or unconcern) can and does exist side by side with the expertise in steelmaking.

When the heads of great chains of stores—and the President himself—are unwilling to say a word in behalf of a Negro desiring to eat a sandwich and drink a coke alongside a white man in Atlanta or Richmond, nearly 100 years after Appomatox and adoption of the 14th amendment, this too reveals that they have opinions about public issues that most of us think are long outdated.

To be head of a large corporation is not qualification enough for a top Government job—or should not be.

Aid to India

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1960

Mr. CARLSON. Mr. President, Kansas has a very particular interest in the problems of India. Kansas State University has for several years, through the International Cooperation Administration, had contracts for developing agricultural programs in that country.

It was my privilege to visit India 2 years ago, and to observe some of the work that has been done. As a Kansan, I am proud of the progress that has been made.

Last December, President James A. McCain, of Kansas State University, and Mr. Whitley Austin, a member of the State Board of Regents, visited India, and made a study of the projects that we have undertaken. They made some very worthwhile suggestions, which I received, and sent to the State Department, in the hope that some of the programs could be improved.

Mr. Whitley Austin wrote an editorial, entitled "Hard To Help," which appeared

in the April 16 issue of the Salina Journal. I ask unanimous consent that the editorial be made a part of these remarks and be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HARD TO HELP

Much of our program of technical and financial help to India could be financed without costing U.S. taxpayers another dollar.

We are interested in helping India because it is a stronghold of freedom in Asia, a barrier against the further advance of communism.

It is a major cold war front. The Russians thoroughly appreciate it and are sending men and rubles to India in an effort to win the vast subcontinent to their side.

In selling wheat and other commodities to India, we have built up a large reserve of rupees. Under an agreement covered by our Public Law 480, the rupees owed us for these commodities are held for our account by the Government of India.

These rupees may be spent by us in India for the purposes of loans and grants to promote trade and economic development, including agriculture. Nearly 1.5 billion rupees already have been obligated for these purposes.

But we still have on deposit nearly 3 billion rupees, or more than $500 million worth, enough to give tremendous stimulus to our technical help programs.

The Indian Government, however, must approve the additional help. It has not done so. This may seem strange because the help is for India. The explanation probably is that India feels the spending of this sum of rupees would deplete its resources and be inflationary.

The Indians are a hard people to help. They are one reason waging a cold war is so interesting—and so exasperating.

Clearer Public Understanding of Agricultural Problems Is Needed

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include the following editorial from the Jackson (Miss.) Clarion-Ledger:

[From the Clarion-Ledger, Apr. 10, 1960]

CLEARER PUBLIC UNDERSTANDING OF AGRICULTURAL PROBLEMS IS NEEDED

Responding to an appeal from the Delta Council and other cotton industry groups, the National Cotton Council of America has developed a blueprint for a workable public relations program for agriculture, to offset a serious extent of public antagonism brought about by what seemingly is an organized campaign against farmers.

A positive approach to the solution of this problem was presented by National Cotton Council staff members at Cleveland, Miss., recently, sponsored jointly by Delta Council, the Mississippi Farm Bureau Federation and the Staple Cotton Cooperative Association.

The success of this public relations program will, of course, depend largely on intelligent planning, hard work and a great deal of sustained effort by farmers and agricultural interests—including all agencies and organizations that service and supply agriculture's needs.

Miller P. Holmes of Yazoo City, president of the Delta Council, has summed up the problem this way: "We believe the most serious threat to agriculture today is the intensity of the effort on the part of many people to discredit farmers and farm programs.

"Right or wrong, and whether we like it or not, public opinion will eventually determine the kind of treatment farmers and their associates get, both in the marketplace and in the halls of Congress. This same public opinion will ultimately determine our economic position and standard of living."

Complicating the problem is the fact that there is enough truth in some of the charges against agriculture to cause many uninformed people to give credence to the entire antifarmer campaign. This means that agriculture has the big job of separating fact from fiction, at the same time setting its own house in order.

It is important for the public to recognize some very significant facts about agriculture and its importance. Farmers, their suppliers and those directly dependent on processing and distributing farm products account together for more than one-third of the Nation's total employment. Over 22 million workers are employed in agriculture and in agricultural industries.

Total farm investment in 1959 was $200 billion, equivalent to over two-thirds the value of all the stocks of all corporations represented on the New York Stock Exchange. Farmers' expenditures for labor, farm machinery, fuel, feed, fertilizer, insecticides and other production items have increased from $6.4 billion in 1941 to $25.1 billion in 1958.

Despite the publicity which indicates that farmers receive most of the Government subsidies, they are far down the line when total dollars are considered. Moreover, it would be difficult to find a segment of the American economy that does not receive some benefits from Federal subsidies.

Facts, however, are being ignored and many city people think of farmers as having both hands in Uncle Sam's pockets up to their elbows, and agriculture is pictured as the most heavily subsidized segment of the economy. A better program of public relations is a must for agriculture, to correct popular misunderstandings and supply the American people with factual information offsetting unfavorable propaganda.

Higher Salaries for College Teachers

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19, 1960

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Kansas City Star concerning one of the most important problems facing us today—the education of the young people of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Kansas City Star, Apr. 7, 1960]

HIGHER SALARIES FOR MANY MORE COLLEGE TEACHERS

In the past we have frequently heard the low salaries of college and university teachers explained by the law of supply and demand. Certainly the cold, old economic law is part of the story. And, now, it pinches the other foot.

Enrollment increases, so far, have created a demand for faculty members that exceeds the supply. The demand will step up at an accelerating rate on the way to the surge of the middle 1960's. Colleges and universities have every reason to bid against each other for faculty talent.

Recently the U.S. Office of Education reported an average salary increase by 4-year colleges and universities at 10½ percent over the last 2 years. It is hardly a dramatic change but at this early stage of the trend it is highly significant. Plainly the competition for teachers will become more intense. It is reasonable to assume that the salaries will rise accordingly.

College trustees who have formerly justified their low salaries by the law of supply and demand can't escape the same law now. Neither can State legislators. Somehow the cries of anguish leave us cold.

The whole public has a direct stake in this operation of the law of supply and demand. A pronounced improvement in faculty incomes is an important attraction to young people who are expected to enter the teaching field in much greater numbers. The supply of teachers must be increased to meet the demand of double enrollments in a relatively few years. The American people will have to meet a higher pay standard for more teachers.

The Nation carries no obligation more important than the education of its youth. It is the Nation's future. This is one cost that taxpayers and private contributors must be prepared to pay. It is one cost that should be met cheerfully.

This is an era of a great national scramble for everybody's money. At the national level, people are taxed within an inch of their lives for a fantastic defense effort that is embroiled in a bewildering controversy. The American people pay billions to buy and store grain without in any way solving the farm problem. They pay for a multitude of high-sounding projects that they don't understand. They are constantly solicited for help by private organizations that are known to them only by name.

But it is easy to see the value of an all-out effort for education. And the culmination of education comes with the training of leaders, scientists, and thinkers at the university level. In the long sweep of history the very survival of the Nation depends on the quality and range of education offered its youth.

Even today American faculty salaries are generally comparable to earnings from skilled labor. We have no intention of minimizing the importance of skilled manual jobs. But it is a simple fact that the manual worker's investment in a preparation in no way compares with the cost of preparation of a teacher with a doctor's degree.

You can assume that the degree holder has spent the equivalent of some 10 years in the student role beyond high school. In his investment the 10 years of outright expenditures are incidental. Far more important is the expenditure of time, which is about one-fifth the productive years in a normal lifetime.

Of course, the real test of a teacher's value is not his investment in education, but his ability to teach what he knows, to inspire the oncoming generation. In the developing competition no doubt many mediocre faculty members will be overpaid. And the contribution of the great teacher will be far greater than any salary increases that may be given him. Here we are concerned only with the general effect of the trend. It is a profoundly important fact of our times.

Former Brooklynite Wins Freedoms Gold Medal

EXTENSION OF REMARKS
OF
HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. COFFIN. Mr. Speaker, I would like to insert in the RECORD an article from the Brooklyn Tablet paying tribute to one of our outstanding young men in Maine, Daniel E. Lambert of Orrington, Maine. Mr. Lambert, fifth district commander of the American Legion, with a distinguished record of service in World War II, has been recently awarded the George Washington Honor Medal Award by the Freedoms Foundation for his public address, "New Glory for Old Glory." It is a pleasure and a privilege to make more widely known, in this manner, the achievements of Mr. Lambert.

FORMER BROOKLYNITE WINS FREEDOMS GOLD MEDAL

VALLEY FORGE, PA.—One of Maine's outstanding Catholic speakers and lecturers has been awarded high honors by the Freedoms Foundation at Valley Forge. W. C. Sawyer, vice president of the Awards Administration, announced that Daniel E. Lambert of Orrington, fifth district commander of the American Legion, has been awarded the George Washington Honor Medal Award for his public address entitled "New Glory for Old Glory" delivered on Flag Day over radio and TV units of northern Maine. Sawyer announced that the four-times-wounded veteran of the famed "Darby's Rangers" of World War II had been awarded the gold medal by the distinguished national and schools awards jury for outstanding achievement in helping to bring about a better understanding of the American way of life in 1959. The medal will be presented to the Orrington Legion official during special ceremonies to be announced at a later date.

Mr. Lambert has delivered hundreds of addresses and lectures on the subject of Americanism during the past few years. He also actively lectures on the role of the Catholic layman in the promotion of Catholic Action and has been one of the Nation's leading opponents against communistic teachings and has been cited by every veterans' group for outstanding work in the field of Americanism. It was recently announced that he would lecture throughout the New England area on the subject of the loyalty oath program in connection with the National Defense Education Act.

A native of Brooklyn, N.Y., Mr. Lambert was educated in St. Agatha's School, Brooklyn, and Cathedral College in New York City. He is the son of the late Walter Leonard Lambert who died in 1952. His mother, Mrs. Ellen McLoughlin Lambert and her daughters Mrs. Jerome Quigley and Mrs. Robert Calvosa and their families reside at 5016 Eighth Avenue, in Brooklyn.

Mr. Lambert, 36, is married to the former Elise C. Pooler of South Brewer. They have three daughters, Cynthia Mildred, Maureen Patricia and Margaret Marie, all students of St. Teresa's School in South Brewer. Active in the affairs of his parish, Lambert is a past president of St. Teresa's PTA and a member of the Holy Name Society. He also serves as a member of the board of directors of the Eastern Maine Friends of Retarded Children and the Bangor-Brewer Catholic Social Service Bureau and the Penobscot County Chapter of the American Red Cross.

Organized "Integration Sitdowns," in the South

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1960

Mr. THURMOND. Mr. President, during the past few months there has been a series of organized Negro "integration sitdowns" in various cities of the South. These occurrences were organized and directed by such organizations as the NAACP and CORE. These instances have demonstrated beyond any shadow of a doubt that these organizations of professional race agitation have neither a respect for legal rights of their own or any other race, nor have they the interest of the southern Negro at heart.

Recently in Savannah, Ga., local Negroes formed an organization called the Negro Protective League to combat the vicious programs of these organizations for race agitation. The Negro Protective League's announced purpose is to combat the vicious boycott programs organized and directed by the NAACP and CORE.

There appears in the April 17 issue of the Augusta Chronicle a splendid editorial which points out that the southern Negro recognizes clearly that continued progress for his race lies not in agitation and ill feelings, but in harmonious, cooperative relationships with the white population of this area. It is the local Negro himself who will be the chief victim of the NAACP-directed boycott tactics. The formation of the Negro Protective League is proof positive that the NAACP does not speak for all the southern Negroes and that its tactics are deplored, not only by the white people of the South, but by the southern Negroes themselves.

Mr. President, I ask unanimous consent that the editorial from the Augusta Chronicle of April 17 entitled "The Boycott Is a Boomerang" be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BOYCOTT IS A BOOMERANG

The fact that a 1,700-member Negro Protective League has been formed in Savannah to combat the vicious boycott program of the NAACP seems highly significant to us for at least two reasons.

The league's mere existence belies the vaunted boast of the NAACP that it speaks for all southern Negroes.

The league's defiance of the NAACP clearly demonstrates that the thinking Negroes of the South are fully aware of how intimately their personal welfare is bound up with that of the southern white man and with the progress and prosperity of the community in which they live.

Too, in taking the position that it not only will not join in the NAACP-sponsored integration sitdowns and economic boycotts, but will instead actively fight them, the Savannah group has shown it will not jeopardize the welfare of local Negroes to the whiplash demands of outside agitators who have no stake in the progress of that city or, indeed, the State as a whole.

The group realizes that use of boycott tactics is more than merely vicious; it is a boomerang, whose chief victim will be the local Negro himself, who will be left to suffer the inevitable results of the NAACP's mischief while the outside agitators, their destructive work accomplished, move on to other parts.

The Negro Protective League has declined this doubtful distinction of being the pawn of such irresponsible outsiders. It has refused to be blackjacked by demands of northern pressure groups and ambitious politicians.

Its stand, we feel, is well-taken, and does credit to the members of the league.

Savannah, even now in the process of developing one of the most important ports on the Atlantic coast, participating strongly in a program to acquire more and large industries in that area, stands on the threshold of a period of prosperity perhaps never before matched in the city's history.

The wealth which will accrue from such commercial and industrial development will not fall alone upon the white residents of Savannah. It is shared with the local Negroes as well, in the form of more and better jobs, higher pay, civic improvements, and better living conditions.

The individual members of the Negro Protective League, as responsible citizens of Savannah, know that any measure taken to sabotage the economic betterment of their city can, in the long run, only hurt them personally and perhaps damage irretrievably the slow but steady progress the members of the Negro race have made over the long period of years in companionship with their white fellow citizens.

The league seems to be saying, in effect, that its members have the patience and forbearance to seek progress by slower and more certain means.

The southern Negro will make that progress. But not by cutting his own economic throat or by giving away the birthright or his children.

The Sweetpotato Must Be Saved

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. THOMPSON of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article carried by the Washington Daily News of April 12 by Inez Robb regarding the delicious sweetpotato.

Sweetpotato production is one of the economic mainstays of the people of my district. The 1958 production for Louisiana was worth around $5 million and today this crop is worth around $20 million and we have more than 60 shippers and at least 30 canning plants. This is the result of breeding new high-yielding, disease-resistant varieties and research in grading, handling, shipping, and canning. Research has saved the sweetpotato industry in the South. A new sweetpotato processing pilot plant specifically for sweetpotato research is now under construction at New Orleans and the industry hopes soon to produce instant sweetpotatoes commercially.

The article follows:

THE SWEETPOTATO MUST BE SAVED

(By Inez Robb)

Life is real, life is earnest and Uncle Sam has a new worry: You and I aren't eating enough sweet potatoes. That is, we don't eat enough of 'em to satisfy the farmers who grow 'em.

We Americans eat only one-third as many sweet potatoes today as we consumed 25 years ago. Last year, we only ticked away a measly 7.3 pounds per person. It made sweetpotato farmers very unhappy. And if there is one thing Uncle Sam cannot afford, it's unhappy farmers.

CAMPAIGN

So, the Government is about to undertake a campaign to glamorize the yellow spud. At the moment I am bracing myself for a tempest of Federal pamphlets on ways to prepare the sweet potato, just as I am trying to work my way out from under a blizzard of unsolicited pamphlets, courtesy of the U.S. Department of Interior, on how to cook and serve shrimp.

Oh, the Air Force isn't the only segment of Government that goes hog-wild once it gets its hands on paper and printer's ink.

Anyway, I have been pondering the plight of the sweet potato, and have come to two helpful conclusions about its present decline. First, we live in a weight-conscious world. Everyone is either on a diet or just about to climb aboard. And the sweet potato has become classified in the public mind with such menaces as chocolate fudge sundaes and banana cream pie.

MUST GET BUSY

If the sweet potato is to be saved, agronemists and horticulturists—or would it be biologists?—must get busy and perfect a noncalorie impomoea batatas. This is the first essential step in the resurrection of the golden spud. Prove it's nonfattening, and half the battle is won.

The second step is equally important, perhaps more so, and that is once and forever to divorce the innocent sweet potato from the marshmallows. It would not surprise me to learn that the decline and fall of the sweet potato began the day that some incompetent cook with a few left-over marshmallows on hand, decided to use them up by topping a sweetpotato casserole with them.

The sweet potato is one of the blessings bestowed upon the old world by the new. Indians were cultivating the sweet tuber before Columbus set sail on his great voyage. The sweet potato is both native and delicious. It deserves to be eaten regularly and not associated strictly with Thanksgiving or Christmas.

Federal Support of Education

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19, 1960

Mr. WILLIAMS of New Jersey. Mr. President, it is the hope of many persons in the Senate that a bill for Federal support of education will be passed this year. Many of us believe that the bill should give States the opportunity to decide whether Federal funds should be used for construction or for increased pay for teachers.

An editorial in the April 13 issue of the New Brunswick (N.J.) Daily Home News, discusses some of the problems facing one board of education which is now faced with voters' rejection of a budget and by resultant resignations from high school teachers. While the editorial discusses the situation in one New Jersey municipality, the conditions described in the editorial apply, I believe, to many thousands of towns and cities throughout the United States.

It shows how teachers must often make a difficult decision between uncertainty in their present positions and the prospects of better salaries and less uncertainty in other kinds of work.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEACHERS TAKE THE LONG LOOK

The Middlesex Borough Board of Education received four more resignations from high school teachers the other night, bringing the total in 2 months up to 10 resignations in the high school and 12 for the school system.

In answer to a question, the board's personnel chairman, Howard Bassett, said that one of the principal reasons advanced by seven teachers who were leaving was a loss of confidence in their future in the system in view of the vote on the school budget. In February, for the fourth time in 6 years, the Middlesex voters had rejected the board of education's school budget.

Bassett elaborated that the teachers appeared to think that in 5 or 10 years they would be better off if they changed positions now.

This is the area in which the rejection of school budgets makes itself most felt and the long range implications are significant.

When school budgets are defeated and pared, when there is skimping on equipment and supplies, when teacher raises are less than had been proposed in the budgets, the immediate effect is not always great or obvious. The older experienced teachers with substantial periods of service do not leave. Many of them own their own homes in town or nearby. They have roots in the areas. They stay on.

But in the younger ranks, where the teachers have most of their career ahead of them, the budget defeats have more impact. The individual teacher's average loss by the budget defeat (in one community a loss of $50 of a proposed raise, and that before taxes) may be small, but if the teacher regards the budget defeat as a pattern for the future, as a picture of what the electorate wants for its teachers over the years, the teacher with decades of professional experience ahead of him moves now to a community which values its teachers more highly.

This, of course, is the tragedy of many school budget defeats here in central New Jersey in recent years. They have benefited the taxpayer but little in dollar savings, and they have commenced an erosion process in the teaching staffs of the schools.

The erosion process is slow. The communities with fine school systems have a broad base of high caliber teaching talent, much of which will stay on. But the replacements which will be obtained will be of lesser quality where the school budgets are being defeated and where the atmosphere is not one of full support for the schools. Inferior replacements will dilute the quality of the faculties.

A vote on a school budget, thus, is not just a thing of today. It is not just a yes or a no on school expenditures for 1 year. It is part of a long-range program which builds or tears down faculties and school systems.

Distressed Areas in the Southern States, February 1960

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. FLOOD. Mr. Speaker, underemployment and rural distress are the dominant problems in the Southern States. Five hundred counties of the total of 690 rural counties considered eligible for benefits under the area redevelopment bill reported to the House of Representatives are in the South. But there are also large numbers of urban distressed labor markets. Current information indicates a total of 82 have substantial labor surpluses and of these 66 have chronical labor surpluses, continuing for more than 18 out of the last 24 months. In some instances these antedate the last 2 years.

Among the distressed labor markets are 7 large major labor markets, 51 smaller ones, and 8 very small ones. The seven major labor markets in this chronic surplus and distressed condition are: Roanoke, Va.; Durham, N.C.; Charleston, W. Va.; Huntington, W. Va.; Wheeling, W. Va.; Steubenville, Ohio; and Louisville, Ky.

The largest number of smaller distressed areas are to be found in West Virginia, 16; Mississippi, 9; North Carolina, 8; Kentucky, 7; Alabama, 6; Maryland, 6; and Virginia, 4.

As part of my remarks, I include fact sheet No. 38 E, part II, which was compiled by the Area Employment Expansion Committee with offices at 99 University Place, New York City:

Employment and unemployment in surplus labor markets in Southern States, February 1960

State and labor market	Month of report	Civilian labor force	Unemployment	Unemployment as percent of the labor force	Months surplus in last 24 months (March 1958 to February 1960)	Distressed area [1]	Most recent date of start of substantial labor surplus

The Lyons Republican Emphasizes the Importance of Cancer Education and Contributions

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1960

Mr. KEATING. Mr. President, a recent editorial in the Lyons (N.Y.) Republican emphasized the importance of the fact that during the month of April the American Cancer Society is promoting an educational and fund-raising crusade. In this editorial, the progress which is being made in the fight against cancer is outlined, as well as the importance of the educational and research work which is made possible by the tireless leadership of the American Cancer Society.

Because of the importance of the message contained in this editorial from this fine newspaper, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOOD NEWS FOR OUR NATION

In connection with its April educational and fund-raising crusade, the American Cancer Society has announced that there are 1 million Americans alive today who have been cured of cancer. Twenty years ago, there were only 180,000.

But there is more to the story. The society considers cured only those alive and without evidence of the disease 5 years following diagnosis and treatment. By this standard, it is estimated that an additional 600,000 cancer patients diagnosed and treated within the last 5 years will live to enter the ranks of those cured. This means that today there are actually 1,600,000 men, women, and children cured of cancer, although 600,000 will not formally be counted until 5 years from the time of treatment.

Twenty years ago, only one out of seven who developed cancer was saved. Ten years ago, it was one out of four. Today it is one out of three. It is estimated that 165,000 Americans will be saved from cancer this year.

This is good news indeed. But, unfortunately, there also is bad news.

The dark side of the picture shows that 85,000 men, women, and children will die needlessly of cancer this year because their cancer will not be diagnosed in time and promptly treated. It is possible to save half of all those who develop cancer through early diagnosis and proper treatment.

But the good news in cancer control is not the result of accident. It has come about through cancer research and education. More and more men and women are having annual health checkups as the best possible protection against cancer at the urging of the American Cancer Society.

Let us cut down on the bad news and increase the good news by supporting the 1960 crusade of the American Cancer Society. Guard your family—fight cancer with a checkup and a check.

Blue Sky Pie

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Lancaster News, Lancaster, S.C., of April 18, 1960:

BLUE SKY PIE

We are striking no blow for Republicanism but give a look at what the Democratic Foreign Policy Advisory Committee would have us do if the Republicans don't win this fall:

As a starter this group, headed by former Secretary of State Dean Acheson, an original one-worlder, would have the United States finance each year the education of 500,000 foreign students in American colleges and universities. This is some 100 times the 5,000 foreign students now being educated each year in the United States at the expense of the taxpayers.

The Advisory Committee, which also includes Representative CHESTER BOWLES, foreign policy adviser to Senator JOHN F. KENNEDY, completely ignores the cost, holding merely that dollars spent in this fashion would make friends for America abroad.

Since each student brought here from a foreign country would cost approximately $3,000 a year, the proposed program would require $1,250 million to finance. An equivalent reduction in foreign aid would make some sense but the Advisory Committee has no such proposal. More foreign aid is needed along with a more liberal foreign trade policy, according to the committee.

According to these Democrats, the United States can survive only by making less on trade, giving away more in aid and spending our educational assets on our foreign friends.

Problems of Children and Youth

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1960

Mr. HENNINGS. Mr. President, an editorial appeared recently in the Joplin Globe on the White House Conference for Children and Youth. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Joplin Globe, Mar. 30, 1960]

HOPES ON YOUTH

Some 7,000 persons are holding 600 round-table conferences in our National Capital this week on problems of children and youth. Their overall objective is to somehow help prepare our young people to do a better job than have the generations before them.

This is ever the hope of father for son. It is a desperate need today in the relationships between the families of nations.

Like each successive White House Conference for Children and Youth, this one becomes more important than preceding ones over a period of 50 years since they were initiated. Present-day youths inherit a new dimension of problems—space and rocketry in a nuclear age. In other words, they are to be asked to assume the responsibility of taming the lion their elders now hold by the tail.

This is why the conference theme is "responsibilities of young people." And what a responsibility to inherit, with civilization itself at stake. But, look also at the opportunities.

These thoughts are at the core of efforts to develop programs and inspirations to give the younger generation better training in education, in health, in environment, and in understanding to prepare their minds and bodies for their test.

President Eisenhower convened this year's conference on a note of fresh hope when he said, "Our children understand, as we did not in our own youthful years, the need—now approaching the absolute—for peace with justice." They are being taught, he said, the value of the individual and the dignity of all people, and the futility and stupidity of war.

It is estimated that some 5 million adults across the land helped to plan this year's White House conference on youth in a monumental effort to pass on to the new generation the benefits of the successes and failures of their elders in dealing with an increasingly complex society. The least we can say is that it is worth a supreme effort.

Significance of Berlin—German Issue at Summit Conference

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1960

Mr. WILEY. Mr. President, a recess in the Foreign Ministers' Conference provides the nations of the world an opportunity to take a new look at the fundamental issues involved in the upcoming summit conference.

As we know, there has been some question as to whether or not this long a recess was advisable. However, now that it is underway, we have the opportunity—and perhaps the obligation—to review the involved challenges.

Fortunately, the Western Powers have achieved a commendable degree of unanimity on proposals for the summit conference. Underlying the Western position are these fundamental—and, I believe, essential—principles: First, the West will not either encourage nor open the door to appeasement; second, the Western Powers are firm in their mutual agreement that there will be no concessions that would jeopardize the status of West Germany or West Berlin; third, agreement on disarmament—though a major issue—will not be bought at a price of jeopardizing our future by neglecting now to provide safeguards to protect non-Communist nations against surprise attack.

The Western Powers have long expressed a willingness to "go that extra mile" for reduction of armaments to reduce tensions and threats of war.

As in the past, however, the adoption of such safeguarded agreements, regrettably, depends to a large degree on whether the Communists are really interested in reduction of world armaments, or whether they are again playing the old game of deceit and subterfuge; that is, trying to get concessions from the West that would weaken our deterrent power while, at the same time, enabling them to engage in activities to ultimately jeopardize the security of the free world.

As one of the major upcoming events affecting the interests of the whole world, of course, the spotlight is focused on the summit conference.

Recently, a great many national and world leaders have given us the benefit of their thinking on major issues "at stake."

A few weeks ago, Chancellor Konrad Adenauer and German Foreign Minister Dr. Heinrich von Brentano were here in Washington. The members of the Senate Foreign Relations Committee and other of my colleagues will recall luncheoning and discussing major issues with these outstanding statesmen of West Germany.

The significance of the upcoming conference, particularly as this relates to problems of reunification of Germany and the status of Berlin, have been constructively reviewed by Secretary of State Christian Herter, Under Secretary Douglas Dillon, and other dignitaries and statesmen. The American press has also widely and constructively reviewed both the issues and the outlook for accomplishments at the summit conference.

At this time, I would like to cite a number of these articles, particularly as these relate to the significance of West Germany to the free world alliance.

First, I would like to introduce a letter to the editor of the New Yerk Herald Tribune, for the Appendix of the RECORD, by my friend Maj. Gen. Julius Klein.

General Klein is a distinguished combat soldier and expert in public relations. Author of the original combat public relations plan for the War Department in 1941 which formed the basis of our own public relations during World War II, General Klein has done much since World War II to create in this country not only a better understanding of the position of the Federal German Republic, but he has also been instrumental in creating good will between the United States and Israel. A past national commander of the Jewish War Veterans of the United States, he has also served as consultant to important Senate subcommittees. For his significant work, in 1952, for the Armed Services Committee and the Appropriations Committee of the Senate, for example, Members on both sides of the aisle not only approved, but praised, his report.

Following General Klein's letter, I ask unanimous consent also to have printed in the Appendix of the RECORD the following articles, reflecting on the significant East-West conference: New York Herald Tribune editorial, April 14, 1960; New York World Telegram editorial, April 15, 1960; New York Journal American editorial, April 15, 1960; New York Mirror, editorial, April 15, 1960; and Chicago American editorial, April 15, 1960.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

LETTERS TO THE EDITOR—GERMANY VITAL TO WEST

To the New York Herald Tribune:

On May 16 the Big Four Summit Conference will open in Paris in an atmosphere of gloom bordering on despair, particularly among the peoples of divided Germany whose destiny is not in their own hands, but rather under the control of alien states—men far from the stage, from the actors, and from the dramatis personae as well.

The reason for this attitude of negativism, which I observed on my trip to Germany a few weeks ago, basically is the threat of atomic extermination which is hurled at the German people day after day, week after week, by Radio Moscow and its satellites. While Khrushchev prates about the Camp David spirit and the relaxation of tensions, his psychological-warfare specialists raise the specter of missiles with atomic warheads on German soil, extinction by nuclear bombs, etc., etc. But even more menacing than these belligerent warnings is a lurking fear on the part of the West German population that they will be abandoned by their NATO allies, chiefly the United States, in the upcoming Paris negotiations.

The free peoples of the Western Alliance clearly state that they will never sacrifice Berlin in the interest of expediency.

We must make certain that these reassurances reach the ears of the German people, but particularly the ears of Nikita Khrushchev, who seems to have reached the false and dangerous conclusion that the free world is intimidated by his claims to power and supremacy.

JULIUS KLEIN,
Major General, U.S. Army, Retired.
CHICAGO.

[From the New York Herald Tribune, Apr. 14, 1960]

NO MOUNTAIN FEVER THIS TIME

The foreign ministers of France, Britain and the United States, with other Western colleagues, are meeting this week in Washington in formal preparation for the summit conference in Paris next month. They will meet twice again before the curtain actually goes up. But this time the approach to the summit is being made at a deliberate and measured pace, quite different from the breathless scramble which brought East and West together at Geneva 5 years ago. This time, there is little mountain fever. The trails seem plainly marked and the ascent looks routine.

One reason for the lack of agitation and excitement is that the summit of 1960 is clearly not viewed by public opinion as a desperate rescue operation on which the fate of humanity depends. At Geneva, the heads of government were looked on as surgeons who had the world on their operating table in dire need of amputations and blood transfusions if it was to survive. But the Geneva meeting accomplished nothing in particular, and the world survived anyway.

At Paris, it will not be so much a question of rescue as of preservation, of holding present advantages as against the risks of seeking new ways to set the world, once and for all, in order. Of course, there is a more positive prospect in the field of disarmament. The possibility of some form of agreement to ban nuclear tests has become a strong one, and it is in this field that the greatest flexibility, perhaps the only flexibility, exists. Therefore disarmament is the most potentially fruitful of all topics of discussion, and that is why Western statesmen hope it will be the principal one.

It is unlikely that Mr. Khrushchev will show flexibility over Berlin or German reunification. Dr. Adenauer's belief that any change in the status of Berlin itself will be to the West's disadvantage is surely the right one. The big worry here is that Mr. Khrushchev will make a brutal effort to force the issue.

Another reason for the summit atmosphere is that in the past year the ground has been so often and so carefully covered. There has been the foreign ministers' Geneva conference of last summer on Berlin. There are the two current disarmament conferences, again on the shores of Lake Leman, and the issues and positions are being endlessly aired. There have been spectacular visits between the world's capitals. In the past month only, Mr. Khrushchev has been to Paris, General de Gaulle to London, Dr. Adenauer to Washington, and Prime Minister Macmillan to both Washington and Paris. The summit, in a manner of speaking, is a continuing body.

On the whole, these things are to the good. A summit meeting which arouses no great hopes can cause no great disappointments. And it should be easier to gain the painful inch when no one is talking about the grandiose but vacuous mile.

[From the New York World-Telegram, Apr. 15, 1960]

THE BERLIN TUG-OF-WAR

Four weeks before the long-prepared summit conference at Paris, it is becoming pretty clear that ideas haven't changed much in either camp during the 17 months since Nikita Khrushchev prodded the diplomats into motion by his sudden threat against West Berlin.

The West wants Germany (including both Berlins) united and free. The East wants Germany (including both Berlins) united and Communist. Obviously neither side can achieve its whole desire without a shooting war. Both sides are on record as saying war is "unthinkable" in an atom-armed age: Therefore, all the threats and counterthreats really constitute a verbal tug-of-war over half-measures, with each side hoping to get a slightly bigger share of the whole cake neither can have.

In this tug-of-war, the West has been, and remains, on the defensive, chiefly because Khrushchev had the advantage of the first tug: His November 1958 threat to absorb West Berlin into the embrace of the East German Communist satellite which surrounds it. Geography makes it almost impossible for the West to overcome this disadvantage. Firm and oft-stated resolve to keep Berlin free may prompt Khrushchev to slacken his grasp from time to time, but there is no conveniently surrounded chunk of Communist real estate where the West can begin a retaliatory tension.

Thus Khrushchev retains the initiative as the summit comes into view, despite commendable declarations of united determination such as those issued by the Western foreign ministers during their Washington strategy talks this week.

He retains it for two other reasons, in addition to his geographic advantage at Berlin. One is that Western experts, even the most veteran Soviet specialists like State Department Adviser Charles Bohlen, frankly can't predict what issue the bouncy Kremlin leader will pounce upon next, either as a surprise threat or as a surprise conciliation toward the outside world. The second is that the West's own leaders—being human and not always agreeing on everything, and sometimes distracted by such influences as public opinion and oncoming elections—take a painfully long path toward any policy-testing occasion such as the summit.

This doesn't mean Khrushchev is foredestined to win at Paris. There is a too-common habit of talking about these international negotiations as if they were a baseball game, with each side scoring a certain number of runs in succeeding innings. Nobody is going to win at this summit, or probably at any of the many summits which seem likely to follow. For Khrushchev has been convincingly warned that such a prize as Berlin is not available for winning at any debating contest, and cannot be won by force except at the penalty of global nuclear war.

These basic facts are the rigid limitations within which all the East-West negotiations must maneuver, so long as the Western experts are right in their assumption that the Soviet Union—unlike Hitler's Germany—is not willing to go to war to achieve its most coveted ambitions.

[From the Journal American, Apr. 15, 1960]

FREE CHOICE

The Foreign Ministers of the Western Allies have agreed on strategy for the German questions to be taken up at the summit.

While seeking a stopgap settlement on sensitive Berlin, they have decided to make no concessions which would weaken Allied rights in that city or that would imperil the eventual goal of a united, democratic Germany. The solid front does not promise to make matters easy for the Soviet.

Neither does the Allied decision to challenge the Russians to allow all Germans to vote on the question of a peace treaty.

The Allies want a peace treaty to await the reunification of democratic West Germany and Communist East Germany. Khrushchev is demanding separate treaties now.

The Hearst newspapers have consistently advocated letting the German people themselves decide their future. To let them vote—all 70 million of them—on the question of separate or joint peace treaties is a step in that direction.

But the right of free choice for the Germans must be really free.

[From the New York Mirror, Apr. 15, 1960]

GERMANY AFTER 15 YEARS

The central issue of international relations at the present time is Germany. The summit conference in May will deal with it first. The foreign ministers conference which has been meeting in Washington dealt principally with the German question.

It is impossible to separate Berlin from Germany, which is what Soviet Russia is really trying to do.

West Germany was represented at the Washington meeting by its Foreign Minister, Dr. Heinrich von Brentano, who is adamant that Berlin should not become absorbed among satellites of Soviet Russia.

He is fighting the policy of Great Britain, which is one of opportunistic appeasement. If West Germany is to be betrayed at the summit conference, West Germany will take steps not to be reduced to a Soviet satellite. In this, West Germany will be supported by France.

Thus 15 years after the end of World War II, the wheel of history has turned and the United States is now no longer the enemy of Germany but the friend and supporter. True, West Germany has engaged not only in a brilliant reconstruction of its economy and its industry, but has conducted a worldwide political propaganda, the best example of which was the recent meeting in New York between Chancellor Adenauer and Prime Minister Ben-Gurion of Israel.

This meeting brought to a close the Hitler era. It was an open assertion that nazism as a racial doctrine was offensive to West Germany and that the West German Government opposes any recurrence of antisemitism. The importance of this is that it is widely believed that the recent attacks on Jews throughout the world were Communist inspired.

Von Brentano, in his address before a group of United States Senators, restated West Germany's position, the essence of which is:

1. West Germany favors the unification of Germany, but not as a Soviet satellite.

2. West Germany insists that Berlin should not be absorbed by Communist East Germany which is a satellite of Soviet Russia.

3. West Germany is not to be sacrificed to appease the imperialistic ambitions of the Kremlin.

The policy of the United States has been to build up West Germany as a modern state, associated with France in the Common Market, and as a bulwark against further aggression in Europe by Soviet Russia.

This was the Dulles-Adenauer line which has proven to be historically correct. Any other position imperils France and can lead either to the reduction of Western Europe to a satellite of Soviet Russia, or to forcing West Germany into some kind of an understanding with Soviet Russia which would imperial our economic position in Europe.

The queer thing about all this is that while the United States is wobbling between the British policy of appeasement and the Adenauer-Dulles policy of insistence upon maintaining the right of Germany to its own existence, it is West Germany which is really maintaining the position that the fundamental rights of the United States as the victor in a war be fully respected.

The question is: Do we have to lose everything we fought for in World War II? Does Soviet Rusisa have to have all the gains from World War II? President Eisenhower will have to answer at the summit conference.

[From the Chicago American, Apr. 15, 1960]

A SHOWDOWN WITH KHRUSHCHEV

It is cheering to hear, from the Western foreign ministers who finished their presummit meeting in Washington yesterday, that they have united on a plan for German reunification to be offered to Nikita Khrushchev at the Paris meeting next month.

The reason we consider this encouraging is not that we expect Khrushchev to accept the plan; it is because the plan is right and reasonable and Khrushchev, in rejecting it, will have to accept the position of being wrong and unreasonable.

The West's proposal would give the 17 million Germans living under Russian Communist rule in East Germany an opportunity to vote, in an election to be held under international control, on the question whether they prefer to reunite with West Germany, as the West advocates, or to sign a separate peace treaty with Russia and remain under Communist rule, which is Khrushchev's plan for them.

If Khrushchev actually believed in self-determination for all peoples, as he is always saying he does in his propaganda speeches, he would readily agree to this plebiscite. But as the record in Hungary, Czechoslovakia, Poland, and the Baltic States makes clear, Khrushchev believes in conquest and suppression, not in self-determination.

Within the last 2 years he has observed, in moments of angry candor, that East Germany never will cease to be Communist territory and that if Germany ever is unified it will be done by converting West Germany to communism, too.

We hope President Eisenhower, President de Gaulle, and Prime Minister Macmillan will present their East German plebiscite plan as soon as possible after the summit meeting opens May 16. Khrushchev's answer will reveal whether he wants to use the summit meeting to improve international rela-

tionships or just to take the West for another dizzy propaganda ride.

In agreeing to confront Khrushchev with a challenge he will have to meet, Secretary of State Herter, British Foreign Minister Lloyd, French Foreign Minister Couve de Murville, and West German Foreign Minister von Brentano have acted to keep Khrushchev from taking charge of the summit meeting and running it for his own purposes. That is intelligent and decisive diplomacy, the kind the West hasn't practiced too regularly.

A Dangerous Excursion Into State Sovereignty

EXTENSION OF REMARKS
OF
HON. RANDALL S. HARMON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. HARMON. Mr. Speaker, I respectfully submit to my colleagues for perusal, the following editorial from the Muncie Star, Muncie, Ind., April 16, 1960. This editorial aptly points out some ramifications of the civil rights bill which, in my opinion, need to be given contemplative deliberation:

A DANGEROUS EXCURSION

Indications are growing in the U.S. Senate that the fight over a civil rights bill is far from over. The latest report is that Senators are considering at least one major revision in a proposed law which was passed by the House a few days ago. Should this occur, the process of finding common agreement between the Representatives and Senators may take even more time.

The belief that this law will apply only in the South, and only in the parts of the South where Negroes have not been allowed to vote, is not so. Provisions of this plan would make themselves felt at once in Indiana. They would also have direct application in many other States.

Title II of the House proposal makes flight to avoid prosecution for bombing "any building, structure, facility, vehicle, dwelling house, synagogue, church, religious center or educational institution, public, or private," a Federal crime. Under the civil rights law these local incidents could come under Federal police jurisdiction and punishment.

Title III of the proposed law requires voting records and papers to be kept for a period of 2 years. Only a few months ago, an elderly janitor burned ballots in an election in Logansport where fraud was alleged. Such an act could become a Federal offense under the new civil rights plan.

The House bill provides under title I that the obstruction of court orders regarding public schools shall be a Federal offense. An effort will likely be made to include all Federal court orders under this part of the new law, since it may be logically argued that every order should be equally supported by statute.

This would strike hard in the field of organized labor and labor disputes. The section says that any person who "willfully prevents, obstructs, impedes, or interferes with * * * the due exercise of rights * * * under any order, judgment, or decree of a court of the United States * * * shall be fined not more than $1,000 or imprisoned not more than 60 days, or both." The impact of such a law is obvious.

The previous, which would set up voting referee procedures, are equally open to question. These referees would be given broad powers in the dual capacities of judge and jury. In addition, the courts are directed by this law to act with speed at all times. The speediest action is not always the best in a court of law.

In its entirety, this law represents a dangerous invasion of many areas of life which have nothing to do with the popular concept of civil rights. The application of such a law might be even more of a shock outside the South than in those States toward which this statute is aimed.

Where citizens of any State are being denied the right to vote, they should look to the State laws and courts for relief. A more lasting adjustment of any inequities will come from local action than from Federal intervention.

The civil rights law as it is now proposed represents a dangerous expansion of Federal police power. Certainly it must be revised in order to protect millions of citizens who have not grasped the full meaning of this excursion into State sovereignty.

Democracy in Venezuela: President Betancourt's First Year

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. PORTER. Mr. Speaker, Venezuela's great President, Rómulo Betancourt, made a report to his constituents on February 13, 1960, marking the first anniversary of his inauguration of President.

Today, with pure republican joy—

Said Betancourt—

Venezuela is celebrating the first year of her constitutional government, the government that she herself built with the mortar of her votes. Now the child is no longer kicking in his cradle; he is precociously adult and walks along, placing his feet firmly on the Venezuelan land.

Venezuela is our friend. Venezuela provides an example for many nations who want both freedom and economic development. The Castro government could, if it only would, learn much from Betancourt and his associates.

Next Tuesday Venezuela celebrates the 150th anniversary of its existence. She has suffered through many dark days of tyranny but a brighter day has at last dawned.

Under consent previously granted I am including the entire text of President Betancourt's notable report to the people:

A YEAR OF GOVERNMENT

(By Rómulo Betancourt, President of Venezuela)

(A report to the people on the first anniversary of his Presidential Inauguration, Caracas, February 13, 1960.)

On other occasions I have spoken to the people of Caracas, and over the microphones to the people of Venezuela, as a militant member, a representative, and a candidate of a political party; but today I have come to speak as the director of a coalition government and as President of all Venezuelans. I shall speak to the nation and not just to the political party that I helped to organize and that put forward my candidacy for the Presidency, because as Chief of State I do not belong to any political party but rather to all Venezuelans of all political camps and to those who are not active in any party.

Today, with pure republican joy, Venezuela is celebrating the completion of the first year of her Constitutional Government, the Government that she herself built with the mortar of her votes. Now the child is no longer kicking in his cradle; he is precociously adult and walks along, placing his feet firmly on the Venezuelan land, and he will continue to roam it until April 19, 1964. The celebration of a first anniversary of a constitutional government in a country with a normal republic in existence, where the institutions of government are consolidated, is something that has no special importance, but it certainly has unusual significance in a country like ours, in which most of the governments have been self-elected and very few have reached the Presidential Palace raised up by the only legitimate source of power within the democratic system of government, which is the completely free will of the people expressed in elections.

I find myself among those Venezuelans who are least surprised that the Constitutional Government should have reached its first anniversary, having had to face only passing hours of emergency, because I always had faith that the government that I headed was founded upon bases of granite. Of these granite foundations, the fundamental one has been and will continue to be the decision of 7 million Venezuelans to eradicate forever from our country systems of force and arbitrary action, to be governed by regimes of law within the boundaries set by the inexorable standards of the laws. Moreover, I had faith that this was going to be a government not born under the sign of partisan sectarianism but under that of national unity, represented by the three great parties of the coalition: by Acción Democrática, by Copei, and by the U.R.D., and by the vast majority of Venezuelans who do not belong to any political party and know that they are properly represented within the Cabinet, the State governments, and the Autonomous Institutes, by partyless citizens, politically independent, but who are a guarantee of good service to the Republic.

The Communist Party has been excluded, and will be excluded for the remaining 4 years of my government, from this coalition, and no one can be surprised by this, because that party was implicity excluded from possible cooperation in the Government when the Pact of the National Organization was signed on October 31, 1958. And in this very spot, from this same platform, on December 5, I said that if I came out elected by the vote of the Venezuelans, my government would respect the right of the Communists to act as a party in national life; but that they would not be called upon to collaborate in the Government, nor would they have any influence on the decisions of the Government, because their philosophy is incompatible with the democratic philosophy of the Venezuelan state, and because their position in international politics not only fails to coincide with, but actually runs counter to, clashes with, and struggles against the best national interests of Venezuela.

When Abbé Sieyes, one of the authors of the Declaration of the Rights of Man in the French Revolution, suddenly appeared on the streets of Paris after the days of the Jacobin terror, he was asked what he had been doing during those long months in which the guillotine had functioned so efficiently; he replied ironically: "I survived." This government not only has guaranteed the exercise of the basic freedom, not only

has respected the rights of political and union organizations—700 more unions have been given legal status, and during its time in office the Confederation of Workers of Venezuela and the Farm Workers Confederation of Venezuela have been created—not only has it guaranteed freedom of the press and of broadcast or written information; not only has it eliminated from Venezuela the nightmare of midnight assaults by the National Security Police; not only has it freed the country from fear of the government, for it can be criticized and is criticized openly and freely, every day, in the pages of the press. This Government has done more than all that, which in itself is important. It has also undertaken a fiscal and administrative task, directed not only toward putting an end to the disorder left by 10 years of misgovernment but also toward laying the foundations for a new Venezuela, who will be the master of her own fate.

I shall not tire you now with a mass of figures, for that would be an abuse. The patient parliamentarians, the Honorable Senators and Deputies of the Republic will have the opportunity, on April 19, to listen to that succession of figures that reveal how, in this year of government, a fundamental impetus has been given to the economy, to production, to education, to housing in this country. At the same time a 4-year plan, a coordinated plan of achievements down to 1964, will be submitted to Congress for consideration. This plan has in large part already been drawn up. It will be discussed beforehand by the State Governors in the convention we shall hold on February 22. It will be discussed with the political parties, with the workers, with the Federation of Chambers of Commerce and Production, with the Banking Association, with everyone who has a word to say and an opinion to contribute. Because this is a Government not of introspective egocentrics but of people who seek and listen to the reactions of public opinion. This Government bears no man's first name or surname. This is a coalition government, and its success and mistakes are not successes and mistakes of the President of the Republic but successes and mistakes of the cabinet team, on which there are men from Acción Democrática (the Democratic Action Party), from Copei (the Social Christian Party) and from the U.R.D. (the Republican Democratic Union), and politically independent citizens. They are successes and mistakes of a coalition that is not a temporary arrangement but one that we must keep and maintain; for if there is one thing that has done harm to this country, which throughout its sorrowful republican history has been governed most often by imperious and arbitrary despots, it is that, in the limited moments of regimes of law, the political forces have become factions engaged in bitter, cannibalistic, and aggressive controversy. We must call a halt to interparty discord; we men of all political camps and politically independent citizens must all strive to lift Venezuela up, and not go on leaning on the wall of laments for what we have not done for Venezuela.

I have here in my hands the proof that it is possible, through the route of discussion and agreement, and as long as the understanding and agreement among the great national parties is maintained, to reach solutions that are favorable for the Republic. I have here a report that tonight the contract between the oil companies and the Fedepetrol (the oil workers union) will be signed. This contract means a raise in wages, salaries, and social benefits for the workers of the black gold, estimated at 330 million bolívares. And this was reached through the normal system of bargaining between the parties and without the foundations of the national economy being shaken by a strike such as that which went on for so many months between the steel companies and workers in the United States. This agreement shows the truth of the thesis maintained by the Government I head, that there are two ways of showing nationalism: the demagogic, loquacious, shouting nationalism; or the nationalism that, defending the interests of Venezuela and its workers, is not importing from abroad what has been well defined as "strategic hatred."

This leads me directly to state our position in regard to foreign capital. Our policy is well defined. We consider that we cannot fully develop our sources of wealth with Venezuelan savings alone, and that this is particularly dangerous, because with the advances of modern technology, riches that are not developed today may within a few years be obsolete (to use a word for which people have poked fun at me). But our position is well defined: foreign capital will come to Venezuela, not to aspire to special privileges or to expect that we should behave like the ingenuous aborigines of the 15th century who exchanged their gold for glass necklaces. We are aware of the value of our riches and we are not inclined to surrender them to the first bidder at whatever price he offers.

The second thesis is that we shall guide everyone who wants to invest money in Venezuela toward those branches of production in which there is no native Venezuelan development of our own; and in any case we shall establish as a necessary condition that he endeavor to associate himself with Venezuelan capital. But at the same time we are not adopting an attitude of unbending and aggressive xenophobic zeal, because if we did we would end up isolated in a world in which the underdeveloped, or insufficiently developed countries are seeking the cooperation of foreign capital to develop their own sources of wealth. We have a very well defined and very clear position toward the oil companies; they are here; they have more than $2 billion invested in this country's basic industry; they are paying high taxes, the taxes established by a decree that did honor to the Provisional Junta of Government; they are paying their workers high wages; they will have no further concessions in Venezuela, because so long as I govern not one centimeter of Venezuelan territory * * * (applause drowned out the end of the sentence).

We are going to establish the national petroleum enterprise, which is already being studied by the National Energy Commission created by the Government to coordinate all aspects of the production of energy in the country. The national petroleum company is going to act as an explorer and refiner of the black oil, for, 30 years after the establishment of the oil industry in this country, it is a shame for Venezuelans that we do not directly manage any part of the production. Every time that the stability of petroleum prices, and simultaneously the income of the Venezuelan nation, has been threatened, we have acted with decision. Thus we presented a carefully thought-out critical memorandum to the Government of Great Britain, when a company connected with the Crown lowered prices; and thus we went, without consulting any foreign ministry or any oil company, to the Pan-Arab Congress of the Middle East, which met in Egypt, to try to work out a front of the producing countries in order to maintain a high, stable price for the crude oil that both the Middle Eastern countries and we produce.

That is our nationalism, a nationalism that serves the interests of Venezuela and not the interests of a power that is not Venezuelan. The decision made by the Government of Venezuela, with the support of the parties of the coalition, to contract for a loan of some $200 million in the United States, is no deviation from that nationalistic line. The origin of this loan is very clear, fellow countrymen. We inherited from the dictatorship some very high budgets that were not in line with the real revenues of the country. The deficits of those budgets, which in part went to the private pockets and accounts of the beneficiaries of the regime, were covered by the system of debts, of invisible debts, which amounted to almost 5 billion bolívares, and which the provisional government and ours have had to pay. The country was told that part of the 1959–60 budget was to be covered by an internal loan; but the contraction of banking activity came along, not as a result of a bankers' conspiracy, but because the banks, in 1959, lent 1 billion bolívares more than in 1958. So the internal loan was no longer possible. And there are a number of basic works in progress that cannot be halted. Money must be given to the development corporation so that it will help to give impetus to the accelerated industrial development of the country, accelerated to the extent that last year 50 million bolívares more than in 1958 were invested in industry, and industrial jobs increased by 126,000. Money must be given to the Workers' Bank, so that it can continue to carry out its plan all over the Republic—a 260 million bolívares investment plan already underway—through loans and building, not only in Caracas with apartment houses, but in 80 towns distributed all over the Republic. Money must be given to the National Agrarian Institute, because the day after tomorrow the agrarian reform law will be promulgated by Congress and in the evening of the same day in which it is promulgated, in a solemn act at Miraflores Palace, it will receive the Presidential order that it be put into effect, as we thus fulfill one of the forgotten codicils of the agrarian testament of Simón Bolívar. And this money is needed to continue useful works, because we are not building more cable cars or more Guaicamacuto Hotels here now; instead, schools are being built; hospitals are being built; aqueducts and dams, highways and local roads are being built.

Under these circumstances, it will be necessary to take this loan which will be the first and last short-term loan that will be taken under the Government that I head, and which will be paid in full on April 1, 1964. We are not alienating our sovereignty, any more than Nehru's India is alienating her sovereignty when, as it has been reported, it has arranged a loan of 360 million rubles from Russia. We do not make arrangements for loan in rubles, because the ruble lacks purchasing power in the dollar area, which is the area in which we operate. But neither Nehru's India nor our Venezuela is mortgaging its sovereignty by making use of credit. More than this, fellow countrymen. In the 4-year plan to be presented to the National Congress on April 19, a minimum program is foreseen, that can be carried out with national resources, in three areas—electrification, irrigation, and telecommunications. But we have begun conversations with international agencies (not private banks) to see whether it is possible for us to carry out national electrification more rapidly, to carry out a program of damming water more rapidly, because in this country there cannot be really developed agriculture and cattleraising so long as we have barely 20,000 hectares with permanent irrigation and we are subject to the alternatives of drought and rains. And finally, a telecommunications plan that would let us maintain communication with each other in this immense geographic area of 1 million square kilometers. If it is possible it finance the execution of more aggressive plans of electrification, irrigation, and telecommunications in the next 4 years through the International Bank, I shall be most willing

to tell the country that we are contracting for a large loan to be paid in 25 years, but that the present generations will already begin to benefit from a powerful resulting advance in economic development and general welfare.

This would make it possible for ordinary expenditures that were to be devoted to electrification, dams, and telecommunications to be invested in agrarian reform; in the housing program; in increasing the number of hospital beds, because we have an extraordinary shortage of them; in giving drinking water to the hundreds of towns and thousands of villages of Venezuela that are dying of thirst. And all this can be put before you, before the Venezuelan nation, because there may be doubts about the purposes toward which the money from a loan is to be applied, but the people of Venezuela have no doubt about the honesty of those who are now managing the taxpayers' money. On October 18, 1946, then as President of a de facto government, before an enormous crowd similarly assembled in El Silencio, I said something that I want to repeat here now: that I, and my cabinet ministers, and my closest collaborators, can show our hands for you to see whether there is on them the mark of 1 single misappropriated bolivar.

It is rumored in the centers of street gossip, that percentages are still being taken, that there are Government officials who are profiting from trade in influence; but I want to say here, publicly, to 7 million Venezuelans, that if administrative immorality still survives (to a much smaller degree than formerly) it is due to lack of decision by the Venezuelan people themselves. A tribunal on illicit enrichment is operating, to which anyone can go to denounce any official, whatever his rank and position, whatever the political party in which he is active, who has suggested a dishonest deal to him. We do not have a radar system in Miraflores that will reach throughout the Republic to locate which official is dishonest or venal; but the thousand eyes of Argus of the Venezuelan people must point out and single out whoever is not meeting the inflexible standards of administrative morality that we are obliged to observe, because this was a promise of all the parties, because it is the vehement desire of all the Venezuelans, because it is an indispensable necessity of public morality and administrative health.

Fellow citizens, I have been talking a long time. I would like to refer to what our foreign policy has been. This foreign policy has been identified with a sense of national responsibility and of respect for the very profound and vehement desire of our people for the solidarity of the Americas. In foreign policy, in the United Nations, we have vigorously supported the longings for self-government and freedom of the Asian and African peoples who are still under the domination of European nations, and in this we are loyally following the tradition that was bequeathed to us by the anticolonial generation of 1810. At an appropriate time, because the instrument involved must still be drawn up, we are going to present in the United Nations a proposal for a convention under which money embezzled from peoples by their unscrupulous rulers might be pursued wherever they may have deposited it. We maintain relations of cordial friendship with the democratic governments of America, a position of discreet diplomatic coolness toward certain dictatorships, and a definitely belligerent attitude toward the one that is the shame of America and a mockery of the regional juridical system. We have rendered a great service to America by submitting to the Council of the Organization of American States a denunciation of the violations of human rights in the Dominican Republic, and we shall not let up until that Government shall be eradicated from an Organization that, according to its Charter, is composed only (or should be composed only) of governments born of direct, universal, and secret voting, of governments that respect human rights.

Our international relations are also directed toward seeking agreements and understandings in the economic field with the countries of our own race and language. Let us remember the still-valid precept of Simón Bolivar: "Only the union of the Latin peoples of America will make them great and respectable in the eyes of other nations." Faithful to that line of thought, we have established mixed commissions, with the Governments of Colombia, Ecuador, and Panama, that are studying agreements of a commercial and a cultural nature. In my conversations with the President of Mexico, there was nothing frivolous or trivial; and we reached basic agreements that will permit a greater flow of economic relations between Mexico and Venezuela.

Fellow citizens, I do not wish to say (because it is not my custom to use the platform to utter falsehoods) that the problems of Venezuela have been solved in this year of government. Today a newspaperman asked me what was the most moving moment for me during this year of government, and I added that, in addition to that unforgettable, stellar moment in which I received the tricolor sash (of the Presidency) from my good friend Dr. Raúl Leoni, emotional moments recurred every time that, in my frequent contact with the people of Caracas and the interior of the Republic, I was surrounded by the fervent cordiality of my fellow citizens, even though they knew that their problems had not been solved. We have not been able to put an end to unemployment, for a problem dating from so many years cannot be solved in 12 months; but those who say there is more unemployment now than on February 13, 1959, are lying. The unemployment has not been absorbed, but we are painstakingly endeavoring to absorb it. The principal unemployment in Caracas is of construction workers, and we are giving indorsements and direct loans to a series of enterprises so that they will take in workers. We are discussing with the Construction Industry Chamber the possibility of beginning some large works on deferred payment, to absorb unemployment. And the Government has engaged in long discussions about the rents law before presenting it to the Congress, because we are seeking a formula that will at the same time guarantee a logical and fair rent reduction and a stimulus to private initiative in the construction industry.

The price of medicines has already been lowered, and in the last few weeks we have been carrying on an allout battle against speculation and profiteering, to prevent speculation in essential items. Although we are convinced that we can put an end to the chronic calamity of the high cost of living in Venezuela only with vigorous development of agricultural and livestock production, there are palliatives that can be applied, and they are being applied. But the success achieved in the campaign against profiteering and speculation underlines the fact that the instruments and resources of the Government are not sufficient to meet the problem alone. The whole community must cooperate and collaborate with the Government. Those one thousand women who assembled at a Caracas radio station to offer themselves as volunteer, unpaid inspectors in the fight against profiteering and speculation in essential items, the efforts already seen for the formation of consumers' cooperatives, all these things show that the Venezuelan citizenry is convinced that the Government alone, with only its own resources, cannot solve all the problems. And I must say here that this struggle against speculation and profiteering will never lead the Government to the sale of articles below their reasonable cost, because we do not want to ruin small business, the retail trade, in which there are some speculators and profiteers, but the vast majority of whose members are earning their living honorably behind the counter of a grocery shop.

Fellow countrymen, A few words on a problem that has arisen and that cannot be evaded. I have seen with alarm the emergence of a certain aggressiveness or xenophobia toward the immigrant. The Government is enforcing, and will continue to enforce, strictly, the provisions regarding the percentage of Venezuelans there must be in every establishment, whether of construction, commercial, or industrial, in the country. But this does not mean that anxiety is being sown in Venezuela, an open and hospitable country, about people who live here, have their families here, and have children who were born in Venezuela and are, therefore, themselves Venezuelans. Therefore I wish to call upon the people of Venezuela to adopt an attitude of understanding and welcome toward the hard-working immigrant; because we have quietly been sending the gamblers (the Bureau of Foreigners is already taking care of them) out of the country by dozens, because we do not need them here.

I would like to pay tribute here publicly to a Yugoslav with a complicated name, who is known in the plains of Portuguesa simply as "Mitar." He has won the prize for conservation of renewable natural resources. This Yugoslav has reforested 500 hectares of lands along the banks and headwaters of the Araure River, and now abundant water is assured for the aqueducts of Araure and Acarigua. He has been a guide in a job that we are carrying out all over the country, a silent work, a work that is not seen by the tourist's passing glance, a work that is not so spectacular as the cablecars. There are 5 million for this work in the special budget, and perhaps there will be 15 in the next one. Fellow countrymen, the task is to reforest the headwaters of the rivers, to reforest the headwaters of the Tuy River, the Tocuyo River, the Andean Rivers. The inexorable, merciless, and criminal cutting of the forests is one of the reasons, along with the administrative irresponsibility of the dictatorship, why Caracas is suffering from the present water shortage. Incidentally, I wish to tell you that there will also be restrictions on water consumption in the coming year, but in 1962, when we will have completed a large dam, the sufferings of the population of Caracas in regard to water will end.

Before concluding, I want to mention one institution and three men. That institution is the armed forces. I said on December 5, 1958, in this same place, that if I were elected by the people of Venezuela I would have the support of the country and of the armed forces. I repeated this systematically each time that one of those regrettable outbreaks of street disturbances occurred, which it was necessary to repress, because under my government, today and tomorrow and until 1964, there will be democracy and public freedoms, but not riots and anarchy. I said that I had confidence in the apolitical and obedient attitude of the armed forces, and that the civil power and my position (inherent in the rank of chief of state) of commander in chief of the armed forces would be respected by them. I have no reason to regret those words, spoken on various occasions. Events have shown that only a very small number of members of the armed forces have lent themselves to conspiratorial intrigue, and those who have done so have received the disciplinary punishment the laws of Venezuela provide. At the same time that I say this, I want to call upon Venezuelans once more, so that, as we have eradicated interparty acrimony in political controversies, we may make that absurd division between military men and civilians become less noticeable every day. We are

all Venezuelans, with a single commitment and a single obligation. And the professor who teaches his anatomy course at Central University, the worker in the Matanzas steel mill, or the industrialist who is running his factory is just as worthy of respect as the aviator, the sailor, the infantry officer who is working every day to prepare competent armed forces that will guarantee the borders of Venezuela against any foreign aggression and the democratic public order that the people of Venezuela have given themselves.

I am also going to make a public eulogy of the leaders of the three parties of the coalition, in whom I have found efficient collaborators and men of good faith, as eager as I to push Venezuela along the road of institutional stability. They are: Dr. Jóvito Villalba, leader of the Unión Republicana Democrática, whom I sent as my personal representative on a journey of rapprochement and unity with the peoples of South America; Dr. Rafael Caldera, leader of the Copei Party and president of the Chamber of Deputies; and Dr. Raúl Leoni, president of the Senate and leader of Acción Democrática Party.

Fellow citizens, on April 19 of this year we shall celebrate the 150th anniversary of the first day of the movement for the emancipation of our América. It is a time for reflection, for examination of our consciences, to ask ourselves whether it is enough for the Venezuelans of today to hold great patriotic festivals and make speeches recalling Bolívar, Salias, and Emparan; to speak once again of the reveilles of Carabobo, Pantano de Vargas, and Ayacucho; whether this is the time to continue inebriating ourselves with the heady liquor of the Epic, and, as a people, living on the interest from the deeds performed by the heroes of yesterday; or whether it is time for us, the Venezuelans of today, to offer our own lives to carry out our own crusade, a crusade without martial fanfare, which is the collective enterprise of creative action, the collective enterprise of constructive work. This enterprise requires us to begin by recognizing that this people cannot achieve the return of its destiny if we do not cease to be such nouveaux riches and such a mining country, a people that becomes so alarmed because a tax is levied on foreign liquors and luxury articles; a people that is classed as one of those in the world where the people buy most new automobiles; a people in which it is often supposed that democracy is only a matter of rights, and not of corresponding duties. I want to make here a call to work, to creative work. Let us put aside goldbricking, frivolity, spendthrift nouveau-richisme. Let us realize that we need to build a fatherland, and that we have the qualities and abilities to do it. We have extraordinary resources. Our present monetary and fiscal resources are such that our international reserves amount to 2 billion bolívares—$700 million—which is larger than those of Brazil, Argentina, and Mexico. We have a budget of 5 to 6 billion bolívares, which is double the budget of Mexico. We have extraordinary resources of wealth: there is our Guayana, which is going to be, as I once said right here, the Pittsburgh or the Ruhr of Venezuela. There has just been discovered, located, an iron hill belonging to the nation, that has twice the amount of iron that Cerro Bolívar has, 360 million tons of iron. We will have the capacity, within a few years, to produce up to 5 billion kilowatts of electricity at a price of less than 1 céntimo of a bolívar per kilowatt-hour. But to attain the development of this potential wealth, and for us to use and transform this potential wealth with our own efforts, we must put aside frivolity; we must demand less of the Government and give more to Venezuela; let us remember the generation of the liberators, which followed Simón Bolívar, abandoning families and interests, giving their very lives for a great Venezuelan ideal.

Fellow citizens, at one of the most emotionally charged moments in my life, when I met the Venezuelan people once more after 9 years of exile, I said on this spot that there are stellar moments in the lives of peoples, moments in which they keep a date with their own destiny. This is one of the stellar moments of Venezuela, one of the moments in which it keeps a date with its own destiny: 150 years after the shout of 1810, let us Venezuelans be capable of being consistent and loyal to the obligating heritage left us by the generation that was sacrificed.

Home of Thomas A. Edison

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the genius of Thomas Alva Edison has been a force for the betterment of the lives of people throughout the world. Through his efforts, a new way of life was hastened into being; his gift for invention gave us new light for the world, new enjoyment of our leisure time, and new methods of doing things better than they had been done before.

We of New Jersey are proud that the Wizard of Menlo Park worked so long and so productively at laboratories in our State, and we are particularly happy, I believe, that the National Park Service is preparing Edison's home at West Orange, N.J., for its opening this summer as a museum. His home will be a constant reminder to all Americans of his part in the history of progress.

An article by George Cable Wright in the April 17 issue of the New York Times tells of the preparations now underway at the Edison Home.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDISON HOME IN JERSEY TO OPEN AS A MUSEUM—WEST ORANGE MANSION LITTLE CHANGED IN YEARS SINCE INVENTOR'S DEATH

(By George Cable Wright)

WEST ORANGE, N.J.—Rising majestically on an attractive hillside in Llewellyn Park here is an imposing mansion of red brick and clapboard. Secluded by tall pines, and a profusion of shrubbery, the dwelling is barely visible as the visitor enters the winding, tree-studded lane that leads from Park Avenue.

The many gabled, gray slate roof and towering brick chimneys—some rise more than 12 feet above the highest gable—provide the first glimpse of the 23-room Victorian mansion. Its graveled drive snakes impressively across a wide expanse of green lawn to a portico that shields the cut-stone front steps.

These lead to a porch with ornamental tile flooring and walls of molded brick and, beyond, to a massive front door of solid oak.

This is the estate called Glenmont, the home in which Thomas Alva Edison lived from 1886 until his death on October 18, 1931, and which he presented to Mina Miller, his second wife, as a wedding gift.

EIGHTY-EIGHT-YEAR-OLD HOME

This 88-year-old residence is an outstanding example of gracious living in the Victorian era. The Edison family has donated the home to the Federal Government, and it is now being restored by the National Park Service as a memorial museum and monument to the inventor. The Service hopes to be able to open it to the public early this summer.

A recent tour of the mansion showed that little has been changed since the death of Mr. Edison. Hardly a book, knick-knack, memento or treasured possession of the inventor has been disturbed. The home itself has been meticulously cared for by servants of the Edison family; in fact, it is difficult to believe that it is occupied only by caretakers.

The front door leads into a large, L-shaped entrance hall. In one of the hall's oak walls is a glittering fireplace of brass and French mosaic tiles; above the fireplace is a large oak relief depicting the full battle regalia of a medieval knight. At either side of this, resting on the broad mantel, are hand-painted oriental vases that were presented to Mr. Edison by the Japanese Government many years ago.

From one side of the hall rises the broad staircase of red mahogany. This leads to the bedrooms on the second and third floors. The staircase landing is lighted by an oversized stained-glass window bearing the figure of a peasant woman weaving multicolored yarn. Large oil portraits of Mr. Edison and his son, Charles, a former Governor of New Jersey, hang in the hall.

On the right side of the entrance hall is a small library. The original portieres of brown velvet still hang at either side of the archway leading to this room, just as they have since 1886. Shiny brass andirons, embossed with lions, jut from the library's hearth of blue tile, and bookcases line the walls. This room is furnished in the Victorian manner.

To the left of the hall is a reception room that contains the rosewood organ Mr. Edison enjoyed playing even though he was deaf. This room also has Victorian furniture.

The massive drawing room is furnished in hand-carved ornate rosewood and its walls are blanketed in gold brocade. The dining room is furnished in Victorian mahogany. In a glass case in the dining room is a porcelain incense burner that was presented to Mr. Edison by the King of Siam. The china cabinet is filled with a collection of glassware from all parts of the world.

DEN IS LARGE

The largest room on the first floor is the den. Its walls are of green plaster and are paneled in oak. On a small table at one side of the room is a piece of the original Atlantic cable laid by Cyrus Field and a brass desk set presented to Mr. Edison by the Krupp Munitions Works in Germany. The inkwell is a miniature cannon, and the pen holders are encased in shells.

On another table lies a large album of photographs taken by Mr. and Mrs. Edison on a visit to Hungary in 1911. An interesting feature of this room, in which the Edisons did most of their entertaining, is a 200-year-old megalethoscope. This is a kind of stereoscope with a large magnifying lens. The megalethoscope is equipped with colored slides and is still in working order. Near it stand marble and bronze statues of Cossack soldiers, a gift from Czar Nicholas II of Russia.

On the second floor, the large center hall leads to five-family bedrooms and another living room. The main bedroom has plaster walls colored in a soft tan and a plaster ceil-

ing decorated with flower buds. Hanging from the ceiling is a crystal chandelier. Again, the furniture is Victorian. A full-length mirror centered between marble-top tables served as Mrs. Edison's dressing table. Carpeting of a dark plum hue covers the floor.

"THOUGHT DESK"

The second-floor living room contains Mr. Edison's oak-topped desk, which he often described as his "thought desk." It was while sitting in his overstuffed gold and russet chair here that he conceived many inventions.

The shelves on the wall behind Mr. Edison's desk are filled with scientific books, many of them containing his marginal notes. On his desk is a plaster of Paris cast of his hand and a brass inkwell.

Mrs. Edison's desk is just across the room. Nearby are her bookshelves containing biographies and works on nature and music.

The 13-acre estate is less than a quarter-mile from the Edison Laboratories and Museum on Main Street. Also on the premises are a six-car garage and a greenhouse.

The New York Times and Irresponsible Journalism

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. HUDDLESTON. Mr. Speaker, on yesterday, Monday, April 18, I called the attention of the House to two articles which appeared in the New York Times on April 12 and 13, written by one Harrison E. Salisbury, which purported to give an accurate account of the race situation in Birmingham, Ala., my district. These articles are, in fact, among the most vicious slanders of a community of decent people that have ever come to my attention.

Under leave heretofore granted, I am inserting herewith in the CONGRESSIONAL RECORD another editorial from the Birmingham Post-Herald, this one of Saturday, April 16, 1960, dealing with the irresponsible conduct of Mr. Salisbury and the New York Times in running these biased, distorted, and bigoted articles. The editorial is entitled "Who Will Protest?" and is as follows:

WHO WILL PROTEST?

There are many citizens in our community in a position to refute the charges brought against it in the articles which appeared this week in the New York Times under the byline of Harrison Salisbury. Among them are many reputable Negro citizens who know that the picture painted by Mr. Salisbury is a distortion of the truth and a gross slander.

Certainly many white citizens, outraged by the Times' irresponsibility, will write in protest to its publisher, Arthur Hayes Sulzberger. But is it too much to expect some of our responsible Negro leaders to do likewise?

Mr. Sulzberger and the Times will have done a great disservice to newspapers and newspaper people in general if the Salisbury slanders against Birmingham are left uncorrected.

What Mr. Salisbury seems irked about is what the people of Alabama have done to meet the challenge hurled at them and the problems created by vote-hungry politicians and a Supreme Court which ignores both the Constitution and the law.

If the majority of the people of Alabama find it serves the public welfare to abolish certain counties and create new ones, is that not the business of the people of Alabama?

If as a last resort against an integrated school system the people themselves decide to abolish the public schools and to establish a new system of education, is that not the business of the people of Alabama?

The Supreme Court may in time rule otherwise. If it should and if the people of the United States show no more concern than they have over the tortured 1954 decision then we might as well forget about States rights?

Mr. Salisbury is a very clever writer. He knew what he was looking for and he knows how to bend and to twist facts so as to leave the impression he wants to leave.

He cites John Crommelin to prove the prevalence of prejudice, bigotry, and hate. He is careful to cover himself by pointing out that the Crommelin viewpoint is "deplored by many violent segregationists." But then he adds that its acceptance, however, is far wider than will be publicly admitted.

What Mr. Salisbury didn't tell his New York Times readers was that Crommelin in his race for Governor in 1958, the last time he sought public support, polled 218 votes in Jefferson County and in the State as a whole less than 2,300 votes out of a total of 618,000.

That in Mr. Salisbury's book we suppose is "wide acceptance" because it suits his purpose.

It is typical of his whole report.

Reluctantly, one begins to wonder whether it is typical of the Times.

Loyalty Day

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1960

Mr. HUMPHREY. Mr. President, the United Mine Workers Journal of April 15, 1960, contains an excellent editorial emphasizing that the real struggle between our democratic society and the Communist system is a struggle to preserve and protect human dignity and freedom.

In language as strong and vigorous as the United Mine Workers of America's own record of leadership to strengthen the freedom and dignity of America's mineworkers, the editorial explains the meaning of loyalty and freedom for every American.

Mr. President, I ask unanimous consent that the editorial, entitled "May 1 Is Loyalty Day in America, So What Are We Loyal to and Why?" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAY 1 IS LOYALTY DAY IN AMERICA; SO WHAT ARE WE LOYAL TO AND WHY?

May 1 now has a special meaning for Americans. For a long time now this day has been thought of only as a Communist holiday. But, thanks to the Veterans of Foreign Wars, May 1, in this country, officially became Loyalty Day 2 years ago.

Loyalty to what?

The simplest way to express it is that loyalty means freedom.

And freedom is not just a word to the United Mine Workers of America and other American workers.

Loyalty and freedom to American coal miners are very real things. They are things that had to be fought for by individual mineworkers through the collective strength of the United Mine Workers of America.

Without loyalty to our American institutions we would not have freedom to join together to battle for high wages, better working conditions, safety, pensions, medical care, and all the other things that American coal miners enjoy.

These are hard-won privileges and the fight for even better conditions will go on. But it can go on only if we stay loyal to our free institutions so that we may continue to enjoy the rights of free men.

The occasion of Loyalty Day is an excellent time to ask ourselves what men have in the other part of the world—the Communist part.

COMMUNIST MENACE EXPOSED IN 1920'S

Long ago, because of the wisdom of the leadership of the United Mine Workers of America, Communists and communism were denounced and officially outlawed in our organization. The UMWA took an official stand in opposition to communism back in the 1920's and was the first organization in America—labor or otherwise—to expose this menace to freedom and to individual human dignity.

Our union has been kept clear of these destroyers of human freedom. But, though they were, long ago, unable to capture the minds of American coal miners or win any permanent power in American labor, the Communists still work hard at the business of preaching disloyalty to American ideals and institutions.

May 1 in many countries is a so-called workers' holiday that has been captured by the Communists and used as the occasion to propagandize their diabolical work.

This year, except for Moscow, probably the largest Communist demonstration will be held in Havana, Cuba, with the approval of the Castro government.

"Delegates" will descend on Havana from all parts of the Communist world, sent there by Communist organizations, we suppose, as part of the "deal" engineered by Soviet Deputy Premier Anastas Mikoyan during his visit to Cuba.

The "delegates'" rallying cry will be based on the phony mouthings of Khrushchev that "The workers of all countries and nations are brothers, linked by bonds of class solidarity. They are the powerful army of the world proletariat, endowed with the great historic mission of leading mankind to communism."

Now, there's nothing wrong with the idea that workers are brothers. It sounds nice. But the rest of that statement is a great big Communist lie and typical of the Communist propaganda technique.

The proletariat, which is a fancy Marxian word for working people, do not rule the Soviet Union and they never have. The Soviet Union is ruled by a political bureaucracy of bully boys—the biggest one the world ever has known.

And the first thing the Communist bullies do when they take over is smash the free labor unions and replace them with company unions, loyal only to the bureaucrats.

And thus the great privilege of free men to protest against intolerable working conditions was taken from them.

SOVIET STATE CREATED NEW CLASS OF OPPRESSORS

Under the Communist system an entire new class has emerged, composed of party members, the secret police, and the dictatorial bureaucrats. The new class constitutes the Communist state, and thus makes the state, to quote Karl Marx, "* * * an organ of class domination, an organ of oppression of one class by another."

There is nothing more alien to American ideals and to the workingman's own fundamental belief in himself and his own dignity and his privileges as a freeman than such a system.

But that is what Comrade K. and the Communists want to sell us and other free peoples.

The downfall of our system of free enterprise, prophesied by Marx and his collaborator Frederich Engels nearly 100 years ago, has not happened. And there is no evidence that it will happen. Free enterprise has not collapsed in the countries communism has taken over; rather, the Communists have seized power by military force.

The nations of the free world continue to live in peaceful competition with one another—in denial of the theories of Marx.

But the Communist leaders continue to deceive people with the big lie that capitalism will destroy itself despite the living proof of its healthy existence. That is not to say that our system does not have problems and probably always will have.

But as long as the people have freedom to work for the solution of these problems through democratic procedures there is hope for solutions.

Communist leaders preach that capitalism will disintegrate; that this system has within the seeds of its own destruction.

But the Communist leaders themselves do not believe this. They have refuted the theories of Karl Marx time and time again. They provide incentive wages, for example, to encourage and develop specialists. Well, the free enterprise countries sort of invented this one and good wages and working conditions have helped to make America the great industrial Nation it is.

The bullies in the Kremlin, zealots that they are, have taken unto themselves the role of dictators of mankind's destiny without having found solutions to their own pressing problems.

As a matter of fact many of the economic problems of the Communist countries have been solved by engineers and technicians from the capitalist countries who were paid good, high salaries to do the job.

Of course, the Communists lie about it and claim they invented or perfected these things.

The attempted speedup of productivity in coal mining in the Soviet Union—which hasn't worked very well so far—was to be an example for other industrial workers to follow. The equipment used was designed by Americans or patterned after American equipment.

Unlike American coal miners, Russian coal miners have no right to demand through their "union" that the benefits of the increased productivity of the mechanized equipment be shared by the workers. The Russian coal miner, if he objects to inhuman speedup, cannot protest. At least he'd better not try. His so-called "union" certainly isn't about to go to bat for him. The Communist bureaucrats—the bosses, in other words—decide the wages and working conditions and safety standards and hours of work and rate of production and all the other matters. In America, these vital matters are decided by free men through collective bargaining.

The leaders of the so-called labor unions in the Soviet Union are the bosses of the Communist Party. They are not interested in the human needs and problems of coal miners or other workers.

In America our union leaders are coal miners such as John L. Lewis, Thomas Kennedy, Tony Boyle and John Owens. Their jobs are to better the conditions of the miners not the interests of some political party. Where is there a union man in a Communist country comparable to John L. Lewis?

The Russian coal miner is living in a "company town," buying his grub from a "company store" and obeying the dictates of the company bosses without question, because in Russia the Communist Party is the company.

The only way the Russian coal miner can dig himself out of this morass is to become a big wheel in the Communist Party—a nobleman in the new aristocracy of Russia.

So, American coal miners can say with pride: "We are loyal to America and its institutions because loyalty means freedom."

Address by George Killion

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, it gives me a great deal of pleasure to extend in the CONGRESSIONAL RECORD as part of my remarks a speech made recently in Denver, Colo., by my good friend, George Killion, president of the American President Lines and chairman of the committee of American steamship lines.

George Killion has made a great contribution to the maritime industry of the United States. He appreciates its importance to our economy and to our national defense. He has not been silent in his efforts to educate the people of this country to the necessity for an adequate and efficient merchant marine.

Here is Mr. Killion's speech. From his long experience he gives us the benefit of his thinking as well as that of his colleagues who are all doing so much to maintain the security of our country and to foster and increase our foreign exports—without them we could not live:

Mr. Chairman, Congressman ROGERS, and so forth, being here in Denver for this 2-day meeting sponsored by your very effective chamber of commerce has—in addition to the many benefits of the meeting itself—a very personal reward for me. That is the pleasure of a homecoming. Congratulations on the fine weather—like San Francisco.

Coming home is something all of us who venture forth to seek new horizons should do more often—for horizons begin at home, and it is good for us to return to our starting point, our old stamping grounds—to reevaluate in the light of experience our early ambitions and our efforts to make those ambitions come true.

I am very proud to be a native Coloradoan, and I always look back with great pleasure to my childhood days in this State. I only hope all of you have as happy memories of your early years on this planet as I do.

They started for me up at Steamboat Springs, in Routt County. Later, at Grand Valley, I used to punch cattle on my father's ranch. And although those early cattle trails turned into roads of international travel for me, my affection for this vigorous, beautiful Rocky Mountain empire has never lessened.

Yes, it is, indeed, good to come back to this land where men are men and women, thank Heaven, are still women.

I find a special pleasure in returning this time because I am in the company of my associate in the steamship industry. Why should a group of steamship men gather in Denver? No cargo ships tie up at the foot of Lookout Mountain. No cruise ships call at the Garden of the Gods. But the products of your farms and your ranches, your plants and factories and mines do go down to the sea in ships just as surely as do those from the great coastal areas of this Nation.

Just as my personal horizon began at home here in Colorado, so do the horizons of Denver and the State, and all this fast growing area, stretch far beyond the Rockies, far beyond the Great Plains, into the exotic reaches of the many seas.

During 1958 one-twelfth of all the movable goods produced in the United States was exported. Colorado's estimated share of that foreign trade was $85 million. For example, you sent to foreign markets an estimated $46 million worth of processed foods, aircraft, machinery, primary metals, chemicals, and fabricated metals. Your farmers exported some $29 million worth of wheat, barley, and corn. Your miners exported approximately $10 million worth of molybdenum ore.

About 35 percent of the Gardiner-Denver Co. production is shipped abroad. Gates Rubber Co.—Denver's largest employer—siphons from 1 to 2 month's production into export channels each year.

Land levelers go out to the world from Eversman Manufacturing Co. Mobile shovels from Quick Way Truck Shovel Co. are just one of the lines in Rocky Mountain Export Co.'s annual $3 million export business.

Swayder luggage, Superior honey, Franklin cattle serum, Band-It pressure clamps, and Frankel typewriter ribbons are found on farms, in factories, and in homes around the world.

Frankly, I suspect that you agree with me that statistics too many times can be little more than static. But these statistics are alive. They are part of the lifeblood of this, one of the fastest growing areas in the Nation. They live not only in the ledgers of the exporters involved, they live also in the paychecks of some 138,000 of their employees, and in the paychecks of many other thousands of workers in supporting industries and trades.

Yes, we shipping men have a reason for being here in Denver other than the exhilarating one of breathing your mile-high air and revelling in your majestic mountains. We have a good solid business reason. We want this region, and all inland regions to profit with us from an increased foreign trade, and we have the organization, the informational service, the contacts to help you share in that increase.

Moreover, we have a patriotic reason for discussing foreign trade with you. It has been said before, but it can't be said too often—the merchant marine of these United States is the fourth arm of our national defense. In the Seaboard States we live daily with this truth. It is no less a truth in the teeming, productive inland areas of this beautiful country of ours.

Singularly blessed as this Nation is in natural resources, it no longer is completely self-sufficient—certainly not if we cherish a standard of living unmatched anywhere else in the world. In 1950 we reached for the first time the point where our consumption of raw materials exceeded our production. Just as our increasingly productive economy needs the evergrowing

markets of the world, so do we need the products available to us in those markets.

On our ability to participate in the commerce of the world depends, to a very great extent, this Nation's future as the warm fortress of freedom in a world chilled by the winds of a calculatingly cruel cold war.

On our ability to keep a favorable balance between foreign aid and our own economy, between our merchant marine and the ships flying foreign flags, between the controlled economy of the iron curtained East and the free economy of the West, depends our very survival.

We didn't have that ability during World War I. To "save the world for democracy", as we said then, we had to call upon Britain and all of our Allies to furnish the ships that would transport our troops and supplies—at tremendous cost. Again in World War II, and in the Korean tragedy, we saw the necessity for having always ready and active a well established merchant marine.

There is more, indeed, than just economic self-interest expressed in those slogans: "Buy American," "Sell American," "Ship American." There is good, common logistical sense; an understanding of the realities of world commerce.

If Nikita Khrushchev's unforgettable visit taught us nothing more, it should have made clear to all of us that the Union of Socialist Soviet Republics is out to take us by economic means if possible, by military means if necessary.

We can't afford to take lightly the words from the Kremlin. We laughed at "Mein Kampf", and Adolph Hitler danced a Satanic jig over fallen France.

Now Comrade K. taunts us with his intent to bury us under an avalanche of trade—an economic funeral that would be just as final as a military ceremony.

Of the truth of Khrushchev's claims as to his nuclear stockpile, we can only guess. More tangible is the evidence that Russia is building a mighty merchant fleet of the most modern design—much of it nuclear powered. Ready to protect this merchant armada, and a fast-growing powerful navy are some 500 submarines, now roaming the seas of the world—at least 150 of them in the Pacific Ocean.

This merchant fleet, and its protective underwater escort, is out to capture an ever larger portion of the trade between free as well as satellite nations. It would be as foolish for us to close our eyes to this steadily increasing Russian invasion of the world of trade as it would be to try to wish away their superiority in the fantastic new arena of space.

Nor, unfortunately, can we afford to ignore the more peacefully motivated competition for world trade that is being offered by other nations of the world.

Consider Japan. Today that island nation has one of the greatest merchant fleets of the world—built entirely since the war. And Japan has plans for new ships that will exceed all present U.S. tonnage within the next 5 years.

Germany, like Japan a defeated nation only a few years ago, is building ships at a faster rate than any country in Europe except Great Britain.

In the Pacific, the British—traditionally our vital and friendly maritime competitors—are building large and speedy liners to give my company and other American lines an even more rigorous run for our money.

In the Atlantic and the gulf, American lines are faced with an even greater problem, as the European economy—nurtured on American aid—comes into its own. Great new ships, built and operated at costs much lower than American ships can be, are about to be launched. Others still on the planning boards or on the shipyard ways soon will be competing with American-flag ships for your trade and your business.

This, then, is the competition we face—warlike and peaceful. Our role as the strong guardian of freedom is challenged, as is the economic strength upon which rests our hope for survival and the hope for survival of the free world.

Are we facing up to that double challenge; are we doing anything to meet it?

I am constitutionally unable to be a prophet of gloom and doom, so with pride in my country I am glad that I can answer with a firm "Yes."

I can say yes because after years of confusion and neglect this Nation's determination to have a stable, long-range national maritime policy is bearing fruit. Inspired by the tragic lessons of World War I, our present policy was formulated by Congress in 1936. Since then its essential wisdom has been clearly demonstrated by the tests of World War II, Korea, and scattered military emergencies, as well as by the changing patterns of our Nation's vital foreign trade.

This maritime policy is very simple. Embodied in the Merchant Marine Act of 1936, it recognizes the need for a strong and active American-flag merchant fleet built, manned, and supplied by American citizens at U.S. standard and wage scales, and operated with efficiency and reliability.

To assure the execution of this policy, the act says, in effect, to the steamship lines: If you will make scheduled sailings on an essential trade route whether or not you make a profit, if you will agree to restrictions on your operations and your financial structure that are determined by Congress to be in the national interest, and if you will build ships in American shipyards that meet our defense standards and will provide funds for the periodic replacement of your ships with new, fast, efficient tonnage, then the Government will make up some of the cost differences between U.S.- and foreign-flag operations of similar ships.

Actually, I should explain here, the cost differential between building a ship in America against low-cost foreign construction goes to offset the wage differential in U.S. shipyards. It does not go to the shipyard stockholders or to operating companies. The operators are on their own as to making a profit. Furthermore, if we do realize a profit we must, when it reaches a certain percentage of our investment, return to the Government at stipulated intervals up to the full amount of the differential payments we have received.

The 1936 act has served the Nation well and it continues to do so. Today, the lines having contracts are engaged in a great shipbuilding program to replace the fine U.S.-flag fleet that was built largely during World War II.

The total cost of this program involving the 14 lines here today will be $4,600 million—to be shared by them and by Government. Thirty-four ships are under construction today, and another 250 or so will be built within 12 to 15 years.

It is ironic that for years the United States—the greatest nation in history—was limping along the trade routes of the world in ships that had been built hurriedly, under pressure, for two World Wars, ships that already were outmoded and obsolete insofar as competitive commercial use was concerned.

Only recently have American shipping companies been able to actually develop a tailormade fleet.

Under the able leadership of Clarence Morse, the present Maritime Board has developed the multi-billion-dollar-shipbuilding program I mentioned a moment ago.

This program continues at a pace commensurate with the need. Matson Navigation Co. has within the past 3 years inaugurated service to the South Pacific with two ships converted for that purpose, the *Mariposa* and the *Monterey*, and doubled their service to Hawaii by remodeling and refurbishing the *Matsonia*, at a cost of $20 million, to sail with the *Lurline*.

Just a year ago Moore-McCormack launched the second of two sisterships, the SS *Argentina*, to run in service to South America. Grace Line last year introduced two new passenger liners—the SS *Santa Rosa* and the SS *Santa Paula*—the first ships built under the Government and maritime industry's fleet replacement program. At American President Lines, plans are well underway for a superliner, the SS *President Washington*, to enter the transpacific service. Two large cargoliners even now are under construction in San Francisco.

Yes, gentlemen, we are meeting the economic challenge of the rest of the world. Our American merchant marine is a tangible symbol of our growing strength in foreign commerce. But it is more than that. Because it competes for the commerce of the world on all the earth's seas, it also is a good barometer by which we can read the pressures of the rising power of the other great maritime nations and through them the temper and the stirrings of their neighbors.

We spend billions through the Marshall and Truman plans to strengthen our allies and bolster our friends, and achieve only a temporary semblance of solidarity and security.

We debate the problems of our feverish struggle to keep abreast of Russia's scientific progress. But while we talk—and talk, gentlemen, doesn't always come cheap; in this case its price may be our freedom. While we talk, Russia puts its hammer and sickle on the moon.

We teach underprivileged areas of the world the principles of democracy and see their surging expression of nationalism often tragically turned against us.

We stand hesitant and perplexed in the face of our problems of survival perhaps because we have not yet fully learned the hazards, as well as the strengths, of the world position we do in truth occupy.

As in the earliest days of our Nation, America stands virtually alone as a bulwark of freedom—a bulwark between the free nations and the slave nations.

The concept of our Founding Fathers that all men are created equal, with freedom and self-determination as their birthright, has evolved into the greatest system of government ever conceived in the mind of man. It has created the mightiest and most prosperous Nation in this history of the world.

Being mighty, and being prosperous, we are a natural target to be shot at and torn down—a target for the arrows of contempt and challenge hurled so regularly by the disciples of Marx, Lenin, Stalin, and now most brazenly by Khrushchev himself.

That is why America—and when I say America, I mean all the Americas, plus Canada, which make up the Western Hemisphere—must remain the bulwark against this powerful thrust at world domination by Communist Russia.

We must, at all costs, maintain not only our military position as the "arsenal of democracy," but also our position in world trade, if we are to keep our own and the free world's economy in proper balance.

It is apparent that for the Communists there is no effort, no sacrifice too great if it will help the Communist Party and the Soviet society realize its goals. There is no corner of humanity that can be a matter of indifference to the Communists. To them, the entire human race is to become one big brotherhood—under the stern sheltering wing of Marxist philosophy.

Every day we see new evidence of this continuing Russian thrust for power and conquest. Our lifeline between the Atlantic

and Pacific—the Panama Canal, is the scene of rioting. Not far off Florida, Fidel Castro rants his way through a consolidation of gains achieved in what is now conceded even by some earlier optimists to be a Communist inspired revolution.

Part of Russia's thrust for world domination is based simply on the need for more foreign trade. Part of it is fear, the search for security through friends and captive satellite communities. But the dominant motivation is the historical centrifugal forces in Russia that have been pressing outward for 100 years—into the Balkans, the Middle East, and throughout the Pacific. The important thing to remember is that the Soviets believe in their truth, as we of the Western World believe in ours. The Russians, not we, are firing the shots that are now heard around the world and around the moon.

This summary of Russia's objectives should be frightening only if we let it be frightening, and fail to do anything about it while there is still time. Our foolish languor and false feeling of superiority have been shaken, if not shattered. We are now more inclined to examine ourselves and our record and it is a privilege of our society that every citizen should make his own inquiry. The urgent thing, as I see it, is to feel the need for rethinking, for setting to work the ultimate energies of our free society. We cannot do this by fiat of government. We can do it only through understanding—understanding of ourselves, and understanding of our relationship to the world. We cannot afford the luxury of myopia.

In one of his most brilliant speeches—and he has delivered many telling and effective speeches—Adlai Stevenson discussed in Washington earlier this year the subject of "The Political Relevance of Moral Principle." He said that "Today, when the threat and challenge to free society seem more total and powerful than ever before, it is not a political luxury or fruitless pedantry to reexamine our fundamental principles. I think it more likely to be the condition of survival."

Mr. Stevenson thinks that too many of us "rely on some mythical God-given superiority of the white Western World to save us," adding that "there is more evidence that the Communists accept the reality of the human condition than we do."

Fortunately, there is a new force rising in the land today, a force which, if it continues, can perhaps do more than anything else to bring understanding and strength of purpose in shaping the destiny of this great Nation of ours.

This new force is the growing political consciousness of businessmen and responsible citizens generally through the country. Your chamber of commerce is behind such a program. In almost every State outstanding businessmen are moving out of executive suites and into important political positions. Such men as Averell Harriman, Nelson Rockefeller, Senator Capehart, of Indiana, Mr. Stevenson, and many others, gave up lucrative business and professional commitments to serve their country with distinction.

You are fortunate in the great State of Colorado to be so ably represented by Gov. Steve McNichols and in the Halls of Congress by Senators ALLOTT and CARROLL, and Representatives ASPINALL, CHENOWETH, JOHNSON, and ROGERS—all men of outstanding ability. They will endorse, I am sure, your efforts to take a greater part in the conduct of your Government. They know from experience that their constructive work depends in large measure on an interested, informed, and active electorate.

So here we are today, businessmen face to face with the problems of building our Nation's great economic strength; representatives of the merchant marine of this still most powerful Nation on earth, face to face with the problems of etxending and nurturing that economy through the world—Nikita Khrushchev notwithstanding.

We have a common purpose, one we can help achieve in our daily business and personal lives. America is the pilot light of freedom throughout a troubled world. We Americans must keep that light ever bright, as a beacon of hope to the frightened, to the underprivileged nations now bowed beneath the Communist yoke.

So long as that pilot light of freedom burns bright in America, and in the hearts of our own people, the world cannot, and will not be plunged into the darkness of red slavery.

It has been a source of great inner strength to see these mountains of Colorado again. They are symbolic of the strength and vigor of this great country of ours. It has brought back to me many of the dreams of my youth. But perhaps the greatest inspiration comes from meeting and talking with men who have their faith, their destinies, their hopes, linked with the destiny of this great State of Colorado.

May we all meet again.

Thank you.

Scientific Program for Young People

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we from New Jersey like to comment about the achievements of our young people and about the widespread scientific interest expressed in our schools, our centers of research, and among our citizens.

An article in the Newark (N.J.) News of April 17 discusses one manifestation of that interest. Reporter George Kentera tells how the interest of a South Orange boy in science has resulted in the creation of "an imaginative national program to attract bright youngsters to careers in science." The story tells how New Jersey scientists and businessmen have joined with leaders from other States to create this program.

Mr. President, we in this Nation should welcome all efforts to enrich our scientific understanding and our supply of trained scientists. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ISLE TO BE LAB FOR TALENTED—CURIOSITY OF BOY SPAWNED IDEA—JERSEYAN LEADS YOUTH PROJECT

(By George Kentera)

WASHINGTON.—An imaginative national program to attract bright youngsters to careers in science is underway because a science-minded South Orange boy, late in 1956, horrified the family housekeeper by dissecting a frog.

The housekeeper complained to the Society for the Prevention of Cruelty to Animals as well as to her employer and the boy's father, David L. Lukens of 227 Conway Court, South Orange, who is president of D. L. Lukens Co., an industrial merchandising and consulting firm in Newark.

"That incident set me to thinking there ought to be a place where youngsters with talent and ability could have a wholesome outlet, under supervision, for their talent," says Lukens.

NONPROFIT ORGANIZATION

The result is the National Youth Science Center, a nonprofit organization with a Maine island for a laboratory, the backing of some of the Nation's most eminent scientists and businessmen, and a history of strong support from New Jersey.

Lukens has purchased the island, which is just offshore from Portland, and renamed it Science Island.

Last week, the National Science Foundation, a Government agency, made an $18,000 grant to Nasson College in Springvale, Maine, administrator of the program. The grant will allow 50 youngsters between 12 and 17 years of age to participate in a "trial run" 6-week session beginning July 5.

Lukens and his associates intend that the center become self-supporting, with most of its income derived from "campships" sponsored by industry, labor, civic groups, and individuals. The New Jerseyan says he has already contacted 100 "blue chip" industries and found enthusiasm high for the project.

After Lukens' son Jeffrey, now 16 and a student at Columbia High School, started the idea in his father's mind, Lukens consulted with and was encouraged by two men—Dr. Vannevar Bush, board chairman emeritus of Massachusetts Institute of Technology and board chairman of Merck & Co., Inc., Rahway, and Dr. Mervin J. Kelly of Short Hills, a member of the MIT board and retired chairman of Bell Telephone Laboratories.

Lukens went ahead and bought four-fifths or 125 acres of the island—then known as Cushing's Island, which had been used as a harbor defense post during both World Wars and which included 31 buildings.

In the 3 years of work that followed, the 46-year-old Lukens, a widower with 8-year-old twin sons—Steve and Ira—besides Jeffrey, got encouragement and development funds from a small founding group of executives.

BACKERS

They were Charles Shipman Payson, board chairman of Vitro Industries in West Orange; William C. Jordon, of Maplewood, vice president of the Maplewood Bank & Trust Co.; George L. Pew, a Sun Oil Co. executive, and his wife; Dr. E. Gifford Upjohn, president of the Upjohn Co.; Carl Gilbert, board chairman of the Gillette Co., and Malcolm C. Stewart, vice president and treasurer of Gillette.

As a result, Lukens was encouraged by such people as Dr. Alan T. Waterman, director, and Dr. Harry C. Kelly, associate director of the National Science Foundation, and Dr. George P. Sutton, chief scientist of the Government's Advanced Research Projects Administration.

The national program will provide informal instruction to the youngsters chosen. They will engage in projects of their own selection and will benefit from visits by well-known scientists. A camping program for physical development and a program to promote civic responsibility will be included.

Letters are now going out to science teachers, museums, and directors of science fairs to locate participants. Nasson College will select the final 50. In the future, however, applicants will be screened by the Educational Testing Service of Princeton; no applicant will be accepted on any basis other than ability.

This year's program will use the facilities of Nasson, which was suggested as program administrator by Representative JAMES C. OLIVER, Democrat, of Maine. The project will move to Science Island as facilities and additional funds become available.

As for campships, Lukens says one providing 4 weeks for a youngster will cost

between $375 and $400, and one for an 8-week session will run to about $750.

CENTER'S BOARD

The center's board of directors so far includes Dr. Kelly and four past winners of Nobel prizes—Dr. Edward C. Kendall, of Princeton, biochemist, associated with the Forrestal Research Center; Prof. Percy W. Bridgman, Harvard University physicist; Dr. Dickinson W. Richards, medical director of the Columbia University College of Physicians and Surgeons; and Dr. John H. Northrop, department of chemistry, University of California.

The young people who will benefit from their experience will be the most capable, Lukens says, those with drive and inclination and not necessarily with highest school marks.

Rural Development—Unemployment in Farming Areas

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. NATCHER. Mr. Speaker, we have heard a great deal in recent sessions of the Congress about the plight of jobless people in the Nation's depressed urban areas. This situation has received deserved recognition, and several bills have been introduced to help these jobless people get back to work again and become producing members of our society, a society which, I need not remind you, needs every last bit of its production and enterprise to counter the mammoth thrust of the Soviet Union.

However, at this time I should like to call attention to the fact that our Nation is also gravely weakened in its economic struggle with the Soviet Union by the existence of certain depressed rural areas around the country.

Let us squarely face the fact that whether rural or urban the problem is the same—a great many people who can not find full-time work. This simple fact is very clearly brought out in a recent publication of the U.S. Department of Agriculture entitled "Employment and Underemployment of Rural People, a Study of Low-Income Groups in Arkansas, Maryland, and West Virginia." The accompanying release summarizes this report very concisely with the statement, "The basic economic problem in hundreds of rural communities is the same as that in depressed urban areas—a surplus of labor for the jobs available."

In view of the timeliness of this report and its importance in evaluating the problem facing many of our rural communities, I amplify my remarks by inserting the release describing it in the Appendix of the RECORD.

USDA PUBLICATION REPORTS ON RURAL UNDEREMPLOYMENT

A report on manpower in low-income farming areas of three representative States indicates the basic economic problem in hundreds of rural communities is the same as that in depressed urban areas—a surplus of labor for the jobs available.

Entitled "Employment and Underemployment of Rural People," the report released today was authored by Nelson LeRay, an economist with the Agricultural Research Service, U.S. Department of Agriculture.

His report is an analysis based on recent studies of farm families in selected areas of Arkansas, Maryland, and West Virginia.

These areas are typical of low-income farming areas in all regions of the Nation with large numbers of farm and rural people living on small units, a lack of full-time employment, and generally inadequate levels of living on many farms.

"A surplus labor force exists in each of the low income areas studied," Mr. LeRay states. "A large proportion of individuals available for work expressed a preference for nonfarm employment. A majority of these individuals were young men and women."

Observing that many farm enterprises studied were too small to provide sufficient employment and income, the ARS economist states that by industrial standards, people living on such farms "were employed only two thirds of their total work time."

"The remaining one-third of the time," he comments, "represents a loss to the workers in income and standards of living and to the community and the Nation in reduced purchasing power and volume of economic activity."

Solutions to the problem in the areas studied, as well as farm areas with similar conditions, will require a threefold approach, Mr. LeRay observes:

Increasing efficiency of operations on small farms.

Increasing nonfarm job opportunities in the area.

Promoting job mobility of younger people living on small farms and in rural residences.

The final objective of programs like these, according to the ARS study, should be to develop and conserve both the human and natural resources of the area. "The rural development program are offers a promising approach to the development and conservation of resources in the low-income areas studied," its author concludes.

The three-State area studies analyzed in Mr. LeRay's report are part of a broader research project in which the Agricultural Research Service is cooperating with agricultural experiment stations in 22 States. Aim of the project is to develop information on farmland, labor, and capital resources in specific low-income farming areas around the country.

The cooperative project, a major economic research effort of the Agricultural Research Service, is going forward in connection with the national rural development program.

Studies already issued for areas in Arkansas, Missouri, Georgia, Maryland, West Virginia, and Florida are being used in planning rural development work in these States.

A copy of "Employment and Underemployment of Rural People," ARS 43-109, may be obtained from Press Service, Office of Information, U.S. Department of Agriculture, Washington 25, D.C.

Lowell Mason's Grace

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19, 1960

Mr. CARLSON. Mr. President, for 24 years Lowell Mason, a former member of the Federal Trade Commission, has been host at a luncheon on the opening day of the baseball season. At the luncheon on yesterday were members of the executive, legislative, and judicial branches of the Government.

Mr. Mason, as usual, opened the luncheon with a grace that was an inspiration to all of those present. I ask unanimous consent that it be made a part of these remarks and be printed in the Appendix of the RECORD.

There being no objection, the grace was ordered to be printed in the RECORD, as follows:

LOWELL MASON'S GRACE

Oh God teach us to repay our debt to Thee by the quality of our lives not by the quality of our words.

Grant us such a measure of Thy spirit, that the fellowship of man one with another (at this luncheon, the baseball game and all places where we gather together in comradeship) may be an echo of the fellowship of the spirit Thou hast taught us in the quiet of cathedrals, the solitude of woods, and the majesty of sea and mountain.

Here in the Capital (the busy marketplace of ideas) where men seek the greatest good for the greatest number,

Teach us, oh God, to respect the feelings of others more than our own rights and the rights of others more than our own feelings.

Teach us to differ without anger, to know the best not just the good; to know that it is better to earn liberty than to praise it. Amen.

Single Chief of Staff—Another Life Magazine Hallucination

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an article by Anthony Harrigan, noted writer for the Charleston News and Courier, titled "Life Magazine Urges U.S. Defense Czar," which appeared in the April 10 issue of the News and Courier, the Nation's most outspoken newspaper.

There is so much good sense in this article that it should be read by every American citizen. At the very least, those who read Life magazine owe it to themselves to read this article and learn the facts.

Life magazine, apparently, has taken it upon itself to become the military expert of the Nation. It follows that anyone who can sell advertising and run a magazine must know more about the military structure than those who have given their lives to this, the most important business in the United States. At least this appears to be Life's justification for now becoming experts in the field of national defense. When the facts do not support the case, pound the table. Life is certainly very good at pounding the table.

Fortunately for the Nation, there are countless people who do not subscribe to Life or at least do not subscribe to Life's

editorial policies or concur in all of the articles written for Life magazine.

The dangers of a single Chief of Staff are so grave for the welfare of the Nation, even an individual without military training can understand them. From the time of childhood, one learns the expression "two heads are better than one." This is true for everyone except Life magazine. They subscribe to the theory apparently that a little knowledge is a wonderful thing if you can put it in a magazine and sell it to a gullible public. Its concept of national defense is simply give the defense of the Nation to one man, take the Congress out of the picture except for appropriating enough money for whatever purpose that one man proposes to do, and then everyone can go down to the farm or to the beach or to the mountains and have a lovely weekend. Everyone can stop worrying. We will get more defense for less and all we need is a single supergiant to run the entire armed services. What a lovely, beautiful nightmare this would produce. However, if it means selling more magazines, Life will keep up this prattle from here on out. Perhaps Life would like to make one intelligent public gesture on this point. Perhaps it would be magnanimous enough—if it is truly interested in the Nation's military well being—to publish Anthony Harrigan's response as conspicuously as it printed the propaganda contained in the April 4 issue:

LIFE MAGAZINE URGES U.S. DEFENSE CZAR

(By Anthony Harrigan)

Anyone interested in how the Luce magazines trifle with the truth will do well to examine the article Shameful Strife in the Pentagon published in the April 4 issue of Life.

The article deserves attention on several counts. It is a slur on the integrity of the Nation's military leaders. It suggests that they put the Nation last when the interests of their respective services are involved. It distorts the question of decisionmaking in the Defense Establishment. It recommends that Congress be denied its present authority over military spending. And it endorses a plan that would create a defense dictator who would be able to suppress the kind of independent thought in the armed services that is their strength.

Life's goal as stated in the article is fourfold: It seeks: (1) Appointment of a single all-powerful military chief; (2) an end to the Joint Chiefs of Staff authority over their respective services; (3) transfer from Congress to the Secretary of Defense of control over all funds appropriated for national defense, and (4) elimination of the service secretaries and their replacement with officials wholly responsible to the Secretary of Defense.

Life moves toward this goal by scare talk, loaded language, omission of facts that don't fit its case, and downright distortion.

The article begins with the assertion that a seemingly unquenchable fire of interservice rivalry is out of control and endangers the national security. It says that Gen. Nathan F. Twining, USAF, Chairman of the Joint Chiefs of Staff, "inadvertently presented an appalling case against the present system" when he disclosed that the JCS were unable to reach agreement on the following questions:

Whether or not the Army air defense missile should be developed at full speed.

Whether or not the budget should provide more money for Polaris missiles and submarines.

Whether or not Polaris missiles should be mounted on surface ships.

Whether or not the ground forces are getting enough modern equipment fast enough.

Whether or not the Air Force should be allowed to develop a new bomber.

Readers of Life are supposed to scan this catalog and say: "Gosh, the country's defenses are in a devil of a mess. If the Joint Chiefs can't make up their minds, the President ought to kick them out and name one good man to be defense czar.

Though defense matters are complicated, Americans should not be fooled by Life's scare trick—not if they read the catalog carefully. The big undecided issues are issues that can't be decided as fast as a soldier pulls a trigger or Life shoots off its mouth. The decisions for or against the various weapons systems involve not tens but hundreds of billions of dollars.

If one man had the authority to say yes or no on each one of these items, he would have it in his power to make the biggest boondoggle in history and to bankrupt the United States.

Suppose Life's defense dictator had been approved 2 years ago? He might have ordered to Charleston and other American cities the Bomarc air defense missiles that one Pentagon group thought was the answer to Red attack. Billions would have been committed to a program that now is recognized as unnecessary. Bomarc didn't get the green light on a crash basis because of a disagreement among the Joint Chiefs of Staff.

The slowdown, which is what Life considers interservice rivalry, worked for the advantage of the country.

Consider the Army-Air Force competition in missile building. If all missile work had been assigned to one agency with one boss, the United States might be way behind where it is now. Former Secretary of Defense Charles Wilson, who shared Life's belief in centralization, wanted to shut down the Army's missile-development program. But the Army missile became the Nation's first reliable rocket weapon and satellite launcher.

If the Air Force had had its way in the late 1940's, the Nation's defense forces would have been restricted to long-range bombers. If the Air Force weren't aggressive in pushing its weapons, the Navy might be putting all its money in aircraft carriers and starving the rest of the fleet.

Despite what Life says, the committee system and the pulling and tugging between the services produces a variety of weapons and a reasonable balance in the Nation's Armed Forces. If the rivalry becomes somewhat excessive at times, it's simply because there isn't enough money to go around. Creating a defense dictator wouldn't solve the money shortage.

Life casts aspersions on the generals and admirals when it says "issues of the most vital concern to the Nation can be and sometimes are raised, debated, and resolved—or not resolved—more on the basis of service advantage or disadvantage than on their actual merits." This implies that the Nation's military leaders are more interested in building up service empires than in strengthening the United States. This is a calumny that persons familiar with the records of the splendid men who head the services must repudiate.

No citizen should assume Henry Luce and his editors have more patriotism than the Joint Chiefs of Staff and the officers who serve under them.

"A typical issue of this kind," says Life, "is whether the increasing variety of strategic weapons systems—SAC bombers, missiles launched from land or sea—requires that they be placed under a single command." Life says that when the SAC commander recommended this be done last year, the Navy "instantly interpreted his proposal as a petty grab for its promising Polaris missile and the submarines from which it will be launched. It added that Adm. Arleigh A. Burke quickly came up with a series of proposals to install Polaris on surface ships as well as submarines."

Life dismisses out of hand the integrity of Admiral Burke, a man who has devoted a lifetime to serving his country and who based his rejection of the SAC proposal on the ground that it makes no sense. Admiral Burke is viewed by Life, as a mere partisan. Actually, SAC's proposal for command of Polaris submarines failed to take in account the missile-firing subs antisubmarine role and their relation to other fleet units. The idea that combined air, ground and sea forces can be lumped together into functions ignores the fact that a destroyer, for example, may fire a missile, search for subs, stops a merchantman, rescue U.S. citizens from trouble spots, or bombard an island. Ships can't be restricted to one strategic job.

Life also distorts the character of Admiral Burke's response by ignoring the fact that Adm. Charles Brown, U.S. Navy, former 6th Fleet commander, endorsed Polaris missiles on surface ships as far back in 1957.

Another one of Life's reportorial sins is its failure to stress in the article the great successes achieved by the armed services under the existing organization. For example the Polaris missile system, which Representative L. MENDEL RIVERS told Charlestonians on April 3 is 3 years ahead of schedule, typifies things done without a defense czar. This and other military successes show that the Luce prescription for U.S. defense is bad medicine.

Debate among the services is not, as Life terms it "a cancer," but a necessary discussion and appeal for public understanding. If discussion were ruled out of order and Congress were denied the right to allot money to the separate services, decisions affecting the future of the American people would be made by a handful of people and without public knowledge of the issues involved. The existing military setup at times may be noisy, but it's healthy.

Bascom Timmons, Nationally Famed Journalist From Texas, Has Reported National Affairs Nearly Half a Century

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19, 1960

Mr. YARBOROUGH. Mr. President, recently some 400 friends attended a reception at the National Press Club honoring Bascom N. Timmons, noted Washington News Bureau director and columnist. It was a fitting tribute to one of the Nation's top journalists of the past three decades.

Mr. Timmons is a Texan, although he has reported the national scene for nearly a half century. Few men have had the view and grasp of history in the making that he has had in his adult lifetime. But what is more important, almost none have equaled him in graphically, faith-

fully, and seemingly tirelessly reporting important events of the day to his millions of readers.

It was my pleasure to become acquainted with Mr. Timmons in 1937, when I made a trip to Washington while serving as a State district judge. It was an acquaintance which I treasured from the first, and which has continued over the years. Texas is proud of Bascom Timmons' success in Washington.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent editorial from the Houston Chronicle entitled "B. N. Timmons, Capital Writer, Is Honored on 70th Birthday."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

B. N. TIMMONS, CAPITAL WRITER, IS HONORED ON 70TH BIRTHDAY

Bascom N. Timmons, chief Washington correspondent for the Chronicle, was 70 years of age Thursday and the occasion was celebrated with a reception at the National Press Club attended by more than 400 friends.

Timmons, an indestructible newspaperman who still writes several columns of news and comment each week in addition to operating his news bureau for which several other writers work, has been reporting the national scene for nearly half a century.

That "nearly half a century" phrase turns up again and again in Timmons' career. He has been friend of Presidents and other powerful figures for as long. He has reported virtually every Democratic and Republican national convention during the same period.

Timmons, a Texan by birth, went to Washington as a very young man. While he has written primarily of national affairs ever since, he remains a Texan to the core and when some story involving Texas interest or Texans breaks, he usually takes over and handles it himself.

Two of the closest friendships of his life have been with Texans, the late Jesse H. Jones, publisher of the Chronicle and Secretary of Commerce, and John Nance Garner, of Uvalde, former Vice President and longtime Congressman. Timmons has written biographies of both: "Jesse H. Jones, the Man and the Statesman," and "Garner of Texas." He also is author of a biography of Charles G. Dawes.

Report to the South Carolina Congressional Delegation on the Federal Aid Highway Program in South Carolina

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. McMILLAN. Mr. Speaker, under unanimous consent I insert in the CONGRESSIONAL RECORD a statement made by the chief highway commissioner for South Carolina, Mr. C. R. McMillan, to the congressional delegation from South Carolina at their annual meeting in Columbia on November 20, 1959.

I especially would like for the Members of the House to read this item since the majority of the statement is in connection with the superhighway construction program. The records show that South Carolina is second to the State of Texas in building these new superhighways at the lowest cost to the taxpayer.

The South Carolina State Highway Department has bypassed all the cities in the State and where it is necessary for one of the superhighways to enter the city limits the highway department uses the 50–50 Federal aid highway program rather than the 90–10.

I am certain that if all the States would use the 90–10 programs as we are using it in South Carolina in connection with the superhighway program, it would not be necessary for us to continue to increase gasoline and other taxes to pay for this roadbuilding program which is progressing so well in our State.

I want to take this opportunity to congratulate the State highway department officials in South Carolina for the progress they have made in connection with the entire Federal aid highway construction program.

The statement follows:

REPORT TO THE SOUTH CAROLINA CONGRESSIONAL DELEGATION ON THE FEDERAL AID HIGHWAY PROGRAM IN SOUTH CAROLINA

It is a pleasure to report to you again this year on the progress of the Federal aid highway program in South Carolina. You may recall that in my appearances before several committees of Congress when the 1956 Federal aid legislation was being considered, I strongly advocated adequate safeguards to assure that the respective States would be enabled to carry out a balanced highway program, rather than neglect for the next decade or so our primary and secondary system programs through putting everything into the new Interstate program. I am glad this thinking was embodied in the legislation as finally enacted and that South Carolina, along with other States, has been able to keep her regular programs moving ahead and, at the same time, given needed emphasis to the Interstate highways.

In South Carolina, in the nearly 3½ years since enactment of the far-reaching act of 1956, we have placed under contract 288 miles of Interstate System Highways. A small portion of this mileage has been opened to limited use by traffic and very soon we hope to open additional sections as construction nears the final phases of completion.

Obviously much work is required before we are able to award contracts; for example, a great amount of traffic engineering, drawing of plans, location surveys, and right-of-way acquirement. Including mileage under contract, we have completed surveys on 338 miles of Interstate Highways, or just about half the total of 680 miles to be embraced by the four Interstate routes to be constructed in this State.

Recently when Federal highways trust funds were nearing exhaustion, Federal authorities set up contract controls which, in effect, placed the Federal-aid highway program on a pay-as-you-go basis. This movement was viewed by authorities in many States as undesirable and as placing unnecessary controls on the individual State highway programs. I did not interpret the ruling in that way, but took the position that only through the Bureau of Public Roads' exercise of such controls could we effectively operate the highway program in line with the Byrd amendment to the 1956 Federal-Aid Act. Having operated in South Carolina on a pay-as-you-go basis, and being limited in highway spending by earmarked revenues and Federal aid, I felt that the practical effect of the controls set up by Congress on Federal spending for highways would be to bring Federal operations in line with the highway laws and administrative practices in South Carolina. This may not be the case, however, in all the States.

Under the contract control system, the States will have to schedule contracts at a lower rate during the first half of the current fiscal year than during the last half. Furthermore, under the new schedule, total obligations which may be incurred during the fiscal year 1960, for all the States, have been set at $2.7 billion, compared to $3.4 billion as originally apportioned.

Under the contract control procedure, funds available for obligation will accumulate at a predetermined rate beginning on July 1. Applied to South Carolina, the new ruling gives the State an allowance of $5,075,000 available for obligation through October 31. The State will then receive an allowance of $2,943,000 through December 31; $8,879,000 through March 31; and a like amount through June 30. This will give South Carolina a grand total of $25,776,000 for fiscal 1960.

Our total original 1960 apportionment was $31.8 million. As of July 1 we had obligated about $6.6 million of these funds. Therefore, under the formula worked out by the Bureau of Public Roads, we can still obligate, during the current fiscal year, an amount of funds equal to our unobligated 1960 apportionment, on July 1, 1959, of $25 million. All the States will not find themselves so fortunate, but it so happens that the advanced status of South Carolina's program places us in this favorable position.

On October 8 the Bureau of Public Roads apportioned 1961 funds to the States totaling $1.8 billion for the Interstate program and $925 million for ABC programs, giving South Carolina $14,683,680 for the Interstate System and $11,571,897 for the ABC program. Under the contract control procedure, however, we cannot actually obligate or let any of that money to contract until next year. The apportioning of the money at this time, however, enables us to go ahead and plan our work, submit projects for program approval, and so forth.

During the past fiscal year, South Carolina awarded construction contracts totaling about $81 million. This year we will have Federal and State funds for work totaling about $59 million, including amounts obligated for rights-of-way, engineering and related expenses. We expect highway expenditures for all purposes this year to pass the $100 million mark for the first time in the history of the South Carolina Highway Department. Last year, in fiscal 1958–59, we paid out for all purposes, construction, maintenance, patrol, etc., approximately $96 million.

It was somewhat unfortunate that it became necessary for the Federal Government to institute an investigation of Federal-aid highway spending in the respective States. However, during my appearances before various committees of Congress which were concerned with appropriations for highway work, I could see that such investigations might eventually come about. In the first place, I could appreciate, from questions asked, that some committee members knew very little of the operations of the highway departments in their home States and what was going on there. Secondly, after rumors were circulated in some of the States that there existed improper spending of highway funds, it then became necessary to have an investigation to determine to the public's satisfaction whether such rumors were true or false. The public has a right to know where its tax money is being used, and to be assured it is being properly expended.

When the question arose as to providing additional funds for the exhausted Federal highway trust fund, I took the position that the then existing Federal tax levies were adequate to meet highway needs, provided all such revenues collected were placed in

the fund. The President and those responsible for drawing up the Federal budget were not willing to have all highway user revenues go into the trust fund, but insisted instead on additional motor fuel levies. With this situation prevailing, and the threat of a costly highway construction moratorium hanging over the Nation, Congress had but one alternative, that of providing such additional revenues as required to keep the program moving. I commend each of you for the support you gave in providing needed revenue, which was the only thing to do under the circumstances.

The interstate highway program is unquestionably the most vital of any of the highway programs now being developed, both from the standpoint of ordinary traffic needs and the national defense. I have been conscious of some agitation for amending the formula under which funds are provided for this essential highway work. Presently 90 percent of the cost is borne by the Federal Government and 10 percent by the respective States, with the States also to bear all costs of maintenance and traffic law enforcement. It has been proposed that the Federal Government's part be reduced and that the State's contribution be increased, a step which obviously would mean an increase in State taxes. I am convinced that any such action would seriously retard development of the Interstate System of modern, safe and efficient highways. I can well imagine that such additional State tax money as voted to make up the deficiency in Federal funds would result in a general public demand that it be expended on local projects. This would be ony a natural development which could be expected to result from any change in the existing plan of finance.

In this connection it may be of interest that the Federal Government's relatively high contribution to the interstate program can be justified more and more as time passes, as exemplified by the recent change in minimum design standards to meet national defense requirements. This was an increase from 14 to 17 feet in vertical clearances at bridges, a change which obviously increases the cost of approach road work as well as that of the structures themselves. Any upsetting of the already proven formula for financing this program would be detrimental to essential interstate highway development, and I urge you to resist any movements to change it.

In South Carolina, in laying out our portion of the interstate highways, we have attempted to locate them so as to best serve the highway user and, at the same time, do the least damage to property, thereby meeting a third objective of avoiding excessive costs. Wherever possible we have avoided direct through-city locations, but are developing adequate urban connections of either high type controlled-access facilities or improved primary and secondary routes, depending on needs as indicated by engineering studies. In this way both our local and through traffic needs are being served, as well as the additional highway needs imposed by construction of the interstate roads.

Through the development of our State secondary system program, financed entirely with State funds, we have been able to do more street paving work in our cities than have many other States. This, coupled with the Federal-aid secondary and Federal-aid urban and primary programs, has enabled us to gradually improve the streets that are in the respective highway systems. Much remains to be done, however, which we hope to accomplish as the coordinated program of work develops and additional funds become available.

There is one other matter which I feel compelled to include in this report. It pertains to the proposed new bridge over the Inland Waterway on U.S. Route 501, between Myrtle Beach and Conway. U.S. 501 was recently developed into a fine four-lane divided highway between the popular beach resort and Conway, with a new bridge having been constructed across the Waccamaw River. Before starting the road improvement we petitioned the U.S. Army Corps of Engineers for authority to construct a modern fixed high-type bridge, eliminating need for a movable span. We proposed to provide a vertical clearance of 55 feet above the elevation of mean high tide. The War Department many years ago established a minimum vertical clearance of 80 feet, which places an unreasonable burden on land transportation. Adherence to this standard would force us to build another bridge, with a movable span, at the location.

The Army engineers, following a hearing, denied our petition, and at the same time requested we supply them with extensive data in addition to that already furnished to substantiate our claims that a bridge of the vertical clearance specified could not be justified. This is being done.

There are now before Congress at least two bills which, if enacted, would enable us to build a structure suitable for land transportation while at the same time meeting the needs of water navigation. One is H.R. 1483, introduced by Congressman McMULLAN, giving specific authority to construct the bridge needed on U.S. 501. There is also a bill by Senator CASE of South Dakota, S. 1126, proposing to amend the General Bridge Act of 1946, which would, therefore, have national application. To the best of my knowledge, no action has been taken on either of these measures and we are still without authority to proceed with plans for the type structure we feel is badly needed on U.S. 501.

I greatly appreciate the oportunity you have given me to report to you on the South Carolina highway program. I am grateful for the many courtesies you have shown me and for the help you have given me in all phases of my administration.

Settlement Week

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1960

Mr. KEATING. Mr. President, the observance of Settlement Week recently served to focus attention on the tremendous contributions made by settlement houses and neighborhood centers to the building of a finer America. The dedicated work of those who man these institutions deserves the commendation and recognition of all of us.

More often than not, the selfless activities of settlement leaders have not gained the public acclaim they deserve. It is doubly fitting, therefore, that all of us have our attention drawn to the very vital manner in which Jane Addams and all her associates on down through the years have played their part in making our cities better places in which to live.

The integral part neighborhood centers have played in the development of my home city of Rochester, N.Y., was recently outlined in an editorial in the Rochester Democrat and Chronicle. Just as this city has been blessed with tireless leaders in this cause, so other urban centers all across America have become more livable places because of such people. Although Settlement Week has now passed, it is important for all of us to recall its message and its meaning, and I ask unanimous consent to have this fine editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SETTLEMENT HOUSES A TOP RESOURCE

Settlement Week now being observed in Rochester prompts a reflection that settlement houses and neighborhood centers have completed a cycle in their service to Americans at the grassroots level.

Since Jane Addams founded the settlement movement with her Chicago Hull House in 1889, this technique in dealing with economic and social problems has grown to 289 members of the National Federation of Settlements and Neighborhood Centers.

Refinements have been added but essentially this approach has been to battle on the frontline for better social conditions for low-income families. In the early days this was the only practical attack on the headaches of the less privileged. Now with population spiraling and city residential areas growing more compact, social workers are realizing as never before the efficacy of settlement houses in reaching these people.

Rochester is favored in having five of these institutions—Baden Street Settlement, Charles Settlement House, Genesee Settlement House, Lewis Street Center, and Montgomery Neighborhood Center. It would be impossible to tell how many lives have been straightened out, or to put a cold money value on their 59 years of dedicated service. There is no question that they have made Rochester a more livable city.

Economic Moth Holes

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced H.R. 853 which would increase the minimum hourly wage from $1 to $1.25.

In this connection I commend to the attention of our colleagues the script of a WCBS, New York, radio editorial as it was broadcast on April 13, 1960:

ECONOMIC MOTH HOLES

When the New York State Legislature came out in favor of the $1 minimum wage for intrastate industry last month, a member of the State Senate was overheard to say: "This is a short step in the right direction."

"Short" is right—and shortsighted, too.

For some time now, the Wagner administration has been calling for a Federal and State minimum wage of $1.25 an hour. In Washington this week, a House Labor subcommittee heard David Dubinsky of the International Ladies' Garment Workers Union say that such a raise in the minimum wage would "help stop the spread of unfair competition in terms of human misery." In the Senate, a subcommittee of the Labor and Welfare Committee has already recommended the $1.25 figure. So the Federal

minimum wage may be about to graduate from the school of starvation.

And yet, there is no unanimity of opinion today that a minimum hourly wage of $1.25 is essential for survival in the New York area. The National Association of Manufacturers, for example, spelled out its sentiments like this a few weeks ago:

"The trouble is that most of these people (i.e., people who earn less than the present minimum wage), do not have the skills which would enable them to earn a living wage. Efforts to force employers to pay them higher wages than their abilities warrant can only result in no jobs at all for many of them and no earnings. Then the entire burden of their support will fall on the taxpayers."

This 19th century methodology is expounded despite a recent estimate by New York City Welfare Commissioner James Dumpson. He told the city council that a Federal-State minimum wage of $1.25 an hour would save the city at least $1 million a year in welfare costs. The commissioner explained that of the more than 61,000 people now getting home relief, 44 percent were in families whose wages are being supplemented by the welfare department.

There are 700,000 wage earners in the State of New York today who are getting less than $1 an hour. Of these, 375,000 work in the city of New York. They make up the low-wage pockets which spawn substandard living conditions and crime. No matter how you slice a family budget for 2, $1 an hour for a 40-hour week means $12 less than the amount required under minimal welfare standards. For a family of 3, $23 less. For a family of 4, $34 less.

The NAM ends its analysis of the low-wage problem by saying: "From every standpoint—economic, sociological, or humanitarian—even a low wage is better than no wage at all."

This, of course, is the vine of logic to which many of those who are submerged in profit columns have constantly clung.

WCBS, however, is convinced that a wage of $1 an hour, as outlined in the bill now awaiting the signature of Governor Rockefeller, constitutes the barest minimum essential to survival in the metropolitan area. Anything less can only result in the kind of abject poverty which leads to a loss of dignity.

Let us establish a Federal-State minimum wage which is truly minimum.

Let us wipe out the economic hangover that offers a man a job and then forces him to ask for supplementary welfare assistance.

The theory that a low wage is better than no wage at all may have been indisputable in a long bygone era.

In the spring of 1960, its moth holes are showing.

Philadelphia Apartment House Saves in Fuel Costs by Converting to Anthracite Coal

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the Wilkes-Barre Times Leader of Friday, April 15, 1960:

APARTMENT SAVES IN CONVERSION TO COAL

Typical of savings being made by users of automatic anthracite in commercial investment property is that of the Lakeside Apartments in Philadelphia.

In 2 previous years the annual fuel oil costs were $16,000 and $19,000 respectively. The first complete year with EFM Automatic Anthracite Fire-jet burners the fuel costs added up to $13,300. This means that anthracite saved this apartment house an average of $4,300 a year over the previous 2-year average with oil.

Compared with the high average oil year it saved $5,800. In addition, the management reported, "We have maintained steady heat in all apartments 24 hours a day and an inexhaustible supply of domestic hot water. These conditions did not exist before, and last winter was a much colder winter."

The management further maintains that the use of anthracite entailed no more labor than that previously required when oil heating was in operation.

This installation has become a "showcase" in Philadelphia and the Lakeside management has invited other commercial management companies to visit the premises and inspect this cost-saving equipment.

Because of the results attained from the anthracite unit, the Lakeside management indicated that it will install EFM Eire-jet equipment in other new projects under their jurisdiction.

Pan American Week

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the New York Times paid its respects to Pan American Week in an editorial which appeared on April 18. The editorial discussed the difficulties facing this Nation and fellow nations of the Americas during the next year, and it gave good reasons on why this week should be "a week of dedication to the ideals of democracy and social reform in the Western Hemisphere."

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PAN AMERICAN WEEK

Pan American Week begins today. Each year at this time the nations of Latin America and the United States commemorate the first official International Conference of American States held in Washington in 1889–90. This is being counted as the 70th anniversary. In any event, anniversaries are always useful milestones at which one looks back over the stretch of road just traveled and ahead into the unknown.

The Latin-American scene was dominated in the past year by the Cuban revolution and its leader, Fidel Castro. All indications point to the coming year being similarly dominated. The impact of Cuba's revolution has been hemispheric, and in this respect it is proving even more influential than the Mexican Revolution of 1910–20.

One reason for this is that the Cuban revolution, whatever one feels about it, does embody many of the major aspirations of the Latin-American peoples. As President Lleras Camargo of Columbia sees it, the next 10 or 15 years will witness a struggle for social justice that will end in totalitarianism if democratic processes do not provide land, jobs and a decent standard of living for all peoples. The race is between evolution and revolution, but evolution cannot be the long, slow process we followed in the United States. The underdeveloped peoples of Latin America, Africa, the Middle East and Asia are impatient. They are being wooed, in the form of communism, by an alternate system of life and economy which has proved that backward countries can raise their standards and can industrialize without foreign investments.

At the heart of the demand for social justice in Latin America is agrarian reform, and here, again, one must recognize the appeal of the Cuban revolution. As a general rule there is a striking imbalance between the few wealthy and the poor masses, the city and the country, the big landowner and the landless peasant. This gap has to be closed. The Cuban answer is revolution; the others want evolution. At least, their governments want it that way. No statesman would care to see a Castro-type revolution in his country, and this explains the general hostility to Cuba on the governmental and ruling-class level in Latin America.

The point that President Lleras Camargo of Colombia constantly made during his recent sojourn here was that the Latin-American countries could not have their agrarian reform or industrialization without development loans from public institutions. The alternative, he warned, would be a repudiation of the democratic process and "a historical disaster."

Latin America is entering a period of crisis. The old policies will not suffice. This is a week for ceremony and celebration, but it should also be a week for dedication to the ideals of democracy and social reform in the Western Hemisphere.

Surplus Farm Commodities

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a letter sent to me by Rt. Rev. Msgr. Edward E. Swanstrom, executive director of Catholic Relief Services, National Catholic Welfare Conference, making certain suggestions and amendments in relation to Public Law 480, and the manner in which Public Law 480 might become more effective, particularly in certain landlocked countries.

There is no person in connection with the carrying out of Public Law 480, who is more experienced and whose views are worthy of more profound consideration, than Monsignor Swanstrom. His views and suggestions, as contained in his letter to me, are worthy of deep consideration by appropriate committees of both branches of the Congress.

The letter follows:

CATHOLIC RELIEF SERVICES,
NATIONAL CATHOLIC
WELFARE CONFERENCE,
New York, N.Y., March 30, 1960.

Hon. JOHN W. McCORMACK,
House of Representatives,
Majority floor leader,
House of Representatives Office Building,
Washington, D.C.

DEAR CONGRESSMAN McCORMACK: The problem of mounting stores of surplus farm

commodities is one that I know is of great concern to all the Members of Congress and the officials of various departments of our Government.

Through Public Law 480, you have given the American voluntary relief agencies a wonderful opportunity to accomplish great good amongst the poor and distressed in all quarters of need throughout the world. All of us have made an effort to make the fullest and most effective use of this opportunity.

From time to time the directors of the other voluntary agencies and myself are asked for suggestions for the better use and distribution of these commodities.

We have found by years of experience that there are various factors that seriously impair the efficiency and extent of the programs that our agencies are carrying on overseas on behalf of the needy in which we use title III U.S. Government food supplies. It seems that some of this could be resolved through proper action on the part of Congress.

The purpose of this letter is to lay these problems before you and the members of congressional committees concerned in the hope that all or some may be resolved.

They are as follows:

1. The problem of landlocked countries. Such countries as Laos, Paraguay, and Bolivia, among others, have no seaports to which our food supplies can be shipped. These countries are, of course, very poor ones and in great need of the supplies that we could make available to them under a title III program in larger quantities were ocean freight funds utilizable to the point of entry of these countries. At the present time we can only ship these supplies to a seaport in a neighboring country. The problem of overland transportation of the supplies from such a port to the point of entry of the countries concerned might be resolved by an expression of intent of Congress concerning the use of the ocean freight funds. Government lawyers have already decided that their interpretation of the use of these funds limits them to what is strictly ocean freight. This, of course, works a hardship both on the agencies carrying out programs in landlocked countries and on the landlocked countries themselves.

2. According to present understanding of Public Law 480, all food supplies used by voluntary agencies under title III must be distributed to the needy without exacting any form of recompense from them. This, in effect, means that these foods cannot be used to pay workers who might be engaged in community-effort activities. Many agencies are interested in projects of public-interest nature, such as the building of schools, small roads, drainage ditches, dikes, bridges, etc. Very often the people of underdeveloped countries could be induced to engage in community efforts of this kind if title III foodstuffs could be used as a recompense for their labors in behalf of a community project. Such a use of these foods would have important social as well as economic benefits, since community spirit would be fostered thereby and the value of cooperative effort for social betterment would be made known.

3. According to the present regulations under which we operate, food must be distributed as it is received, or its conversion into other end products must be paid for by some source other than the recipient. The food itself cannot be used in any case to pay for its own conversion into other end products. In effect, this means that the lack of adequate resources on the part of the voluntary agency operating the program or on the part of local groups cooperating with the program limits the amount of wheat flour that could be converted into bread or noodles, for example. This, in turn, limits the usefulness of the supplies. In occupied areas around the world after the last war the Army used a part of these supplies to pay for their conversion. Also, title I and title II supplies are sold in a variety of manners. It would be a great help to the efficiency of the operations of title III programs if the actual work of converting the supplies into other end-use products could be paid for with a part of the supplies themselves. Specifically, bakers could be paid in flour for the baking of bread or the making of noodles. The end result of such a possibility would be to give the poor items that could be used immediately and to familiarize them with new types of food that would be much more beneficial to them than some of those that they are presently using.

4. The use of corn for animal fodder. The people of Asia need meat and are particularly fond of pork in most countries. If corn could be used as food for animals it would be possible to convert large quantities of our surpluses into meat. The details of this would have to be worked out very carefully, of course, in order that the meat go to needy people. Something that might be considered would be, for example, the supplying of corn to people who would raise pigs under contract with us to return to us a pound of pork for a set quantity of corn delivered to them. This may seem like an almost impossible thing to attain, but we should remember that at one time it was illegal to purchase American surplus in the United States for use as animal fodder. At a later date this procedure was made legal. If it could be made legal overseas also, I am sure that we could do a great deal of good in many countries with the resultant product.

Over the past few years representatives of some of the other agencies and myself have offered these suggestions in whole or in part at various hearings on the mutual aid and agricultural bills. I hope that by presenting them to you and some of the other leaders of Congress in this form they may be of some further help to Congress in its deliberations on these matters.

With a word of kindest personal regard, I am

Sincerely yours,
Rt. Rev. Msgr. EDWARD E. SWANSTROM,
Executive Director.

Birmingham City Commissioners To Sue New York Times

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. HUDDLESTON. Mr. Speaker, the reaction in my district to the articles by Harrison Salisbury, which appeared in the New York Times on April 12 and 13 regarding Birmingham, has been tremendous. The people of my district, so intimately familiar with and so well aware of the true situation, are protesting vigorously about this dreadful example of irresponsible journalism by one of the nation's top-ranking newspapers and best-known reporters. On Saturday, April 16, 1960, the Birmingham City Commissioners announced that they were taking steps to file suit against the New York Times on the ground that the articles by Mr. Salisbury slander them as officials of the city and as individuals. Under leave heretofore granted, I insert in the CONGRESSIONAL RECORD newspaper articles from the Birmingham Post-Herald and the Birmingham News, in which the announcement of the intention of the Birmingham City Commissioners appears. The articles by Mr. Salisbury, to my mind, represent the most vicious slander of a community of decent people which has ever appeared in any of our daily press. I endorse the action of the Birmingham City Commission.

The newspaper articles follow:

[From the Birmingham Post-Herald]

COMMISSIONERS TO SUE NEW YORK TIMES

(By Bill Mobley)

The three Birmingham city commissioners have employed a local law firm to sue the New York Times for recent newspaper articles, which they contend, slanders them as officials and individuals.

At a meeting yesterday, Mayor James W. Morgan, and associate commissioners, J. T. Waggoner and Eugene Connor entered into an agreement with Attorneys James A. Simpson and William L. Clark to start preliminary groundwork for the suit.

The statements to which commissioners object appeared in the New York newspaper under the byline of Harrison E. Salisbury who wrote two long articles concerning racial conditions in Birmingham.

The commissioners said they have been advised that they possibly may recover punitive damages because they are elected to uphold Birmingham laws which the articles intimated had not been enforced.

EMPLOY LAW FIRM

Mayor Morgan stated: "We have employed the law firm of Lange, Simpson, Robinson, and Somerville to represent us as individuals in a damage suit against the New York Times.

"The cost will be borne by us as individuals.

"We think the stories were so unfair, and untrue, in so many respects that they were a reflection against the people of Birmingham, both white and black.

"I'm sure they are resented by both races."

Mayor Morgan said no figure has been set as to damages to be sought but it was agreed that if the case is lost the three commissioners will pay court costs.

AMOUNT SECONDARY

The attorneys said "the amount to be named is of secondary importance."

It was agreed that the case will be filed in circuit court on the basis that the employee of the newspaper who wrote the articles in question visited in Birmingham.

The attorneys said the first steps in the suit will be to demand apologies and retractions regarding the so-called libelous statements, and then proceed as the situation calls for.

[From the Birmingham News]

SUIT PLANNED BY COMMISSION AGAINST TIMES

(By Bud Gordon)

City commission will sue the New York Times for publishing articles criticizing and slandering Birmingham, the commission and the State.

Mayor James W. Morgan said the law firm of Lange, Simpson, Robinson & Somerville was told Friday to start legal proceedings against the Times immediately.

Morgan said the suit will be filed by the three commissioners as individuals, since the city cannot legally file a slander suit.

The suit was prompted by two articles which appeared in the Times this week under the byline of Harrison E. Salisbury.

The two-part story painted Birmingham as a city where the "emotional dynamite of racism" is enforced by violence. The story

described Birmingham as a city where telephones are tapped, mail is intercepted and opened and where the "eavesdropper, the informer, the spy, have become a fact of life."

Commissioner Eugene Connor Friday branded the stories as "cheap attempts to smear our city and State." He said the story very plainly indicates that "the mighty Times wears only the mask of fair news reporting; that the face behind the mask is one of bigotry and hate."

Morgan, Connor and Commissioner J. T. Waggoner said they decided to file suit following a meeting with Attorneys James A. Simpson and William L. Clark.

"It is our impression," Simpson told the commisisoners, "that while the city has no cause of action, itself, the city commissioners, as such, do have. The article reflects on them as responsible persons for keeping law, order and tolerable living conditions in Birmingham.

"The imputation that they have not done so is a personal criticism of them."

Simpson reminded all three commissioners that the legal costs of the suit would have to be paid by them personally. He also told the commission it would have to demand a retraction of the paper before it can recover punitive damages.

Simpson said the suit will be filed in State court by him and Clark, as soon as the groundwork has been laid.

"We think the stories were so unfair and untrue in so many respects," Morgan said, "that they were a reflection against the people of Birmingham, both black and white.

"I'm sure they are resented by both races."

Neither the commission nor the attorneys would say what amount they intended to seek in damages.

"The amount isn't important," Connor said, "its just high time someone put a stop to irresponsible Yankee journalism."

Giovanni Verrazzano

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. RODINO. Mr. Speaker, April 17 is a day of importance for all Americans, for on this day we honor Giovanni Verrazzano, the courageous explorer of the American Continent. Verrazzano Day has a grand significance, which only recently has begun to receive the recognition it deserves.

It was Giovanni Verrazzano who, in 1522, convinced Francis I of France that he should make an expedition to America. By 1524 he succeeded in landing on the coast of North America, possibly off the coast of what is now North Carolina; from there he traveled to Newfoundland, discovering en route the Hudson River and Manhattan Island. Verrazzano returned to France the same year and the account of his discoveries is the first description of the northeast coast of North America.

For some reason these glorious exploits remained in comparative obscurity until very recently. Today, however, the tide has been turned. Largely due to the dedicated efforts of such groups as the Italian Historical Society of America and the newspaper Il Progresso Italo-Americano we are beginning to recognize Giovanni Verrazzano's magnificent achievement. On April 17, 1958, for example, Governor Harriman, of New York, calling Verrazzano the first European to step foot on our New York shores, issued a proclamation hailing the Florentine navigator for having sailed into New York Harbor on April 17, 1524. And in the New York State Museum a plaque formally honoring Verrazzano was formally installed in the Hall of History.

Indeed, as recently as March 9, 1960, a bill to name the proposed bridge between Brooklyn and Staten Island in Verrazzano's honor was signed into law by the present Governor of New York.

The honor accorded Giovanni Verrazzano is a symbol, not only of the greatness of this explorer, but of all the Italian explorers to whose daring and courage America owes so much. On April 17 we salute Giovanni Verrazzano, one of the first of these great sailors, and we pay tribute to his great and glorious voyage.

Work Not Play Held Youth's Big Need

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled, "Work Not Play Held Youth's Big Need," which appeared in the April 14, 1960, issue of the Messenger of Madisonville, Ky.

WORK NOT PLAY HELD YOUTH'S BIG NEED

For a number of years we have heard the cry that healthy recreation is the one and only cure for the emotional disturbances of youth—the disturbances which in some cases lead to juvenile delinquency, to use again that well-worn phrase.

Well, managed play entered the picture, sort of regimenting our youth and telling them when to play, when to sing and when to smile, and while a lot of big claims have been made for it, the conviction is growing among serious-minded people that it hasn't worked too well.

A few timid voices were raised in suggestions that work facilities for kids would reduce juvenile delinquency far more effectively than planned play and recreational facilities. There were shrieks of anguish at the idea, and some who advanced the thought were condemned by the planners and the labor folks as being advocates of child labor.

One shrieker to high heaven who was carried away by his indignation at the thought of youngsters working went so far as to revive that old quatrain about child labor, used effectively in former years, which went like this:

> The golf links lay beside the mill,
> And almost every day,
> The toiling children could look out
> And see the men at play.

Well, anyway, there comes now into the picture the celebrated Judge Philip P. Gilliam of Denver, a nationally known juvenile judge who is listened to with a vast deal of respect in various parts of the country. Judge Gilliam makes his point most eloquently. Some people in the youth management business, who have made it quite a profession, will think the judge's declaration is brutally frank, but there will be some millions of others who think it is well worth reading by every parent and by every boy in his teens.

Said the noted Judge Gilliam:

Always we hear the plaintive cry of the teenager: What can we do? Where can we go?

The answer is go home. Hang the storm windows, paint the woodwork. Rake the leaves, how the lawn, shovel the walk. Wash the car, learn to cook, scrub the floors. Repair the sink, build a boat, get a job. Help the minister, priest, rabbi, the Red Cross, the Salvation Army.

Visit the sick, assist the poor, study your lessons, and then when you are through—and not too tired—read a book.

Your parents do not owe you entertainment. Your city or village does not owe you recreational facilities. The world does not owe you a living. You owe the world something. You owe it your time and energy and your talents so that no one will be at war or in poverty or sick and lonely again.

In plain, simple words "grow up," quit being a cry baby. Get out of your dream world and develop a backbone, not a wishbone, and start acting like a man.

You're supposed to be mature enough to accept some of the responsibility your parents have carried for years. They have nursed, protected, helped, appealed, begged, excused, tolerated, and denied themselves needed comforts so that you could have every benefit.

This they have done gladly, for you are their dearest treasure. But now you have no right to expect them to bow to every whim and fancy just because selfish ego instead of commonsense dominates your personality, thinking and requests.

In Heaven's name, grow up and go home.

Evidently Judge Gilliam out Denver way has been doing a lot of thinking about this youth business, and has come to the conclusion that a lot of people are working the wrong end of the street. He must brace himself for a lot of howls of indignation about "work facilities" for youngsters, but he is on the right track.

Presently, it is criminal for kids to work. The reformers made it so, swinging the pendulum too far in the other direction in an effort to curb exploitation of the Nation's kids in the sweatshops of an earlier day.

Letters Critical of New York Times Appear in Birmingham Newspapers

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I insert several letters which appeared in the "Letters to the Editor Column" of the Birmingham Post-Herald on Saturday, April 16, 1960. These letters refer to two articles written by one Harrison Salisbury, which appeared in the New York Times on April 12 and 13. These articles, which were highly critical of Birmingham and its present race conditions, were gross distortions and amazing recitals of untruths and semi-truths. I don't believe there has ever

been a worse example of journalistic irresponsibility ever presented to the American people. The letters which follow point up the reaction of the people of my district to the New York Times newspaper articles:

WHY THE NEW YORK TIMES DOESN'T NEED COMICS

Now I know why the New York Times doesn't carry comic strips. Their hysterical diatribe about Birmingham has the verity of Alley Oop, the objectivity of Bugs Bunny and the humor of Orphan Annie.

The New York Times must be trying to steal the circulation from Pravda.

FORD M. MACELVAIN.

GROVE HILL.

MATERIAL PRINTED WITHOUT INVESTIGATION

The Salisbury articles can authentically be described as yellow journalism or propaganda.

The writer does not give any names of those "quotes," indicating it was what is internationally known as weasel writing.

It is surprising to see a newspaper of the reputation of the New York Times printing this material without investigation.

May I suggest the local chamber of commerce give a paid trip to our city for 1 week to the editor of that paper for him to write his own series.

Frankly it is going to do a great deal of damage toward trusting what I read in any newspaper hereafter.

Is the Scripps-Howard chain up east carrying similar articles?

BOB THOMPSON.

BIRMINGHAM.

SLOGAN SUGGESTED FOR NEW YORK TIMES

Thank you very much for this morning's lead editorial, "Another Slander," and the hard, decent punch minus the minute details.

Some men will do almost anything for the mighty dollar, even to hitting below the belt. One thing I feel sure of Mr. Salisbury and that is he isn't on speaking terms with God. In a way I feel sorry for Mr. Salisbury, coming all the way to the ugly South for ugly news. Perhaps his own city could use a new broom.

Thanks, too, for our decent, honest, southern reporters. If there's a mistake, there is always a retraction.

I believe Mr. Salisbury and the New York Times could use our slogan: "Give light and the people will find their own way."

Mrs. R. C. WHEELER.

ENSLEY.

Educational Rights

EXTENSION OF REMARKS

OF

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. GIAIMO. Mr. Speaker, the Education and Labor Committee, of which I am a member, has been deeply involved for many months in the study of our public school needs and the role which Congress can perform to help meet these needs. I expect that in the very near future this House will have the opportunity to debate and vote upon measures which the committee has proposed. In anticipation of early deliberation, I am inserting in the RECORD an editorial from the April 14, 1960, issue of the New York Times which discusses the question of Federal financial aid for our schools. The editorial, "Educational Rights," follows:

EDUCATIONAL RIGHTS

After acting on the voting-rights bill, it is important that the House turn its attention to another kind of civil-rights measure. This is what might well be called an educational-rights bill, one that would recognize the Federal Government's inescapable responsibility in the present crisis in American schools.

Early in February the Senate passed a bill providing $1.8 billion on a matching basis over a 2-year period for teachers' salaries or school construction or both. One of the great advantages of this measure is that it gives the individual States a choice in spending the money; one of its great disadvantages is that in the light of the administration's narrow view of school needs the President would be almost sure to veto it. To avoid such a fate, the House Education and Labor Committee last month reported a bill providing half the amount of the Senate proposal, stretching it out over a 3-year period, and limiting it to matching grants for school construction only, with an administration-approved bond-retirement plan thrown in for good measure.

The administration, backed by the usual conservative Republican, southern Democratic coalition, has shown so little grasp of the magnitude and the urgency of the school problem in the United States that even if Congress grants any aid at all, it is likely to be inadequate. Yet is is difficult to believe that this issue can once again be shoved aside, as it has been for nearly a decade. It ranks in importance with civil rights and national defense—in fact it is part of national defense.

"The public schools in the United States * * * are ill-staffed, ill-equipped, and ill-housed to provide the kind of excellence in education which the era demands * * *," said the public education association of this city in a recent statement. The nationwide shortage of public school teachers is 135,000 (average annual salary $5,160); the nationwide shortage of classrooms is about 130,000; within the decade, school enrollments will increase by 25 percent, and expenditures "sufficient merely to maintain existing standards" will jump even more sharply. It is no longer simply to improve the quality of education that Federal support is vital; it is necessary to prevent a decline—and it is necessary now.

The Air Force Manual Issues

EXTENSION OF REMARKS

OF

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. KARTH. Mr. Speaker, under *leave to extend my remarks, I include* therein a letter from the St. Paul Council of Churches.

Mr. Speaker, I am confident that this letter better expresses than I could the *sentiments of the Council of Churches in* my district, and better expresses the feeling of those many thousands who are members of the Protestant and Orthodox churches. *Certainly, Mr. Speaker, it is* indeed a sad day, when one of the military services of our Nation imputes, by indirection or otherwise, or implies there is disloyalty originating within many of the great churches of our land. At this point I do not really know who the "scare" hunters are, but whomever they be, I hope the Air Force will take appropriate action. Perhaps if they spent some of this time and money on missiles and defense, we would be in a much more favorable position from a national security standpoint, then we are.

I am opposed to communism wherever it exists, but to cast the shadow of guilt by association, is returning to the sad days of "McCarthyism."

Mr. Speaker, the letter follows:

ST. PAUL COUNCIL OF CHURCHES,
Saint Paul, Minn., April 13, 1960.

Hon. JOSEPH E. KARTH,
House of Representatives,
Washington, D.C.

DEAR MR. KARTH: I am writing to you at the request of our pastors and the board of directors of the St. Paul Area Council of Churches. We are deeply concerned, as are church members in all parts of the country, over the recent statements incorporated in an Air Force manual. You will recall that in this manual the Air Force took it upon itself to warn young recruits in that branch of the armed services to be very critical in their judgment of churchmen and of churches as such. The assumption seems to have been that in the minds of those responsible for the manual the churches of this country are infiltrated with Communist sympathizers, and that therefore they may be a threat to the national security.

This, I am sure, you do not believe any more than I do. When one considers the millions of people represented in the National Council of Churches of Christ in the U.S.A., even if the charges were true that there are a few individuals within these churches who are misled, this in itself does not pose any threat. I am sure you will agree that if there is one institution more than another that can be depended upon to uphold the democratic way of life which we cherish in this country, it is the Protestant and orthodox churches. If these tens of thousands of churches are not to be trusted, then this country is in a very bad way.

It is a most disturbing thought that men high in the ranks of the armed services should take unto themselves the right to sit in judgment upon the churches and upon their leaders. Furthermore, one cannot help being frightened when these gentlemen insinuate that the American people are not to be entrusted with the truth, and that those in the armed services are to be the guardians of what they think and say.

Here in the Twin Cities area there has been an attempt by some people to use the so-called Air Force Manual Issues as a means of undermining the confidence of our people in their churches. We have tried to be discreet and have hesitated to openly rebuke these misguided souls who would sow mistrust among us. You should know that a Minneapolis newspaper editorial took a very strong stand in this matter, as did also station WCCO–TV, and for these outspoken positions the churches are grateful.

May I therefore suggest that you inform yourself as to who these people are, who nationally seeking to poison the minds of our people? In every case they are people who are on the fringe of the church and who in *no way represent the mind of the church.* In fact, they do not know enough about the church at large to be justified in making such statements, even if they thought them to be true. It is obvious that these people have managed to catch the ear of many prominent people in our Federal Government.

We count on you, then, as our representative, to protect the good name of the

church and to refuse to accept at face value the statements of these so-called apostles of discord.

Bear in mind, please, that an attack on the National Council of Churches of Christ in the U.S.A. is an attack on the churches themselves. The national council is the official agency of the 33 denominations that comprise it. It does not have any separate existence. It is wholly responsible to its member bodies and to them alone.

Sincerely,

H. C. BRADSHAW,
Executive Secretary.

His 50th Easter at the Organ

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following feature article by Mr. Lou Rauscher which appeared in the Wilkes-Barre Sunday Independent on April 17, 1960, the subject of the article being Mr. Zygmunt Brodzinski who last Sunday celebrated his 50th anniversary as organist at Holy Family Church in Sugar Notch, near Wilkes-Barre:

HIS 50TH EASTER AT THE ORGAN

(By Lou Rauscher)

Playing the organ for Easter Sunday is nothing new for Zygmunt Brodzinski. Today is the 50th time he is cast in such a role.

"Some youngsters dream of becoming a policeman, fireman, or truckdriver. Others want to join the Marines while still others may even want to become newspapermen. I've never wanted to be anything but an organist."

That's how Mr. Brodzinski sums up his continuous service at Holy Family Church in Sugar Notch for the past half century.

And, just to show that he has not been taken for granted, friends and parishioners will mark his prolonged and faithful service with a special testimonial banquet on May 1.

Zygmunt's tenure as organist ranges from his sandwiching time to play at mass during his shift as an employee for the Lehigh Valley Coal Co. to his present unaccelerated pace wherein he plays the organ daily in a semi-retired setting.

LABOR OF LOVE

Looking back on his stay in the choir loft. Mr. Brodzinski terms it "a labor of love. Times have changed somewhat. Younger people nowadays aren't interested in singing in a choir as was the case when I first began playing."

He was invited to play the church organ at Holy Family by Rev. S. A. Dreier, pastor in 1909. Young Zig was about 18 at the time and had already been exposed to the machinations of handling the organ as his dad had one in the family home.

He accepted Father Drier's invitation and started his daily routine "thanks to an understanding mine foreman." Young Brodzinski was supply clerk at the Lehigh Valley Coal Co. workings in Warrior Run. He managed to get to his organ each morning after tending the logistic wants of the miners. Then, after playing for the mass, he would return to the minesite to complete his shift.

STUDIED MUSIC ONE YEAR

The following year he was sent to brush up on liturgical music at Pio Nono College in St. Francis, Wis. After a course in organ and music theory, Brodzinski returned to Holy Family where he has been organist ever since.

He can't recall having missed a single Sunday during one span stretching from 1910 to 1942. And then he missed only two in 1942 due to a visit he and his wife made to their son Leonard's Air Force base in Florida.

PLAYS TWICE DAILY

Save for a brief respite because of a slight heart attack, Mr. Brodzinski has been playing for two masses daily for the greater portion of his years as organist.

"I've always wanted to be an organ player. I get a sense of satisfaction out of providing the accompaniment for the sacred liturgy. No organist is in business for the monetary advantages—at least none that I know of."

Mr. Brodzinski, who with his wife, the former Pauline (Morris) Mroziewski, lives in a neat home at 805 Main Street, Sugar Notch, currently is serving as secretary of the Luzerne County School Board and is also a member of the Sugar Notch School Board. He is a member of the advisory board of the Ashley branch of Miners National Bank.

ANNIVERSARY COMING UP

He and Mrs. Brodzinski will observe their golden wedding anniversary next year. They were married in 1911 in St. Mary's Church of the Maternity, in Wilkes-Barre, "because Holy Family was being rebuilt after having been struck by lightning."

Mr. Brodzinski was born in Nanticoke, lived for a short time in Warrior Run, and then came to Sugar Notch in 1911. He has supplemented his organist's tenure by working in various business enterprises of his father-in-law and ran his own shoe store in Nanticoke for 22 years. It was known as the Keystone Shoe Store.

Zygmunt's dad, the third Pole to settle in Sugar Notch, spent most of his working years in the mines. He himself volunteered to serve as a coal property guard for the Government during World War I, stationing himself nightly in the vicinity of the ventilation fan at No. 9 colliery of the then Lehigh & Wilkes-Barre Coal Co.

Despite the multiplicity of his interests, Mr. Brodzinski still found time to take care of his daily organist duties. Once, with the business pressures of his shoe store taking up most of his time, he tried to retire but was talked out of it.

He is a member of Musicians Union of Wilkes-Barre, Local 140 A.F.M., the Holy Name Society, Polish National Alliance, Polish Union of Wilkes-Barre, and has been secretary of the Polish Roman Catholic Union of Chicago, Group No. 1173, for the past 30 years.

PLAYED WITH RILEY TROUPE

His musical career includes stints with the noted James Riley Orchestra and the Sugar Notch Community Band. He was active in various minstrel organizations and spent a good portion of his earlier years as a music teacher.

Mr. and Mrs. Brodzinski are parents of five children and seven grandchildren. The children are Mrs. Peter Fedock, Elmhurst, Long Island; Mrs. Joseph Kane, Elmont, Long Island; Leonard, Flushing, Long Island; Mrs. Raymond McGowan, Phoenixville, Pa.; and Cecilia at home.

Cecilia and Mrs. Brodzinski are also organists of the accomplished variety. All the children have at one time taken music lessons.

Mr. Brodzinski, who currently plays for four masses each Sunday, was asked whether he intended to continue playing indefinitely. He said, "I am getting to the point where I would like to retire." A check with some of his friends and Holy Family parishioners revealed that it's not likely that they'll let him.

An Untenable Position

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. TEAGUE of Texas. Mr. Speaker, National Commander Charles A. McCarthy of the Veterans of World War I of the U.S.A., Inc., recently testified before the Committee on Veterans' Affairs to explain the legislative objectives of that organization. He and his associates made an excellent impression upon the committee. The officer responsible for the legislative program is Mr. F. B. Taylor, executive director of the National Executive Legislative Committee and he has been most cooperative with the Committee on Veterans' Affairs. Mr. LeRoy Chittenden is the editor of the National News and in the April 1960 issue wrote an editorial entitled "An Untenable Position" concerning non-service-connected pensions. Under leave to extent my remarks I include the text of that editorial:

AN UNTENABLE POSITION

The editor of the National News in this issue of the paper proposes to set forth in type his views on the pension program of the Veterans of World War I. It should be carefully noted that the sentiments expressed represent only his thinking and he does not in any manner want to infer or imply that his views are shared by any of the national officers of the organization.

The Louisville mandate on pension legislation is unrealistic, unworkable, and threatens the prestige of the Veterans of World War I which has taken years to build.

The mandate completely ignores the advice of experienced congressional leaders who have the best interests of the veterans at heart. It proposes a pension of $100 per month for all veterans of World War I regardless of length of service or present income.

Every pension law on the statute books was initiated with small monthly awards and then the amounts were increased over the years. The first Civil War pension law provided for payments of $6 to $12 per month if the veteran served 90 days or more. These rates were gradually increased so that by 1947 the amount payable was $90 per month.

The first provision of pensions for those men who served in the war with Spain was adopted June 5, 1920, and the amounts were set at $12 to $20 per month depending upon disability. Increases over the years brought the amount payable to the present rate of $101.59.

This was the formula recommended to the delegates to the Louisville convention but unfortunately they were confused and ill-informed when the resolution was brought up for a vote and the present mandate was adopted to the extreme regret of many delegates who had serious doubts as to the logic of endeavoring to push such a proposal through Congress.

Now it is apparent that their misgivings were well-founded. It is rare indeed that a Member of Congress can be found who will make a forthright statement that he will vote and work for a pension of $100 per month for every veteran of World War I, regardless of length of service or income. Chairman TEAGUE at the hearings on March 15 warned that a measure of this description faced a long and rocky road in the Congress.

Other Congressmen have not hesitated to express their opposition to this type of legislation. They resent being asked to sponsor such legislation and have been honest and frank in advising the leaders of the Veterans of World War I that a measure of this description can be enacted into law.

Your national commander faces a momentous decision. Should he adhere strictly to the Louisville mandate which he has been informed has absolutely no chance of passage or should he endeavor to secure some benefits for our aging buddies and later seek liberalizing amendments that would ultimately bring us in sight of our goal. The writer prefers the latter course.

First Prize—Jobs for the Handicapped—Passports to Dignity

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD an essay written by Miss Gail Marie Chadwell of Reno, Nev. Miss Chadwell's essay won first place in the 1960 National Essay Contest sponsored by the President's Committee and cooperating State Governor's Committees on Employment of the Physically Handicapped. Her essay follows:

FIRST PRIZE—JOBS FOR THE HANDICAPPED—PASSPORTS TO DIGNITY

(By Gail Marie Chadwell, Reno High School, Reno, Nev.)

"In these demanding times, the labor force of our Nation is our most precious asset. Working shoulder to shoulder, the handicapped can add spirit and power to America as we seek to promote the strength of the whole free world." With these words President Dwight D. Eisenhower urged the American people to extend to the handicapped that equality of opportunity which Americans believe to be the inherent right of all individuals. Although the handicapped may be limited in physical capacities, they are not disabled in mind and spirit. Their capabilities can add power to our Nation.

Because, as our President indicates, the times are demanding and because we must safeguard our basic rights, we must both utilize the potential of all individuals and extend to them the equality of opportunity which we so esteem as Americans. Specialized areas of labor can utilize the skills of the handicapped. Given the opportunity to prove their worth, the handicapped can acquire their rightful status in our society. From a sense of security and belief in his own worth the handicapped individual acquires the dignity which is his right.

Because the population is growing rapidly and because the lifespan of human beings is longer, the number of handicapped individuals is growing proportionately. Therefore, the problem of finding jobs for the handicapped looms larger. However, this problem exists only because the handicapped are thought by some to be incapable or inferior. It is often forgotten that the ability of a person constitutes his potential for employment rather than his disability. Employers are often afraid to hire the handicapped because they believe that the impaired workers are prone to injury and will therefore boost insurance rates. Surveys show that the safety records of the handicapped equal or exceed those of the nonhandicapped. Many States have "second injury" funds which protect the employer from having to pay total disability compensation for injuries to impaired workers. Furthermore, tests and research have repeatedly disproved the idea that the handicapped are not good workers.

Today many tax-supported rehabilitation centers exist throughout the United States. At these centers the disabled individual is given therapeutic aid and psychological support. He is offered psychotherapy so that he may regain his perspective and reestablish himself in society. A guidance counselor gives him advice and helps him find the type of work for which he is best suited. Having been given excellent training in his specialized fields, he is thoroughly trained in a trade which permits him to compete with able-bodied workers.

When he is prepared both physically and vocationally to make himself self-supporting, he must have a job. His next step is to utilize his training and prove that his work is equal to that of an able-bodied worker. Too many times he is not given this opportunity to prove himself. Prospective employers fail to realize that it is not logical to differentiate between the handicapped and the nonhandicapped. Every individual is handicapped to some degree in some field or another; he may be entirely untrained in or incapable of carrying out certain tasks whether they be physical or mental tasks. In order to ascertain that which a person can do best, an individual's personality, education, experience, interest, and motivation must be matched to the requirements of a particular job. The handicapped individual is not asking for sympathy, pity, or charity. He is asking only for the opportunity to prove that he is capable of fulfilling the essential jobs. He prefers to be hired on his merits and asks for the opportunity to sell himself on the basis of his ability. An employer need not hire a person because he is handicapped; he is obligated to hire the best qualified person without favoritism or discrimination; and frequently that person may be handicapped, but in a way which does not affect the job at hand.

After the prejudice of the employer is overcome and the handicapped individual is given the opportunity to prove himself, the disabled worker usually has no trouble proving that his work is equal to that of an able-bodied person. In the complex world of industry, in the burgeoning field of science myriad jobs exist. With training the handicapped can fill some of those jobs.

Because of increased incentive in trying to prove their worth and ability, the handicapped are frequently better workers than the able-bodied. Some employers have found that the handicapped are better workers than they were before they were injured. Statistics from a recent survey published in "Hire the Handicapped," a pamphlet prepared by the President's Committee on Employment of the Physically Handicapped, show that handicapped employees revealed greater capacity for training and adjusted more readily to jobs than did other employees. Their attendance and safety records were superior; employee turnover was lessened. These facts are corroborated by many other statistics. For example, the December 7, 1959 issue of Business Week presents a joint survey compiled by the Labor Department and the Veterans' Administration showing that the production rate of the handicapped is slightly higher than that of unimpaired workers. Furthermore, the handicapped have proved to be morale-builders as well as pace setters.

What the handicapped are capable of doing is attested to by a thriving business in Albertson, Long Island, known as Abilities Inc., founded by Henry Viscardi, Jr., who is physically handicapped. Its employees are recruited from those who are handicapped. Although the business was started as late as 1952, today it is a million dollar concern with 421 employees. Its purpose is to train, give employment to, and transfer to private industry skilled employees who have previously been regarded as disabled. The work of Abilities Inc. proves that dignity can be restored to the handicapped individual and that he can lead a normal and productive life.

The mitigation of the increasing problem of finding jobs for and restoring dignity to the handicapped must begin in the community. Each citizen must rid himself of his prejudices against the handicapped and accept him on a par with the nonhandicapped. Employers can contribute to the program of aiding the handicapped by hiring such individuals whenever possible. They should remember that the handicapped do not want sympathy, pity, or charity but opportunity. Citizens may be of service in aiding the handicapped by helping them to rehabilitate themselves. Providing help for the handicapped may be a passport to dignity not only for the handicapped, but for the citizens aiding them.

"Give me the man with determination, for he is a doer. No physical handicap will deter a man who believes he can learn to do a job safely and well and is determined to prove it," said Philip D. Reed of the General Electric Co. Men like Mr. Reed possess dignity which stems from sensitivity to the problems of others. By helping the handicapped to restore their dignity, we as Americans are but reiterating our belief in the intrinsic worth of the individual, our belief that every individual must have the freedom to develop to the ultimate his potential for securing life, liberty, and the pursuit of happiness. As we practice real democracy, we help to secure our democracy. Thus we enhance the inherent dignity of man.

Charleston News and Courier Defends Birmingham, Ala., Against Libelous Attack by the New York Times

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to insert my remarks in the Appendix of the RECORD, I include therewith an editorial by America's most outspoken newspaper, the Charleston News and Courier. The editorial is entitled "New York Times Libels Birmingham, Ala., in Picturing City of Race Terror." Mr. Speaker, this timely editorial appeared in Charleston on Saturday, April 16. It is a well-tempered, intelligent response concerning the libels printed about the city of Birmingham, Ala., by the New York Times.

My colleagues of the Congress, if ever there was a time when reason and self-control was demanded of all persons in positions of responsibility, that time is now. I am not alone in stating that I regret that I, along with millions of

others, am a witness to the decline and fall of a once great newspaper, the New York Times. What a crash its fall has made in the lordly forest of metropolitan newspapers, "leaving a lonesome place against the sky." I do not know why this newspaper, once an important fountainhead of intelligent editorial policy, has sunken to an editorial nadir that could be compared only with the pulp magazine industry which has given the Post Office Department so much trouble.

It would seem that the New York Times would have enough to do in explaining to the world the conditions that exist in the jungle of the city of New York without going all the way to Birmingham, Ala., to spread its venom and unjustified condemnation. We in the South long ago have adopted a policy of live and let live but maintaining our historic policy of benevolent neutrality is difficult when a newspaper, misguided, misled, and miseditorialized leaves its own territory and besmirches one of the great, thriving, and tranquil cities of our Nation.

I do not propose to condemn the New York Times as a newspaper because the libel it has printed about Birmingham, Ala., is sufficient condemnation. But, I will say this to the New York Times: "Remove the mote from thine own eye."

N.Y. TIMES LIBELS BIRMINGHAM, ALA., IN PICTURING CITY OF RACE TERROR

In two articles on Birmingham, Ala., the New York Times has plumbed new depths of reportorial unfairness. The articles, written by Pulitzer Prize winning reporter Harrison E. Salisbury, represent a shocking departure from journalistic objectivity.

Citizens of Birmingham, we are told, are aroused and indignant at the defamation of their city. Well might they be, for the articles present the big Alabama steel city as worse than any of the Soviet cities Mr. Salisbury wrote about when he was Moscow correspondent for the Times.

According to Mr. Salisbury, Birmingham is a city where "every reasoned approach" to the race problem "has been fragmented by the emotional dynamite of racism, reinforced by the whip, the razor, the gun, the bomb, the torch, the club, the knife, the mob, the police, and many branches of the State's apparatus." He said that "the eavesdropper, the informer, the spy have become a fact of life." Birmingham police are represented as a terrorist group ruled by race hatred. The Ku Klux Klan is depicted as riding high, so much so that suburbanites know which of their neighbors belong to the KKK.

In short, Mr. Salisbury's articles present Birmingham as a hideous community of lawlessness, terror, and injustice. He found somebody who called it the Johannesburg of the United States and gleefully passed on the phrase.

John Temple Graves, distinguished southern newspaper writer who lives in Birmingham, informs us that the Salisbury articles are completely without foundation. Birmingham's police chief, he said, is tough in his handling of all groups fomenting riots, "but he is determined to be as fair as he is tough."

Mr. Graves also pointed out that the Salisbury articles failed to mention that five Klan members, who attacked and mutilated a Negro last year, were convicted in a Birmingham court and sentenced to 20-year jail sentences.

"Not even Atlanta," he said, "with all its talk of liberalism, has been as summary in its punishment of lawbreakers."

Terming the Salisbury articles "an arrant lie," Mr. Graves said that the New York Times reporter, to the best of his knowledge, did not talk with prominent white leaders. The Birmingham Post-Herald disclosed in an editorial Thursday that Mr. Salisbury had not discussed racial conditions in Birmingham with newspapermen in that city.

Granting his skill in the use of words, we find Mr. Salisbury's approach to race relations in the South more like the propagandist's than the objective reporter's. If the Times is intent on stirring revolution in the South, as it did with its promotional articles on Fidel Castro in Cuba, it is going about its business with determination and skill.

Such distorted pictures of the South do the American Republic no good in the eyes of the world. They may bring suffering to peaceful citizens of both races in the South.

Falsehood and the New York Times

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. HUDDLESTON. Mr. Speaker, on Saturday, April 16, 1960, Mr. John Temple Graves, well known editorialist of the Birmingham Post-Herald, penned a vigorous protest to the two articles by one Harrison Salisbury, which appeared in the New York Times on April 12 and 13. These articles purported to be an accurate statement of the current race situation in Birmingham, Ala., my district. Mr. Graves very forcefully states the viewpoint of all citizens of my district, white and colored, in their reaction to the type of irresponsible journalism practiced by Mr. Salisbury. With the thought that the article by Mr. Graves would be of benefit to the Members of Congress in acquainting them with the true situation in Birmingham, I insert Mr. Graves' article in the CONGRESSIONAL RECORD herewith under leave heretofore granted:

ALMOST TOTAL LIE FROM THE TIMES

(By John Temple Graves)

"That all should cry, 'beware, beware!
His flashing eye, his floating hair.'"

If reporter Harrison Salisbury could be psychoanalized for his Alabama pieces in the New York Times, the monstrosity of them might be traced back to his birth, upbringing and education in Minnesota, most south-hating of the States.

The Times must have known this. Only in malice could it have picked him.

A few weeks ago this column was praising Mr. Salisbury for an impressive and possibly historymaking piece in the Saturday Evening Post on the menace of Red China, comparing it with the confirmatory stories of Scripps-Howard's Roy Howard.

The objectivity and calm of his piece gave it extra impact, identified the true professional.

But now this madness in Alabama.

This almost total lie from a man alien to lies.

This throwback to tooth-and-claw hate.

You can guess only that in middle age (52) some horrid childhood image has interrupted all he is and does, that some prejudice gathered in streets or behind barns, some forgotten excess of elders has come flooding back at him with bigotries shaming all that is ordinarily civilized, objective and fair.

It may be significant that he writes of TCI President Wiebel as Arthur "Weible." It isn't like a first class reporter to get so familiar and important a name wrong. He gives many other evidences of having come here with only half an attention, with a story subconsciously already written and in a psychopathic passion blind even to spelling.

For bitter hurt to race relations blessedly better here than in other parts of the South and infinitely better than in New York, for an evil and libelous name given our eager city, and for a cruel—and subtle—body-blow to Birmingham-Southern College and President Stanford, God may forgive him but we never shall.

His pep talk to Dr. Stanford would be amusing if it were not tragic, a light touch in the dark and depravity.

Writing as if our fine Birmingham southern president had somehow defied a sea of southern prejudice and invited persecution from hosts of enemies of God and man, Mr. Salisbury imagines Dr. Stanford talking to himself: "You weigh the situation. You listen to the voices which say don't rock the boat. But finally the time comes when a man has to stand up and be counted."

Dr. Stanford has stood up and been counted all right. But not for any of the things Harrison Salisbury fancies in throwback.

He has stood up for the right of a comparative handful of his students, coaxed by a well-meaning, little half-time student, one-time minister with a messiah complex (many of these students only half noting what the thing was) to petition the Governor in behalf of nine Negro students expelled from Alabama State College for leading a Montgomery sit-in demonstration.

Dr. Stanford stood up and was counted for academic liberty—and aren't we all. Many here support his stand, including this column, regretting only that he expressed no opinion of his own.

True, he was not counted for libertarian sentimentality in behalf of centrally organized and directed lawbreaking and the most dangerous disturbances since the Civil War.

He was not counted for the damnable hypocrisy of CORE, NAACP, and Martin Luther King as they misled these young colored people into aggressions in the name of passive resistance or what the U.S. News better calls "passive insistence."

He was not counted for blasphemous, Bible-reading, hymn-singing, God-saying, America talk in every course of assailing the foundations of America.

No friend of the South—ever—is the New York Times. But it has on its staff men who don't go berserk. Our people should make the Times' incoming mail department miserable with letters now, not hot letters but cool, coolly asking that a newspaper with so great a name right some of the wrong it has done by sending here for a second and more rational look such men as Arthur Krock, or even James Reston (who lectures here Tuesday evening).

They say hell has no fury like a woman scorned. A comparable fury is that of a good man gone wrong with suddenly uncontrollable prejudice, bigotries and illiteracies flooding out of his past.

There is nothing, by and large, of which Birmingham—and the South—can be more proud than the behavior of its police and its people in the situation brought about by the Supreme Court's virulent, witless and unconstitutional interruption of the true advancement of colored people here.

Even with the interruption, there are things in Birmingham which a Harrison Salisbury in right reportial mind would have mentioned.

He would have mentioned the white men now serving 20 years in prison for mutila-

tion of a Negro whose only sin was being a Negro. New York could never have disposed of that crime as eagerly as we did here.

He could have mentioned the fight of white people here in cooperation with colored people to save from destruction the Negro community of Rosedale.

He could even have mentioned the metamorphosis of our much-mooted police commissioner—tough as ever but hell bent to be fair and on the scene.

It would have been too much to expect, of course, that he would mention something that concerns our critics not at all, the fact that trespass is illegal aggression and that when done to the tune of organized agitation it is more than any community can tolerate at an intense time like this.

What Easter Is

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Wilkes-Barre (Pa.) Independent, Apr. 17, 1960]

WHAT EASTER IS

(By Rev. Burke Rivers)

It is strange that after 20 centuries, Christian people as well as non-Christians and semi-Christians should need to be told what Easter is. But it is so.

In our time Easter has become only our version of the ancient festivals which celebrated the return of spring. The new life rising out of the dead earth stirs our hearts with a suggestion that immortality is a kind of built-in feature of human nature. The message we hear—which is not necessarily the message which is preached from our pulpits—is essentially that of the song, "There Is No Death"—which is a manifest absurdity.

At least it is absurd for Christians who have shared the Passion on Good Friday and known the desolation of Holy Saturday. Death is both real and everywhere present in life as we know it. Even the Son of God—so we believe, endured the pangs of death, real death.

But if death is real, so is the Resurrection from the dead which Easter celebrates and affirms. The Christian Easter has never claimed to be a part of the natural order, as it would be if it only asserted that man is born to everlasting life. The Christian Easter frankly proclaims a miracle, an event which is the act of God above and beyond the natural order of things as they are. "Now is Christ risen from the dead!" In St. Paul's words, this is what Easter says, and it bids us wonder, marvel, and rejoice. Easter really says very little about man, but it says a great deal about God.

WE HAVE TO ACCEPT IT

Christians have never "explained" the Resurrection. All they have done is to relate it to the love of God who would not be defeated by the sinful stupidity of men even when they raised the Cross on Calvary. We don't have to "explain" it, but unless we want to fly in the face of history, we do have to accept it as something that really happened and let our lives be shaped by it as, in some measure, they are shaped by every other historical event. Any man who takes history seriously is bound to accept the fact of the Resurrection of Jesus Christ.

But what does this mean for the shaping of our lives? It means first that we need no longer be prisoners of despair, doomed to find nothing at the end of days but the darkness of the grave. We can now live in hope of a new life beyond death which will be ours, not by some inborn right of our own, but as the gift of God.

It means also that this hope rests upon a firm foundation, and not upon some desperate longing that death should not be what it obviously is. That foundation is our knowledge of Him who was seen by many witnesses on Easter morning, and has been known in the power of His Spirit by countless multitudes ever since.

NOT TO BE AFRAID

And it means that from this hope we draw courage to face all life's difficulties and problems. The first words of Easter, spoken to the women by an angel, are "Do not be afraid!" Christians are those who know how not to be afraid, no matter what may happen to them.

But above all it means that these life-shaping gifts of hope and courage are given to those who know the Christ as Lord and Saviour, who having given their hearts and lives to Him, have received at His hand newness of life in the power of His Resurrection and so have found peace.

This, then, is what Easter is and it can never be understood as anything else: The Feast of the Resurrection of Jesus Christ. And what it says to the world today is just what was said long ago in the words of the old carol—

"O sons and daughters, let us sing!
The King of heav'n, the glorious King,
O'er death today rose triumphing.
Alleluia!
On this most holy day of days,
To God your hearts and voices raise,
In laud, and jubilee, and praise.
Alleluia!"

Giovanni Da Verrazzano Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. MULTER. Mr. Speaker, Verrazzano was a famous Italian navigator and explorer early in the 16th century. He is remembered and honored for many of his discoveries and exploits. On April 17, we honor his memory with the 436th anniversary celebration of his discovery of New York Bay.

This adventurous son of Italy was born in a village near Florence in about 1485. As the son of a family famous as spice merchants, Verrazzano sailed to many lands and lived in some of them. In 1521 he entered the services of the king of France, and as a French corsair became a veritable terror to Spanish sailors carrying consignments of gold from the West Indies and Mexico to Spain. Two years later the king gave his permission to find a new route to Cathay, China. Late in December of 1523 Verrazzano set sail in search of a new route to Cathay, but by early March of 1524 he was in sight of South Carolina shores. Then sailing north, in mid-April he and his companions were in the vicinity of New York, in sight of the New York Bay. This discovery by Verrazzano climaxed his career, and a few years later he died.

On April 17, the 436th anniversary celebration of his discovery of the New York Bay, on this Verrazzano Day, we honor the memory of this great and gifted explorer.

This Man Knows Why Forand Bill Needed

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, the East Bay Labor Journal recently published an article entitled "This Man Knows Why Forand Bill Needed." It was based on a letter received from Philip Ickler of 4201 East 16th Street, Oakland, Calif., a very old friend of mine. Philip Ickler has had a varied experience. At one time he was very successfully engaged in the real estate business in Florida.

When he came to the Pacific coast, he renewed his activities in the labor movement as a member of the Painters Union and he has been active every since.

Philip Ickler has been in the forefront of every liberal fight that we have had in Alameda County. He is a fine organizer and reflects the thinking of the man on the street.

I think that, in his own way, he points out conclusively why we need the Forand bill.

The article follows:

[From the East Bay Labor Journal, Feb. 26, 1960]

THIS MAN KNOWS WHY FORAND BILL NEEDED

Philip Ickler, 4201 East 16th Street, Oakland, who informs us that he has been a member of organized labor for 58 years, having joined the Painters Union in 1902, sends in the following plea for the Forand bill:

"There is a health and hospital bill, now before the U.S. Congress in Washington, D.C., the Forand bill, which is very badly needed right now. We have many health and hospital insurance companies here in the United States of America, but they are raising their prices most every year. We have 16 million elderly people on the social security old age pension, and they cannot afford these high premium prices.

"About 6 years ago I joined a health and hospital insurance company; at that time I had to pay $3 a month premium, with my wife included. This company raised their price every 2 years. The last 3 years, I had to pay $7 for me alone, because my wife had died in 1954. Now last year, 1959, on July 1 they raised my premium price to $9 a month. I am 75 years of age with very little income, but I cannot drop this health and hospital insurance now, because no other health and hospital insurance would take me, because I am too old already. Then I would be without any protection in case of sickness.

"Now there are millions of working people who are in the same predicament. We have 16 million elderly people on the social security old age pension; they cannot afford such

high prices for health and hospital insurance, so they have to drop out, then they would not have protection at all; then many of them have to go on county or State relief, which is not very nice. We have about 6 million union members who are on social security old age pension, and they cannot afford such high prices for the health and hospital insurance.

"I had the privilege to be the first member of organized labor who introduced a Government health and hospital resolution, at the national convention of the Painters and Decorators at Buffalo, N.Y. My resolution was discussed and was then unanimously adopted, September 1937 at Buffalo, N.Y. This same resolution was also unanimously adopted at the national convention of the American Federation of Labor in October, also in 1937.

"Then the Honorable Mr. DINGELL, Member of the House of Representatives introduced a health bill in the House of Representatives, in 1938, at the same time the Honorable U.S. Senator Mr. WAGNER from New York introduced this same health bill in the United States Senate, also in 1938. This health bill was before the U.S. Congress in 1938 and 1939, after debating this health bill at both sessions of Congress. This health bill was postponed for later years.

"Now, this was over 20 years ago and a few times it came before the U.S. Congress, but it always was postponed. Now this health and hospital bill, the Forand bill is now before the U.S. Congress. I sincerely appeal to all our 12 millions of union labor in the United States of America to write a few lines to their two U.S. Senators and to their Representatives in Washington, D.C. and ask them to vote and work for this Government health bill, the Forand bill. It takes many millions of letters to get action from our United States Senators and Representatives. Please do your part in this very vital and very badly needed right now Government health and hospital bill."

A Mighty Voice

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1960

Mr. THORNBERRY. Mr. Speaker, the Smithville Times, which is owned and published by Mr. C. K. Mick of Smithville, Tex., on Thursday, April 14, 1960, published a very impressive and splendid editorial pointing out that the Honorable LYNDON B. JOHNSON, majority leader of the Senate and U.S. Senator from Texas, has been recognized throughout the Nation as the ablest man for the Presidency of the United States and urges that "the individual citizen—multiplied—speakes with a mighty voice" and that "it is a voice that cannot be denied." The editorial is as follows:

A MIGHTY VOICE

The office of President of the United States is both a high honor and an awesome responsibility. It is the one office above all others in our democratic system for which the people should seek the man.

Throughout our Nation, LYNDON B. JOHNSON has been singled out—by editors, by writers, by Government leaders, by the people themselves—as the ablest man of them all for the Presidency.

Since LYNDON JOHNSON is the ablest of them all, as we believe him to be, then we feel that the American people should call LYNDON JOHNSON to the Presidency. LYNDON JOHNSON is devoted to his country and to his fellowmen. He could not say no.

On May 7, every Texan will have the opportunity of announcing LYNDON JOHNSON'S candidacy for him. On that date, Democratic precinct conventions will be held in every neighborhood in the State. This is a meeting every Democrat of us should attend with our poll tax receipt stamped to show that we voted in that day's primary.

This is our chance to speak significantly to a fellow Texan who has risen to a position of international prominence through proven ability. This is our chance to say that we want the ablest man for President—Senator LYNDON B. JOHNSON.

The individual citizen—multiplied—speaks with a mighty voice. It is a voice that cannot be denied.

Beardsley Ruml—Leader in the Fields of Social Science, Education, Business, and Government

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. IRWIN. Mr. Speaker, on Monday morning there died in Danbury, Conn., a man who made outstanding contributions in the fields of social science, education, business, and Government.

Beardsley Ruml was not just a theorist; he conceived goals and achieved them. The story of his career, while necessarily abbreviated, serves as a fitting tribute to his memory.

Pursuant to permission previously granted, I include an article published in today's New York Times which relates the story of Beardsley Ruml:

DANBURY, CONN., April 18.—Beardsley Ruml, who devised the pay-as-you-go plan for the payment of Federal income tax, died of a heart ailment this morning in Danbury Hospital. He was 65 years old and lived on Route 53 in West Redding.

Mr. Ruml, a man noted for his ideas, had been chairman of R. H. Macy & Co. and the Federal Reserve Board of New York and was a former professor at the University of Chicago as well as Government adviser. At his death he was a director of Encyclopaedia Britannica, Inc., and had a desk in its offices at 342 Madison Avenue in New York.

His income-tax contribution came at a critical time in world events. Without the pay-as-you-go method of collection, the Government could not have financed from current revenue so much as it did of the terrific cost of World War II and the cold war that followed.

Essentially, the plan involved forgiving all or part of 1942 taxes in order to begin collection of 1943 taxes on a withholding basis.

For Mr. Ruml this proposal was unusual only in that he had to battle to get it accepted. First he had to arouse interest in the Treasury Department and then to convince a reluctant Congress to enact it. To those who viewed the plan as dubious fiscal sleight of hand, he offered this assurance:

"Nothing really will be lost. All you do is set your tax clock ahead a year. It's as simple as daylight saving time and there's nothing mysterious about that is there?"

Mr. Ruml had an established reputation as social scientist, educator, and businessman when he put this plan forward. He was chairman of the Federal Reserve Bank of New York at the time, but it was as treasurer of R. H. Macy that he hatched this particular idea.

It came to him as he pondered over the difficulty that many Macy employees encountered, on retirement or entry into the armed services, in paying income tax for the previous year. Characteristically, he was relaxing aboard the Twentieth Century Limited, en route from Chicago to New York, when the idea took form. He always contended that his best ideas emerged as he lolled in a "state of dispersed attention."

"Nobody can think if he's uncomfortable," he would say as he reclined in an easy chair.

CHALLENGED THINKING

He made whipping up ideas pay. An associate at the University of Chicago said that he was "leaving ideas for notions" when he stepped down as Dean of Social Sciences to go with Macy's in 1934. But he got $70,000 a year in his new job, where Percy Strauss, then head of Macy's, said his only duty would be "to challenge our thinking."

Mr. Ruml, known as "B" to friends, did just that. He instituted the Q system, an accounting device that drove home to employees the importance of getting that little extra bit of business. His "cash-time plan" enabled Macy's to take on installment business without sacrificing the "6 percent less for cash" slogan that had built so much of its sales volume.

Born on November 5, 1894, at Cedar Rapids, Iowa, Mr. Ruml early revealed an affinity for ideas. An aunt ended a visit without thinking to repay 2 cents she had borrowed from him for a stamp. At age 7, he wanted very much to collect but his parents enjoined him not to mention the matter. His next letter to his aunt, however, had the figure 2 printed in all four corners. He got his 2 cents back by return mail.

A couple of years later, his father, Wentzle Ruml, a well-known physician, offered his three sons a penny for each nail that they would pick out of the cinder driveway. His brothers went to work by hand. Beardsley dragged a large magnet on a cord.

The name Ruml is of Czech origin, brought to the United States by Mr. Ruml's paternal grandfather. Beardsley was the maiden name of his mother, Salome, whose family came from New England.

Mr. Ruml graduated from Dartmouth College in 1915 with a Bachelor of Science degree and a Phi Beta Kappa key. He returned to the Midwest to take his doctorate at the University of Chicago. His thesis: "Psychometry, the study of measuring and determining intelligence."

World War I took him from an instructorship at the Carnegie Institute of Technology to Washington, where he directed the Army's trade tests in a civilian capacity. Then he and five others formed a company to advise private industry on personnel problems.

In 1921 Dr. James R. Angell, president of the Carnegie Corp. put Mr. Ruml to work as his assistant. A year later, the young man, just 27, was drafted by John D. Rockefeller, Jr., as director of the $80 million Laura Spelman Rockefeller Memorial.

Chief monument to his 7 years' work in this capacity is the Public Administration Clearing House in Chicago, a national headquarters in the science of government. Liberal grants to improve relationships between white and Negro races also were made during this period. In 1930, Mr. Ruml became dean and professor of education at the University of Chicago.

While at Chicago, another Ruml idea, which had been at large in the public realm

since 1927, was put to work in the Agricultural Adjustment Act, enacted in the early days of the New Deal.

Three years after going to Macy's, Mr. Ruml became a director of the Federal Reserve Bank of New York and from 1941 to 1947 he was its chairman. He became Macy's chairman in 1945 and continued in that post to 1949. He remained a director until 1951.

Mr. Ruml played a prominent role at the conference of monetary experts from 41 nations at Bretton Woods, N.H., in the summer of 1944. This conference led to the establishment of the International Monetary Fund and the International Bank for Reconstruction and Development (World Bank).

SUPPORTERS OF STEVENSON

He had been a registered Republican, but he usually voted Democratic "to balance things." He was chairman of the Democratic Finance Committee in Adlai E. Stevenson's 1952 campaign for the Presidency. A Ruml plan in that campaign produced a flood of $5 subscriptions to the Democratic cause.

In addition to the Encyclopedia Britannica, Mr. Ruml's corporate connections in later years included directorship of the Enterprise Paint Manufacturing Co., the General American Investors Co., the Government Development Bank of Puerto Rico, the Market Research Corporation of America, the National Bureau of Economic Research, the Muzak Corp., and the National Securities and Research Corp.

Mr. Ruml was also an adviser to the Commonwealth of Puerto Rico and a trustee of Dartmouth College, Fisk University, the Committee for Economic Development, the Museum of Modern Art in New York and the National Planning Association. He also was active in the National Citizens Commission for the Public Schools.

His clubs included The Links, Century and The Players.

Mr. Ruml is survived by his widow, the former Lois Treadwell; two sons, Treadwell of Chicago and Alvin of West Redding; a daughter, Mrs. John Doyle of Winnetka, Ill.; a sister, Mrs. W. K. Jordan of Cambridge, Mass.; a brother, Wentzle Ruml, Jr., of East Orange, N. J., and eight grandchildren.

A funeral service will be held Wednesday at 3 p.m. in the Redding Federated Church.

Mayor George Christopher's Description of His Recent Trip to the Soviet Union—A Report to the People of San Francisco

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable George Christopher, of San Francisco, in which he tells of his recent historic trip to the Soviet Union as an official guest of the government of the Soviets. All of us in San Francisco are particularly proud of his accomplishments on this trip in assisting in the better understanding of our peoples and of his convincing demonstration of the desire of the citizens of our country for world peace. I am pleased to make this address available to my colleagues and commend it to your attention:

ADDRESS OF MAYOR GEORGE CHRISTOPHER, COMMONWEALTH CLUB OF CALIFORNIA LUNCHEON, MARCH 18, 1960

Visiting the Soviet Union was the remotest thought in my mind a few months ago. And then Mr. Khrushchev visited the United States.

During this tour, apprehensions were felt about the reception being accorded the head of a very powerful state—one whose personal decisions could weigh heavily for or against the peace of the world. By the time he reached San Francisco, relations were severely strained.

As the mayor of San Francisco, I considered it my duty to extend a sincere welcome—to make him feel at home—to send the party away feeling the warmth of our hospitality.

In these unpredictable days when a cold war is being fought on numerous fronts, I hoped we might add a grain of sand to the mountain-heap of the world's peace efforts. If we could forestall a hot war for even an hour, millions of lives might be saved.

In February the snows are high in the Soviet Union and the temperatures are low, but I had to conclude my journey before our budget hearings began in San Francisco, and so we prepared for the winter trip.

I was aware, of course, that this visit would have its political dangers. Any error of judgment, or the wrong word at the wrong time, would reflect not only upon me and on my city, but upon our national efforts for peace. And then there are the local contentions. There is the visitor who can see no good whatever in the Soviet state of affairs, and the extreme opposite faction that can see no evil at all. I consider the Soviet Union and the United States from the same critical vantage point—both have advantages and disadvantages. I have no illusions about this visit and I'm not setting myself up as an expert by virtue of a 3-week sojourn.

I spoke personally with Mr. Khrushchev, Mr. Kozlov, Mr. Mikoyan, and the mayors, governors, and prime ministers of the various republics, and received some insight into their administrations.

On the way to Moscow, we stopped in Paris where I conferred with General de Gaulle. Not only General de Gaulle, but mayors and high officials in England, France, Denmark, and other countries, spoke highly of San Francisco's part in receiving Mr. Khrushchev in our city. They were in agreement that San Francisco's reception of Mr. Khrushchev was of great importance to the world's peace. These comments surprised me, for to that moment I had not considered its importance beyond our own area.

We started for Moscow on a Russian jet, but snowstorms forced us to land first in Leningrad. Finally, however, we arrived, and after plodding through several feet of snow, we were brought into a room where a battery of cameramen snapped pictures as the first round of toasts began. It was obvious that the people were friendly, and they wanted to be as hospitable as possible.

I insisted on a full-fledged program, and the itinerary we set up startled our hosts but this was to be a working session.

The next morning we met Ambassador Llewellyn Thompson, and from there went to Mr. Zhukov's office for a conference. I had many projects which I wanted to bring to the attention of Soviet officials, including the release of a number of Soviet citizens to relatives in the United States, the establishment of a World Technical Information Center, the exchange of cultural exhibits, the exchange of students, a program for the exchange of athletic events, and other such projects which I deemed appropriate for the creation of better understanding between us.

Personal contacts are important, and I could see almost immediately that my own visit, despite the fact that I was a comparatively minor official, was accomplishing a great deal for the betterment of American prestige in the Soviet Union.

The top-level heads of the Soviet Union understand the importance of these personal contacts. That is why Mr. Khrushchev has made one trip after another to various lands in the interest of conveying the Soviet message. And that is why it is important that President Eisenhower be encouraged, rather than discouraged from going to various nations and portraying, as only he can, the true American spirit.

In our travels throughout the Soviet Union, we enjoyed more than just diplomatic immuntiy. Mr. Gromyko was with us at all times, and my party had automatic entrance through customs and in every other facility. This carte blanche service admittedly was a precedent and several times special phone calls were placed to Moscow to verify this unusual procedure.

I will not belabor the first impressions, such as the elderly women shoveling snow and performing other menial tasks, or the monotonous tones of the only radio station and the solitary television station. I am sure of one thing—there can be no payola there, because it isn't worth it.

In expressing some of my thoughts on these matters, I am saying only what I said quite frankly to the Soviet officials. It is not my purpose to come home and unduly criticize their efforts. Where they are performing well, I believe we should recognize it, and where they are deficient, I believe it is only fair to point out the deficiency.

In Moscow there is a tremendous housing program under construction. Under the 7-year plan, an expenditure of 500 billion rubles is called for and most of this money is going for new housing. This housing is being constructed on a mass production basis. Huge derricks are placing the prefabricated walls together, and row after row of housing is going up, although it all looks the same and is without style or architectural imagination. Usually, these structures go up to five stories, and any structure up to five stories contains no elevator. By our standards, this housing would be considered very inadequate. However, we must remember that Moscow is a city over 800 years old, and before the revolution consisted of 1⅓ million people, with 80 percent of the housing being dilapidated log cabins. Now they have 5½ million people. Moscow alone will build 91,000 flats this year, and a total of 650,000 during the 7-year plan. Despite the fact that this is comparatively new housing, the doors are warped, the fixtures are falling off, and the construction is generally poor.

In every city I asked the mayors and the governors about crime and juvenile delinquency. At first I was skeptical about their answers. They all shrugged off the extent of crime—not more than seven or eight murders per year in the large cities, they said, and juvenile delinquency is negligible because it is policed by a "people's guard." Robberies and holdups are practically nonexistent, they said. My skepticism eventually gave way as I delved into the figures in each of the cities. While I cannot believe that their murder rate, for instance, amounts to only 6 or 7 per year in a city of over 5½ million people, I am convinced that their crime rate is negligible by comparison to the major cities of America.

Their city councils are widespread in representation. Moscow, Leningrad, and Kiev

have from 700 to 800 members on their city councils, which would amount to quite a debating society in our democracy.

They are proud of their Moscow University, 33 stories high, with 25,000 students—10,000 boarding on the premises at $2 per month. Education is compulsory for 11 years in the Soviet Union, and the able student has no difficulty being subsidized if he desires to continue higher studies. But entrance examinations are severe, and all students must attend classes 6 days a week. In this category the Soviet people are working hard.

After several days in Moscow, we took their crack Red Arrow train to Leningrad. Here, too, considerable housing construction is going on. They will build 40,000 flats this year. As in Kiev and Moscow, they, also, are extending their subway.

The pioneer clubs for young children are widespread. Thousands of youngsters attend these clubs and receive instruction in dancing, music, art, games, and even chess. I tried my chess hand with one of the 12-year-old boys, and I was severely trounced. These pioneer clubs are for instruction beyond the regular 6-day school schedule, so it is evident that they keep their children quite busy all during the week.

The Soviet Union is replete with museums, most of them being converted churches, 1,000 or more years old.

We insisted on attending church services one Sunday and found the church filled to capacity, mostly by very elderly women. Our guides, of course, were atheists, but Mr. Gromyko, though professing his atheism, nevertheless dutifully came in with us and stood by.

One of the most impressive museums is the Hermitage in Leningrad. It has 400 halls, and is filled with Rembrandts, Michelangelos, El Grecos, Van Dykes, and DaVinci's works. I was interested to learn that 15,000 people a day, mostly students, are escorted through the museum for educational purposes. Even members of the Soviet navy were present in large numbers though I doubt that their navy men have a different concept of culture than ours.

The Leningrad metalworks is a huge machine-tool plant, and the turbines they produce here are about three times as large as the turbines at Grand Coulee Dam. The average beginner earns about 800 rubles, or about $200 per month. They can go up to 2,500 rubles for engineers, and the top plant director receives 5,000 rubles per month, or about $1,250. A plant employing over 15,000 persons, as this one does, requires considerable responsibility. Here, I believe, talent is being used to subsidize government operations. What else can you call the difference between the frozen 5,000 rubles this director was receiving, and his actual worth under a system of free enterprise? They work 46 hours a week and settle their labor differences through a "conflict committee." The decision of the conflict committee is final—no strikes.

It is from such operations as this plant that the Soviets are able to finance major research projects as the one at Dubna, 100 miles out of Moscow, where 5,000 scientists are daily engaged in atomic research.

Generally speaking, the absence of the free enterprise system is evident to any American. There is a complete lack of imagination in their merchandising. In fact, there is no promotion, no effort at selling—no merchandising whatever.

Their newspapers are four-page publications, with no advertising, no features, no articles contradictory to their editorial policy—nothing but straight, Government-approved news. Incidentally, the newspaper Pravda which we visited, has a circulation of 6,300,000. It sells for 20 kopecks when it has four pages, and for 30 kopecks when it has six pages.

The average stores are poorly stocked by our standards. There are on institutions such as our local supermarkets. In one large Kiev market, the meat was wrapped in a newspaper and handed to the buyer half exposed. The store fronts are practically identical and the only thing that will ever change this drab situation is for two alert merchants to start competing with each other.

On the way to Kiev we saw large numbers of jet fighters on the ground.

Kiev, too, is on a housing spree. They will build 130,000 new flats in the 7-year plan.

Kiev is about ready to start construction of a subway. Since the water was turned off all over Kiev the last night we were there, indicating an inadequate water system, I wondered why their subways had a higher priority in the 7-year plan, especially since they have so few cars compared to the United States. They discounted the suggestion that the underground could have facility as a bomb shelter, as well as serving as a means of transportation.

The shopping area of Kiev resembled the other cities—hundreds of wagon stores on the sidewalks, selling every conceivable commodity, foodstuffs exposed to the elements, and a great deal of activity at every store, especially the bookstores. The Russian people evidently are thirsting for knowledge.

The dairy stores are unique. Butter is cut from an exposed cube about 1½ feet square. Cottage cheese is poured from a 10-gallon can into a paper container made into a cone right on the spot—certainly no fancy wrapping, no packaged merchandising.

The Soviet Government then provided us with a special DC–3 and we went on to Tbilisi in Georgia. Here, again, the reception was overwhelming. The townspeople knew we were coming, or if they didn't, they soon found out, with all the motorcycle escorts and the tremendous commotion that was stirred up on our arrival.

Georgia is a great wine-producing area, and we derived considerable enjoyment presenting them with casks of California wine. The spirit of friendliness ran high here and the Georgians know how to make one feel at home.

Now, let us check some of the economics. The average worker earns between 800 and 900 rubles per month. He recevies an advantage in his rent which is subsidized, costing only about $4 per month. Medicine costs nothing at all. But let us also check the daily needs of living. Shoes cost 200 to 300 rubles, or about 10 days' wages. A fair suit costs 800 to 1,000 rubles, which is a month's wages. Can you imagine an American worker being compelled to spend a month's wages on just one suit? A table model television costs about 2,500 rubles, or 3 months' wages. One shirt costs 150 rubles. A small car costs about 40,000 rubles, or about 4 years' pay for the average worker. Which American worker would like to work 46 hours a week for 4 years just to buy a car?

In the realm of producing these consumer goods, Mr. Khrushchev privately admitted to me that we are still ahead, but he emphatically states that we shall fall behind eventually. In fact, Mr. Khrushchev has told me that we would not even be second, but rather would be third behind China.

In their program of austere living, the Soviets have over 50 percent of their population living on communal agricultural farms, while America has only 12 percent of its people in agriculture. This, of course, means a more restricted life for the Soviet people.

In 1959, their national budget was 707 billion rubles, while their revenue was 724 billion rubles. They derive their major national revenue from a sales turnover tax, while their income tax maximum is only 13 percent. They can be very practical about the adjustment of their economy. In 1957, 260 billion rubles in state bonds were repudiated. I asked persistently how they could possibly justify this action and their reply was simple: Why issue new bonds to pay the old? They sold this idea of repudiating the old bonds on the basis that they would no longer issue additional bonds which theretofore have been compulsory to the workers.

In their production program under the 7-year plan, a 7 percent annual increase in production is called for everywhere, and they are meeting this increase now. If this rate of increase is maintained, and if the United States keeps its present rate of growth, which is about 3 percent annually, by 1965 they will have caught up to us in steel, aluminum, and machinery production.

I talked to some buyers of steel who had come to Russia for that purpose. These buyers were from countries not in the Soviet orbit, yet they bought Soviet steel, and they quoted me a savings of approximately $400,000 on one order of structural steel. The United States and England could not come near the Soviet prices. This means that in a fixed Socialist economy the Soviets can revise downward any competitive item and subsidize it through state control. This is, indeed, tough competition, for they have increased their steel production from 15 million tons in 1945 to over 60 million tons in 1959.

It is obvious that the aggressive growth of the U.S.S.R. will impress the peoples of the other continents, for the Soviet people have risen from one-eighth of our total production prior to the revolution to a present ratio of about one-half.

While we give them credit for their increases, we must also take into account the kind of work they are putting out. Their efficiency is poor, and cannot possibly compare with American efficiency. Their methods of production are far behind the American system of production. Their work is slipshod and inferior, and whatever the job it certainly falls far below the standards of the American worker. There is no competition to spur them on with a desire to create a superior product or facility.

In their anxiety to build fast and big, they are casting aside all semblance of good workmanship. There is one project, however, in which their construction excels. The subway in Moscow is finer and cleaner than any other subway in Europe, replete with statuary in the underground, and very imposing in every way. The escalator leading into the subway is the longest I have ever seen, and takes so long to travel that passengers even read their newspapers going up and down.

During all of our travels throughout the Soviet Union, there was one satisfaction accorded us without our asking for it. At every table occupied by our party, there was always the American flag, and there were no sneers or incidents of any kind.

Next, we went to Tashkent by way of Karshi, and the people there had a charm all their own. I visited a collective farm in that area which is supporting 2,500 workers. Ordinarily, 100 workers would be sufficient under American standards to operate this farm. They maintain their own schools and other institutions on the farm, and my best comparison of prices was to determine the price for which their milk was sold. It came to approximately 40 cents a quart, which indeed would meet with some real opposition in our country.

The hotel in Tashkent, while practically new and imposing on the outside, was in a dilapidated condition on the inside. My room number was 110, and I had a difficult time finding it, for it was on the fourth floor. They insisted on bringing a luxurious grandfather's clock into the room, which

struck the time on the hour—but you had to remember that when it struck 9 o'clock the time was really 7 o'clock. When someone wanted to contact me in my room, they did not dial 110; they had to dial 2222. To say it was confusing is putting it mildly.

I asked about the wages of teachers, because we hear about the superior rates of teachers' pay in the Soviet Union. The teachers in the elementary schools earn from 1,100 to 1,200 rubles per month. The higher classified professors can earn up to 5,000 rubles per month. Since the State must eventually hire all trained teachers, doctors, engineers and other professional people, the curriculum is set far ahead in accordance with the birth rate. Thus, they know how many school teachers, engineers and doctors they will have 25 years from today.

Their schools carry on athletic competitions, but they also carry on competitions among the cultural and scientific classes, as well. The receipt of one of the coveted medals by a student is a signal honor. One student receiving such a medal had designed a new type of helicopter. It was interesting to note that 60 percent of the Moscow University students are in scientific studies. 80 percent of the students receive subsidies ranging from 300 to 780 rubles per month, depending upon their marks.

The director of the Moscow University had visited in the University of California, and I asked him to compare the two universities. He stated that with the exception of our atomic laboratory, their university is much better equipped for new experiments and scientific research. They are very frank to claim superiority of their methods in every educational phase. They can boast of having 110,000 women scientists in the U.S.S.R., and they also claim to have over 280,000 research workers doing scientific work.

They are very proud of their Bolshoi Ballet, their circus and puppet shows, and many other forms of entertainment which they call the people's cultural shows.

Finally, we came to our meeting with Mr. Khrushchev, who had been away in Indochina. It was scheduled that I go to Mr. Zhukov's office, and that he would accompany me to the Kremlin. At 12 noon I entered Mr. Khrushchev's office. After some minutes of press review, we were left alone, and I conferred privately with Mr. Khrushchev for over an hour.

Then we left the building for another section of the Kremlin for luncheon. It was here that Mr. Khrushchev ignored his chauffeur and asked me if I would prefer to walk. I said I would, and we walked the few hundred yards down the Kremlin way to the astonishment of sightseers who now are permitted to enter the Kremlin grounds. As they saw him approaching, they applauded him, and frequently he would take me by the arm and introduce me to the crowd, whereupon the applause would begin all over again.

The luncheon was attended by Mrs. Khrushchev, Deputies Kozlov and Mikoyan, and Mr. Zhukov. We discussed a number of items, and for 2½ hours I was engaged in a very absorbing conversation. First of all, Mr. Khrushchev said he regrets very much that the United States is not ready to enter into trade relations with the U.S.S.R. He believes that trade will bring better understanding and strengthen the cause of peace. In this instance, Mr. Khrushchev ignores the fact that he can trade with the United States if he desires—provided that he pays cash and does not depend on credits. We have considerable millions of dollars due from prior sales, about $700 million, reduced from about $3 billion, and the United States is not apt to permit a recurrence of this situation.

He agreed with me that a broad scale exchange of cultural exhibitions would be good for our two countries. He specifically promised the loan of one major exhibition, and I shall be working on that in the months ahead.

Mr. Khrushchev further stated that the relationship between America and the Soviet Union had improved vastly in the past months, and he pointed out that the present improved relationship was unthinkable 1½ years ago. He believes that the tensions have been lessened considerably, and I think all of us can agree in that respect.

Mr. Khrushchev believes that President Eisenhower's visit will be of tremendous value in the cause of peace, and he is looking forward to it with great anticipation. He stated further that the main job now is to improve further our mutual relations, and believes that disarmament is a most important problem to solve. In fact, he called this the problem of problems.

In the course of this discussion, he told me that the Soviet Union is ready to destroy all nuclear weapons if everyone agrees to do likewise, and to go under a strict surveillance thereafter. What constitutes adequate inspection is another question.

And, if the Soviet Union in concert with Red China were permitted then to maintain the largest land army in the world, America certainly would be placed at a total disadvantage. It has been said that the Chinese Reds could lose 100 million men, and it would make no difference if victory were in the offing.

Mr. Khrushchev stated—and he said this very emphatically—that the U.S.S.R. will never be the aggressor, nor will they ever attack nor inspire an attack on the United States, or any other nation of the Western World. This, of course, was most reassuring to me, and I replied in kind by saying that the American people have never been aggressors in the past and certainly have no aggressive designs now. I stated that the only apprehension we feel from time to time is the political encroachment upon our governmental system, and if we can induce people throughout the world to contain themselves in their own area of political influence there should be no difficulty.

Mr. Khrushchev reiterated his appreciation for the reception given to him in San Francisco, and said he would be happy to encourage a summit conference in our city.

Alternately, Mr. Khrushchev, Kozlov, and Mikoyan would gang up on me on some economic or political problem, but I managed to divert them frequently to Mr. Mikoyan, for I perceived that Mr. Khrushchev likes to joke at Mr. Mikoyan's expense. I interpreted this only as a manifestation of affection for Mr. Mikoyan. Mr. Kozlov, on the other hand, was less expressive though he is extremely jovial and laughs heartily. In particular, we made Mr. Mikoyan the butt of our jokes by depicting him as a sharp, cunning trader. I was, as the saying goes, joking on purpose.

Once, the conversation became grimly serious. We were talking about Fidel Castro, and I said that the wholesale executions taking place in Cuba did not meet my standards of judiciousness. Mr. Mikoyan, who had just returned from a meeting with Castro, remarked that Batista had executed 10 times as many political adversaries as had Castro. "Two wrongs do not make a right," I answered. Mr. Mikoyan, to prove his point that Mr. Castro is a fine gentleman, observed that he had even permitted an opposing newspaper to remain open in Cuba. "We Americans," I replied, "are not impressed with the fact that an opposing newspaper is allowed to exist, for they are entitled to that privilege. We thrive and prosper and grow on the comments and criticisms of our newspapers, and it is upon these constructive criticisms that America has grown. "Independent, forthright newspapers are our greatest institutions."

"If I were in Castro's place," replied Mr. Mikoyan, "I would close it in a minute." His lip curled defiantly, and there was no question but that he meant it.

About 4 o'clock, we adjourned since I was to return at 5 o'clock for another meeting with him.

That night, a reception was held in the Kremlin in celebration of Women's Day. The various leaders of the women's organizations presented their reports, and all of them referred to Mr. Khrushchev as the champion of friendship and peace for the world. Regardless of what we think here, Mr. Khrushchev is to them the man who is striving to bring happiness and peace to all the peoples of the world. The reports were primarily on production, and there was loud applause when it was learned from some that they were beating the 7-year plan by 2 or 3 years.

They are proud of their production—at least, the quantity of it for they are not able, yet, to actually gage the quality of that production.

Everyone here works at something, and if one is inclined to become a drone bee he is tried in a kangaroo court by his own coworkers, and may be banished to Siberia. To indicate how employment is inspired, even a small barbershop with two chairs has a cashier—unheard of in the United States.

I inquired about the former chief of the Soviet police, Beria. Some have reported that he was shot in the back by Mr. Mikoyan, and I had the temerity to ask this very direct question. I was told simply that while Mr. Stalin was ill and failing because of his age, Mr. Beria had committed "certain injustices." What these injustices were was not explained. I was further told that a military tribunal was set up to try Mr. Beria, who was found guilty and executed by the military squad. That was all the information one could learn from the officials regarding Mr. Beria.

It is interesting to note that the people of the Soviet and the people of America have the same thought in mind with regard to peace. All throughout the Soviet Union, I was asked why we cannot work toward this common goal. In America, I am frequently asked if Mr. Khrushchev and the Communists are sincere when they say they want peace. I believe they do want peace. I believe, Mr. Khrushchev, especially, wants it, but, of course, without disturbing his measured plans. We must not forget that the Soviets lost 8 million men in the First War, and they sustained over 15 million casualties in the Second War. They were sieged at Leningrad for 900 days, and there were cataracts of blood on their soil. They have not yet erased these awful memories from their minds. If they don't want peace, they must be insane, and certainly no one has accused them of not having their full mental faculties.

The next problem posed frequently is when some Americans say there can be no peaceful coexistence between us. I am certain that the Soviets will fight to preserve their national Communist ideology. We all concur that, if necessary, we will fight to preserve our American democracy. Since both of these converse philosophies of government are equally determined to resist each other, and if there is to be no peaceful coexistence, then the objectors to such a peaceful coexistence have no alternative but war. Such an episode would be the most tragic blunder in the history of civilization.

We have licked communism before with our intelligence. We had communism at Plymouth Rock in 1620, two centuries before Karl Marx wrote his manifesto. In a pragamtic sense, we gave it up and embarked on an economic program unequaled in man's history. With the same passion for our ideals in these contemporary times, we can fulfill the ancient word that this and future generations shall not be compelled to lift their swords and learn to war.

I have perceived not superiority in the Soviet Union other than the sputniks they have placed in orbit, and of course their grim

determination to succeed by hard work. We are ahead in every category that contributes to a rich, full and happy life, but we must keep ahead.

All we need in our country is to reapply ourselves to those principles of diligence and hard work which in the first place created the great incentive system under which we operate. If we do, we have nothing to fear.

We still have time to show the spirit that prevailed when we were building our country. At Bunker Hill, many years ago, Yankee farmers stood their ground and fired rusty nails out of squirrel rifles at their opponents. That's what we Americans do when we're in a pinch, and I see no reason why we should not now get down to the same kind of perseverance and application.

Perhaps the propulsion of sputnik is the best psychological impact we've had for many, many years.

I think we should remember the words of Theodore Roosevelt, who once said that the United States of America has not the option as to whether it will or will not play a great part in the world. He said it must play a great part. All that it can decide is whether it will play that part well or badly.

I believe that the Americans have underestimated the determination of this Socialist state, but it is not too late for a reappraisal and strengthening of our own self-resolve. From a position of strength, we can assure the Russian people and all the people of the world the peace which I am sure they want more than anything else.

Let me assure you that Mr. Khrushchev is a superb salesman. I considered our trip a vital sales mission, too. With modesty, I believe that I and my party succeeded to a reasonable degree. The name of San Francisco was on every tongue in thousands of villages in Europe and in Asia. I fervently pray that the spirit of this city, in its desire for friendship and peace, will prevail amongst all the peoples of the world.

I want to thank the members of my party—Mr. George Pottorff of Pan-American, Russ Cone of the Examiner, Mel Wax of the Chronicle, Jim Leonard of the News-Call Bulletin, and George Martin and Charles Stanyan of KRON-TV. They were a part of the team, and played their parts well.

Thank you.

A Grave Disservice by the New York Times

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. HUDDLESTON. Mr. Speaker, on yesterday, Monday, April 18, 1960, I inserted in the CONGRESSIONAL RECORD editorials from the Birmingham News of April 13 and the Birmingham Post-Herald of April 14, concerning the articles which Harrison E. Salisbury wrote on the race situation in Birmingham, Ala., my district, and which appeared in the New York Times on April 12 and 13. The reaction to these examples of the most reprehensible type of irresponsible journalism has been tremendous. On Friday, April 15, 1960, the Birmingham News ran a scorching editorial, highly critical of Salisbury's type of journalism. The editorial was entitled "A Grave Disservice." It is the considered opinion of the Birmingham News that the New York Times has done Birmingham and American journalism a grave disservice.

The editorial follows:

[From the Birmingham (Ala.) News, Apr. 15, 1960]

A GRAVE DISSERVICE

An amazing recital of untruths and semi-truths, employed to justify conclusions obviously implanted in the writer's mind before he ever crossed the Mason-Dixon line, has provided the Nation with a picture of Birmingham maliciously bigoted, noxiously false, viciously distorted.

Another journalistic or literary libel against the South is, in itself, nothing to excite great concern. Northern journalists have for generations taken great delight in labeling certain segments of our social and political life as "dirty linen," then washing it for us in public.

One more asinine "expose" of the South would not seem to matter much. But when the New York Times, with a long-standing reputation for respectability and integrity, stoops to journalistic demogoguery and South-baiting a response is required.

The Nation today has a portrait of Birmingham threatened with "civil strife," ruled by the "whip, the razor, the gun, the bomb, the torch, the club, the knife, the mob." Telephones are "tapped," mail "intercepted," the "spy" has "become a fact of life." Ridiculous? A psychotic mirage induced by self-delusion?

Nonetheless, we must remember that the Times readership is one of the most influential segments of America and that for the Times reader this noxious faleshood, couched in the most purple of phrases, is the truth. These readers do not and probably will not know that normally high journalistic standards have not been followed.

Interpretation of an isolated incident as typical of the entire region has long been a favorite instrument for libeling the South.

The New York Times sets a new standard for the anti-South propagandists to aspire to in its articles datelined "Birmingham."

A rape story from Pennsylvania creates no assumption in the South that everybody in Pennsylvania is a rapist. But the most sordid incident of violence and prejudice in the South, no matter how unusual, is immediately employed by segments of the journalistic North to indict the entire area.

The Times cites incidents which it skillfully interprets as all happening within a short time. As logical would be taking the year's record of knifings, shootings, muggings and assaults in New York City and, as the basis for a sociological survey, presenting them as a true picture of a normal day in the life of a great city.

Typical of the distorted picture of Birmingham given the Nation is the assertion that "a drive is on to forbid Negro music on white radio stations."

Basis of that statement of "fact" is, of course, a column by News TV critic Roger Thames deploring the unusual amount of vulgar rock and roll generally associated with second rate Negro music played on radio stations compared to the time given to good music, of the classical and semiclassical and popular varieties. Such is the pattern of The Times' distortion.

Race tensions exist only in the South many Northern writers would have you believe by inference. Negro and white tension in the North frequently explodes into extended violence. But there are very few "official" race conflicts in the North. If whites and Negroes clashed physically in the South, an occurrence so unusual as to defy citing, we can be assured it would be immediately labeled a "race riot."

That a shoddy, vicious type of reporting should be resorted to by the New York Times makes the artciles slandering Birmingham even more shocking for the people of this city.

It is with amazed disbelief that the community views this malicious journalistic portrait of itself.

But Birmingham, engaged in a major program of community improvements, may find itself more than shocked. Many here are asking if this type of reporting may not cause economic damage.

If the prize-winning reporter, Harrison Salisbury, can write this about Birmingham, how can we evaluate what he reported for the Times out of Moscow?

We believe the New York Times has done Birmingham and American journalism a grave disservice.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of April 16, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Tex.)

Campaign oratory produces some startling statements. Fortunately most voters make allowances for the assertions of politicians during election years. But should the voter have to adopt this "let the buyer beware" attitude toward the statements of those who hold, or aspire to, public office? Bernard Baruch once said, "Every man has a right to his own opinion, but no man has a right to be wrong in his facts." Unhappily, as voters we're often aware of our own inability to test the factuality—the truth—of "campaign" statements. No matter how knowledgeable and realistic a voter may be, or try to be, he's often forced to rely on little more than instinct or intuition—on his general impression of a speaker's mannerisms or physical appearance—in exercising his political judgment.

Some current political shibboleths are worth examining closely. For instance, some would have us believe that the United States has degenerated, militarily and economically, into something of a second-class power. These fellows often call for a crash program to develop one specific weapon or another, and hang the cost. Oddly enough, it's often these same people who loudly advocate ever larger and more expensive welfare programs. Questions about deficit spending and consequent inflation are apt to be shrugged off with the observation that 60 percent of our budget is for defense, "and you can't cut that—we ought to be spending more."

Let's look at some facts: Nondefense spending in recent years has soared at twice the rate of our defense costs. Moreover, by laws already on the books, we have committed ourselves (and our children) to pay out the incredible future sum of $396 billion for programs having nothing to do with defense. This figure doesn't include any of the $290 billion in debt we've already run up. Neither are these contingent liabilities, mind you, but definite nondefense c.o.d. bills which will fall due in the future under the terms of laws already enacted.

Where is the tax money coming from to meet these bills? For a generation now, professional "do-gooders," some labor leaders,

and self-styled liberals have convinced many people that the money would come from someone else—that with our progressive tax rates their programs to help the little man would be financed by taxing the well-to-do. Well, the rich can't be soaked any more. If all incomes over $25,000 were seized outright by the Federal Government, it would only raise $1.8 billion in revenue. If all incomes over $10,000 were seized, we would only increase revenues by $5.6 billion, less than it takes to operate the Government for a month. No; the taxpayers with modest incomes must bear the burden for any Federal programs allegedly aimed at providing for his welfare. When this fact sinks in generally, pie-in-the-sky campaign promises, involving greater spending, should lose a lot of their allure for John and Jane Doe who foot the bill.

Any schoolboy can tell you that ours is a government of, by, and for the people, who enact laws through their elected representatives in Congress. Granted, this is the way it should be, but the facts are a little disconcerting. My friend JIMMIE UTT, Congressman from California, recently pointed out that there is more administrative law governing our citizens than there is statutory law enacted by Congress. Thus, regulations are drawn up by almost every board, bureau, and commission in Washington, ostensibly to implement the broad statutes authorizing them. After due publication in the Federal Register, they become part of the body of administrative law governing you and me.

Says UTT: "We are rapidly coming to a point where a complete change of elected officials, including Congress and the White House, can mean little change in policy. You are governed more and more by people for whom you have never voted, for whom you never will vote, whom you have never seen, and whom you cannot recall by your vote. They are entrenched in the boards, bureaus, and commissions, even at the policy level. For example, you may think that the Secretary of Labor sets the policy of his Department, but I know that much of the policy of that Department is set by civil service employees who have been with the Department for 20 years, and they have no intention, now or ever, of recommending to the Secretary of Labor any policy which does not fit their personal philosophy of government, and you cannot remove them or replace them by your ballot. That same situation exists in the State Department, and in fact in every bureau, board, and commission. This is a form of invisible government and can lead to the most oppressive type of tyranny.

"Congress must assume a great deal of the blame for constantly delegating powers and duties which rightly belong to Congress. These delegations of power generally take place under a temporary emergency situation and, once delegated, they are never returned."

Justice Tom C. Clark, of U.S. Supreme Court, Addresses Philadelphia Chapter, Federal Bar Association

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. TOLL. Mr. Speaker, it was my good fortune to attend a monthly meeting of the Federal Bar Association, Philadelphia chapter, at the Bellevue-Stratford Hotel on April 8, 1960. The main speaker on that occasion was the Honorable Tom C. Clark, Associate Justice of the Supreme Court of the United States. Justice Clark's speech contained such interesting historical information that I include it below and commend it to the attention of every Member of Congress:

REMARKS OF MR. JUSTICE CLARK, BEFORE THE PHILADELPHIA CHAPTER, FEDERAL BAR ASSOCIATION, BELLEVUE-STRATFORD HOTEL, APRIL 8, 1960

It is fitting that, in this 170th year of our Supreme Court as we meet here in Philadelphia, where it sat for 10 years, we review a few of the highlights of its founding and development.

In writing article III into the Constitution, the Founding Fathers created a judicial department. That article merely says that "the judicial power of the United States shall be vested in one Supreme Court and in such inferior courts as Congress may from time to time ordain and establish." While it provided that the judges were to hold office during good behavior and that the judicial power should extend to a certain class of cases, including those over which the Supreme Court had original jurisdiction, it left to the Congress not only the number of justices that should constitute the Court but also the number and character of the inferior courts in the Federal system. In addition, it left the appellate jurisdiction of the Supreme Court up to the will of Congress, and in article II provided that the membership of the Court was subject to the appointment of the President with the advice and consent of the Senate. In light of these provisions the Federal judiciary was unable to function until both the Congress and the President acted.

It will be remembered that the new government was to have begun to function on March 4, 1789—but it was not until a month and two days later that a quorum was had in each house, nor was President Washington able to take the oath of his office and enter upon his duties until April 30, 1789.

In view of the fact that the third branch of the Government, the judiciary, could not function until its machinery was provided, it was necessary that the Congress devote its attention immediately to the formulation and passage of the Judiciary Act of 1789. Under it the Congress provided that the Supreme Court should consist of one Chief Justice of the United States and five Associate Justices. It further provided that the Court should hold two sessions each year at the seat of government. Two days after President Washington approved the act, he sent to the Senate his nominations of the first Chief Justice as well as the first five Associate Justices of the Court and they were confirmed the same day. As you know, John Jay was appointed the first Chief Justice of the United States; and the President appointed John Rutledge, William Cushing, James Wilson (of Pennsylvania), John Blair, and Robert Harrison to be the first five Associate Justices.

It is interesting to note that on the opening day provided in the Judiciary Act for the convening of the Court, only three members were present for its meeting in the Exchange Building in the city of New York. Lacking a quorum, the three awaited the arrival of Associate Justice Blair from Virginia, and the first session was held February 2, 1790. The Court's Journal reflects that the only business transacted the first term was the adoption of four short rules. The first had to do with the seal of the Supreme Court and the Circuit Courts. The second fixed the qualifications for the admission of attorneys and counsellors to practice before the Court and prescribed their oath. The fourth ordered that all process of the Court should run in the name of the President of the United States. The Court adjourned with no business on its calendar, no lawyers on its rolls, and no precedents to guide its future adjudications.

The second term of the Court continued to be a bobtailed one, since Colonel Harrison declined his appointment as one of the Associate Justices and Mr. Rutledge had failed to respond. The press of the business is indicated by the Court's Journal, which has but one notation, reciting that James Iredell, who had been appointed in lieu of Harrison, had finally accepted his appointment; the appointment was read and Justice Iredell qualified according to law. The beginning of the third term found the Court sitting not in New York but in the national capital right here in Philadelphia. That was on February 7, 1791. The Court's Journal, however, indicates that a momentous event in the Court's history had occurred. Three attorneys and three counsellors were admitted to its bar, the origination of a roll which now numbers over 70,000 lawyers. The Court still had no business and so it was again adjourned sine die. The fourth term convened August 1, 1791, and the Court had two cases on its docket. The first case ever filed was *West* v. *Barnes* (2 Dallas 401). West had lost to Barnes in the Circuit Court of Rhode Island. It appears that he won in the Supreme Court on a pure technicality; namely, that his attorney had obtained the issuance of a writ of error by the Clerk of the Circuit Court, rather than the Clerk of the Supreme Court of the United States. As insignificant as the case was at the time, it was the forerunner of the practice which has continued ever since. The second case was *Vanstophorst* v. *State of Maryland*. To the amazement of a present-day practitioner, that term's only action in this case was the issuance of a commission to take depositions in Holland. The fifth term of the Court began in February of the next year. Some wag has said that the final disposition of the only case considered during that term indicated the lack of confidence that the lawyers then had in the Court. The style of the case was *Oswald, Administrator* v. *The State of New York*. After the Court had taken under advisement some motions to quash the writs, the attorney's voluntarily discontinued the suit.

During the sixth term, John Rutledge who had served on the circuit but never attended a session of the court, resigned to become Chief Justice of South Carolina. President Washington offered the vacancy to Rutledge's younger brother, but he declined, whereupon Thomas Johnson, of Maryland, was appointed and qualified. We therefore see that it was not until after the lapse of almost 3 years from the first meeting of the court that all six seats on its bench were occupied.

It was in its sixth term that the first case, *The State of Georgia* v. *Braislford* (2 Dallas 403), was decided by the court. Justice Johnson, of Maryland, was its author and it covers some seven pages in our reports. It appears that Georgia, "being then free, sovereign, and independent," adopted a statute reflecting certain penalties upon and providing for the confiscation of the estates of persons declared to be guilty of treason. Braislford had brought an action on the bond against the "surviving partner of Kelsell and Spalding for debt. The marshal had levied on certain moneys in satisfaction of the judgment secured by Braislford. Georgia claimed that it "was entitled to the bond" and "equally entitled to the money levied" upon. It asked through its attorney, one Dallas, who might, for all we know have been also the reporter of the court, for an injunction impounding the money in the hands of the marshal. One Randolph represented Braislford. The court issued the injunction prayed for. It is interesting to note that each of the justices wrote in the case. Mr. Justice

Wilson, of Pennsylvania, started his opinion thus: "I confess that I have not been able to form an opinion which is perfectly satisfactory to my own mind." I might add that I am sure many opinions since that time have been handed down by authors who have suffered the same difficulty. In fact, Chief Justice Jay has this opening paragraph in his opinion: "My first ideas were unfavorable to the motion; but many reasons have been urged which operated forceably to produce a change of opinion." I can further add that this also occurs many times during the deliberations of the court.

The Court continued to have its organizational problems; only 5 years after he had taken the judicial oath, Chief Justice Jay resigned in order to accept the governorship of New York. John Rutledge, the chief justice of South Carolina, about whom I have previously remarked, was given an interim appointment for this vacancy on July 1, 1795, and took his oath on August 12. However, the Senate was not pleased with this nomination and on December 15 it was rejected. Chief Justice Rutledge, however, had taken part in the Court's deliberations during this 4 months' period and is included in the 14 Chief Justices who have adorned the Court's bench since its first organization. When the Congress returned to its next session on March 4, 1796, President Washington nominated Oliver Ellsworth to be Chief Justice and he was sworn in March 8, the same year. However, his service was terminated less than 4 years later by resignation. On January 3, 1801, President Adams appointed John Marshall—then 45 years of age—to be Chief Justice of the United States. He served in that capacity until his death July 6, 1835; a period of 34 years.

In the 170 years that have elapsed since the Supreme Court of the United States first convened in New York, 14 men have served as Chief Justice of the United States. During the same period there have been 78 Associate Justices who have actually served on the Court. Six men have declined after appointment by the President and confirmation by the Senate—but only one since 1837, when Senator Roscoe Conkling declined in 1883. A number of others either declined the position or were refused confirmation. Likewise I have not included in these totals 3 of the 14 men who have served as Chief Justice who had previously served the Court as Associate Justices. They were, as you know, White, Hughes, and Stone. There have been no women at all on the Court. A recent historian of the Court, commenting on this fact, said, "Think what the women have missed, when you consider the Supreme Court has the very last word." As we noted above, the Congress, under the Constitution, has the power, as well as the duty, of determining the number of Associate Justices who compose the Supreme Court. Eighteen years after the Judiciary Act of 1789 the Congress increased the number of Associate Justices from five to six, and 30 years later added two more Justices, bringing the composition to eight Associate Justices and the Chief Justice. In 1863 President Lincoln recommended, and the Congress adopted, an amendment increasing to nine the number of Associate Justices. This is the largest number of persons who ever sat together on the Court at one time. It is said that this increase was made in order to change the opinion of the Court in the Legal Tender cases. If that be true, its purpose was effected. The number 10, however, had no magic, for only 3 years later, the majority of the Congress, in a pique with President Johnson, passed an act providing that any vacancy that might occur on the Court should not be filled until the Associate Justices reached the number of 6. However, 3 years later President Grant was able to secure a further amendment whereby the Supreme Court's composition was to be made up of a Chief Justice and eight Associate Justices. That provision has remained the law ever since.

Perhaps you might be interested in knowing that Pennsylvania stands fourth among the States in the number of men who have served on the Court. Six men were appointed from your State, while 12 Justices have been from New York, 10 from Ohio, and 8 from Massachusetts. Little old Texas has only had 1. However, there are 22 States, including Alaska and Hawaii, who have furnished none.

As to longevity, two men—John Marshall and Roger Taney—served the Court as Chief Justice during more than a third of its life, a total of 62 years. Mr. Justice Field, who was appointed from California, served the longest, 34 years and 6 months. But Chief Justice Marshall served only 1 month less, and there were many close "runner-uppers," including Justices Story and Harlan, who served for 33 years each, Justice Wayne, who served for 32 years, Justice Johnson of South Carolina, and Justice Bushrod Washington, of Virginia, George Washington's nephew, who served 30 years each. The statisticians say that the average tenure of a Justice is 15 years. At the present time we have 3 on the Court who have served over 20 years each, and I come in a poor fourth with 10 years.

In the early days of the Court's history, many must have agreed with Alexander Hamilton that the judiciary was "the weakest of the 3 departments of power; [one that] can never attack with success either of the other 2." Little could they foresee today's Court, which disposes of nearly 2,000 cases a year, and has the admitted power to strike down statutes, and to pass on the constitutionality of the official actions of the Government. The Court's authority as the final interpreter of the Constitution extends to any official act of any officer in the Federal or State Governments. Though an act of Congress or of any State legislature receives the unanimous vote of the members of either of those bodies, together with the approval of the President or the Governor, as the case might be, it may be declared null and void by a majority vote of the Court. Let me add, however, that this power has been exercised very sparingly. The decisions of the Court in this field are a very small percent of the total Court business. In fact, since 1937, only a handful of the acts of Congress have been declared unconstitutional. Perhaps this wise judicial restraint was sown in the practical realization that, as James Bryce said fourscore years ago, it is "To the people we come sooner or later; it is upon their wisdom and self-restraint that the stability of the most cunningly devised scheme of government will in the last resort depend."

Wesleyan's Colloquium on Freedom—A Great University Accepts the Challenge

---

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1960

Mr. BOWLES. Mr. Speaker, with freedom under daily attack in many areas of our country and of the world, I was glad to note recently that a university in my congressional district has been taking positive steps to advance the cause of freedom. In fact, the National Broadcasting Co. thought so highly of this educational innovation that they reproduced part of it on their weekend coast-to-coast "Monitor" radio program.

I am referring to the 2-day colloquium on freedom which was conducted this spring by the graduate summer school for teachers at Wesleyan University in Middletown, Conn.

There are two notable things about this freedom conference which lead me to draw it to the attention of my colleagues in the House of Representatives. In the first place, it was, so far as can be discovered, the first in which high school students, high school teachers, college teachers and a college president all participated. For a private university thus to concern itself directly with the education of high scchool students as well as their teachers indicates an awareness of the challenge of public education and a readiness to accept that challenge which I find commendable.

In the second place, it was an occasion when hard thinking—tough, sustained intellectual effort—was required. There was no facile repetition of slogans, no lazy acceptance of cliches, no easy and comfortable repose in established answers. Adult problems were dealt with in an adult way.

The participants, whether adolescents or adults, grappled with such problems as those of reconciling the highest degree of individual liberty with the legal restraints necessary to insure equal liberty for all; with the distinctions between spiritual, intellectual and physical freedom; with the presuppositions on which our constitutional guarantees of freedom of speech and assembly rest; with integration and segregation; with the puzzling contradictions involved in such matters as censorship and loyalty oaths, the attitude of our country toward France as a member of NATO, a traditional friend, and also a contestant in the Algerian struggle; and with the attitude of the United States toward the Cuban people, the Castro regime and the protection of United States investments in Cuba.

The colloquium grew out of the course called the philosophy of freedom which is given every year in the graduate summer school for teachers at Wesleyan University. This course was established because of Wesleyan's conviction that, though freedom is our priceless heritage, it will not be cherished unless it is understood, and not understood unless it is studied. The tragic record of the American soldiers who were captured by the Communists in the Korean struggle is only one of a number of evidences that many Americans do not understand, and therefore do not properly value, the freedom which is theirs by birth.

In attendance at the colloquium were eight high school teachers who had previously taken the philosophy of freedom course at Wesleyan, and 27 of their pupils from public and private schools in Connecticut and Massachusetts. Some of them were interviewed on the NBC "Monitor" program by Ross Miller of station WTIC in Hartford. Throughout their statements both the teenagers and

their teachers emphasized this theme: "Don't take freedom for granted." It was this mistake, taking freedom for granted without understanding its true significance and depth, that left many of our captured GI's in Korea unable to explain or defend the precious liberties for which they were fighting.

Proper understanding of freedom comes not through indoctrination, but through the study of history, government, economics, and suitable literary works. Courses in all these subjects, as well as in the philosophy of freedom, are provided by the graduate summer school for teachers at Wesleyan University.

The freedom discussion opened with a short statement by Dr. Victory L. Butterfield, president of Wesleyan University, on the morality and psychology of liberal education and its meaning in a free society. Three of his basic assumptions are worth repeating. They are:

First. That a liberal education is one which helps men gain greater measures of personal freedom for purposes of more significant living in ways that can help sustain or strengthen a free society.

Second. That the heart of personal freedom lies in the autonomy of the self—in that balance of inner compulsion, judgment, taste, and conscience, that constitute the will to appropriate action.

Third. It is this experience of being able to decide for ourselves what is true or false, wise or unwise, lovely or ugly, right or wrong, and to take appropriate thought and action that give us our positive sense of autonomy and freedom.

A later conference session was devoted to various aspects of political and social freedom. Dr. S. Hugh Brockunier, professor of history at Wesleyan, opened this session by quoting part of the report on the Communist brainwashing of U.S. soldiers in Korea made by Maj. William E. Mayer of the U.S. Army Medical Service School. Dr. Brockunier's central theme was that freedom cannot be taken for granted, and that the only people who have freedom are those who continually learn by study and experience how to fight for it. He supported his thesis by quoting a number of memorable statements, including these:

By the late Senator Borah:

The safeguards of our liberty are not so much in danger from those who openly oppose them as from those who, professing to believe in them, are willing to ignore them when found inconvenient for their purposes.

By the late Justice Jackson:

Freedom to differ is not limited to things that do not matter much. That would be a mere shadow of freedom. The test of its substance is the right to differ as to things that touch the existing order.

In each age man has to relearn the lessons of freedom. Our captured soldiers in Korea had to relearn through suffering. Most of us are more fortunate and may relearn the meaning of freedom in our homes, our libraries, and our educational institutions.

I find that the entire curriculum of Wesleyan's Graduate Summer School for Teachers serves the cause of freedom directly. From ancient to modern times, great men have repeatedly asserted the connection between freedom and education.

Jefferson summed it up for many when he wrote, "Enlighten the people generally, and tyranny and oppression of body and mind will vanish like evil spirits at the dawn of day."

All liberal study, whether of history, physics, philosophy, music or mathematics—all intellectual effort which leads to a wider view and a deeper human sympathy, builds, and supports the love of freedom.

The Wesleyan Summer School deserves commendation for pioneering in the field of education for freedom. This recent conference on freedom is exciting because it represents an unusual and valuable approach to one of our most important educational problems. I am confident that it will serve as a good beginning for further inquiries into the meaning of freedom both at Wesleyan and at other educational institutions.

Negro Youth Impatient Over Denied Dignity, Not Leadership

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

SIT-IN STUDENT FREEDOM FIGHTERS—NEGRO YOUTH IMPATIENT OVER DENIED DIGNITY, NOT LEADERSHIP

(By Saunders Redding)

In a recent Associated Press dispatch out of Charlotte, N.C., where he went to address a "freedom mass meeting," Thurgood Marshall was quoted as saying in a news conference: "And if you mean, are the young people impatient with me, the answer is 'Yes'." The chief counsel of the NAACP is not often wrong about race matters, but he was wrong this time. The courageous, determined youngsters who sit-in at lunch counters are not impatient with Marshall and they are only reasonably impatient with the slowness of court action in furthering desegregation in public schools.

The sit-ins, the picket lines, and the silent parades are a frontal attack on another problem: the denial of the dignity and decorum of self, the bruise on the ego, the affront to the personality that is offered by discriminatory practices in places of public accommodation soliciting public patronage. Certainly this aspect is present in the school desegregation fight, too, but there you have an attack upon the structure and interpretation of the law. It is an organized attack, and it is basically impersonal.

The sit-ins are different. Youngsters who are taking part in them want something more than to be treated as first-class citizens within the frame of the Constitution. Citizens are political and legal entities. These youngsters are asserting themselves as first-class human beings, and human beings are spiritual and moral entities.

And certainly the continuing wave of protest is spiritual and moral, and although the Governor of Florida, LeRoy Collins, had to remind white southerners of the fact, he did not have to remind the Negro students. They knew of old, and from many sources—including their parents, and the ancestral memory of slavery, and Jim Crow. Nor are patience and what is called passive resistance new to them. It is only that—thanks to Mohandas K. Gandhi per Martin Luther King, Jr.—these psycho-emotional qualities have been reestablished on new moral and intellectual basis for the furtherance of social ends.

Patience inspired the songs these youngsters' grandparents sang and that the youngsters themselves sometimes sing in choral groups and have lately been singing in the jail cells of Tennessee, South Carolina, and Alabama. But the singing is different now. The oldsters sang out of social innocence and in reverence and in the fervent faith that "a bright dawn is coming." In that fenced-in jail yard in Orangeburg, S.C., the youngsters sang in defiance of those who seek to hold back the dawn. Patience is no longer an absolute virtue. It is a virtue only when linked with courage and coupled with nonviolent public demonstrations.

COLLEGE SIT-IN DEMONSTRATIONS ARE SPONTANEOUS

The key phrase here is public demonstrations. In Montgomery, Negroes simply refused to do something they had always done—ride the buses—and then they took practical steps to overcome the inconvenience of not riding them. Under Martin Luther King's guidance, they employed a technique called passive resistance. But the young college people are not passive. They are doing something they have never done, and they are refusing to desist from doing it. They did not organize for this purpose. What they are doing was of spontaneous origin. It was a blind grab for a hold on that human dignity that is instinctive in all men; and it was personal.

Asked why he took part in a sit-in in Richmond, a student at Virginia Union University replied that he was doing it for himself. Who told him to do it? No one. And one of the young women run in by the Tallahassee police and reprimanded with, "The devil must have got into you," shot back, "No. God has."

There have been one-man sit-ins, and lone women pickets, and silent parades of four. The demonstrators' signs have been personal, too. "I'm entitled to equality, and I want it"; "My stomach may be empty, but what about your heart?"; "The law of God will be fulfilled." No mass slogans are on parade. These Negro youths are speaking in their individual voices. In view of the intensely personal element in their push, it is right for them to do so.

Many white southern officials claim that Communication between the races has broken down; they say they no longer know what Negroes are thinking. In spite of broken communications, they know what Negroes are thinking now. It is better than a guess to say that they know because communications are broken down. For when they speak of communication between the races, they are speaking of a system of control whereby they made their will known to a Negro of their own choosing whose job and profession it was to make that will palatable to his own people. There are not so many of these local chefs de Negres anymore, and those who remain have forfeited the patience of young Negroes.

Although the Governors of Florida and North Carolina and the officials of a few southern cities are encouraging exceptions, many white southerners have never wanted an exchange of ideas with Negroes. The Governor of Virginia, for instance, refused to appoint Negroes to a citizens' committee to look into interracial relations, and recently all the top officials of Hampton and Newport News, Va., turned down an invitation to

discuss with Negroes the present "troubles" in race relations.

In point of fact, the thing that has most surprised the diehards and the fearful and silent moderates is that there has been so little trouble. And what there has been they have made—sometimes under the blush of preserving law and order, as, they say, the new gaggle of so-called "trespass" laws are designed to do, and sometimes in the sheer foolish hope of evoking anger so as to have an excuse for bashing Negro heads. Some managers of chainstores have hired goons to bar Negroes' entrance to lunch counters. Some are paying toughs to occupy lunch-counter seats to keep Negroes off them. Some police forces have used trained dogs in an effort to cow young Negro demonstrators; and in Montgomery a white man clubbed an unoffending Negro woman with a midget-size baseball bat.

COURAGE, CONDUCT OF COLLEGIANS HELD DOWN VIOLENCE

That there has been so little trouble is due to three factors: First, the courage and the conduct of the demonstrators. Southern newspapers invariably report of "the quiet behavior," "the good manners," and "the neat appearance" of the Negro youngsters. Second, the sympathetic reaction to the protest of people in Europe and Asia, but more particularly the sympathetic reaction of Americans outside the South. Third, the withering away of the southern notions that the race problem is exclusively the South's own business, and that only the South can handle it because only southerners "know and love the Negro."

How much influence to assign to each of these it is impossible to say, but none can be overestimated. The courage and the conduct of the Negro students has meant the difference between demoralizing ridicule and surprised though grudging respect. The reaction of people outside the South suggests the slow retreat of thoughtless prejudice along other fronts, and the gradual spread of the idea that democracy is not simply an ideology, but a way of living that all Americans must embrace.

Perhaps nothing represents this consciousness so well as the statement of the manager of Houston's city hall cafeteria the day after a pair of Negroes had asked for and received service there. The manager said, "I only served the Negroes so as not to embarrass a group of foreign dignitaries visiting Mayor Lewis W. Cutrer."

This is, of course, the wrong reason for doing the right thing, just as establishing "vertical integration" is the wrong thing for the right reasons. But in matters of revolutionary social change, right thing and right reason come together only slowly in the best of circumstances, and in this case, among a people who remain unconvinced that they are wrong in believing segregation right, expediency will be slow in yielding to moral principle.

Meanwhile, the cynical manipulation of fears is still the role of southern politicians, although these fears have no correspondence to facts in the objective world, and although these fears—of miscegenation, of "mongrelization" are a gross insult to white southern womanhood; and bitter race-hatred and tragic ignorance are still the lot of the wool-hat boys and the blue-jeaned, duck-tailed punks.

So a white mob—and mobs in America seem always to be white—can openly carry and make threatening gestures with guns, blackjacks, and baseball bats against Negroes, without fear of being arrested.

* * * * *

But if cynicism, bitterness, and unreason still prevail among many southern whites, a growing responsiveness to the moral imperatives of democracy, a divine courage, and above all a new sense of their dignity as individual men and women prevail among this generation of Negro students.

"I am not a problem," said one of these students at Hampton Institute; "I'm a person, and I want to enjoy the right of acting like a person." This is what the sit-ins, the picket lines, the silent parades are all about. They are about the right of the individual to choose dignity over degradation, decent pride over self-hatred, and moral courage over social cowardice.

Problems of Oversea Employees

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1960

Mr. PORTER. Mr. Speaker, in connection with my visit to the Far East last November I made the following recommendations:

First. Reemployment legislation: That prompt and favorable consideration be given by the committee to the official request of the Department of Defense for legislation to grant reemployment rights to employees of that Department who are assigned overseas.

Second. Housing: That the appropriate executive agencies investigate overseas housing policies and conditions for Federal civilian employees and make recommendations for appropriate changes in policy and legislation including, but not restricted to, the following: (a) Cutting off further shipments of household goods overseas and having basic needs furnished by Government; (b) establishing a program to purchase housing for civilian employees off as well as on bases; (c) coordination and reviews of existing restrictions by commanding officers overseas with respect to areas and price range; and (d) giving civilian employees housing allowances under a system identical to those given their military counterparts.

Third. Competitive status: That the U.S. Civil Service Commission and the Department of Defense join in devising improved procedures so that certain nonstatus employees in oversea areas may have better opportunities for achieving competitive status.

Fourth. Coordination: That regulations having to do with identical activities be issued by the Department of Defense rather than in three somewhat different versions by the Army, the Navy, and the Air Force, as in the case of the recent teacher pay adjustment legislation.

Fifth. Duty limit on gifts: That section 321 of the Tariff Act of 1930, as amended, be amended to increase the limit on duty-free goods from $10 to $50 but only with respect to Federal civilian employees assigned overseas.

I asked the Defense Department to comment on recommendations 2, 4, and 5. Under unanimous consent I am inserting herein a reply I received from Assistant Secretary Charles C. Finucane dated April 12, 1960. It is encouraging to see the steady and responsible progress being made in these areas. As for the duty limit on gifts, I intend to file legislation to provide for increasing the duty free limit for civilian employees overseas so that they will have the limit now provided for military personnel.

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., April 12, 1960.

Hon. CHARLES O. PORTER,
House of Representatives.

DEAR MR. PORTER: This is in further reply to your letter of February 12, 1960 to the Secretary of Defense, requesting comments on recommendations 2, 4, and 5 in your report on Federal civilian personnel activities in the Far East. These recommendations are commented on as follows:

2. Housing:

(a) The feasibility of cutting off further shipment of household goods overseas and having the Government furnish basic needs has been a subject of continuing study in the Department of Defense. In September 1956 a directive (No. 7000.2) was issued authorizing the military departments to restrict the overseas shipment of household goods when it is determined to be advantageous to the Government to do so. A copy of this directive is attached for your information.

Under this directive the military departments have restricted shipments to most overseas areas for military personnel to 2,000 pounds. Only in certain areas where the stock of Government-owned household effects is inadequate, or for special reasons it is determined to be advantageous for certain individuals to take their own household effects, is shipment of privately owned effects permitted.

Although this directive covers civilian as well as military personnel, it has not been generally applied to civilians because there is no legal authority under which their household effects can be stored at Government expense when they are not shipped. Section 301(c) of H.R. 7758, the proposed Overseas Differentials and Allowances Act provides such storage authority. As you know, this bill was passed by the House last year and is now pending before the Senate Post Office and Civil Service Committee. If H.R. 7758 is enacted into law, the Department of Defense will be in position to apply the directive to civilian employees.

(b) A large-scale program for the purchase of offbase housing overseas for civilian employees is not considered economically feasible at this time. The Department of Defense cannot afford to obligate substantial amounts of money to meet all family housing needs, especially in those areas where requirements cannot be considered firm. The overseas civilian force in an area such as Japan, for example, is subject to frequent readjustment, and construction or purchase of housing in the light of this situation is not considered to be warranted.

Under existing procedures, family housing is financed primarily from the proceeds of sales of surplus commodities. As of recent years these proceeds have been inadequate in most areas to meet essential military needs. In Japan, for example, it appears doubtful that adequate yen will be available to support the fiscal year 1961 military requirements for family housing construction. There is no reason to believe that financing will improve or that large amounts of foreign currencies will become available. To use appropriated funds for such construction or for purchase of housing would place a heavy burden on agency appropriations which would be unjustified under existing fiscal policies.

With improvement in the Japanese economy, it would appear that greater numbers of rental housing units will become available for civilian employees. It is considered desirable to determine the possible availability of such private housing before considering the need for any Government construction or purchase.

(c) It is understood that close liaison is now being maintained by the Army, Navy, and Air Force on all housing matters. For example after the recent cutback of Army requirements in Japan, excess family housing assets in the Tokyo area were reassigned to the Air Force and those in the Yokohama area to the Navy. However, it is our desire to insure that maximum use is being made of available housing in accordance with consistent policies. Therefore the problem of coordination and review of existing restrictions imposed by commanders with respect to areas and price range is being referred to the military departments for study and appropriate action.

(d) The Department of State, under authority of Executive Order 10011 is responsible for issuing regulations governing the payment of quarters allowances for civilian employees. At present maximum allowances are fixed, and an eligible employee is paid his actual quarters expenses or the maximum allowance, whichever is lesser. The Department of State has been considering the advisability of changing to a system of flat allowances comparable to the system for military personnel. The Department of Defense favors such a change and has so advised the Department of State.

4. Coordination: A primary function of this Office is to coordinate the policies and practices of the military departments relating to civilian personnel matters so as to assure consistency, where desirable, in the regulations which they issue. In the case of Public Law 86-91, rather detailed implementing regulations were issued by the Secretary of Defense. Also, the regulations of the military departments were reviewed in this Office prior to their release to assure consistency and compliance with the departmentwide regulations.

There still remain a few areas in which differences in practice with respect to employment of teachers in the overseas dependents schools were permitted to exist for the remainder of the current school year. These situations are now being reviewed with the view of eliminating unnecessary differences prior to the beginning of the next school year.

So long as the military departments continue to function as separate departments, with their own personnel offices, it has not been considered feasible to require a single set of regulations to be used by all. Again, however, this is a matter which will receive continuing attention with the view to taking any appropriate action which will promote economy and avoid duplication among the services.

5. Duty limit on gifts: Although this Office has not received any recommendations on this point, there would be no objection to providing the same duty-free limit for civilian employees overseas as is provided for military personnel.

Your thoughtful report has been reviewed with interest and profit. We appreciate the time which you have taken from your busy schedule to take a firsthand look at our overseas activities and to comment upon some of our personnel problems.

Sincerely yours,

CHARLES C. FINUCANE.

Address by Ira D. Mackler

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. MEADER. Mr. Speaker, one of the leading industries of Lenawee County is the feeding and finishing of beef cattle. It is estimated that there are over 600 farm cattle feed lots in the county. It is claimed that this exceeds any other county in the United States.

The 40,000 cattle on feed in the county, not including dairy and breeding cattle, ranks in the top three of the country.

It is claimed that only about one-half of the States feed out more beef cattle than does Lenawee County. Feeders are brought into Lenawee County from some Southern States and many from the western range States.

The banks of Lenawee County lend farmers over $4 million annually to buy feeder cattle. These loans run from 6 to 12 months and there is almost a complete turnover every year.

The finished cattle bring the farmers of Lenawee County approximately $10 million annually. This is big business.

These cattle produce some of the finest steaks and meat cuts available anywhere.

The cattle are marketed in Detroit, Cleveland, Toledo, and other cities. And, of course, some of the cattle are kept in the county for slaughter.

Lenawee is also one of the leading dairy counties, producing milk and meat for Michigan and Ohio citizens.

Mr. Speaker, my attention has been drawn to an address delivered recently to the Kiwanis Club of Bethesda, Md., by Mr. Ira D. Mackler, general manager of the Jepsen Hotel Supply Co. I think this speech is an excellent dissertation on a subject of great interest not only to my colleagues in the House but also to people in the country generally since it concerns one of the most delicious staples of our diet, namely, steak.

Under leave I include the text of Mr. Mackler's speech in my remarks at this point:

ADDRESS BY IRA D. MACKLER, GENERAL MANAGER, THE JEPSEN HOTEL SUPPLY CO., BEFORE THE KIWANIS CLUB OF BETHESDA, MD., MARCH 22, 1960

Mr. President Scott Brewer, members of the Kiwanis Club of Bethesda, invited guests, ladies and gentlemen, during the year 1944, it had become readily apparent to the Japanese high command that, for them, the war had been lost. As a consequence, they began to do all in their power to conquer the American fighting man on the psychological front, to bring him to his knees with emotional weapons in place of the more lethal weapons that already had failed.

Many of you who were in the Pacific theater of operations will recall this phase of the war in the Far East. It was the era of Tokyo Rose, and her plaintive attempts to make American fighting men homesick for their families, their wives, their children and their peacetime pursuits. It was the era of loudspeaker systems set up in forward battle areas, and geared to play American popular music, to give baseball scores, to nettle our troops by reporting how easy the folks were having it back home while these men were fighting and dying in the stench and heat and fever of the South Pacific.

It was at this time that one unit of Japanese psychological warfare activities came up with a most ingenious device.

Erecting a blower system on the edge of one remote jungle in the Solomons, the Japs filtered through this blower the pungent, nostril-tingling aroma of steaks being broiled over a charcoal fire.

Now picture it, if you will—here were our troops, many of them living on K-rations, thousands of them existing on luncheon meat and similar prepared rations which—for all their very wonderful nutritive value and their undoubted success as compressed foodstuffs—were far from being repasts calculated to delight a gourmet.

And suddenly, like a breath of home, there came to them the hearty, masculine aroma of a steak being broiled over a charcoal fire.

I think you all will agree that here, if anything ever could, was an ingenious, even diabolical weapon, that came very close to making even the most cautious and loyal GI in that particular theater lay down his arms and head for that charcoal pit, wherever it might be. And that they didn't, that our fighting men were able to see through the ruse for what it was, is not only a tribute to their willpower and training, but is one more indication of the superiority of our forces in World War II, and just one more reason why ultimate victory was ours.

I cite this story because I believe it indicates more than almost anything else can the tremendous popularity of the American love for a good, thick, juicy steak—and the way that popularity is known around the world. Truly, the steak—juicy, tender, sizzling, and done to a turn—is as American a dish as virtually any other one.

Italians are known for their national dishes—spaghetti, ravioli, the pasta. To a German, the schnitzel is as much a national dietary symbol as anything you can name. The English and their mutton are famous. The French have their snails, their wines, their incomparable breads. But here in America, if we are known for any national dish at all, it is our love of a good, thick steak.

Think if you can, do you know anyone, other than a confirmed vegetarian, who doesn't like steak? I doubt it. What's more, I occasionally suspect that even a diehard vegetarian now and then sneaks himself a bite of good beefsteak when he thinks no one is looking.

Today, beefsteak as our national dish is apparent to anyone who looks at the statistics to quote Charles R. Musser, vice president, Wilson & Co., Inc., meatpackers.

In 1935, Americans consumed some 6,770,000 pounds of beef. Even though we still were feeling the effects of the depression at that time, and not everyone who longed for the taste of a good steak could afford to enjoy one, the fact is that the figure I just gave you represented approximately 40 percent of our total consumption of all meats during that year of 1935.

We are practically at the beginning of the new year and the 1960's will be fabulous in most every respect. During the decade there will be approximately 30 million more people with a good many billion dollars more to spend. The building and general business in itself can't help but go forward.

There is no doubt now that more than 25 percent of the meat consumed this past year has been consumed in eating out. In other words, one out of every four meals has been eaten in a restaurant, hotel, motel, roadside stand, hospital, institution, or in an in-plant feeding group. More than 120 million meals a day are being served and every indication is that this field will grow.

Now consider how the popularity of a good steak has grown.

In 1958—the last year for which statistics are available—we in this country smacked our lips over a total of 13,798,000 pounds of beef, a jump of more than 100 percent in a little over 20 years.

What's more, by that year of 1958, beefsteak represented more than 50 percent of all meat sold and eaten in the United States, with consumption rising almost daily.

I think you'll be interested to know, by the way, that a fellow I was talking to on

my way over here this morning, and to whom I mentioned this fantastic 13-million-plus figure, remarked that there must have been an awful lot of black eyes during 1958.

Well, gentlemen, all I can say is that, in all my years in this business, I never knew anyone who used a steak to heal a black eye. As one man said about this, if you have a black eye and a nice thick piece of steak at the same time, broil the steak and eat it, and you'll forget all about the black eye.

Today, as you know, we are about to start taking our 1960 census. And one of the things that census is supposed to reveal, and will reveal I'm told, is the tremendous growth of suburbia. Today, more than a third of our population lives somewhere in suburbia, more than 33 percent of all Americans.

And I don't think you gentlemen have to be told that a most essential part of any suburban household is the outdoor grill, the barbecue pit in which the host can grill his favorite thickness of T-bone steak.

If there is any status symbol whatever that defines your true suburbanite, it is the backyard charcoal pit and the householder presiding over it as he grills a steak for his guests.

How he selects that steak at his butcher shop or supermarket, of course, will depend the success of his dinner party. If he has shopped wisely, if he has made no compromise with quality, then he is almost certainly guaranteed to have a reputation as a successful host. Indeed, if I were to bring one message to you here today, it would be that when in doubt, when you are unsure of the tastes of your guests, and when you wish to run no risk of making a mistake, then serve steak. And if you ever find anyone who doesn't like it, who turns up his nose and says he prefers something else, then I wish you'd send his name to me—I've never met such an individual myself, and I've often wondered what one would look like (aside from having no teeth).

When I say make no compromise with quality, gentlemen, I mean just that. Steak is expensive when compared with some dishes, I'll admit, and a housewife can't be blamed for shopping carefully and trying to find the very best grade and cut of meat for the least amount of money. There's nothing wrong with this, and we should bow toward our wives for thus trying to save some of our hard-earned take-home pay.

But, I say again, if you want a good steak for broiling and you plan to serve it to your important guests, then don't buy a cut of beef that's designed to be used as a pot roast or for the swiss types of steaks. The latter are fine and make very good economy dishes for the housewife who is saving her pennies; what's more, the nutritional value inherent in them is every bit as good as can be found in many similar dishes costing a great deal more. But if it's a succulent, juicy, and tender steak you are seeking, and your plan is to broil it over a charcoal fire in your backyard grill, then, by all means, insist on a cut of sirloin. Its thickness, of course, is up to your personal tastes, but I can assure you you'll never go wrong by having it as thick as your wallet can afford.

Sirloin is truly the grand knight among all cuts of meat, a position given to it by its having been graded—either U.S. Prime or U.S. Choice—by the U.S. Department of Agriculture Grading Service of the Federal Government.

You know, some years ago, when it was the fashion in this country to admire everything foreign and to downgrade anything that was truly American, they used to have an expression for use on certain types of men.

They called them "steak and potatoes" types.

They were "steak and potatoes" types as compared with the pinkie-waving teacup-balancing fortune hunters who once flocked to these shores to marry American heiresses, and who were then very much in vogue with impressionable young ladies.

But I think you'll notice how much of a change there has been in the years since the end of World War II. Today you rarely hear of anyone being called a "steak and potatoes" man, and I think the reason is that so many of us today—both men and women, boys and girls—are "steak and potatoes" types and are proud of it.

What's more, the change has been apparent in our national health. We're bigger, huskier, healthier today simply because so many of us are "steak and potatoes" types.

Most important of all, though, is the fact that we're happier.

In closing, would like to thank Mr. Richard D. Gruver, Wilson & Co., Inc., for his assistance and cooperation.

Thank you.

Forest Management

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. NELSEN. Mr. Speaker, today I have introduced a bill to authorize and direct national forest management to produce sustained yield and maximum use for all purposes. I feel that an affirmation of the national forest policy of multiple use will affect the economy of our area in many ways.

The Chippewa and Superior National Forests in Minnesota cover vast areas of the finest recreational land and water in the Nation. To use it for only one purpose when it has many present and potential uses is being rather short-sighted and neglectful of its full possibilities for the benefit of the ever-increasing recreational seeking public. This multiple-use policy has existed and been applied ever since the national forests were created. The legislation that I have proposed would further strengthen and implement its management and utilization.

With longer paid vacations, faster transportation, and better highways, the American people are seeking outdoor recreation as never before. The national forests are becoming increasingly important for camping, fishing, hunting, and other forms of recreation, in addition to their importance for timber production and watershed protection. These increasing demands for public recreation use can be accommodated without undue effect upon timber production and watershed protection. I feel that the practice of multiple use and sustained yield which will develop and sustain such integrated uses will result in the maximum benefits to the locality and to the country.

Such legislation would protect national forest resources from possible overutilization in the future as a result of economic pressures or those of single-interest groups.

It seems the legislation is timely and appropriate. The multiple demands are increasing as never before. We have all watched the recreation demand grow—considerably beyond our means to accommodate it. The future will bring heavier demands on all forest resources. Legislation acknowledging the necessity for recognizing all these needs would, most likely, in itself be a great aid in implementing the program.

The growth of recreation use on the Chippewa gives some idea of the rapidly increasing demands on the national forests. The number of recreational visits to the forest in 1955 was 341,000; by 1959 this was more than doubled—706,000. Estimates place the 1965 use at more than 1 million to exceed 1,500,000 by 1970. It seems sure that this increased demand will equally apply to timber and other forest uses.

In Minnesota the travel and tourist industry has become one of major proportions and its impact on our State's overall economy is vital and important. Annually, in excess of $300 million is spent in Minnesota by the recreational seeking public. Other States enjoy a similar return. We are dealing mainly with a replaceable resource and the license buying sportsman is paying the bill. Therefore, wise and protective utilization of our forest and lake areas should be of immediate and sincere concern to us all.

The following facts were revealed at a meeting held in Duluth, Minn., and are taken from a news story in the Duluth News-Tribune, dated March 24, 1960:

A Federal economic survey team heard complaints here yesterday that an excessive amount of land in northern Minnesota is publicly owned.

John Hoene, secretary of the Timber Producers Association, said that nearly 13 million acres in Minnesota is in Federal, State, or county hands now and the Federal Government is seeking to acquire more.

U.S. Commerce Department representatives and specialists of other Federal agencies met in the Spalding Hotel with representatives of area timber and tourist industries.

The Federal study group held a general meeting last night in Ely and will conduct another in Grand Rapids today. The survey team is examining longrun business and industrial potentials for use in coordination of Federal assistance to meet area unemployment problems.

Hoene declared that only about one-quarter of the land is privately owned in this area, compared with 90 percent in Southern States. The Federal Government is offering very little forest land for sale, he added.

Support for the Item Veto

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. SCHWENGEL. Mr. Speaker, concurrent with my introduction of three joint resolutions to authorize the President to use the item veto, two daily newspapers in the district I represent, have published editorials in support of this action.

Under leave to extend my remarks, I include in the Appendix of the RECORD a copy of an editorial "Item Veto—SCHWENGEL Pushes It," from the April 8 edition of the Davenport, Iowa, Daily Times; and a copy of an editorial from the Burlington (Iowa) Hawk-Eye Gazette of April 2, entitled "SCHWENGEL to the Fray."

The editorials follow:

[From the Davenport Daily Times, Apr. 8, 1960]

ITEM VETO—SCHWENGEL PUSHES IT

Congressman FRED SCHWENGEL is preparing to press for legislation permitting the President to veto single items in an appropriation bill.

As matters stand, the President must approve or disapprove an entire appropriation bill.

Logrolling being a popular occupation in Congress, Members are able to get into necessary appropriation bills items which are of limited benefit. If he is not to hold up appropriations for essential governmental operations, a President has to sign the whole bill including provision for items to which he objects.

Every student of Government has condemned this process since it is extremely wasteful of taxpayers' money. It causes the Government to pay for projects scarcely needed except as a bid for votes.

Congressman SCHWENGEL is taking on a tough assignment since one of the prerogatives most highly valued by many a Congressman is that of getting projects for his district to which he can point as examples of his service. Some Congressmen have Federal projects spotted all over their districts. In some of these districts, in fact, there isn't much of any other kind of projects.

SCHWENGEL can point to successful operation of the item veto in some of the States and he can muster plenty of authority for its desirability in Federal law.

And the legislation would on occasion prove of great advantage to a Congressman. If his constituents should press him to support a project about which he had doubt, he could get the item into an appropriation bill sure that the President would veto it.

His constituents would think he had done all he could, his support would be unimpaired and the fault for failure to obtain the project would be placed on the President.

SCHWENGEL is proposing a basic improvement in Government. Its money saving potential is enormous.

[From the Hawk-Eye Gazette, Apr. 12, 1960]

SCHWENGEL TO THE FRAY

FRED SCHWENGEL is out to butcher one of the most sacred of Capitol cows—the blanket appropriation measure, the love of the logrollers and the aggravation of Presidents.

Representative SCHWENGEL would do this by giving the President item veto authority. He has a triple approach:

1. Permit the President to approve or disapprove items separately in any bill.

2. Disapprove or reduce items separately in all appropriation bills.

3. Approve or disapprove items separately in appropriation bills except those which have the approval of the agencies involved, the Bureau of the Budget and the appropriate committees of Congress.

The principal villain in this triangle is the present provision that the President must accept all appropriations in a money bill, or veto the whole thing. This is the basic reason so many questionable public works get on the drawing boards. They are put there by Congressmen who may not be convinced of their validity, but are willing to let the President take the credit or blame for their creation. Often, the President approves these matters rather than veto needed public expenditures.

A good example was provided last session, when Eisenhower vetoed the water resources measure because he had not authority to eliminate a dozen projects for which he saw no justification. Congress passed, over that veto, another water resources bill which was a much worse hash than the original, and more costly.

The item veto makes so much sense we question whether it gets out of committee. If SCHWENGEL should pull this one off, he may lose a few friends in Congress, but he is certain to win millions more among the taxpayers.

Mexican Farm Labor

EXTENSION OF REMARKS
OF
HON. THOMAS G. MORRIS
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. MORRIS of New Mexico. Mr. Speaker, I would like to call to the attention of my colleagues an excellent article concerning Mexican farm labor in the Christian Science Monitor for February 20, 1959:

REPORT VITAL TO FARMERS—BRACERO DATA BUOYS ARIZONANS

(By Ernest Douglas)

TUCSON, ARIZ.—Mexico's bracero, the day laborer whose work for U.S. farmers makes him Mexico's third largest source of income, has just been made the subject of a detailed, documented report which is tremendously pleasing to Arizona farmers.

Richard H. Hancock has made the study for the Hispanic American Society of Stanford University, which financed Mr. Hancock's intensive investigations. Mr. Hancock's findings fill a typewriter-size book of 146 pages titled, "The Role of the Bracero in the Economic and Cultural Dynamics of Mexico."

Dan W. Clarke, president of the Arizona Cotton Growers Association, says: "This is the first complete and impartial study ever made of the Mexicans who are brought in under contract to work on U.S. farms."

INFORMATION ASSESSED

Mr. Clarke adds that "the information developed by Mr. Hancock can be of incalculable value."

Prior to making this study, Mr. Hancock spent 7 years as labor director in charge of braceros for a farmer group at Las Cruces, N. Mex.

An inquiry into the whole field of bracero employment culminated in 4 months of traveling through Chihuahua, interviewing rural people and otherwise collecting information on how that state is affected by the annual bracero migration and the money they send or bring home.

His general conclusion is that the bracero program has imperfections but is of great benefit to Mexico, and that its discontinuance would severely cripple that country while opening few farm jobs to Americans.

STATISTICS DISCLOSED

Tables amid an array of statistics show that 436,039 braceros worked in 27 States in 1957. Texas used 188,824; California, 149,069; Arkansas, 23,658; Arizona, 23,108; New Mexico, 19,444; Michigan, 10,686; Colorado, 8,189. Numbers were small in the other 20.

Mr. Hancock estimates that they sent back $120 million. This places bracero earnings third among Mexico's sources of income, behind tourism's $348 million and cotton's $173 million. Those earnings were divided among approximately 2,250,000 of the nation's 33 million inhabitants. Recipients were members of "the most needy sector of the economy."

In 3 months of the border the bracero can earn as much as in a whole year at home, provided he found steady employment there. Many use their wages to get into farming on their own account, and do well. As private enterprisers they are vastly aided by skills learned in the United States. Mr. Hancock places those agricultural skills high among the benefits to Mexico.

KNOWLEDGE GAINED

One anomalous result is that the returned bracero is often better informed than intellectuals, such as teachers and merchants, who have never been out of the country. A certain amount of jealousy develops, but it is suggested that the progress of Mexico may be speeded thereby.

Furthermore, the bracero finds that justice is administered more equitably in the United States than in Mexico. He appreciates the health services which his contract, drawn under international treaty, guarantees him. Paradoxically, he discovers that to his own government he is an individual of more importance abroad than at home, where he is pretty well ignored by officials.

Mentioned with regret, as a Mexican weakness in the program, is mordida—the exaction of bribes by Mexican public employees from would-be braceros eager to earn the high wages paid in the United States.

EXODUS CRITICIZED

Although there is criticism of the braceros exodus among Mexican intellectuals, officials, and labor leaders, Mr. Hancock notes that they have no alternative to offer. "The program does much to lessen the distress of a large number of Mexicans." Its termination would be a blow to the whole country. It might even have to be replaced with aid from the United States, which would be extremely costly and of less benefit to the needy elements of the population.

Also, if bracero contracting were ended, the deplorable wetback system of Mexicans sneaking across the border to work for Yankee farmers would return. A new problem would be created that would raise international tensions and be on a par with that of enforcement of racial integration in the South.

Extensive literature published on braceros, including transcripts of congressional hearings, was perused by Mr. Hancock. He found it all a study of conflicting views. Most of the criticisms do not apply exclusively to the migrant-labor problem but are of a type that constantly arise from any labor-management relationship.

A Happy Solution

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. HOFFMAN of Michigan. Mr. Speaker, while in many places discussion of the so-called civil rights bill has engendered ill-feeling and caused trouble, there is ample evidence that, in the Fourth Congressional District of Michigan, commonsense, observance of the Golden Rule, will prevent practically

much of the trouble with which, through the press, so many are familiar.

An editorial captioned "Senseless Picketing," from the News-Palladium of Friday, April 15 last, published at Benton Harbor, Mich., points the way. That editorial reads:

[From the News-Palladum, Apr. 15, 1960]

SENSELESS PICKETING

There were strong indications yesterday and today, that the local unit of the NAACP will ignore the advice and appeals of this area's Negro clergy, and of Mayor Smith, to abandon its announced intention of picketing the Benton Harbor Kresge and Woolworth stores next week in protest against the lunch counter ban against Negroes in some southern cities.

Mrs. Marie Nelson, president of the NAACP in Benton Harbor, said Thursday that she is quite positive that the picketing demonstrations will proceed.

Mayor Smith conferred with Mrs. Nelson, but reported that the organization leader appeared adamant. The NAACP by its own admission has about 300 Benton Harbor members, out of an estimated 7,000 to 10,000 Negroes in Benton Harbor and adjacent areas. Claiming to represent this great majority are a group of ministers who, while publicly expressing their sympathy with their southern brethren, emphasize that cordial and cooperative relations between racial groups here have always been satisfactory and mutually beneficial. The ministers disapprove of the picketing move, asserting that there is no local race problem, as such, and that Negroes enjoy the same status as white in stores and elsewhere. They point out that racial demonstrations could do only harm, not good.

Benton Harbor has a large Negro population, but the races have always gotten along. There has been no racial trouble in the schools. What then, is the NAACP striving for—racial friction, hostility and insecurity?

There is no paternalism here. Race relations have been based on the principle of fair dealing and mutual goodwill.

The situation is well summed up, we believe, in the following letter to the editor of this newspaper from the Reverend Charles L. Kolb, Jr., pastor, First E.U.B. church:

"The Negro ministers of the Benton Harbor community are to be commended for their carefully considered action in regards to the call of the NAACP for local picketing of chainstores involved in lunch counter disputes in the South.

"They show wise judgment in their desire to maintain the friendly relationships which exist in our community between the races and the commercial interests. Their forthright statement serves to ease possible community tensions and creates better understanding between peoples. For such positive Negro leadership we are grateful.

"Their statement comes at a time in national and international political and racial tension when Christians need to speak out boldly for the rights of all men everywhere."

As a boy of ten, with both colored and white, it was my privilege to attend the public schools and churches in St. Joseph County in the Fourth District of Michigan. Cass County in the same district was one of the stations on the underground highway from the South to Canada during the war and prewar days—and many a colored individual stopped over and made it his permanent home—good, prosperous citizens, engaging in farming and mercantile pursuits.

Not until recent years, when do-gooders and agitators came in, principally from outside, was there even a hint of discord. As this editorial, and as David Lawrence quoting Billy Graham suggested Christianity and a sense of fairness will give greater progress and harmony than will force or law.

From a practical standpoint, it is impossible to determine just where preference ends, discrimination begins. But one thing is sure: Law or force will never create kindly, charitable consideration of one toward another.

Black, yellow, or white—we are all people. We have in the Fourth District of Michigan always, while behaving ourselves, lived together in harmony and there is no reason why we cannot so continue.

Help Wanted for Building a Golden Sunset

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1960

Mr. PORTER. Mr. Speaker, George Owen, a prominent lumberman and public-minded citizen in my hometown, Eugene, Oreg., published an advertisement in the Eugene Register-Guard earlier this year entitled "Help Wanted for Building a Golden Sunset at a Price All Can Afford."

This was no promotion for a money-making project. It was George Owen's idea how to provide properly for older people—and on a practical basis.

George Owens is both a practical and a philanthropic man. His ideas on this important subject are worth passing on and under a previous consent I am including the text of his advertisement hereafter:

HELP WANTED FOR BUILDING A GOLDEN SUNSET AT A PRICE ALL CAN AFFORD

The average lifespan of our people has jumped from less than 50 years to nearly 70 years in less than a century. Many oldsters cannot get a job and they cannot live on a meager social security check, welfare, or a small pension but they may "exist" under great hardship on it. My sister in Portland has long been concerned with this problem and tells so many pathetic stories of case after case of aged "castaways" living under deplorable conditions in privation and loneliness maybe in an unwanted attic although our badly overloaded welfare agencies are doing all within their power to meet the needs and are to be commended.

Other unfortunates such as a lady in Salem living near a friend of mine had terrific headaches almost constantly. My friend took her to the best doctors in Salem but they could find nothing wrong. Finally the University Medical School in Portland found the trouble, she was under great tension and strain. She must relax and stop worrying and she would be all right. But her answer was, how could she stop worrying? Getting a $90-a-month welfare check with her two teenage daughters the cheapest rent she could find was $50 per month. Her utilities averaged $14 per month which included a telephone which she must have so her daughters could pick up a few extra dollars babysitting. The $26 left plus these extra dollars just could not be made to stretch and left her in a highly disturbed mental condition. Such things need not be.

All over our Nation people are becoming aware of this big problem with our aged and unfortunates. The big cry too often has been give them "More money"—"More money." Dr. Townsend would have had us lift ourselves by our bootstraps by pouring more money into the pockets of our oldsters who would spend us all rich. The cry to give more money is not the answer. Where is it coming from? But here is a simple and practical solution.

FRINGE AREA LOCATION

Our thought is to secure land a few miles from town on a paved road where plenty of water is available, perhaps 20 acres or more. Build a lodge, a one-story building with a big lobby (a huge fireplace) with wings running at right angles in four directions for maximum view. This building might be 60 by 80 feet with the 4 wings 48 feet wide by 250 to 300 feet long with hallways in each and each wing containing 20 to 30 apartments or total 100 living units. In the space between the back wings would be a kitchen and dining room next to the lobby and the rest of the space between all the wings in lawn and trees.

But this would only be the beginning of the project. A shop where woodworking tools and all kinds of other tools would be available to the men who cared to make any of the hundreds of articles they could make and sell, making some money for themselves as well as for the project. Also, a sewing room and a laundry room might be a source of some income as well as pleasure for the ladies. Older people need two things especially, besides food, companionship and something to do. Here on the acres surrounding both would be provided, everything from games to gardening.

TRANSPORTATION

But in a place of this kind, transportation would be vital to give a feeling of freedom. And here again thrift would be the motto, but good cars 5 to 10 years old can be had for a song and a first-class mechanic kept there to keep them in top repair, watch tires, oil, and gas. Also, discarded school buses in good condition are available at an unbelievably low cost. Several of these could be there for groups who might wish to have a picnic at a park or riverside or maybe to the beach occasionally.

FOOD COST

But the food would still be the biggest single cost. Yet buying in large quantities for all people there the cost of food would be cut to a minimum. For instance, trucks hauling lumber to eastern Oregon and western Idaho can and do haul various kinds of produce back. The big potatogrowers in eastern Oregon and western Idaho are happy to have them pick out the irregular-shaped potatoes, those that do not look the best for market, for $3 per ton as they are dropped into a conveyor and put through a grinding mill for hog food. These could probably be hauled here for .01 cent or less per pound or $20 per ton. Meat also bought at the right place and handled in large quantities with deepfreeze units could be stored at a great reduction in cost over ordinary market prices. Also, at the right time of year many of these older people, the ladies especially, who have had experience in cooking and canning such things as beans and berries, fruits and vegetables could put up much for winter use by canning or cold storage. Apples now wasting on the ground could be made into applesauce and cider and these picked up by the more able men and all would enjoy it. Sauerkraut from cabbage could be made and enjoyed; the kind with which store kraut will not compare.

A PROFIT VENTURE

Anyone can get $90 to $100 per month if needed from welfare if nothing else. Some might like to work out part of their keep. Those preferring to do no work naturally

would pay more. A person drawing social security in good health might help with cleaning, cooking, laundry, dishwashing, or other general upkeep at regular fixed hours and pay maybe half or less, and another might pay $100 per month and do nothing toward plant upkeep and maintenance and work in the shop and make extra money. But on an average, if there were 200 people in the project (and there would always be a waiting list if properly managed), and if the average payment were $100 per month, in cash or labor, food cost would not exceed $20 per person per month, labor cost $10 per person average. Rent, including heat and water, $12.50 per person per month, hospital and emergency fund $10, transportation $5, utilities (mostly electricity), $5, and taxes, upkeep, and miscellaneous $17.50, total $80 per month cost, leaving a profit of $20 per person—$4,000 per month for 200 persons or $48,000 per year or 12 percent interest on the investment and profit is the thing we are after yet only because with profit thousands of these so badly needed projects would get going.

This can be done; it is being done today on a little different basis at the Taft and Carlton Hotels in Portland, which my wife and I helped finance. We have long felt what almost no one believes, that a profit can be made from the lowest income check after giving these people comfort, care and dignified living. Here in Portland it is being demonstrated. The Columbia Broadcasting TV system from New York is putting on a 1-hour program February 23 next at 3 p.m. on channel 6 "Problems of the Aging" over 176 stations throughout the Nation and among other things is showing some of the fine work being done at the Carlton Hotel. The picture was made in Portland and last Sunday, January 10, the Oregonian-Journal gave almost a full page feature and writeup (p. 32) of this project for which Portland is and may well be proud.

FREE ENTERPRISE

America has been made by the profit incentive and if we can take the precious dollars of those in lowest income bracket and give them three or four dollars in value for every one we take, we would be entitled to be well paid for it. And we would want to pay interest on the money because money is worth something to every business in our Nation. And for the Government to take money from you and me worth 6 percent or more to us and give it back to us at a low interest for us to help our older people get cheap rent is fine if there is no better way. But there is a better way.

TWELVE DOLLARS AND FIFTY CENTS PER MONTH RENT

But what about this $12.50 per month total rent, heat and water cost? That sounds unbelievable but is really very simple. The lowest grade lumber that does the job just as well would be used and pine, cedar, and hemlock here are much cheaper than fir. For this structure which would cover about 50,000 square feet these cheaper logs would be brought to a mill at a low cost and knotty pine and other lumber could be placed on the ground at a very reasonable price; lumber that would sell retail for much more. The floor, cement on ground level, radiant heat from big sawdust burner (the cheapest and best heat) to heat the circulating water would be the first step in construction. All fixtures, plumbing and wiring, would be bought in quantity in one big lot for the entire project at greatly reduced prices. The best carpenters, plumbers and electricians would head the project but much of the work could be done by those older men at a low wage or for shares in the project. What is wrong with that? They can't get a job anyway, and they would enjoy it for they would just be working on their own homes and at hours of their own choosing. They wouldn't need to try to keep up with men 30 years younger. Among them are the finest plumbers, electricians, and carpenters who have spent a lifetime at their trade and anyone can drive a nail as helper. I have contacted so many and almost all are enthusiastic about the entire plan.

OVERALL COST

I feel sure after a great deal of figuring this central meeting lodge plus these 100 apartments, housing 200 people can be put up for $400,000. Interest at 6 percent on this money is $24,000 per year or for 200 people $120 per year or $10 per month. This interest on the money plus $2.50 per person or $500 per month should pay for insurance, depreciation and taxes or a total of $12.50 per month total rent cost. Public housing while answering a need only scratches the surfaceand does not provide the many advantages outlined above. The magic wand of Government can't compete with free enterprise. But this plan is just as sound as social security checks or pension checks from industry. And millions of dollars of private capital is available for these projects all over our Nation when people have a few demonstrations of how solid, sound and profitable they can be. Much money has been spent for nice homes for our aged who need no help, this place would help those who really need it and still pay its way nicely on a profit, nondole basis.

The key to its success would be management. A good manager would be there at all times on the payroll, as well as cooks, nurses, mechanics and handymen who could fix such things as wiring and plumbing when not done by the guests themselves who would be paid for their services.

BENJAMIN FRANKLIN SAID

This plan is different from most. A Carlton hotel in a nice fringe area yet is entirely in line with the judgment of our wise old Benjamin Franklin who said: "There are two ways of sufficiency and happiness. We may either diminish our wants or augment our means—either will do—the result is the same; and it is for each man to decide for himself and do that which happens to be easiest. If you are idle or sick or poor, however hard it may be to diminish your wants, it will be harder to augment your means. If you are active and prosperous or young or in good health, it may be easier for you to augment your means than to diminish your wants. But if you are wise, you will do both at the same time, young or old, rich or poor, sick or well; and if you are very wise you will do both in such a way as to augment the general happiness of society."

This plan "aguments our means" by rubberizing low income checks so they will stretch many times their normal size.

If interested write me and give your suggestions. We would interest one person for $400,000 or 400 people for $1,000 or a lesser number in between. We have pioneered several sawmills and other projects now highly successful but this is the finest and most badly needed project we have ever contemplated pioneering. But we need your help. We now have all details worked out subject to improvements from your suggestions.

COST ESTIMATE

1.	Land—20 acres	$20,000
2.	Cement	70,000
3.	Labor	50,000
4.	Lumber	40,000
5.	Plumbing and water	35,000
6.	Bathroom fixtures	15,000
7.	Shop building	10,000
8.	Kitchen and equipment	15,000
9.	Landscaping, lawn	10,000
10.	Six beds and infirmary	15,000
11.	Supplies and equipment	20,000
12.	Transportation	5,000
13.	Heating system	40,000
14.	Doors, windows, etc	5,000
15.	Miscellaneous	50,000
	Total	400,000

American Legion Contest Winners from the 23d District of Ohio

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. MINSHALL. Mr. Speaker, a State citizenship essay contest is sponsored annually by the local departments of the American Legion, and it gives me great pleasure to announce that among the 12 winners, we are honored to have 2 from the 23d Congressional District of Ohio, which I have the privilege of representing. It is most gratifying and heartwarming to read why these young citizens are proud to be Americans. I believe the following two essays contain excellent and inspiring expressions of Americanism. These young students, with their fresh and optimistic outlook toward the future, represent the next generation of Americans who will take our seats and carry out the plans we are formulating daily. They bring a meaningful message of encouragement to those of us who are at times burdened with the problems of the world today. I, too, am proud that these young people are Americans, proud to welcome them to Washington and pay tribute to them in the CONGRESSIONAL RECORD.

ESSAY BY ANN KOEHLER, OLMSTED FALLS, OHIO

I am an American citizen. My parents are American citizens as were their parents and grandparents. Calling myself an American is as natural for me as eating or sleeping. Yet, when I think about being an American, I feel proud. I'm glad I was born in America and glad I live here.

What arouses this feeling of pride? What is its basis? This is January 1960, the beginning of a new decade. The world is troubled and people everywhere are anxious about the future. But, somehow, I feel secure. I am concerned, but not afraid, of the future. I know my country wants peace, not war. I know she is striving for a better understanding among the nations of the world. I feel secure and proud in the knowledge that brilliant men are working against opposing forces toward the goal of freedom and democracy for all. I am proud because I know that America is earnestly trying to help the suppressed peoples of the world.

Because I am an American I live in a country that is for the people, each and every one. I am proud when I realize that in my country every man is equal under law. Each individual can think for himself without fear of punishment.

I am proud when I see the cities of America, great towering cities of steel and glass. Strong free Americans have built these cities. I am proud when I see the homes and families of America, people taking pride in their land and in their work. When I see the farms of America I am also proud. Because of their improvements Americans enjoy the highest standard of living anywhere.

I am proud when I see the fine schools and colleges of America, open to all who will work. From within their walls have come and will continue to come the pillars of America—doctors, lawyers, teachers, ministers, scientists, engineers, and many others.

I am also proud when I see the churches of America, and the people worshipping in them. They are helping unite our Nation and make it strong. In America each per-

son has the right to choose his God and worship Him when and where he wishes.

Every American has much to be thankful for. Each American has much to be proud of. Within his grasp is opportunity unlimited, unbounded. I am glad and proud to be an American. I only hope I can be a good American.

ESSAY BY ROBERT LACHANCE, JR., SHAKER HEIGHTS, OHIO

I am proud to be an American for many reasons.

First, I am proud to be an American because of my Nation's heritage, a heritage born in the crucible of blood and an abiding faith, a heritage that has been passed on to us through the generations, each one adding its bit to our country's history; a heritage that has been strengthened through five wars—none of our own making, but waged defensively because of our deep beliefs in the rights and principles of a free world.

Too, I am proud to be an American because of the many freedoms granted us under our Constitution and preserved for us through our religious convictions. In almost any community throughout the Nation, whether it be a village, town, or metropolitan area, a cross-section of mankind can be found that would be hard to duplicate anywhere else in the world. Negro and white, Christian and Jew, Hindu and islander and Chinese and Indian can be found brushing shoulders. Each has his own faith, his own God, and his own prayers—and he can worship in his own way in dignity without interference.

Again, I am proud to be an American because my country has utilized its natural resources more practically, skillfully, and profitably than any other nation in the world. And we have diverted a portion of all of these profits to the helping of needy mankind in every section of the earth. This has been done without thought to creed or custom, without evaluating friend or enemy. It is sufficient that the need exists—and our ability to aid is there.

I am also proud to be an American because of the broad uses to which we have devoted our scientific and medical knowledge and discoveries. We have shared our discoveries with our international cousins in the hope and belief that this common knowledge would cement a closer bond between all men of peaceful aims. Too, we have done it in the hope that it would bring strength where there had been weakness, light where there had been darkness, faith where there had been no hope.

I am also proud to be an American because I can feel a kinship with the great men whose sacrifices and contributions made such an enduring imprint on the high road of our Nation's history.

Washington, Jefferson, Lincoln, Wilson, and Franklin D. Roosevelt each helped to lay a portion of the foundation for this great land we call home. Their footprints span the centuries, and their deeds bridge a chasm between two worlds—peonage and freedom.

Washington's sword helped forge the loose-knit colonies into a nation; Jefferson's pen gave us the document that lit the fires of freedom in the hearts of men; Lincoln's wisdom brought dignity and equality to the downtrodden; Wilson's foresight gave birth to the League of Nations in an effort to bring the peoples of the world into a family circle; and Franklin Roosevelt, whose grim courage fostered a brotherhood among all men, virtually lifted poor nations to an upright position through sheer determination, restoring the pride they had lost in home and country.

I am proud to be an American because I can shape my life according to my personal preferences, so long as my aims do not interfere with established order, knowing that my opportunities will only be limited by my personal abilities.

Finally, in summing up my feelings, I am proud of my American citizenship because human good has always been my country's first consideration, rather than nationalism. Americanism is a creed, not a geographic circumstance. No matter where I go I will see evidence of the friendly hand my country holds out to other peoples of the world. This gives me a kinship with everyone.

President Garcia, A Man of Faith

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. McCORMACK. Mr. Speaker, in the book written by Norman Cousins, one of America's great writers, entitled "In God We Trust," he underscored the religiousness of America's outstanding Presidents. Faith in God is a leader's unyielding anchor, his armor, and his guide. It is, in our contemporary life, the unassailable rampart against Marxian material mindness, the steadfast defense against communism.

It is with great interest, therefore, that I read in a Manila paper, the Daily Mirror, an article which describes how truly religious is the President of the Philippines, what a genuine Christian he is, how in his daily life he practices the tenets of Christianity. President Carlos P. Garcia who had the vision and the courage to sign the law outlawing the Communist Party from the Philippines, translates his belief in an Almighty in actions that redound to the welfare of his people. This is a facet of President Garcia that is not known in the United States.

It is not strange, therefore, that in his desire to protect his country's national security against the inroads of communism, and having the vision of a statesman, he recently made a statement which reveals not only his foresight and his patriotism but also his confidence in and his friendship for the American people. He came out openly in favor of allowing the United States, after securing the approval of the Philippine Congress, to have Philippine-based missiles for the protection and security of his country in particular and of Asian countries that believe as he does in freedom and democracy in general.

The Washington Evening Star of April 9 and 11 and the New York Times of April 11, published the following dispatches:

[From the Washington Evening Star, Apr. 9, 1960]

UNITED STATES INVITED TO SET UP PHILIPPINE A-WEAPONS

MANILA, April 9.—President Carlos P. Garcia today issued a Bataan Day invitation to the United States to station atomic weapons in the Philippines.

The approval of the Philippine Congress would be necessary "but I am sure Congress would approve," Mr. Garcia said in an interview with the Associated Press.

"The weapons could include missiles," the President said. "If the United States felt it necessary they could be kept at the American bases here rather than under control of the Philippine Government."

BUILDUP

Mr. Garcia made his plea for a drastic buildup in Philippine military might on the 18th anniversary of the surrender of Filipino and American forces on Bataan to Japan. The day is a holiday of national mourning in the Philippines.

Diplomatic negotiations have been underway for some time with the United States on the Philippine desire to become a center of free world military might in Asia. This was the first time that there has been public mention of the Philippine desire to have atomic weapons available here.

"We need the weapons so if there is another Bataan we can stand on this ground long enough for an outraged world to come to the rescue," said Mr. Garcia.

Mr. Garcia made no specific mention of Communist China, whose giant army lies only a few hundred miles away across the South China Sea. However, his words seemed to indicate that he felt the major threat of Asian aggression lies in China.

CORREGIDOR CITED

"I am trying to point to America a historical parallel," he said. "Before World War II there was a myth that Corregidor was impregnable. In fact, Corregidor strength depended on Pearl Harbor.

"Corregidor could hold out indefinitely only if the ships could come from Pearl Harbor and resupply it with weapons and food. Otherwise, it could hold only 3 months. Seventy thousand Filipinos and 30,000 Americans fought the battle there and on Bataan that history has not had time to appreciate. It was heroic beyond belief. They were just waiting for arms and food to hold out indefinitely and shatter the Japanese movement south. However, the destruction of the American fleet at Pearl Harbor made resupply impossible."

The Philippine President went on:

"Learning from that experience—Corregidor—if the Philippines have the wherewithal to undertake their defense I can say with full knowledge of the fact that we will stand firm."

The Associated Press reporter asked if the President included atomic weapons in his plea for more armaments.

"Yes, atomic weapons or missiles if they are necessary. That is my personal view. The matter would be up to the Philippine Congress. I am sure Congress would approve."

[From the Washington Evening Star, Apr. 11, 1960]

STRONG SUPPORT GIVEN PHILIPPINE A-BASE BID

MANILA, April 11.—President Carlos P. Garcia's bid for U.S. missile bases in the Philippines drew strong bipartisan support in Congress here today.

Unofficial reaction in Manila's leading newspapers was equally favorable to the proposal Mr. Garcia made in an interview with the Associated Press.

Mr. Garcia said he would like to see the most modern American weapons stationed in his country, including atomic weapons and missiles.

The President added that he felt certain his Congress would approve.

Speaker of the House Daniel Z. Romualdez told newsmen, "The President was correct." This was echoed by other leading Congressmen of Mr. Garcia's Nacionalista Party, including Representative Cabangbang, chairman of the House National Defense Committee.

Members of the opposition Liberal Party said they also favor stationing missiles here.

One Liberal commented that "it's about time" such a proposal was made.

Lt. Gen. Manuel Cabal, armed forces chief of staff, said he also fully supports the President's proposal but admitted it "caught me unawares."

There was no immediate word from Senator Recto, an extreme nationalist who opposes the presence of U.S. military bases in the Philippines. Senator Recto is expected to lead whatever opposition develops to Mr. Garcia's proposal.

[From the New York Times, Apr. 11, 1960]

GARCIA FOR A-BOMBS IN THE PHILIPPINES

MANILA, April 9.—President Carlos P. Garcia said Saturday that he wanted atomic weapons stored in the Philippines where they could be put to instant use in the event of an attack. He emphasized that this included U.S. missiles.

President Garcia's top air force general, Brig. Gen. Pedro Q. Molina, quickly backed the President. Both men were obviously thinking about the giant armies of Communist China, only a few hundred miles across the South China Sea.

Mr. Garcia issued the invitation to the United States to bring atomic weapons here in an interview on the 18th anniversary of the fall of Bataan to the Japanese.

The President appeared to have been thinking a great deal about the question, and chose his words carefully. He was obviously aware of the violent opposition of some other non-Communist Asian nations, especially Japan, to storing atomic weapons on their soil.

President Garcia said that if the United States felt it necessary, the atomic weapons "could be kept at the American bases here rather than under the control of the Philippine Government."

He added that the approval of the Philippine Congress would be necessary, "but I am sure Congress would approve." There has been some congressional opposition to any such arrangement.

The Daily Mirror of April 13, 1960, written by one of the veterans of Philippine journalism, Silvino Caparas, is the following article, entitled "Lent: How President Garcia Observes It":

[From the Daily Mirror, Apr. 13, 1960, Manila, Philippines]

LENT: HOW GARCIA OBSERVES IT

(By Silvino Caparas)

The religious aspect of the life of President Garcia has come now to the fore because of the present holy days.

Practically on a continuous spiritual retreat and mortification since Passion Sunday, the President is now up in Baguio leading the faithful in observance of the Holy Week.

He practices his religion in a realistic way. He is a religious man by conviction without fanatism or intolerance.

He is a convinced believer in God. He sees the divine hand in all things on earth especially the good, beautiful, and rich things which abound in the country.

He follows his creed not only by praying, going to church, and hearing mass, confessing, and receiving holy communion. He also applies his religious beliefs in the fulfilment of his duties, as family man, as citizen, and much so as head of the nation.

To him religion is not only spiritual action but also human force.

Knowing that man is composed of body and soul, he sees to it that both are given the necessary care. Last Passion Sunday he submitted to a complete medical checkup. This is for the body.

He then started his annual 2-week fasting. This is to clean his body and fortify his soul. And now he is in Baguio devoting the days of the Holy Week to meditating and contemplating things divine.

In the exercise of his duties as President of the Republic he has shown that his conscience, heart, and mind are deeply religious. He complies with and applies the teachings of God and His church.

He subjects official matters to a long, profound study because he does not want to commit injustices or harm people unnecessarily. When attacked he shows control and humility. He does not explode, and much less retaliate violently with hate in his heart. He answers calmly, dispassionately, with reason, without insults.

Personally he has no vices.

To him the best readings to feed his spirit and mind are the four gospels. The Old Testament according to him is a great history book, which presents a long array of great leaders of men like Moses, Josuah, Gideon, and other biblical personages.

The Epistle of St. Paul to the Corinthians, particularly, chapter 13 is one of his important guides in life. To him, faith, hope, and charity and love was emphasized by St. Paul are the mighty forces on heaven and earth.

"The Imitation of Christ" by Thomas á Kempis and "God is Dying," a collection of Seven Last Words sermons by Fr. Fulgence Meyer, are his other favorite reading matter during these sacred days. But he also reads authors who are not Catholics like Renan who wrote "Life of Jesus" and Ingersoll author of "Myths and Miracles." His purpose is to have a wider possible knowledge of all kinds of human views on Christ and religion.

But he warns that people who are not well grounded in their faith should not take the risk.

In his speeches he seldom forgets God.

In a recent speech in Cebu he said:

"In our planning and thinking for country, let us never forget the supremacy of spirit over matter. Our spiritual welfare is above our material well-being. Let us establish the moral foundation of our Nation on granite rock. Let the signet of eternity be the stamp mark of our culture and let our manhood seek first the kingdom of God, and everything else in life will be added to him.

"Let our cherished treasures be freedom and justice. Let the Christian trinity of faith and hope and love be the warp and woof of our national life. Then can we say with deep conviction and satisfaction that we have lived a full life dedicated to service of God and country."

Speaking at the Pax Romana dinner, last January, he explained that his "administration supports the movement (for world peace founded on justice and moral law and love of his fellowmen) because it rejects the principle embodied in the atomic bomb that 'might is right.' I support Pax Romana because it reaffirms on international scale the deathless Pauline principle in 13th Corinthians, viz: 'So there abide faith, hope, and love, these three; but the greatest of these is love.'

"Peace based on might is fleeting. Only peace based on justice and love will endure. Only peace based on the eternal laws of the Almighty will prevail."

At the beginning of his administration the President in his inaugural speech said in conclusion: "I reverently invoke the aid of the Divine Creator, Infinite Fountain of all blessings, that we may have unity where we have been divided, that we may have faith and courage where we have faltered and weakened, that we may be given light and vision where we have walked in darkness, that we may have love where we have been selfish, and that we may achieve lasting peace, prosperity and happiness for our people."

Mrs. Garcia herself is a pious lady and much is due to her for the strong influence of religion in her family. In fact only last week she sponsored a 3-day spiritual retreat and CANA conference at the Malacañan social hall conducted by Jesuit Fathers Rev. Francis Parisi and Rev. Lorenzo Ma. Guerrero. Besides the President, Attorney and Mrs. Fernando Campos, others who attended were members of the cabinet, solons and other Malacañan officials.

Helping the President in the discharge of his religious duties, is the presidential chaplain Fr. Juan Tugadi. He is always with the President, in Malcaañan, in the presidential residence in Quezon City, on the Lapu-Lapu, in Baguio, etc., to say mass and perform other religious rites.

Address by Martin B. McKneally, National Commander, the American Legion, Before the 69th Continental Congress of the National Society Daughters of the American Revolution, on April 18, 1960, at Constitution Hall, Washington, D.C.

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. McINTIRE. Mr. Speaker, last evening I attended the 69th continental congress of the national society of the Daughters of the American Revolution at Constitution Hall.

President General Mrs. Ashmeade White, a distinguished citizen of Maine, opened the session which offered as fine a program as has been conducted for a continental congress in many years.

As part of the program there was an excellent address delivered by Martin B. McKneally, a citizen of New York and the national commander of the American Legion. I commend this statement to everyone as an excellent challenge to our thinking, for it is a real inspiration to our patriotism:

ADDRESS BY MARTIN B. MCKNEALLY, NATIONAL COMMANDER, THE AMERICAN LEGION, BEFORE THE 69TH CONTINENTAL CONGRESS OF THE NATIONAL SOCIETY, DAUGHTERS OF THE AMERICAN REVOLUTION, ON APRIL 18, 1960, AT CONSTITUTION HALL, WASHINGTON, D.C.

Madam President General, Daughters of the American Revolution, ladies and gentlemen, it is a great privilege to participate in this Continental Congress of the Daughters of the American Revolution. I am delighted to bring to you the greetings of the American Legion and to laud you for the record of accomplishment which you have compiled over the years. I note the wide range of your activities, all nicely fitted and arranged so that one objective is served: the maintenance in the United States of a patriotic citizenship. I cannot refrain from informing you on this occasion that the American Legion seeks to do no less. And I tell you more and not without melancholy—that the work of these two organizations must not be limited by considerations of comfort, ease or unwillingness to stand and fight for the things in which we believe.

No citizen of this great country, no beneficiary of its freedom, no disciple of its spiritual ideals can, in thoughtful moments derive comfort in viewing the events and

developments of these days. One billion of our fellow human beings are held in a Communist thrall. Emissaries and agents of communism encircle the globe and aim to increase the figure either by appeals to friendship, ideals of a sort or by subversion. We see at our doorstep a Government that is headed by a revolutionary named Castro who is doing the Communist business. And yet, we also see a number of Americans who have achieved a certain celebrity, apologizing and praising this Government. These Americans who presumably wish to serve democratic ideals and in many instances hold themselves out as the definitive interpreters of them, find no incongruity in their espousal of the cause of a man who ordered hundreds of his fellow citizens gunned down without a fair trial or even the remote trappings of proper court procedures. Where, one wonders, were these men when lessons in justice were taught? Where were they when respect for the dignity of human beings was taught? What kind of men are these who aline themselves with a predatory Communist oriented government in Cuba? Where, alas, is their loyalty to American ideals.

One extraordinary thing about these men and women who find it easy to socialize and fraternize with tyrants is their distaste for organizations such as yours and mine. You have found as have we, that organizations devoted to God and country and the maintenance of America's traditions and a forthright devotion to their country, are the targets of those extremists. There is, therefore, a great gulf between our thinking on the basic issues facing America and certain highly articulate well-placed critics, important in the fields of propaganda.

How to explain that gulf? Is it not the result of an abandonment on their part of certain basic values which you and we husband with great care? Is it not that they have adopted for themselves and for all the rest of us new standards by which men are to be judged and actions are to be taken? We daily see matters seriously proposed and supported in the Congress of the United States, which but a few years ago would have received scant consideration. We daily see brought into the homes of America television programs portraying violence and seaminess as accepted ways of life. We have become curiously aware recently of a new usage of the art form. In other days, dramas were written in order to amuse and entertain and to lift up the spirit of a man to noble emotions. Now we are told that they are created to make us think—think according to whose pattern, one might ask—the producers, the directors, the writers? Whom are we supposed to think like? Some person with exalted patriotism or someone with tarnished and perverted ideals? Are we supposed to think in accordance with a mentality that is disposed to war with our system—our basic beliefs, our quintessential values of God and country. Are we to accept as art a portrayal of morbidity and salaciousness offensive to good taste and be satisfied with the explanation—that this is adult fare—that this is just a reexamination in the light of modern experience of certain basic tenets heretofore taken for granted; that the producer knows best what is good for us?

Are we to accept as right, as in the best interests of our country, arguments by men of exalted station both in the Congress and the academic world that a simple affirmation of loyalty, coupled with an affidavit attesting to freedom from the taint of disloyalty, is a burden upon young Americans going to school with Government aid; is it, as they contend, a reflection upon their integrity or their loyalty?

Are we to accept as sound the arguments from men of high office, editorial writers, and columnists that the best way to develop a rule of international law is by submitting ourselves to the jurisdiction of a court largely composed of judges either innocent of or in opposition to our theory of rights as described in the Declaration of Independence?

Are we to be pleased with the state of education in America, which seems to have removed the rigors of mind training, of building mental muscularity and substituted therefor a kind of vague life adjustment process; an instruction in the art of living, an acculturation, if you please?

Are we able to rely on the state of our spiritual defenses? Can we say that we believe in our system with a fervor and a faith equal to those of Communists? Has it not been eroded away by the constant and carping criticisms that have been leveled at it by men of little faith? By television and radio commentators who in their sepulchral tones of omniscience dilate upon its minor defects, smear its upholders? Are we already propagandized too much by men who have traveled too much, and thought too little; acquired facts but no wisdom, success but no faith?

Is it too late to head off the final plunge into basic, crass, and hopeless materialism, in which men place all of their confidence for the future? Or have we lived so long now by the doctrine of spend and spend, consume and work, build more, buy more, and want more, that there is no room in our heads for the doctrine of belief upon which this Nation was founded?

Communism proposes that life is material and that man is a product of nature with no purpose, no will and no soul. As harsh as this doctrine is, the Communist accepts it as truth and will give his all to sustain it. He is willing to give everything we covet in its support. Bakunin-Nechayev in his "Catechism of a Revolutionist" describes the Communist revolutionary as follows: He is a doomed man; he has no personal interests, no affairs, sentiments, attachments, property, not even a name of his own. Everything in him is absorbed by one exclusive interest, one thought, one passion—the revolution.

Is it any wonder that a revolution started 40 years ago in a retarded nation has ripened into a governance of one billion human beings, and a threat to every freeman on the face of the earth, when it has disciples of supreme conviction and the capacity for ultimate sacrifice?

"The question for us here tonight in this august hall is, "is there any hope to withstand the pressures of so dynamic a faith and so powerful an enemy as communism?" The answer is, "Yes," but the work lies with you.

If we shall win in this struggle it is because patriotic women like yourselves have kept the faith, have reenkindled the spirit of patriotism, have fired youth with love of their country, have said so loud that all can hear; yes, the students of America will take a loyalty oath in this day of freedom's darkest peril; yes, we shall stand for justice, freedom, democracy, and loyalty in the traditional modes of American thinking; yes, we shall retain the Connally reservation protective of the sovereign rights of our citizens; yes, we shall reject the preposterous theory that freedom of conscience requires that a man may engage in a conspiracy, the objective of which is to overthrow the established order; yes, we shall reject Hollywood producers as the arbiters of our morals and our thought patterns; yes, we shall reject the presumptuous notion that freedom of speech may be denied to those who wish to publish the records of men who have been and may still be the enemies of our country; yes, we shall insist upon the reexamination of our basic educational ideals with a view not to decrease its democratic nature but in order to strengthen its learning and its training of the minds of youth; yes, we shall build our spiritual defenses in the home, in the school, in the church by increasing our faith in God and our dependence for the rules of action upon His moral law; yes, we shall reject the doctrines of relativism that say there are no objective standards by which man's conduct can be gaged; yes, we shall proclaim that right is right if nobody is right, and wrong is wrong if everybody is wrong; yes, we shall oppose the admission of Red China into the United Nations; yes, we shall stand up for America in the ways that our traditions and the love of our country require; yes, we shall avail ourselves of our opportunities; yes, we shall do our duty to America; yes, we shall absorb the blows that, in this desolate age, are aimed at women who think and believe and speak out as you do; yes, we shall bear in mind the credo of the revolutionist to whom all things are possible because he believes.

And we shall in our turn proclaim our own beliefs, our own faith in our country. May I suggest to you that these are neatly summed up in a passage written by a refugee, one who came to these shores from Herr Hitler's concentration camp, one who came to us delivered from sights, sounds, and agonies no child of God should ever experience.

He became a citizen of these United States and then wrote:

"I am an American citizen—a member of the greatest fraternity on earth—the brotherhood of freemen. Because a million American citizens have died and millions have suffered in the wars of our Republic, I have greater freedom than any other citizen of any other nation in any other period of mankind. I have greater freedom to work, to worship, to love, to learn, and to play. Mine is the freedom to compete, to invent, to save, to invest, to create, to promote, to own. I have freedom to choose, to join, to vote, to speak, to travel, and to walk erect with my head held high. I am free to be my own self as an individual human soul. I am free to glorify Almighty God."

Electronics in the Field of Rehabilitation

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. KEARNS. Mr. Speaker, I believe it will be of interest to every Member of Congress, especially to my colleagues from the Commonwealth of Pennsylvania, to learn of a pilot project, which in this age of automatons, has geared for the first time electronics into the field of rehabilitation. The Remington Rand division of the Sperry Rand Corp., the department of property and supplies, and the Department of Justice of the State of Pennsylvania, are cooperatively offering a course for the training of Univac programers to a selected group of 20 youthful prisoners in the State correctional institution at Camp Hill, Pa. Remington Rand is providing, without cost, instructors, manuals, laboratory facilities, and textbooks.

The significant aspect of this development, in view of increasing problems of crime and delinquency, is the demonstration that our system of individual enterprise can do something constructive about it. In this respect I heartily

recommend that our industries, corporations, businesses, and union authorities, explore the possibilities, through training and employment, of bringing out the constructive capabilities of the youthful offender.

The officials of the respective organizations are to be congratulated on their dynamic progress in the area of treatment.

Lincoln's Greatness—1865

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. DERWINSKI. Mr. Speaker, on April 10 this year, during the anniversary week of Lincoln's assassination, Congressman FRED SCHWENGEL was one of the speakers at a special ceremony at Ford's Theater. He delivered an address on "Lincoln's Greatness—1865." Under leave to extend my remarks, I include SCHWENGEL'S speech in the Appendix of the RECORD.

LINCOLN'S GREATNESS—1865

Fourscore and 15 years ago next Thursday, a shot was fired in this building that was heard around the world. The assassin's bullet triggered the beginning of the greatest worldwide tribute ever given to an American—indeed to any political statesman in history.

Ever since the morning of April 15, 1865, when the Reverend Dr. Gurley bowed his head on a bloodstained coverlet and prayed fervently in the backroom of the Peterson house across the street from here, historians, poets, philosophers and writers have pondered the mystery of Lincoln's greatness. Barrels of ink have been spread on carloads of paper telling the story of, explaining the mystery of and commenting on the life of this great and good man.

On February 11, 1959, the President of the United States, speaking at the annual Lincoln banquet which was the real beginning of a year's commemoration of the 150th anniversary of Lincoln's birth, made the observation that, "Abraham Lincoln belongs not only to the ages, but to all humanity. Immortality is his in the hearts of all who love freedom everywhere in the world."

The following day that great poet and historian, Carl Sandburg, gave, from the podium at the Capitol to a Congress in joint session and to the world, the finest statement on Lincoln ever uttered. This dissertation on Lincoln was noted by all the areas of communication more than any other in history except some of Lincoln's own statements.

All of this, plus the tremendous response to the great program inspired and promoted by the Sesquicentennial Commission, chairmanned by that great Senator from Kentucky, JOHN SHERMAN COOPER, has encouraged people to believe that Lincoln has become great since his death. While a good case can be made for this feeling, it shall be my purpose today to suggest that the people he lived with, the people he knew and the people he led through the dark valley of the shadow of death to preserve the Nation sensed his greatness and importance more than we realize. To add sustenance to this contention, we need only to refer to the public records of the time of his death and we will note the universal, immense and moving response of great respect tendered him by the press, by men in public office and by the people in their response to the plans carried out by governmental leaders for his funeral. Most statements and sermons by the clergy of that period speaking from the pulpits of every church in the North and from a vast number of churches in the South were eloquent and inspiring.

The funeral ceremonies lasted from the time of his death, April 15, 1865, until the 4th of May when he was buried at Springfield. Every public official of that time from the mayor of the smallest village to the President of the United States publicly paid tribute to this man. A reporter who was on the funeral train during its 12-day journey from Washington to Springfield, a distance of 1,682 miles, reported that "From the time the train left Washington until it reached Springfield there never was a time when it was out of sight of people during the day or that the lanterns, torches and bonfires could not be seen from the train during the night."

Sandburg reminds us that "in this period along the funeral route bells sobbed, cities wore crepe; people stood in tears and with hats off as the railroad burial car paused in the leading cities." From the record we find that along the route, when his body was taken from the train, over a million people passed by the open casket and newspaper accounts tell of the many hundreds of thousands who wanted to pass by and didn't because there wasn't time and of the many millions that watched the funeral car pass along the route. Here, then, is abundant evidence that the people sensed and deeply mourned the loss of a great man.

Great statesmen, great leaders, and great thinkers inspire others to build and carry forward nobel objectives. While it is true that many authors and students have, since his death and in recent years, been inspired to great heights by the life and works of Lincoln. It is also true that the great leaders of that time, using Lincoln, expressed themselves nobly and effectively and in a way that added immeasurably to our heritage.

Here are some of the thrilling and significant statements by the clergy and statesmen who addressed audiences during the period of his funeral.

Probably there has never been a better known preacher than that man who served the pulpit in the great Plymouth Church in Brooklyn for 40 years—Henry Ward Beecher. Among other things, comparing Lincoln to Moses, he reminds us that, "Again a great leader of the people has passed through toil, sorrow, battle, and war, and come near to the promised land of peace, into which he might not pass over, and asks, 'Who shall recount our martyr's sufferings for this people?' Since the November of 1860, his horizon has been black with storms. By day and by night, he trod a way of danger and darkness. On his shoulders rested a government dearer to him than his own life. At its integrity millions of men were striking at home. Upon this government foreign eyes lowered. It stood like a lone island in a sea full of storms; and every tide and wave seemed eager to devour it. Upon thousands of hearts great sorrows and anxieties have rested, but not on one such, and in such measure, as upon that simple, truthful noble soul, or faithful and sainted Lincoln."

He continues:

"He wrestled ceaselessly, through four black and dreadful purgatorial years, wherein God was cleansing the sin of his people as by fire."

He pointed out:

"Men were bereaved, and walked for days as if a corpse lay unburied in their dwellings. There was nothing else to think of. They could speak of nothing but that; and yet, of that they could speak only falteringly. All business was laid aside. Pleasure forgot to smile. The city for nearly a week ceased to roar. The great Leviathan lay down, and was still. Even avarice stood still, and greed was strangely moved to generous sympathy and universal sorrow. Rear to his name monuments, found charitable institutions, and write his name above their lintels; but no monument will ever equal the universal, spontaneous, and sublime sorrow that in a moment swept down lines and parties, and covered up animosities, and in an hour brought a divided people into unity of grief and indivisible fellowship of anguish."

He asks: "Do not all soldiers that must fall ask to depart in the hour of battle and victory? He went in the hour of victory."

He explains a facet of Lincoln's greatness by telling us: "He was a man from the common people that never forgot his kind."

He reminds us that "this blow was but the expiring rebellion."

He reminds use of an eternal truth when he says: "Slavery wastes its victims; and it destroys the masters."

He sees the need for the people to be reminded that "the blow has signally failed. The cause is not stricken; it is strengthened. This Nation has dissolved—but in terms only. It stands foursquare, more solid, today, than any pyramid in Egypt. This people are neither wasted, nor daunted, nor disordered. Men hate slavery and love liberty with stronger hate and love today than ever before. The Government is not weakened, it is made stronger. How naturally and easily were the ranks closed. Another stepped forward, in the hour that the one fell, to take his place and his mantle; and I avow my belief that he will be found a man true to every instinct of liberty; true to the whole trust that is reposed in him; vigilant of the Constitution; careful of the laws wise for liberty, in that he himself, through his life, has known what it was to suffer from the stings of slavery, and to prize liberty from bitter personal experiences."

He describes the power of the spirit of Lincoln "and now the martyr is moving in triumphal march, mightier than when alive. The Nation rises up at every stage of his coming. Cities and States are his pallbearers, and the cannon beats the hours with solemn progression. Dead, dead, dead, he yet speaketh."

He asks: "Is Washington dead? Is Hampden dead? Is David dead? Is any man that ever was fit to live dead? Disenthralled of flesh, and risen in the unobstructed sphere where passion never comes, he begins his illimitable work."

We know that Reverend Beecher sensed his greatness when he reminds us that: "Four years ago, O Illinois, we took from your midst an untried man, and from among the people. We return him to you a mighty conqueror. Not thine any more, but the Nation's; not ours, but the world's. Give him place, O ye prairies. In the midst of this great continent his dust shall rest, a sacred treasure to myriads who shall pilgrim to that shrine to kindle anew their zeal and patriotism."

That great leader Henry Bellows from the All Souls Church of New York, editor of the Chrisian Inquirer and President of the U.S. Sanitary Commission during the Civil War, speaking in New York in 1865 tells us:

"Our beloved President, who had enshrined himself not merely in the confidence, the respect, and the gratitude of the people, but in their very hearts, as their true friend, adviser, representative, and brother; whom the Nation loved as much as it revered; who had soothed our angry impatience in this fearful struggle with his gentle moderation and passionless calm; who had been the head of the Nation, and not the chief of a successful party; and had treated our enemies like

rebellious children, and not as foreign foes, providing even in their chastisement for mercy and penitent restoration; our prudent, firm, humble, reverential, God-fearing President is dead" and he continues by observing: "But he has gone. Abraham Lincoln, President of the United States during the most difficult, trying, and important period of the Nation's history; safe conductor of our policy through a crisis such as no other people ever had to pass; successful summoner of a million and a quarter of American citizens to arms in behalf of their flag and their Union; author of the Proclamation of Emancipation; the people's President; the heir of Washington's place at the hearths and alters of the land; the legitimate idol of the Negro race; the perfect type of American democracy."

He bravely points out that maybe we needed to make this sacrifice by saying:

"And may we not have needed this loss, in which we gain a national martyr and an ascended leader, to inspire us from his heavenly seat, where with the other father of his country he sits in glory, while they send united benedictions and lessons of comfort and of guidance down upon their common children—may we not have needed this loss to sober our hearts in the mist of our national triumph, lest in the excess of our joy and our pride we should overstep the bounds of that prudence and the limits of that earnest seriousness which our affairs demand? We have stern and solemn duties yet to perform, great and anxious tasks to achieve. We must not, after ploughing the fields with the burning share of civil war, and fertilizing them with the blood and bones of a half million noble youth, lose the great harvest by wasting the short season of ingathering in festive joy at its promise and its fulness."

Then Reverend Bellows suggests that: "God has startled us, to apprise us of our peril; to warn us of possible mischances, and to caution us how we abuse our confidence and overtrust our enemy."

Rev. Theodore L. Cuyler, pastor of a Presbyterian church, a man who then had an international reputation as a preacher and writer saw virtue in Lincoln's humor. He said:

"Lincoln's humor was as natural to him as breathing. It was a happy gift. It kept his temper sweet, and lubricated his mind, that might otherwise have been worn into sulleness or into despondency by the tremendous friction of care and overwhelming anxieties. None of his jokes were ill-timed or malevolent. Some of them were exceedingly adroit. For instance, when an inquisitive visitor questioned him too closely as to the destination of the Burnside expedition, the President inquired with mock gravity, 'my friend, can you keep a secret?' 'Yes, sir,' he eagerly replied. 'Then,' said Mr. Lincoln, 'I will venture to inform you that the expedition has gone to sea.' "

He comments on his religion by telling us that "Abraham Lincoln's religion, as far as the world saw it—lay in two cardinal principles—a rigid sense of right—and an unfaltering faith in the Providence of God. He was a child of Providence. 'If I did not seek help from God every morning I could not stand up under the load laid upon me,' was the substance of a remark made to an intimate friend during a gloomy period of the war. What was the degree of our President's heart-faith in Jesus Christ is known only to the Omniscient. He worshipped in God's sanctuary; he once taught in the Sabbath School; he was rigidly moral; he practised abstinence from the wine cup as well as preached it; he set a noble example of industry, continence, fortitude, and integrity."

He underscores Lincoln's faith in the power of right:

"After issuing the proclamation of freedom he said to a friend, 'I did not think the people had been educated up to it; but I thought it was right to issue it, and so I did it.' "

Reverend Cuyler also refers to the people's response to Lincoln's death by telling us that "Lincoln in his coffin has put a world in tears. Never was a man so mourned; never before did all Christendom stand mourners around one single bier. That pistol shot at Washington echoes around the world in the universal wail of humanity. God pity our noble friends abroad when they hear the tidings."

He raises a question that has been discussed since his death when he asks, "Did Lincoln die too soon?" And answers that, "For us and for the world he did; but not for himself. It is all sadly right. God's will be done. The time had come when, like Samson, our beloved leader could slay more by his death than in his life. He has slain the accursed spirit of slavery yet lurking in the North. He has slain the last vestige of sympathy with the discomfited rebellion in every candid foreign mind. That pistol's flash has revealed the slave-drivers' conspiracy to the world—our father died at the right time; for his mighty work was done. He lived to see the rebellion in its last agonies; he lived to enter Richmond amid the acclamations of the liberated slave, and to sit down in the archtraitor's deserted seat; he lived until Sumter's flag rose again like a star of Bethlehem in the southern sky, and then, with the marty's crown upon his brow, and with 4 million broken fetters in his hand, he went up to meet his God."

Rev. Joseph P. Thompson, a graduate of Yale, a great pastor and the sanitary commission member with General Sherman's army during the Civil War, touches on Lincoln's greatness:

"I count it one of the noblest acts in the history of the race, an impressive proof of the progress of human society, that a nation has rendered its spontaneous homage, a tribute without precedent in its own annals, and hardly equaled in the annals of the world, to a man whom it had not yet learned to call great."

Commenting on Lincoln's education this reverend from Yale reminds us that "whether his books or his teachers be few or many, whether his education be in professional schools or in the open school of nature and of practical life, he who would become a power either in the world of opinion or in the world of action, must make himself a man of self-discipline and culture with such helps as are at his command. Mr. Lincoln made himself, not by despising advantages which he had not, but by using thoroughly such advantages as he had."

He continues:

"He thought out every subject for himself; and he did not commit himself in public upon any subject which he had not made his own by reflection. Hence even familiar thoughts, coming before us in the simple rustic garb of his homely speech, seemed fresh and new. He took from the mint of political science the bullion which philosophers had there deposited, and coined it into proverbs for the people. Or in the great placer of political speculations, he sometimes struck a lode of genuine metal, and wrought it with his own hands."

In his reasoning on the Constitution, Reverend Thompson points out that: "The Union is older than the Constitution; the Union made the Constitution, and not the Constitution the Union."

Then commenting on Lincoln's simple philosophy Reverend Thompson said:

"With a noble contempt for political prejudice, and with a touching moral simplicity, Mr. Lincoln avowed this principle in his treatment of the Negro. In pointing out that more has been given you (by the Creator) you cannot be justified in taking away the little which has been given him. If God gave him but little, that little let him enjoy. In the right to eat the bread, without the leave of anybody else, which his own hand earns, he is my equal, and the equal of Judge Douglas, and the equal of every living man. In his highest prosperity he never forgot his kindred with men of low estate. Amid all the cares of office, his ear was always open to a tale of sorrow or of wrong, and his hand was always ready to relieve suffering, and to remedy injustice. I seem to see him now, leaning against the railing that divides the War Office from the White House, while the carriage is waiting at the door, and listening to the grievance of a plain man, then sitting down upon the coping and writing on a card an order to have the case investigated and remedied. An undignified position do you say? It was the native dignity of kindness."

It seems to me that one of the most eloquent statements by a public official was made by Job Stevenson, a Representative from Ohio, when he gave the principle address for the service at Cleveland. He reminded the American people that "for 4 years the war raged, and the President was tried as man was never tried before. Oh, 'with what a load of toil and care,' has he come, with steady, steadfast step, through the valley and the shadow of defeat, over the bright mountain of victory, up to the sunlit plain of peace.

"Through all these trials the President stood firm, trusting in God and the people, while the people trusted in God and in him. Tried by civil affairs which would have taxed the powers and tested the virtues of Jefferson, Hamiliton and Washington, he administered them so wisely and well, that after 3 years no man was found to take his place. He was reelected, and the harvest of success came in so gradually, that he might have said, 'Now, Lord, let us Thou Thy servant depart in peace, for mine eyes have seen Thy salvation.' Yet he was free from weakness or vanity. Thus did he exhibit, on occasion, in due proportion and harmonious action, those cardinal virtues, the trinity of true greatness—courage, wisdom, and goodness; goodness to love the right, wisdom to know the right, and courage to do the right. Tried by these tests, and by the touchstone of success, he was the greatest of living men."

Abraham Lincoln's very good friend, Matthew Simpson, the Methodist bishop, concluded the final service at the grave by recalling: "How different the occasion which witnessed his departure from that which witnessed his return. Doubtless you expected to take him by the hand, and to feel the warm grasp which you had felt in other days, and to see the tall form walking among you which you had delighted to honor in years past. But he was never permitted to come until he came with lips mute and silent, the frame encoffined, and a weeping Nation following as his mourners. Such a scene as his return to you was never witnessed. Among the events of history there has never been a greater procession of mourners."

He, too, refers to the people's moving response:

"There have been mournings in the kingdoms of the earth when kings and princes have fallen, but never was there, in the history of man, such mourning as that which has accompanied this funeral procession, and has gathered around the mortal remains of him who was our loved one, and who now sleeps among us. If we glance at the procession which followed him, we see how the Nation stood aghast. Tears filled the eyes of manly, sunburnt faces. More persons

have gazed on the face of the departed than ever looked upon the face of any other departed man. More faces have looked on the procession for 1,600 miles or more—by night and by day—by sunlight, dawn, twilight, and by torchlight, than ever before watched the progress of a procession."

His closing remark is appropriate and touching. He said:

"We crown thee as our martyr—and humanity enthrones thee as her triumphant son. Hero, martyr, friend, farewell."

Here is abundant evidence of the spontaneous homage of the tremendous outpouring of grief rendered at his death. A tribute that is without precedent in all the annals of history and this to a man who they had not yet learned to call great even though they, in their action, proved him the greatest. From the experiences of this funeral period and from what we have learned about Lincoln since that time, we can believe that there may be something greater than greatness itself. Even though he had not yet been enrolled with the great names of literature; and no feats of arms nor strategy on the field had yet placed him among the military heroes; and even though he was not yet ranked with the great thinkers and philosophers of history, the people sensed his greatness or they would or could not have paid such moving tribute to him at that time. Possibly he was great in his own way. Maybe he represented a new type of greatness. It seems the less it was recognized and acknowledged, the more it is genuine and divine. Even though the people and the leaders had not begun to accord him the epithets and the homage of greatness, the people in their simple way demonstrated so well that they believed him great. He had something that they understood and felt akin to greatness and it may be that there are lessons to learn from their reactions; maybe the recognized grandness in this character, rather than greatness, is the fitting epithet for the life and character of Abraham Lincoln; not greatness of endowment nor of achievement, but grandeur of soul. Grand in his simplicity and kindliness; grand in his wisdom of resolve and his integrity of purpose; grand in his trust in principle and in the principles he made his trust; grand in his devotion to truth, to duty, and to right; grand in his consecration to his country and to God, he rises above the great in genius and in renown, into that foremost rank of moral heroes, of whom the world was not worthy.

The people who were of the Nation he loved knew he was great. The leaders knew too when they saw the multitudes weep and they then expressed the depth of their feelings marvelously as they proclaimed him the greatest of the great, grandest of the grand, a statesman who built his own monument in the hearts of those who love liberty unselfishly for all mankind.

Yes, he was rather great and grand in his own time. If it were not so we would not know him so well or love him so much today.

Electronic Warfare

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. AYRES. Mr. Speaker. I direct your attention to a special report on electronic warfare appearing in the current issue of Space/Aeronautics, a Conover-Mast publication.

In any war of today or tomorrow electronics will play the prime role as a data gatherer—radar, infrared, optics—and for control and communications. Any side that has the capability of depriving the other of the use of all or part of the electromagnetic spectrum will have the top hand in modern warfare.

This is why electronic countermeasures is so important, this is why it has been a closely guarded secret and has been the least written about phase of all electronics. The ECM—electronic countermeasures—goal is to deprive the enemy of the use of the electromagnetic spectrum, hence to deprive him of the use of his radars, infrared equipment, radio control and communications and his optical viewers, such as cameras.

It can take two major forms: confusion and deception.

In confusion you saturate his electronics with noise, or send several false targets along with the true target.

In deception you give him false information but make him think it is true information.

Countermeasures dates back to the days of the Trojan horse. The battle of countermeasures and counter-countermeasures is analogous to a game of chess but the stakes are high—human loves and the fate of nations.

In the April issue of Space/Aeronautics the editors have made a complete report on the state of the art at this moment, to the extent that security permits.

Air Route to Hawaii

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. WESTLAND. Mr. Speaker, I am pleased to learn of the Civil Aeronautics Board decision which prevented removal of certain Seattle-to-Honolulu air service. I believe this decision is in the interest of all concerned and will contribute to the continued growth of air transportation in the Pacific Northwest and Hawaii.

Under leave to extend my remarks, I include in the RECORD an editorial that appeared in the April 4, 1960, issue of the Seattle, Wash., Times:

[From the Seattle (Wash.) Times, Apr. 4, 1960]

AIR-ROUTE CASE WELL MADE

Voices of the Pacific Northwest spoke often, vigorously and with clear logic in the fight for continued competitive air service on the Seattle-Portland-Honolulu run, and the Civil Aeronautics Board gave heed.

Here was one case where this community did not meekly bow its head and accept an adverse decision of a Federal official—a decision which appeared to ignore vital facts.

Community alertness, a refusal to accept defeat after a losing "first round," were rewarded when the CAB overruled the recommendation of its examiner and gave permanent certificates on the Pacific Northwest-Hawaii route to both Northwest Orient Airlines and Pan American World Airways.

The examiner had recommended last September that Pan American be dropped from the route, and only Northwest continued.

Seattle could have said, "too bad," and sat back with resignation to await the expected confirmation of the examiner's decision.

Instead, a vigorous campaign was pressed under the leadership of the municipal government, the Seattle Chamber of Commerce, the Seattle Traffic Association, the State public service commission and the attorney general's office. Strong support came from Oregon and Hawaiian spokesmen.

It was pointed out that traffic on the Pacific Northwest-Hawaii route climbed from about 36,000 passengers in 1958 to more than 57,000 in 1959, and continued to climb dramatically in January of 1960.

It was further pointed out that Hawaiian statehood, the general boom in the islands' economy, the increasing popularity of "off-season" vacations, the conversion to jet aircraft, and population growth in the immediately affected areas all pointed to continuing climb in traffic on that route.

Competition on the route to the island State will guarantee this area first-class service on that route, and will be important to the city's bid for recognition as a key terminal on global air routes.

Removal of Pan American from Seattle-Honolulu service would, for instance, have created a great gap in Pan American's one-carrier service between London and Sydney by way of Seattle and Honolulu. Traffic on transpolar flights to Europe from the central Pacific, otherwise destined for Seattle, would have moved through San Francisco.

This community can take great satisfaction from the CAB decision, which was a wise one, supported by the facts.

It can take satisfaction also in having spoken up—and been heard.

The McGuffey Readers

EXTENSION OF REMARKS

OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. MUMMA. Mr. Speaker, on March 29, I stood in the well of the House and announced I had in my office for the perusal of anyone who might care to see them, a set of the famous McGuffey Readers.

I addressed the House briefly and made some passing comment.

To my surprise, I received in the mail from the west coast of our Nation—Oakland, Calif.—a letter containing the favorable reaction of Mr. Frank P. Stelling and his additional comments and personal observations. They appear in his letter which follows:

OAKLAND, CALIF., *April 5, 1960.*

Hon. WALTER M. MUMMA,
House Office Building,
Washington, D.C.

DEAR MR. MUMMA: I read your speech in the CONGRESSIONAL RECORD of March 29, page 6327, entitled "The Three R's," with great pleasure.

I have felt for many years that juvenile delinquency, the lack of knowing right from

wrong, the desire for security from the cradle to the grave, has been "progressive education" pushed by the famous lobby, the National Education Association.

My father (who died in 1933 at age 71) was brought up on McGuffey's Readers, and when I was a member of the Ohio Society of New York, in the old Waldorf-Astoria Hotel, where the Empire State Building is now—the board of governors bought a full set for the library of McGuffey's Readers.

I have a first eclectic McGuffey Reader before me for my grandson (I am 69 and a graduate of Amherst College, A.B., 1913), which I bought.

I shall buy the other five readers later from Old Authors, Department C1-12, Rowan, Iowa.

The McGuffey Readers are springing up over the country and, I hope, save the day in education.

Thank you for your splendid speech.

Yours sincerely,

FRANK P. STELLING.

Eight Myths About the Farm Situation

EXTENSION OF REMARKS

OF

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. LANGEN. Mr. Speaker, farmers today are in the unenviable position of witnessing a continued downward trend in their income, while in the same breath are being accused daily of receiving unwarranted handouts and becoming wards of the Government. In an effort to bring forth a proper perspective concerning this Nation's farmers, Mr. Carroll Streeter, distinguished editor of the Farm Journal magazine, has written a booklet dealing with some of the commonly held misconceptions regarding our farm families. Mr. Streeter has labeled these misconceptions as the eight myths and I would recommend this reading to all persons interested in unbiased public understanding of the present problems being faced by our farmers.

The article follows:

EIGHT MYTHS ABOUT THE FARM SITUATION

(By Carroll P. Streetcar)

May I make clear, first of all, that I am not writing to defend the present farm program. It has its faults, and some virtues. I shall, however, defend farmers. Not that all farmers are completely lily-white, but I believe that farmers as a class deserve far less blame than the public has been putting on their shoulders.

The farm situation itself is no myth. There are, however, several commonly accepted myths about it, and it's time somebody exposed them.

MYTH NO. 1—THE FARM SITUATION IS SO COMPLICATED NOBODY CAN UNDERSTAND IT

Actually I believe I can state the situation in four sentences:

1. We are producing more of some farm products than we can sell at support level prices—about 2 to 3 percent too much of our overall farm production—and we haven't been able to shut off the spigot.

2. Under the support price program we have held some of this surplus production at too high a price, so we haven't been able to move it into consumption either at home or abroad.

3. Thus, even though the oversupply is not large, except for a handful of commodities, this surplus unduly depresses the farmer's price and causes disproportionate distress because the demand is so inelastic.

4. Farmers' costs have continued to go up, adding to the squeeze.

MYTH NO. 2—ALL FARMERS ARE TAKING A HANDOUT

We have an unfortunate proclivity in this country to lump all farmers together as though they were an homogenous group. There is no such thing as a typical farmer. A range cattleman in Colorado is a far different kind of individual than a dairyman in Vermont, who hardly resembles a cotton grower in Alabama, who in turn bears little likeness to an Iowa hog farmer or a Pennsylvanian egg producer.

These people buy from and sell to each other. Often they compete with one another—and whole regions compete. Their views on farm policy vary from one pole to the other.

It may surprise you to know that less than one-fourth of agricultural produce gets so much as one red cent of Government subsidy. In the 27 years that the Government has been in the farm-program business, it has supported prices for only 45 of the 256 farm commodities produced in this country. Right now, only 21 are being supported.

Wheat, of course, is the conspicuous example—we have nearly 2 years' supply stored up. Next come the feed grains, chiefly corn and grain sorghums; then comes cotton, then tobacco.

Practically the entire livestock world—which accounts for more than half our farm income—has never accepted supports, even though stockmen could probably have had them for the asking. The lone exception is diary products, but the support prices there are not being used to any extent, except on dried milk powder.

I think it's useful to know these things. They put farm subsidies in some perspective. If more people had this information, we'd probably hear fewer heated statements about farmers as a class, or about the farm mess.

MYTH NO. 3—FARMERS GOT US INTO THIS SITUATION

Well, they produced the food and fiber all right, too much of some things, but they had a lot of push from forces they weren't entirely responsible for. Let's see how we want to assess the blame.

Two wars had much to do with it—World War II and the Korean war. It was suddenly patriotic to raise all the food possible. "Food will win the war and write the peace"—that was the slogan. War contributed in another way, too. The sudden demand for nitrates for munitions gave tremendous impetus to the fertilizer industry, and it's been booming ever since. As fertilizer stayed relatively cheap it paid farmers to pour it on. Quite naturally they did.

During the war Congress adopted support prices on a half dozen basic commodities at 90 percent of so-called parity. These supports were supposed to expire 2 years after World War II, but Congress hung onto them until 1954 (and tobacco still has them, albeit with tight acreage control). The farmers concerned with those crops had something to do with that, all right. It was a mistake, except possibly for tobacco, and most growers know it now. It not only whooped up production for these farm products beyond all need, but it priced us out of the export markets, and out of some of the domestic markets as well.

Another important factor has been a literal explosion of new scientific information about farming which the colleges, high schools, and the farm press have carried to every farmer in the land. For 100 years it has been American public policy to carry on agricultural research. We've all been for it. And consumers should be. It is not too difficult to demonstrate that it has done consumers more good through lower food costs than it has done farmers through higher yields.

The Government is pouring fuel on the fire in other ways. While trying to control farm production, it continues to vote money for reclamation projects which bring new land into production. It continues to dole out $250 million of so-called agricultural conservation practice money, chiefly for lime and fertilizer which further stimulate production.

On top of all that, we've had phenomenally good crop weather over most of the country in recent yaers. No wonder we've had overproduction. And no wonder the individual farmer, caught up in this tide, had no alternative but to produce his head off in an attempt to survive. What would you do? Try to cut production for the benefit of society when you had no assurance others would do the same?

MYTH NO. 4—FARM SUBSIDIES ARE COSTING US $6 BILLION A YEAR

Let's take that $6 billion figure apart. It is indeed the amount in the Federal budget labeled "Agriculture." Only two items are bigger: defense, and interest on the national debt. But a lot more than subsidies comes out of that $6 billion.

Part of the agriculture budget goes for general services which are of benefit to the entire population, not just to farm people—services such as scientific research and education, grading of food products, market reporting, the Forest Service, soil conservation, food inspection services, and the like. Should we charge all of these just to farmers alone? We do.

A large part of the budget is used for commodity loans and purchases, most of which the Government will later recover. Some of the commodities the Government acquires go for the school lunch program. Should we charge this to agriculture, or to school lunches?

In the past we've given away vast quantities of food to needy nations. We've sold great quantities more on long-term credit, and still more for soft currencies we spent in the recipient countries. Is this farm aid, or foreign aid, or a mixture of the two? Certainly we're using the money for both—but charging it all to farmers.

Actually, of the entire agriculture budget, probably not more than half can be charged to farmers alone, and not all of that to subsidies. That still is a very substantial sum of money, but it also is quite a distance from $6 billion.

No one denies that the Government is holding a tremendous pile of surplus food and fiber—some $7.3 billion worth on January 31, plus another $1.9 billion worth under current loans. We can't go on piling it up indefinitely. And you might be surprised to know that most farmers agree with that view.

Twice in the past 2 years Farm Journal has printed ballots asking farmers to choose among five possible courses of Government action, all the way from complete Government control of farming to getting the Government clear out. The vote each time was within 1 percent of the other time—apparently it was no fluke. Some 55 percent of the farmers who responded voted in favor of getting the Government clear out—which, incidentally, is farther than Farm Journal would go.

Well, then, who does oppose cutting back our farm plant, and putting some of our wheat and cotton land back into grass and timber—conserving it for the time when a steadily rising population may call it back into production? Three groups, chiefly: (1) a substantial group of farmers, many of

whom feel there are better answers to an undeniable problem, (2) politicians who come from these crop areas, and—surprise—(3) businessmen in the wheat and cotton belts who sell farm supplies, those who process what farmers raise, and those who market it. Naturally they hope to find some other answer than shrinking farm production—at least the part that affects them. Farmers aren't the only ones guarding the status quo—not by any means.

MYTH NO. 5—THESE FARM SUPPORTS ARE COSTING US TWICE—ONCE WHEN WE PAY TAXES AND AGAIN AT THE GROCERY STORE

In taxes, yes. At the store a trickle, maybe, but not enough to put in your eye. Since wheat is mentioned frequently, let's consider wheat. According to a 1959 report of the House Committee on Agriculture, labeled "Food Cost Trends," "the pound loaf of bread that sold at retail at 19.3 cents in 1958 contained wheat having a farm value of 2.4 cents." You could double the price of wheat and it should make practically no difference in the price of bread to the consumer.

While it has nothing to do with farm support prices, I think it's interesting to note what is happening to the food bill—and why.

First of all, food is one big item that is only moderately higher than it was 10 years ago—19 percent higher according to the Bureau of Labor Statistics. The House Agriculture Committee report puts it at 20 percent. "But," says the committee, "prices received by farmers for food have declined 8 percent in the same 10 years."

Then where did the widening spread go? To services, to packaging, to refinement of product. I'm not condemning such. If consumers want to pay for these services and this convenience, it's all right with me. But I do say they ought to realize what's putting food costs up, and not blame farmers for it. Farmers, more than any group in our population, have stood between consumers and an increased cost of living.

MYTHS NOS. 6 AND 7—FARMERS ARE BROKE—A LOT OF THESE FARMERS ARE DRIVING CADILLACS

You can find farmers who are driving around in Cadillacs, and also you can find farmers who are broke. You might, somewhere, find a farmer who is broke and also driving a Cadillac. But what is the truth about agriculture as a whole?

Farmers' net income from all sources in 1959 was lower than in 1958, although still the second highest of the past 6 years. It's too early to tell about 1960. Some prices will be higher, some lower. Hog prices, which fell sharply in 1959, are halfway back and should improve further this summer. Eggs, which hit the skids in 1959, will do better in 1960. Cattle prices, still pretty good, will drop on some, while milk should hold steady. Costs will doubtless keep on inching up. We'll have to wait and see about 1960 but it may well turn out better than expected.

There are three things to remember when you see the Government's most widely quoted "realized net farm income" figures.

The first is that they do not include some $8.5 billions that farmers take in annually from off their own farms.

The second is that the figure has covered everybody who calls himself a farmer, and generally speaking, that's anybody with three acres, or who sells $250 worth of farm stuff a year. If you consider just the 3 million commercial farmers—the real farmers of this country—the net income per family runs materially higher than for all "farm" families.

The third thing to remember is that we have fewer farm families dividing the agricultural income pie every year, which only means that the piece per family steadily is getting bigger.

I do not say that the net income situation is not serious for many. For some it is calamitous. Farmers as a class have been substantially underpaid and still are. They deserve much more income than they're getting. But the picture is not as serious for commercial farmers as a group as Government figures make it seem—nor as serious as some city reporters, venturing into the country for interviews with a half dozen farmers on a snowy day in March, make it sound.

While net income is of vital concern to farmers, their gross income is important to the businessmen who deal with them, and is part of the measure of agriculture's importance in the national economy. It's from gross income that farmers spend for their business needs (and on the farm even the family automobile is partly a business expense). Farmers' gross income has more than tripled in the past 20 years, and it's bound to go higher, not lower, as agriculture continues to grow. Agriculture continues to be a bigger industry to do business with, not a smaller one.

If you want the full story of how farmers are doing, you have to look beyond their current income figures to see how their net worth statement reads down at the bank. Farmers' total assets are now around $208 billion. Their debts come to $24 billion, leaving net assets of $184 billion—a ratio of assets to liabilities of 8.6 to 1. Nor are things suddenly getting worse—in 1956 the ratio was 8.9. If you follow the stock market, you would call that pretty good. Seven out of ten farmers have no mortgage.

That's good, and we should give thanks for it. But the mere fact that a farmer may be worth more when he sells out or dies doesn't reduce the pain of trying to make ends meet now.

It's like saying to the man in town: "Don't worry because your salary has been cut; your house is worth more."

This gain in assets has been largely in land values. High-priced land is fine if you happen to own land. If you're a tenant, as about one-fourth of all U.S. farmers are, it only increases the cost of buying your own place.

What about agriculture's prospects?

We have seen a population growth of 48 million in the past 20 years. The Census Bureau forecasts additional growth of 80 million in the next 20. The upward curve will keep getting steeper. Personally, I'm glad I won't be around by the year 2050 when we're likely to have a billion people in this country. It's hard enough to find a parking place now. But all these new millions will be food customers, three times a day, for tomorrow's farmers.

Nor are family farms about to be a thing of the past. They're about as big a proportion of the total as they were 10 years ago—and 30 years ago—and somehow most of them manage to steadily improve their levels of living.

MYTH NO. 8—FARMERS AREN'T A VERY IMPORTANT GROUP ANY MORE; THERE ARE TOO FEW OF THEM

It's true that fewer than one out of eight of our population now lives on a farm. But let's consider a few facts, too often overlooked, about the place of farm families in our scheme of things.

Obviously, farmers provide us all with our daily bread, as well as cotton and wool for clothing. Rather important, but what else?

Well, every 10 years they send to the cities some 1.9 million fine young people—completely reared, educated, ready to work. These children are trained in self-reliance, in responsibility, in habits of work, in our finest family traditions. Not only do they make excellent citizens, but a great many of them turn into leaders.

This is a tremendous social contribution. But have we considered how much of a financial contribution it is? Not to the individual taxpayer personally, but to the Nation. What would you say—$20,000 per child? I saw that statistic from Kansas State University the other day as being the cost of rearing a child from birth to age 18. At that figure the total would come to $3.8 billion per year—a considerable offset to the $6 billion agriculture budget mentioned earlier.

Well, how else are farmers important to us? Farming is our biggest single industry, measured by almost any standard, and a major customer of other industries. And it is getting bigger, not smaller. It's a real growth industry, if there ever was one. But do we realize how big it really is?

In 1959 farmers' gross income was $46.3 billion. That's a big hunk of money. It was 9.7 percent of our gross national product for that year.

With that money farmers buy 6½ million tons of steel a year—half as much as the automotive industry uses. They buy more petroleum than any other single industry—more than one-eighth of all the petroleum produced in the country. They use more electric power than Baltimore, Boston, Chicago, Detroit, and Houston combined. It takes $6 billion worth of containers and packing materials to pack the food U.S. farmers raise in a year.

Then let's not forget the jobs that farming creates in food processing and distribution, in the manufacture and distribution of farm machinery and supplies. All these jobs are part of the agricultural complex, too.

So the "no longer important" myth holds no water at all. Citizens with a $46 billion income and $208 billion in assets, who buy from nearly everybody and sell to everybody, can't be dismissed as nobodies.

What, then, should we do about the "farm problem?"

That's for every citizen to figure out for himself. Most farmers are not special pleaders. But they do have a right to ask their fellow Americans to base their opinion on facts and on a fair picture of the situation. Most metropolitan citizens haven't had much chance to get such. It's not their fault—they've been given a lot of half-truths, some untruths, and little unbiased information. With this statement, I hope I may have been of some help to them in understanding "the farm situation."

4–H for Good Farming and the Good Life

EXTENSION OF REMARKS

OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. NELSEN. Mr. Speaker, I have read with interest an article which appeared recently in Corn Quarterly, a publication of Corn Industries Research Foundation. This article presents a very fine picture of 4–H Club work and some of its excellent results.

The tremendous impact that has resulted from the devoted efforts of 4–H Club members would be hard to measure. Many of us have personally learned much because of this effort, first by personal participation as a club member and later because of the leadership and inspiration that has been supplied by young

men and women who, after being 4–H Club members, have assumed roles of leadership in their communities.

The 30th national 4–H conference will be held here in Washington April 23–29. About 200 delegates will represent 4–H Club members in the conference and about 100 State 4–H leaders will hold concurrent work meetings in Washington. These 300 people represent the 2¼ million young people who belong to about 93,000 4–H groups in the United States and Puerto Rico.

Under the leave to extend my remarks in the RECORD, I include the following article from Corn Quarterly:

4–H FOR GOOD FARMING AND THE GOOD LIFE

Back in 1955, a 16-year-old boy startled the world of agriculture by becoming the corn-growing champion of the United States. Far from the midwest Corn Belt, Lamar Ratliff, a 4–H Club member of Baldwin, Miss., grew 304.38 bushels of corn on a measured acre. (The U.S. average yield in 1955 was 40.6 bushels.)

This was no flash-in-the-pan achievement. In several previous years, young Ratliff had made sensational yields on his project acre. His 4–H training had taught him about soil, seed, irrigation and fertilization; more than that, it had inspired him to excel, instilled that competitive drive which is prerequisite to any victory. Some people hailed the boy as a corn-growing genius, and maybe they were right. But Ratliff's 4–H training had taught him to apply that genius to practical ends.

On countless other farms in every State, more than 2,253,000 4–H Club boys and girls are engaged today in projects of farming, home crafts and community betterment which are teaching them better agriculture, better citizenship, better living. These solid achievements of rural youth, under the 4–H banner, make few headlines. But they should be heeded by those inclined to judge the younger generation by the much-publicized crimes of juvenile hoodlums.

4–H BEGINNINGS

The 4–H idea began to take shape years before its formal organization into the club whose emblem is the green four-leaf clover with the words "Head, Heart, Hands, and Health."

As early as 1856, none other than Horace Greeley sponsored a corn-growing contest for boys in Cattaraugus County, N.Y. The record of one contestant, young Franklin Spaulding of East Otto, N.Y., and his exhibit of corn, are still preserved in a local library and would be credited today as an acceptable 4–H project.

During the latter decades of the 19th century, Cyrus McCormick's reaper was taking over the jobs of thousands of farm hands. Rural youth, out of work on the farm, headed for the cities in droves. Alarmed by this trend, leading agriculturists, educators and others saw a need to reawaken the interest of farm youth in farming, as a means of livelihood and a way of life.

As few rural teachers were versed in agricultural subjects, the State college experiment stations were called on to furnish information. Farming institutions joined with school superintendents in promoting contests in crop production and soil testing. One such program, conducted in 1900 in Macoupin County, Ill., provided seed corn to each of 500 boys who grew the corn and exhibited their best ears for prizes at harvest time.

Then as now a leading crop, corn was the subject of many of these youth projects. In January 1902, Albert B. Graham, school superintendent in Clark County, Ohio, organized 85 boys and girls in an agricultural club to grow corn, plant vegetable gardens and test soil.

Elsewhere, school superintendents followed suit. In the South, where diversified farming was being urged because of boll-weevil damage to cotton, Dr. Seaman A. Knapp, of the U.S. Department of Agriculture, encouraged the formation of boys' corn clubs. The first of these was organized in 1907, in Holmes County, Miss.

By now the youth-in-agriculture movement was fanning out over the East, Midwest, South and Southwest. The early farm-youth clubs had enlisted mostly boys, but in 1910 Miss Marie Cromer, a rural-school teacher in Aiken County, S.C., started the first of the girls' canning clubs which today are nationwide.

Such were the beginnings of 4–H. The club's officials today state that the movement cannot be attributed to any single individual but grew out of the efforts of many. Albert B. Graham, however, who died in Columbus, Ohio, on January 14, 1960, was cited in his obituaries as the founder of 4–H. Mr. Graham's death, at the age of 90, came exactly 58 years after he had organized his corngrowing club, and throughout that time he had continued active in 4–H work.

PROJECTS AND PROFITS

Graham and other pioneers saw the extension of the 4–H emblem to every State and virtually every rural county, and to Canada, too. Despite the sharp decline in farm population and the trend toward fewer and larger farms, 4–H activity is reaching new peaks. Increases in urban and rural nonfarm enrollments have offset a slight decline in farm membership. In 1958 (latest year of 4–H statistics) the 2,253,999 enrollments represented an alltime high, and included a slight majority of girls.

The 4–H age bracket is 10 to 21; the average age is about 12½. The organized 4–H clubs, supervised generally by county agents and led by local adult volunteers, numbered 92,932 in 1958—also an alltime high.

"Project" is a key word in 4–H. A project may occupy a boy or girl for weeks or months, perhaps for years. A boy engaged in swine production, for instance, starts with one little of baby pigs. He feeds and cares for them, raises them to market weight, and then demonstrates his results. Local club members compete for county prizes: county champions go to the State fairs; State champions exhibit livestock or corn, or otherwise demonstrate their knowledge of a subject, at the National 4–H Congress held annually in November in Chicago.

Rewards of success are often more tangible than the recognition of ability. Though the 4–H philosophy properly deemphasizes cash earnings, it is by no means unusual for a 4–H member to make his project pay for a year or more at college.

Last November, at the 38th National 4–H Congress in Chicago, 154 scholarships, each worth $400, were awarded to 4–H members from virtually every State.

The scholarships, given by industrial firms and private individuals, cited achievements which, in many cases, produced substantial income. Walter L. Record, a 20-year-old Lyme, N.H., boy, was awarded 1 of the 12 scholarships given by the Ford Motor Co. for national achievement. Walter started 4–H club work in 1947, with assets of two animals. Today he has 40 Holsteins, 120 Hampshire sheep, and several hundred poultry. He has won 136 blue ribbons since 1949. Graduated from Hanover High School in 1956, he has taken charge of 100 additional Holsteins during his father's illness. In his 4–H project Walter has sold $3,850 worth of cattle and grossed over $14,000 in sales of dairy products and bull services.

A long way from New Hampshire lives 19-year-old Margaret Ann Burk, of Vale, Oreg., the only girl among six winners of the Du Pont scholarships in the 4–H beef program. Miss Burk started her 4–H work in the usual modest fashion, with a cow and calf, 10 years ago. Her herd of registered Herefords now numbers 20 and is valued at $4,700. Her animals have won for Miss Burk's trophy collection 5 cups or plaques, 12 blue ribbons, and 20 second- and third-place ribbons.

Some of the projects are less remunerative but nonetheless challenging. The electrical program, for example. To win a scholarship in this one—provided by the Westinghouse Educational Foundation—you have to be a veritable wizard with volts and amperes. Sixteen-year-old Robert James Sims, of Grand Bay, Ala., possessed enough wizardry to be one of 6 national 4–H winners last fall out of 133,000 members engaged in electrical projects. Robert's products, some of them fashioned of discarded and salvaged parts, include a chick brooder with heat lamp, a 20-foot exhaust fan, a hi-fi preamplifier, a portable sound system (used at several school and community events), and a six-station intercom which was set up between buildings and tents at the Greater Gulf States Fair at Mobile. We would guess that the name of Robert James Sims may be a prominent one before this electronics age is much older.

Among the national winners are quite a sprinkling of city-bred boys and girls, and some of them go in for projects that attract the dedicated scientists. Consider young Morgan Morrison, 17, of 112 South Aberdeen Street, Arlington, Va. Morrison's interest is entomology, and his urge to study "man's chief competitor, the insect," led him to form a 4–H Club in his city three years ago. His own project was to prepare a reference collection of beneficent and harmful bugs. He now has a classified album of 800 insects, of 690 species, representing 22 insect orders and including data on life cycles. Basic knowledge acquired in 4–H studies has been applied to practical ends. Morrison has controlled in his local area such pests as rose and maple aphids and Japanese beetles. He had conducted surveys for campaigns against the Mexican bean beetle and the European corn earworm; carried out 3 insecticide-research projects under joint grants from industrial firms; built 20 exhibits and given 120 demonstrations on entomology; lectured and appeared on TV programs. His insect collection has been used as a reference tool by his high school and as a classification aid by the County extension service.

For this formidable roster of achievements Morgan Morrison earned one of the Hercules Powder Co.'s six scholarship awards for entomology. No less than 47,000 club members competed in this program.

There is old saying: "Don't send a boy on a man's errand." The youthful 4–H'ers are disproving that dictum every day, on a million farms.

In the variety of its projects, 4–H offers dozens of opportunities and challenges to the imagination and ingenuity of the young.

The foregoing examples merely typify those of 154 national winners, boys and girls, kids from early teens to early twenties, in projects ranging from food preparation to forestry, and embracing corn, wheat, cotton, tobacco, beef, dairy, poultry, swine, home improvement, clothing, home economics, health and nursing, safety, soil and water conservation, and many other activities that contribute to better agriculture and better living. Other than the 154 top winners, thousands have won county and State awards, and tens of thousands have performed to the credit of themselves, their local clubs, their leaders, families, and communities.

Some 4–H projects that never get close to a national award can nevertheless be of great local benefit. Recently in the Deep South

the success of a single 4–H member boosted the farm prosperity of an entire county. In Lee County, Miss., Negro 4–H'ers started milk-production projects in 1951. So successful was Roy Beene, of Guntown, in raising production per cow to profitable levels that his grandparents bought additional dairy cattle through the Farmers Home Administration, and now have 13 head. The news spread; today many of the 1,000 or more Negro farmers in Lee County are making money in dairying by feeding and breeding according to the doctrine of Roy Beene.

Investments in 4–H youths are considered gilt-edged by many banks, Rotary clubs, and others who finance the purchase of pigs and baby chicks for 4–H projects. Such loans are later repaid, with interest, by the sale of hogs and poultry resulting from the original stock.

Collectively, 4–H club members earn millions of dollars a year directly from projects. Indirect earnings are incalculably greater, for their 4–H work equips them for profitable farming or for jobs in other fields. Among today's distinguished 4–H alumni are Governors, Senators, editors, clergymen, and high officials in the Department of Agriculture and other branches of government.

THE 4-H SETUP

The organizational pyramid of 4-H rests on the foundation of the local clubs and rises through the county, State, and national levels.

The National 4-H Foundation, an organization of the Cooperative Extension Service, was created 10 years ago to serve as a supporting arm of Extension's youth program. The Foundation appraises educational projects and keeps them geared to the new technological age of agriculture. It enlists private support for 4-H work and provides certain physical facilities, specifically the National 4-H Club Center.

The Center, a large and handsome edifice in Chevy Chase, Md., near Washington, was officially opened by President Eisenhower on June 16, 1959. This new building houses the Foundation's offices, provides meeting rooms for 4-H conferences and those of other eligible groups, and accommodates up to 300 persons in its dormitory-style bedrooms. First major meeting in the Center was the 29th National 4-H Conference in 1959—an event which, in former years, saw its delegates living in tents pitched on the Mall before the Department of Agriculture Building.

The foundation and its associated activities, such as the International Farm Youth Exchange, are financed by private funds. Donors have included 4–H members and leaders, business firms, foundations, and private citizens. Member companies of the Corn Industries Research Foundation, Inc., are among the contributors.

In the half century since men like Albert B. Graham revived a lagging interest in agriculture by starting a few farm boys on corn-growing projects, the 4–H movement has inspired many millions of youngsters to probe the scientific truths of agriculture. The results cannot accurately be measured, but the fact is that America's agricultural production is the envy of the world. This global supremacy in farming assuredly owes much to the 4–H training of farm youths who have become the master farmers of the present day.

4–H has shown the way not only to better farming and the all-important production of food, but to qualities of homemaking and citizenship which are the true bases of this Nation's leadership.

A Manifesto for America

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. McINTIRE. Mr. Speaker, I insert into the RECORD this thought-provoking article by Harold B. Wess, professor of business administration at American University:

[From Human Events, Mar. 10, 1960]

A MANIFESTO FOR AMERICA—WHAT IS NEEDED TO STRENGTHEN OUR COUNTRY

(By Harold B. Wess, professor of business administration, American University)

In his recent visit to this country, Khrushchev said that capitalism followed feudalism and that communism follows capitalism. When asked what will follow communism, he answered in typical Communist double-talk that since they had not fully tasted the cake of communism, why talk about it now? Someone should have pointed out to Khrushchev that in Russia communism was preceded by semifeudalism and not by a capitalistic society, and that in China, communism was imposed on a feudalistic state. In all other countries, communism was imposed by military force or by infiltration and subversion by Russia and China.

Communists are trained in the skill of dialectical materialism, the theory that social and economic changes are the result of materialistic forces only. If we fail to challenge this untruth, it will inevitably lead us to the conclusion that only communism, the so-called classless society, is the answer to all human problems. Karl Marx predicted that ultimately the state as a force will wither away and the utopian classless society evolve. After more than 40 years there seems to be little indication that the state in Soviet Russia is showing any signs of withering.

Our reaction to Khrushchev's propaganda, as reflected in the press, radio and television, indicates a strong fear that Soviet Russia will overtake us militarily and economically and ultimately become the most powerful nation in the world. Even a former ambassador to Russia finds himself in the dilemma of suggesting, by implication, that there is little hope for this country unless we change the very character of our society. After enumerating areas of weakness in our society, such as overemphasis on personal comfort and amusement, too much privately sold gadgetry, an educational system where quality is sacrificed to quantity, he had this to say: "* * * if you ask me whether such a country has, over the long run, good chances of competing with a purposeful, serious and disciplined society such as that of the Soviet Union, I must say that the answer is 'no'."

Is the implication of statements such as this one which have been made by others as well, and by some in very high places, that we ought to impose a disciplined society on the United States? Do these people mean to say that within the framework of the free enterprise system we cannot meet the Soviet challenge? When people speak of our lack of a "national purpose," what do they really mean? They never spell it out.

Underlying these pessimistic and alarmist statements is a tacit assumption that our social system, which has enabled us to become the greatest Nation in the world through the fostering of plural centers of initiative with decisionmaking and values concentrated not only in our Government, but in the home, in professional associations, business corporations, labor unions, church groups, universities and other forms of associations in a free society, can no longer work. Do they really wish to imply that the only way to meet the Communists' challenge is to become more like them? I submit that we do have a national purpose but that we have failed to spell it out and to be articulate about it.

In our present uncertainty and panic let us remember what our national purpose must not be—it must not be the easy road blueprinted by some dictatorship or powerful centralized Government. There were many in this country during the Nazi and Fascist era who believed that these doctrines were "the wave of the future." There are many today in our midst who likewise believe that communism is "the wave of the future." We must not compromise with our belief in the sanctity of the individual. We must not deteriorate the integrity of the purchasing power of the dollar. We must not forget that there are many millions of people with fixed incomes who see their purchasing power dwindle year after year to a point where they cannot make ends meet. Among these it is estimated that in the 1960's there will be about 20 million people over 65 years of age. Above all we must not compromise with the underpinning of the Judeo-Christian ethic of our society.

Let us not listen to the false prophets who would lull us into a sense of well being generated by inflation where people have more and more dollars that are worth less and less. This is a sure road to ruin.

We must also guard against anything that will slow up our ever-increasing productivity per worker. Increased productivity per worker is basically the result of the capitalist system of reinvesting a substantial part of its earnings in new and better tools of production. But this is being eroded by ever-growing featherbedding and restrictive practices. If this should continue unabated, our productivity may slow down to a point where the Russians can overtake us, not because they are stronger than we, but because we are not making maximum use of our productive potential.

An example is the railroads. There was a time, years ago, when a run of 100 miles of freight took 8 hours and a run of 150 miles of passenger service took 7½ hours. Today the run from New York to Chicago of 900 miles takes 16 hours, but the railroads are required to pay 9 basic days for the total run. The Chicago-Denver run requires eight different engine crews, each averaging a run of about 2 hours. Similar restrictive practices exist in the building industry, and in many other areas of our economy. One thing is certain, if we do not eliminate these restrictive practices our economic growth must inevitably slow down and our standard of living cannot continue to expand.

These are some of our national purposes and if pursued faithfully and vigorously, we need have no fear for our future either from communism or any other form of dictatorship. Our difficulties today arise from the fact that we are moving away from the fundamental principles that have been the underlying basis for the dynamic growth of our country.

We have failed to imbue our young people with the knowledge and understanding that what has made our Nation great has been not only our genius for production but

also our jealous concern for the rights of the individual. If we had to name just one thing which distinguishes our society from that of the Communists, I would place the rights of the individual first.

After spending a lifetime as a business executive and having been in recent years a professor, I am disturbed by the lack of understanding on the part of young people of what makes our social system what it is. During a seminar in business management, for example, I made the statement that it is the duty of every businessman to participate in the civic, cultural, and philanthropic life of his community. One of the students in unmistakable tones of animosity said, "What makes you think that businessmen are better qualified than others?" It was obvious that he was harboring a prejudice toward businessmen. This is not the first time I have encountered this type of reaction but it is surprising that it should come from students preparing for business careers. It may come as a shock to many that students in our high schools, colleges, and even those in graduate schools are not taught the basic principles of our economy nor what makes for a free enterprise system.

Public debates in the press and other fields of communication seldom come to grips with these basic principles so it is not surprising that we panic every time there is a temporary downturn. Some who have been predicting the doom of our capitalist society have witnessed instead, not only survival, but tremendous growth and expansion. They fail to understand the uniqueness of our system which has forces within it to transform and adjust to changing conditions without changing its basic character.

In a seminar in human relations in business I find a lack of sensitivity to spiritual values. During a discussion of a problem involving human values I reminded my students of the teachings in the Sermon on the Mount. While they agreed these were noble lessons in human conduct, they did not believe that in actual practice they could be applied. In relating this to a friend of mine, he asked how I could reconcile my belief that this country has been built on the rock of the Judaeo-Christian ethic and my concern for the deterioration of these spiritual values. My answer was that we are still living on the accumulated spiritual forces built into our society by our Founding Fathers and the great leaders who followed them.

Our weakness is that we are looking for easy and quick answers to problems. We will grab at short range reforms in spite of the fact that they may violate long range principles. A good example is our noble experiment of prohibition. Some well-meaning people, disturbed by the increasing use of alcohol, were influential in establishing prohibition in this country. Theirs seemed a simple solution—pass a law that will prohibit the manufacture and sale of alcohol and people would have to stop drinking. But they overlooked another law, that of cause and effect, and failed to anticipate the chain reaction which followed. Prohibition brought in its wake gangsterism and corrupt politicians which continue to plague us even today.

Let us take the recent steel strike for instance. Nobody will deny that a prolonged steel strike adversely affects our economy. The solution for some well meaning people would be a law to empower the Government to deal with such a situation. If this should mean that the Government will have the power to set wages and prices of steel, it also follows that it may determine the profit of steel companies. Should profit become so fenced in, the public will not be attracted to invest in steel companies. This would lead to insufficient capital with which to expand plants and improve machinery. Here we have what appears to be a simple solution but it could start a chain reaction which might conceivably lead to the socialization of the steel industry. Granted that strikes of the magnitude of steel are bad for our economy, we must be certain that the cure will not be worse than the evil itself.

A good many reforms being urged upon us today must ultimately lead us to socialism. We have gotten into the habit of using palliatives and hypodermics that were applied to alleviate certain economic problems 25 years ago which no longer apply to present economic conditions.

As a civilized and spiritual Nation we know that wrong means never justify ends, no matter how noble. In fact, we know that wrong means ultimately become ends in themselves. The noble experiment of Karl Marx of a stateless society, with each individual voluntarily contributing his labor and everyone receiving according to his needs, was established through means of dictatorship and murder. The means used have now become ends in themselves. Instead of a classless society there is a new and most powerful ruling class in Communist Russia; instead of a stateless society they have the most powerful state in the world and instead of freedom, they have virtual slavery. We must be ever vigilant that we do not adopt improper means which would curtail the rights and sanctity of the individual, or which would place too much power in any segment of our society.

We must not allow our horizons for the future to be beclouded by ignorance and the mistakes of the past. We must not allow precedents to limit our growth. Time was when man thought that only wooden ships would stay afloat and, so long as he believed this, he was bound by that precedent. As soon as he discovered the principle of flotation, he was freed from this precedent and began to build iron ships. So it is true for an individual, a business or a nation. So long as we allow ourselves to be bound by precedent and lose sight of basic principles, we stunt our growth.

There are many examples of how precedents are hemming us in right now. Take our farm program which was inaugurated years ago at a time when the farmer needed help desperately. This emergency action by the Government to help the farmer has become a precedent which we are unwilling to replace with the principle of the free marketplace. We now hand out large sums of the taxpayers' money to big farming enterprises that should be able to establish a price-cost relationship and a healthy marketing program as other enterprises in our economy do. Instead, we depart from the basic principle of a free market economy, thus artificially keeping prices up, trying to keep production down without noticeable success, and of course, contributing an important share to inflation.

We have similar precedents, such as subsidies and tax laws introduced for reasons which no longer apply and which in effect actually inhibit the growth of our economy by distorting economic incentives. Let us consider our foreign aid program which was started after World War II when most countries were in desperate need of help. We continue this aid as a precedent, although the need has been considerably reduced. Today, there are many nations economically in a position to contribute their share to underdeveloped countries, but not doing so.

Another example of a precedent we seem unable to eliminate is the matter of fixing railroad rates. When the Interstate Commerce Commission first came into being it was undoubtedly necessary to fix railroad rates, but today competition among other methods of transportation makes such price fixing outdated and unnecessary.

These are but a few examples of how we have been functioning within the framework of precedent instead of fundamental principles. A nation, a business, or an individual can only continue to grow by discovering and understanding the principles underlying its progress and growth and avoiding the pitfalls that bind it to precedent. Were this not true, we should still be primitive savages.

Our way of life, our capitalist society, is still in the process of growth and we must stop looking back at what preceded it and begin to think of the road ahead. Our manifesto for America therefore consists of adhering to the following:

1. The sanctity of the individual must not be violated even though it may appear that communism has made great strides by doing just that.

2. We must continue to increase productivity per worker as a basis for a higher standard of living.

3. We must protect the integrity of the purchasing power of the dollar.

4. We must avoid the danger of short-range reforms as immediate palliatives if they violate our basic principles of long-range objectives.

5. We must not use wrong means to achieve desired ends no matter how desirable they may seem to be.

6. Our best and surest way of meeting the Communist challenge is to keep alive the image of the destiny bequeathed to us by our Founding Fathers.

Box Score in Space

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of April 14, 1960:

BOX SCORE IN SPACE

Coming so soon after Pioneer V's flight into orbit around the sun, and Tiros I's bow as the world's first picture-taking weatherman with a globe-encircling eye, the successful launching of Transit I–B serves as striking additional evidence of the steady progress our country is making in its effort to be second to none in space.

The Navy, using Air Force rocketry, is responsible for having put this latest of our earth satellites into orbit. Although described as "only" a test vehicle, Transit I–B represents a vital step in the development of a great new navigational system of far-reaching military significance—not merely in terms of guiding warships at sea, but also in terms of insuring the accuracy of nuclear ballistic missiles like the Polaris.

Indeed, according to spokesmen for the Navy, this new traveler in space confirms predictions that the United States—by 1962, if not sooner—will have in operation a full-scale transit system made up of four signaling satellites (each in a different orbit) covering every square mile of earth. Clearly, as soon as such a system is functioning, missile-bearing vessels, particularly the Polaris submarine, will be endowed with a deadly new degree of effectiveness, and all

other ships—including nonmilitary passenger liners—will have spatial navigational assistance enabling them, as never before, to determine their exact positions almost instantaneously.

So Transit I–B, through basically a military project, holds out a good promise of important peaceful applications. More than that, it helps to remind the world at large that our country is doing rather well in competing with the Soviet Union in space. The box score may be set forth as follows, dating it from October 4, 1957, when the Russians startled all of us by putting into orbit sputnik I, history's first manmade earth satellite:

(1) Seventeen earth satellites launched successfully thus far by the United States, with eight continuing in orbit. (2) Three launched successfully by the U.S.S.R., with none now in orbit. (3) Four deep-space probes successfully launched by us, with two—Pioneers IV and V—hurtling perpetually around the sun. (4) Three deep-space probes including Lunik II's hard landing on the moon, launched successfully by the U.S.S.R. And (5) all Soviet instruments now absolutely silent as important information is still being transmitted by five of ours—Vanguard I, Explorer VII, Pioneer V, Tiros I, and now Transit I–B.

This is a comparison that speaks pretty much for itself. Although the Russians still excel us in the rocket power needed to put heavy payloads into space (an advantage they are likely to lose in the next year or so), our American program continues to produce scientific data more efficiently and in greater volume than theirs. We have no reason to be complacent, of course; but neither have we any reason to belittle ourselves.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Medical Care for the Aged

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1960

Mr. HUMPHREY. Mr. President, this past week it was my privilege to testify before Senator McNAMARA's Subcommittee on Problems of the Aged and Aging in support of legislation to provide medical insurance to our older citizens as proposed in the Forand bill and in my bill, S. 1151.

I ask unanimous consent that my statement be printed in the Appendix of the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE HONORABLE HUBERT H. HUMPHREY, U.S. SENATOR FROM MINNESOTA

Senator HUMPHREY. Thank you very much, Mr. Chairman.

First, I want to express my thanks to the chairman and subcommittee not only for the opportunity of appearing at this hearing, but for the splendid work that the chairman and the subcommittee have already undertaken and accomplished in the field of the problems relating to the care of our senior citizens. I believe that the work of this subcommittee has done a great deal to guide the thinking of the Congress in all of these matters of legislation concerning the care of our senior citizens.

Mr. Chairman, I am particularly pleased to see Representative FORAND here this morning and I am grieved to read the announcement of recent date that he would not seek reelection. I might say that the most popular man that I find in America today amongst people who are thoughtful and are concerned about their fellow human beings is Congressman FORAND and it is a justly deserved tribute to you, Congressman. You have pioneered in this area and shown the way, and I believe those of us in Congress who have followed in your wake, so to speak, owe you a great debt of gratitude and appreciation.

There is only one other man that I can think of that has consistently joined in this same great effort and that is our own colleague here in the Senate, Senator MURRAY who, for years, has been advocating the extension and improvement of our social security system in the health field. Of course, the father of the Congressman from Michigan [Mr. DINGELL], whom I had the privilege of knowing when I first came to the Senate, was another one of those pioneers. Both he and Senator MURRAY took a great deal of abuse in earlier days for their efforts to improve medical care but I noticed it did not seem to affect them particularly. People still placed their faith and trust in them.

When I first came to the Senate I joined in Senator MURRAY's amendment to the Social Security Act which would have provided for hospitalization under social security for those who were to be the recipients of old age and survivors insurance.

Since that time social security has been greatly expanded in its coverage. I believe I am correct in saying that about 8 out of 10 wage earners are covered under social security and I think that in time it will be pretty much universal. It well ought to be.

We also now have arrangements for the self-employed to be covered as the Forand bill indicates.

Mr. Chairman, I have a statement that I have prepared and I am going to ask—with your permission and consent—to have that statement made part of the record as if I had delivered it in person.

Senator MCNAMARA. It will be made part of the record at this point without objection.

Senator HUMPHREY. Along with that, if the chairman will permit a statement of a five-minute radiocast to my own constituents back in Minnesota, along with a brief analysis of provisions relating to the Social Security Act in which I have particular interest.

Senator MCNAMARA. That, too, will be made part of the record in the same manner at this point. If you will see that the reporter is supplied with a copy it will be placed into the record.

(The statements follow:)

Mr. Chairman, I appreciate this opportunity to testify in support of legislation to help in meeting the urgent health needs of our older citizens. This subcommittee is to be congratulated for directing attention to this crucial problem. Your hearings and reports make a wonderful contribution to public understanding of the needs of our older citizens.

We are now in the 25th anniversary year of social security, a program which has paid tremendous dividends in human welfare and human dignity for American citizens by making many welfare benefits a matter of earned rights rather than a matter of charity.

The conscience of our affluent society must now face up to the moral challenge presented by the health care needs of our senior citizens. This is a human problem. It involves our fathers and mothers, our grandparents and ultimately, of course, ourselves and our children. This is a human problem we cannot—and should not—sweep under the rug. We have the resources and the time-tested method of social insurance to meet this challange successfully.

Last year—as in the 85th Congress—I introduced legislation to help meet this problem. My bill, S. 1151, would provide insurance against the costs of hospital and nursing home care through the Social Security mechanism. Similar in intent and purpose to the legislation of Congressman FORAND—it would add these benefits to those already provided through old age and survivors insurance:

1. Up to 60 days of hospital care, with subsequent nursing home care, if necessary, up to a combined total of 120 days in any year.

2. All hospital services, drugs, appliances and other care ordinarily furnished to patients in semi-private accommodations.

3. Upon certification by a physician, freedom to choose any hospital that can admit them, and which has previously contracted with the Secretary of Health, Education, and Welfare to furnish such services—except tuberculosis and mental hospitals.

4. Similar freedom to choose nursing home service, including skilled nursing care, related medical and personal services and accompanied bed and board provided by a licensed nursing home operated in connection with a hospital or in which a medical doctor directs the care.

This program of hospital and nursing home insurance can be fully financed by an increase in the present social security tax of one-fourth of 1 percent for employers and workers and by an increase of three-eights of 1 percent for self-employed people.

In this way, with the wonderful tool of social insurance, we can spread the heavy health care costs of old age over an entire lifetime of earnings instead of demanding that our senior citizens use up their meager savings just at the time when their income is barely enough for the simple necessities like food and shelter.

Just think for a moment about the heartrending problems of the average retired couple trying to struggle along on $1,440 a year—and the Department of Health, Education, and Welfare tells us that it costs at least $2,300 a year for a couple to live by themselves in a modest fashion—without luxuries.

And the average individual with social security benefits receives only $72 a month. That is scarcely luxurious living. Let us consider the desperate situation facing 1,300,000 aging widows who must try to exist—I can hardly call it living—on average insurance benefits of $56 a month.

The budget-shattering impact of unexpected hospital costs creates terrible anxieties and hardships for these people. Three out of every five men and women past 65 have no protection against hospitalization costs. A survey published last year by the Health Information Foundation showed that half of the people over 65 without health insurance could not afford it or were denied coverage.

Insurance companies have taken steps to cover a larger proportion of our older citizens in their private health care plans. These efforts are indeed praiseworthy, but it is clear that the greater health care needs and the lower income of aged people do not make them good insurable risks for private carriers. Either the private insurance company must raise its premium to a prohibitive level for low-income pensioners, or the company must impose such restrictions on benefits that the value of the coverage and protection is too small in comparison to the need.

A working man in his earning years usually can take advantage of group hospitalization, but when he retires, his income goes down drastically, his right to group coverage in hospital insurance plans is often lost, and the cost of private health insurance is often completely out of reach.

Thus, our older people past 65, who use more than twice as much hospital care as the rest of our fellow Americans, find that increased health needs and lower income create terrible financial worries and anxieties when hospital or nursing home care is necessary.

As my friend, Prof. Wilbur Cohen, told this subcommittee last year:

"These are the people who, as they need hospital care, even though they are receiving social security, must ultimately apply for public assistance to supplement their social security to pay for this hospital care; or not receive hospital care; or borrow money; or receive it from relatives or friends; or get free care in some way from the communities."

There are many doctors who provide free services. There are many free clinics and free hospital rooms for indigent patients. Through public assistance programs we spend hundreds of millions of dollars for medical care through our city, county, State, and Federal governments. And, of course, children and grandchildren and other relatives bear many costs of medical and hospital bills during emergencies.

But who will ever know how many aged citizens have suffered, or even died, because they were unwilling to ask for charity, because they waited too long before they asked for help?

And how can we measure the heartache that accompanies the reluctant decision to ask a son or a daughter to exhaust savings or go into debt to pay for the patient's hospitalization or nursing home care?

We cannot be heartless or insensitive to the health care needs of our 16 million fellow citizens who have passed their 65th birthday. I would like to point out that lengthening lifespans in the next few years will mean that many adult Americans will find they have parents and grandparents trying to exist on retirement pensions.

We must have a Government with a heart. A Government which will expand its humane, dignified system of social insurance where benefits are available as a matter of right—a right that results from a lifetime of work and a lifetime of contributions. And I further believe that we must make up for past neglect by blanketing in those Americans who have already qualified for social security benefits.

America's older people deserve protection against rising hospitalization costs this year. I hope this Congress will not allow White House opposition to block action on this urgently needed and thoroughly justified legislation. Certainly the Eisenhower administration has offered no reasonable or workable alternative.

For 8 years the President and Vice President and their experts at the Department of Health, Education, and Welfare have had plenty of opportunity to come up with some plan to help elderly Americans in time of serious illness.

But now this Republican administration is suggesting that action be postponed for another study—in spite of the backlog of urgent needs, in spite of overwhelming demand for action. We have had plenty of studies. We have files full of evidence on the need to protect our older people against unexpected health costs. Any Member of Congress who reads his mail knows just how concerned, how worried and anxious our older people are about the costs of serious illness.

I say Congress must act now, because, if we wait for the Republican go-slow, not-now, veto administration to take action on a program to help finance health care, we will wait forever.

I do not doubt that a voluntary program involving local government as well as State and Federal support can be invented for an election year. But I believe we should let commonsense and reason guide us—instead of creating an administrative monstrosity.

We already have a successfully operating national program of social insurance to help take care of Americans in their retirement years. Social security has helped to make our country great and strong. Social security has enhanced human dignity and welfare—and it has done so with an administrative cost of less than 2 percent. Let us improve and expand this wonderful program. Let us help protect the health of our senior citizens economically and effectively. Let us show them government with a heart.

Protection against hospital costs through social security has top priority but it is only one of the steps we must take to give security and dignity to our senior citizens in their retirement years. I have introduced other legislation to help older Americans, but I do know that you are chiefly concerned at this time only with the problem of health care for the aged.

Mr. Chairman, I ask that you include in your record of hearings the text of my radio speech of March 7 and my newsletter of March 11 about my 6-point program for senior citizens. I believe Congress should give most urgent attention to legislation carrying out this program.

I deeply appreciate this opportunity to discuss the health needs of our senior citizens with you. Thank you very much.

A PROGRAM FOR SENIOR CITIZENS

(Text of recording by Senator HUMPHREY week beginning Mar. 7, 1960)

We often hear the word "crisis" thrown about these days. It is a word which is used all too often to describe problems of all types.

Today I want to talk with you about a problem which is truly critical. It is a problem which can not wait for more talk and more study. It is the crisis faced by our Nation's senior citizens.

Let me first give you an idea of the immensity and growth of this crisis. In the year 1900, there were only 3 million Americans over the age of 65. Today there are nearly 16 million. In 10 years there will be more than 20 million.

But these are just figures. They do not tell the pathetic story of the needs of our senior citizens in terms which all of us can understand.

They do not tell the story of the elderly widow whose income is so low her day begins and ends with a sense of hunger.

They do not tell the story of the elderly man who needs but can not afford hospital or nursing home care for illness or disease.

They do not tell the story of the elderly couple who live each day in fear of losing the roof over their heads.

We hear noble talk about "the golden years." But more and more people are finding that these are years of despair and anxiety. This is a disgrace for a nation with our wealth and luxury.

I am not just talking about a few isolated cases. Millions of Americans—through no fault of their own—are existing without adequate incomes, health care or housing, and without a recognized role in the community.

The Department of Health, Education, and Welfare tells us that it costs at least $2,300 a year for a couple to live by themselves in modest fashion.

But the average retired couple on social security receives only about $1,440 a year.

And 60 percent of the individuals retired on social security have less than $1,000 a year in money income.

Even more desperate is the crisis facing the 1,300,000 aging widows who now receive an annual social security benefit of $56 a month.

I ask you, is this what our mothers and fathers deserve? Do these fine citizens deserve a shabby rented room and a diet of bread and soup in their final years?

There are selfish and narrow-thinking persons who say the problem is not theirs. They say "It's every individual for himself." They say every individual has total responsibility to plan for retirement.

I agree that we should all plan on an individual basis to provide for our future needs. But the best plans and preparations of all men can be crushed by forces beyond their control. Disease, economic fluctuations and just plain bad luck can make a mockery of even the wisest investments and preparations.

What we need is a new dedication to end the crisis facing our senior citizens. What we need is a government with a heart and understanding. And what we need right now is action on a program to allow our senior citizens to live with dignity, security and a sense of usefulness.

Let me specify six steps which are vital to such a program:

1. Increase social security benefits to keep pace with living costs.

2. Increase from $1,200 to $1,800 the amount which individuals may earn without losing social security benefits.

3. Extend the social security system to cover costs of hospital and nursing home care for senior citizens.

4. Establish minimum Federal standards which States must meet for old-age assistance programs.

5. Provide effective Federal assistance for specialized housing programs for the aged.

6. Allow a tax credit incentive to encourage hiring of older workers.

I have sponsored legislation for these purposes in the Senate and will continue to fight hard for favorable action. This is no sudden effort on my part. I have never forgotten—and I will never forget—the crisis facing our senior citizens. We must let them know they are not alone.

NEWSLETTER

(From the desk of Senator HUBERT H. HUMPHREY, special to editors—week ending March 11, 1960)

A program for senior citizens. We hear noble talk about the "golden years" for our older citizens settling down into retirement. But too often these years bring despair and anxiety.

Millions of Americans, through no fault of their own, are barely existing, without adequate incomes, without access to adequate health care, without decent housing, and without the dignity and respect to which they are entitled. An action program to help our 16 million senior citizens is needed now.

Desperate needs: A married couple living by themselves needs at least $2,300 a year for a modest, minimum standard of living—but the average couple retired on social security gets only $1,440 a year. And three out of five people on social security pensions get less than $1,000 a year in cash income. Do these citizens deserve a shabby rented room and a diet of bread and soup? Should they be forced into overcrowded charity wards in hospitals and nursing homes when the savings of a lifetime are wiped out by unexpected sickness or hospitalization? I say this is disgraceful and unjustified in our rich and productive country.

Dividends of medical research: Wonderful advances in medical science promise eventual conquest of crippling and killing diseases such as arthritis and heart ailments. A man of 65 today can expect to live another 13 years and a woman will probably live another 15½ years. If medical research continues successfully, we may have 30 million or 40 million people over 65 instead of the expected 20 million. My Senate Subcommittee on International Health is helping to advance research on the problems and the process of aging. But, in addition to lengthening life spans, we can put more "life" in the retirement years. We can give our older Americans the security and the dignity they need and deserve.

Action program for 1960: Since I first came to the Senate, I have worked for legislation

to help America's older people. Here is my action program:

1. Health benefits. My health benefits proposal will give protection against the heavy costs of hospitalization and nursing home care through social security.

2. Increased social security benefits to keep pace with rising living costs. A 30 percent increase in the minimum payment is needed.

3. Raise earnings limits from $1,200 to $1,800 so benefits won't be lost by many older workers.

4. Minimum Federal standards for State old-age assistance programs. Protect the dignity and self-respect of relief recipients. Abolish public "shame" lists.

5. Effective Federal assistance for special housing for the elderly.

6. Tax credit to encourage hiring of older workers.

Government with a heart: This is the 25th anniversary of social security—the first major attack on poverty, helplessness and shattered family life. In these 25 years, we have created "government with a heart"—a government properly concerned with the welfare of all citizens, not as an act of charity, but as a moral and social obligation—bringing new security, new dignity and new independence to millions of American families.

I am sure you know that a number of us have been meeting with rather substantial numbers of people in recent weeks and I have been asked many times by reporters, by interested citizens, by commentators—what are the American people concerned about? I think the chairman of this subcommittee, along with his associate here from the House of Representatives, Congressman FORAND, would be interested to know that in a series of television programs that I conducted called "Ask Senator HUMPHREY" just a question and answer program with people just calling in with no advance preparation, just picking up the phone and calling the television station—that we had more questions on the problems of medical care and hospital care for the aged than all the other questions put together.

Now, these were just people calling in, not any organized group.

Also, I found out in analyses relating to those questions that a goodly number of them came from younger people, not the elderly who were already eligible for social security benefits, who were concerned, first of all, about their own parents and what would happen to them under prolonged sickness, and secondly, they were concerned about their own future, what kind of care would they get?

Mr. Chairman, the costs of local and county and State governments in the field of health care for our elderly has become one of the largest items of cost, next to education. The property tax burden upon citizens and localities is a very heavy one. In fact, I would say that many communities today have property taxes at such high rates that they act as a deterrent to further economic expansion in the community.

One of the reasons for the high property tax is medical and hospital care of the needy, the indigent and the elderly. In my own State of Minnesota, we give pretty good care to our elderly people. We feel, through our University of Minnesota Hospital, University Medical School, through our welfare departments, we have done a good job, but, Mr. Chairman, this has become a very, very heavy burden upon the property owner. That is the only way we have raising taxes for them with the exception of an income tax which has its limitations and has its dedicated funds.

Through the wonders of medical science and technology, we have been able to extend the lifespan of our people, we have come to the point where we have a substantially larger group of people 65 and over to be cared for.

Now, their sickness increases with age and their capacity to pay decreases with age. The incidence of the need of hospitalization goes up with age and the ability to pay for it goes down.

One does not have to be a wizard to figure out what ought to be done. What needs to be done in a country such as ours is to provide some means of caring for these people. This is just elementary social justice.

Now, the argument apparently is not over whether or not they should be cared for at the moment even though I think that behind some of the pettifogging that goes on, there is a little argument about that. But, let us assume for a minute that everybody wants to provide hospitalization, nursing home and medical care for the elderly. Then the argument comes down to the means of doing it.

If we are going to spend the next year, 2 years, 3 years, arguing over means, we are doing it at a great expense because in the meantime a large number of people are being inadequately cared for.

We have a true, tried, and tested method for providing adequate care. That method is under the social security system.

The Forand bill provides freedom of choice for hospitalization, freedom of choice for the surgical service. I have introduced a bill, S. 1151, which does not include the surgical services but includes all hospital care, all nursing care, including the drugs and other items that are required under nursing home and hospital care.

I put that bill in because I thought it might be well to have a bill that provided only hospital and nursing home care as a way of possibly some compromise on the broader Forand bill. But I want the fact quite clear—I support the principles and the details of the Forand bill.

My proposal should relieve some of the attack from the American Medical Association, which is so concerned about the possibility of interference with the freedom of choice of doctors. But I think we ought to put our foot down on this strawman right now. There is no denial of freedom of choice under the Forand bill. The choice is there but it is a real choice. It is a choice you can make and know that it will be paid for. There is no use of having a choice of automobiles, you know, if you cannot buy one, no use of having a choice of homes if you cannot even afford to have a tent. To talk about freedom of choice for doctors and hospitals for the elderly when they have no way of paying for it except to swallow their pride and go on relief and the public welfare rolls, seems to me to be denying the real meaning of freedom of choice.

The Administrative says it is going to come up with some kind of alternative proposal. What we want is a program that will help the patient, that will help the needy.

I recognize that there is a variety of services in this country such as group health and group hospitalization, and various private insurance plans, but let the record be clear: If we could relieve the private medical care programs, the private and group hospitalization and medical care programs of the extra cost that comes with the care of the elderly, premium payments on other insurance policies for the rest of the American people could be substantially reduced.

The way to relieve those costs and to put them in proper relationship with the income is to take the group that are eligible for old age and survivors insurance benefits and include them under social security. Those who do not want to do that are really asking that others pick up a disproportionate share of the bill for a group of people that could have better medical care, better hospital care, better nursing home care, under some provisions under social security. And the cost under social security, according to the studies made in the House and according to private research foundations, can be financed with a quarter of 1 percent increase in the tax on both employer and employee and three-eighths of 1 percent on the self-employed.

This is a modest amount for the care that can be extended.

So, Mr. Chairman, I want to extend to you my thanks for doing a service for first of all, the elderly; secondly, those who will be under private health insurance plans; and thirdly for the insurance companies, themselves, which will be able to give better insurance coverage for the vast number of people under 65, if they can be relieved of the cost and the burden of those above 65.

I thank you very much.

Senator MCNAMARA. Thank you, Senator HUMPHREY. We appreciate very deeply your taking time to be here this morning and to speak so eloquently and well on behalf of the elderly citizens.

Senator HUMPHREY. Senator, for the record, we had a tremendous audience that gathered in Detroit recently on this very issue. All of us in public life know a good audience when we see one. I believe there were about 18,000.

Senator MCNAMARA. That is about what it was said to be.

Senator HUMPHREY. Approximately 18,000 people who gathered in the Coliseum in Detroit, elderly citizens, on a Sunday to urge upon the Members of Congress passage of the Forand bill. I think that every Member of Congress who would come in here and testify would have to admit that his mail on the so-called Forand bill is the biggest bulk of mail that he has today and the letters are not these "jimmied up" ones. These are letters that come in from people who write them in their own way, appealing to the Congress of the United States to do something in this crucial area.

We had better get busy and do something or some of these Members will not be back here. If some of my friends in Congress want a little political health insurance, may I suggest that they get busy and do something for the elderly people?

Senator MCNAMARA. Thank you, Senator. We appreciate your suggestions here this morning and intend to move forward this morning to accomplish the ends you have suggested.

Are there any questions?

Senator BRUNSDALE. I just want to ask the Senator if, under his plan, he wants to limit the contribution through the Social Security payment to one-fourth of 1 percent? If that is not enough, would he not agree that it should be raised so that these people can be adequately cared for?

Senator HUMPHREY. I surely would, Senator.

Senator BRUNSDALE. That is all. Thank you.

Senator MCNAMARA. All the records we have from them indicate this, and you do agree, I take it, Senator, that there is evidence that a quarter of 1 percent from the employer and employee, plus three-eighths of 1 percent for the self-employed, would do the job?

Senator HUMPHREY. I not only think it would do, I think it would more than do the job. This is particularly true if you get the 4 million unemployed in this country employed, Mr. Chairman.

Senator MCNAMARA. And we can look forward to some increase in our gross national product which we expect would take care of some of this unemployment and, therefore, the prospects would be very good.

Senator HUMPHREY. Absolutely. With this economy moving forward at any rate that is worthy of being called America, and with the picking-up of the unemployed and seeing they are reemployed, which is the least the country ought to do, there would be no problem with one-fourth of 1 percent ac-

cording to the actuaries who have studied this.

I am not an expert, but I do know that studies have been made by private groups as well as Congress and that percentage of tax seems to be adequate. But I want to be very frank about it, if it requires, for example, one-eighth of 1 percent more or whatever the figure would be, the Senator from Minnesota does not hesitate to say he would vote for it. I happen to think the American people can afford to have education for their youngsters and they can have decent hospital and medical care for their oldsters. If we cannot, we ought to close up shop, because this country spends a good deal of time wallowing around in its commercial recreation which adds little or nothing to its character.

I think the richest country in the world ought to be able to protect the elderly.

I was over in Sweden, Norway, Finland, Denmark. They do not have nearly as high a standard of living as we do, but there is not an elderly person there that is not given the best medical care that modern science can provide.

If the Swedes, Norwegians, Finns and Danes can afford it, this cosmopolitan society of ours can afford it. I would like to think we could aspire to those heights.

Senator MCNAMARA. Many people oppose the social security approach to solving this problem and have recommended that the States participate in payments to the fund. What is your reaction to that?

Senator HUMPHREY. Well, I think it would be a good idea to go out and find out how the States are going to finance it. You know, Mr. Chairman, there are all kinds of ways to duck an issue, and they have been perfecting some new ones of late. One way that people try to duck the real responsibility for meeting head on an issue is to say "Well, we will let the localities do it," or "we will let the State do it."

And when you go to those same States, you discover that they are often times incapable of financing their education program, their highway program, their basic State services. To load onto them additional responsibilities with their tax base base being sorely limited, is, I think, ducking or avoiding the issue. The real truth is the one area of government that has the capacity to raise the money to pay for this cost is the Federal Government and that is exactly why those who do not want to pay for it, are saying, "Let the States and localities raise the money."

There are constitutional prohibitions in some States against this thing, and there surely are under city charters. I have been a mayor of a city. No one needs to tell me what a problem it is for a city to raise money. I know what has happened to the tax base. I say those persons trying to shift this burden back on local, county and State governments, are really trying to avoid the responsibility altogether.

There are differences. Some States can and are being helpful but in the main——

Senator MCNAMARA. Another suggestion made by the opponents of the social security approach is that it is not or does not take care of a certain number of people, 2 million, 3 million, 4 million. Actually, all of the shortages in our social security system or the failures to meet the total problem under the social security system would be reflected in this program and is it not a pretty good argument for extending the social security system to others when they are so much concerned with this area in connection with medical care?

Senator HUMPHREY. The Senator's insight into this matter is only excelled by his great compassion for the people. The Senator is absolutely right. Now we find people pointing out the shortcomings of social security—the very same people who made those shortcomings mandatory.

I am perfectly willing to have social security cover every person in the Nation. I think it ought to. And I want to say the gaps that are there can be filled as social security is expanded. This is a good argument for expanding social security. Also, I understand that this subcommittee is working on some proposals to cover those not currently covered under social security.

Senator MCNAMARA. That is correct.

Senator HUMPHREY. I might add that if the administration feels as deeply as it apparently claims of late about uncovered workers, it might want to try out its programs on those not covered. That is a possibility. We will see which plan works the best. It would be very interesting.

Senator MCNAMARA. Senator HUMPHREY, we know of your concern to get away. You do have important commitments, and again we appreciate your testimony.

Senator HUMPHREY. I am going over to the Committee on Foreign Relations to see to it that the public funds are protected. I came over here to see that the public interest was at least helped along. I did not need to do much with you as the chairman.

Senator MCNAMARA. I hope you do as well over there.

Senator HUMPHREY. Thank you.

Are Democrats Playing Politics With Science?

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial published in the Palo Alto (Calif.) Times of April 13, 1960:

ARE DEMOCRATS PLAYING POLITICS WITH SCIENCE?

The vote of the Joint Congressional Committee on Atomic Energy against authorization of the 2-mile, $170 million Stanford University linear accelerator was distressing.

That the committee did budget $3 million for design studies is small comfort. This sop suggests—but by no means guarantees—eventual authorization of the project. With a change of Presidents in the offing, anything could happen.

Committee Democrats set the course, with only one Republican joining their majority. Their vote flew in the face of recommendations of President Eisenhower, the Atomic Energy Commission, and the Nation's very finest scientific brains in the high energy physics field.

Senator CLINTON P. ANDERSON, Democrat, of New Mexico, Joint Committee chairman, has offered the explanation that legislators are alarmed by the rising costs of such research tools and want to give this factor more study. That explanation has a tinny ring.

In addition to its unimpeachable scientific backing, the project has had extremely thorough reviews. Every objection the committee has raised—some of them farfetched—has been met.

Then what is the trouble? We can't help suspecting that the project is just too expensive. So expensive that politicians may hate to see rivals get credit for it. So expensive that legislators dislike seeing so much money put on one spot when it could be spread around. So expensive that it may have become a target for partisan whacks at the budget.

It is very discouraging to think politics, not science, may be ruling the work of the Joint Committee, which is supposed to be a "blue ribbon" group of outstanding legislators.

It is even worse that the committee majority is risking U.S. leadership in one field where we are well ahead of the Russians.

How the Democrats can defend their position we cannot see.

If these impressions are false, a frank statement of the reason for defying unanimous scientific opinion—or better yet, authorization of the project—will correct them.

We wish Congressmen VAN ZANDT, GUBSER, and YOUNGER success with their proposed floor fight to reverse the committee decision, but as long as a party line division exists, it is hard to be very hopeful.

Mount Holyoke College Withdraws From Student Loan Program of the National Defense Education Act

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1960

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the RECORD a brief statement announcing the withdrawal of Mount Holyoke College, at South Hadley, Mass., from the student loan program of the National Defense Education Act, in protest against the disclaimer affidavit.

Personally I believe that students should take the loyalty oath, but that a disclaimer affidavit is not necessary. Mount Holyoke College is one more college in Massachusetts which protests against the disclaimer affidavit.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SOUTH HADLEY, MASS.—Mount Holyoke has joined the growing list of U.S. colleges and universities to withdraw from the student loan program of the National Defense Education Act in protest against the disclaimer affidavit.

The board of trustees has voted to endorse the resolution passed unanimously by the faculty on February 8 urging withdrawal because the requirement of the affidavit is "inconsistent with the principle of intellectual freedom."

The Mount Holyoke trustees, in approving the withdrawal of the college from the program, went on record as making a sharp distinction between the loyalty oath required of student borrowers, which they supported, and the affidavit, requiring applicants to disclaim "vaguely defined beliefs," against which they were protesting. They expressly urged support of Senator Kennedy's bill, S. 2929, which has my full support, for repeal of the affidavit, which has been endorsed by President Eisenhower and Arthur S. Fleming, Secretary of Health, Education, and Welfare.

Mount Holyoke has received thus far about $15,000 under the program, of which $13,000 has already been loaned to students. The college will make no further loans from the

remaining $2,200, President Richard Glenn Gettell reports.

The faculty resolution against the affidavit declared that "such a requirement by Government, while ineffective as a measure to prevent subversion, constitutes an invasion of freedom of thought and belief, establishes ambiguous standards for determining perjury, and discriminates in an unwarranted fashion against students seeking financial assistance."

The total number of colleges which have now withdrawn from the program is now reported to be 15. Among the group are Amherst, Yale, and Harvard. Another group of eight colleges, including Bryn Mawr, Princeton, and Swarthmore, refused to enter the program from its beginning.

President Gettell, in reporting on the action of the college, commented that "we looked upon the institution of the program with enthusiasm as a means by which additional worthy students could be assured of a good education. We hope that the affidavit will be withdrawn and that we can rejoin the program."

Some Gas Rate Questions

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. HOLLAND. Mr. Speaker, on Sunday, April 17, there appeared in the Pittsburgh Press an editorial which asks some very pertinent questions as to what is happening in establishing gas rates by the Federal Power Commission in cooperation with State utility commissions.

I believe that the Members of Congress want to know these points. On the surface it looks as though the Federal Power Commission, who should support the consumers of America, are protecting the large gas companies now operating throughout the Nation. All the questions we want answered I think are contained in this editorial.

In order to expedite action on the questions asked by the Pittsburgh Press, I am introducing a resolution asking for an investigation of the Federal Power Commission's decisions by a special subcommittee of the House Interstate and Foreign Commerce Committee. I believe this problem is of such magnitude that another committee should have their independent investigation to determine just what has happened in this field.

Mr. Speaker, I hope that this resolution shall be considered with numerous other resolutions which have been introduced as this is not only a problem in Pennsylvania but one in other States as well, and should get immediate attention.

The editorial follows:

SOME GAS RATE QUESTIONS

Distribution of natural gas is a natural monopoly, like street railway or telephone service. Since there can be no automatic control of prices, by competition, Government rate regulation is necessary.

Regulatory bodies have one main function, which is to protect the public against exorbitant rates. That is the job of the Federal Power Commission (FPC), in cooperation with State utility commissions.

All the evidence isn't in and, until it is, no final judgment should be made. But, on the basis of what already is known, it seems to us some pointed questions are in order.

1. The FPC permitted Midwestern Gas Transmission Co. to build a $50 million line from Tennessee to the Chicago-Gary area.

It permitted delivery of gas for industrial users at a rate actually less than cost in Tennessee.

2. Household rates were fixed high enough to cover costs of the pipeline, plus transmission costs and profit.

3. These decisions were reached by the FPC after testimony to the effect that big industrial users in the Chicago area would not shift to gas if the rate were any higher than the 22 cents asked. They would stick to coal.

The questions are these: Why did the FPC break with former policy which divided transmission costs between household and industrial users? What business has the FPC engaging in a cut-rate plan which will hurt the coal business, in favor of the gas business?

Commission staff members warned that the FPC action will increase gas rates for household users not only in the Chicago area but also in Pennsylvania, Ohio, and New York—areas in which local gas companies, including three in the Pittsburgh district, are served by the pipeline firm which owns the Midwestern company.

There's been a great deal of talk about "off the record" conferences between members of the FPC with utility officials or their representatives. A free ride on a company plane has been admitted.

At the very least these conferences and this ride are evidences of bad judgment. And so, at the very least, seems this Midwestern rate ruling which appears to violate the fundamental purposes of rate regulation.

A congressional committee is looking into this affair and has scheduled, as one witness, Thomas Corcoran "Tommy the Cork," former New Deal braintruster and now in law practice with utility clients.

It is highly important that Congress get to the bottom of this whole affair. If there are more logical explanations for events, let's hear them. If not, let's find out what's going on.

The Dallas News Approves Bills To Permit Aged To Earn Money Without Losing Benefits

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1960

Mr. YARBOROUGH. Mr. President, the Dallas Morning News, the Texas newspaper with the largest daily circulation, published an editorial Saturday, April 16, in support of two bills I introduced last week to aid senior citizens.

Both of these bills are aimed at encouraging elderly citizens who are drawing social security or old-age pensions but want to work more, to do so without loss of social security or old-age pension payments.

Under my bills, retired persons drawing social security would be permitted to earn $2,400 annually instead of the present $1,200 limit, without their checks being cut. Folks drawing old-age pensions would not be docked for the first $50 they earned each month, because pay up to that amount would be exempted in computing their needs. The denial of the right to earn money often kills the initiative, injures the health, causes mental problems, and shortens life.

The Dallas News editorial makes a valid point when it says that permitting social security recipients to earn $2,400 a year would not only encourage older folks to work, but would also encourage businessmen to hire them since they would be more likely to stay on the job in a year-round basis.

I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the Dallas Morning News of April 16, 1960, entitled "Yarborough Has Sound Plan."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YARBOROUGH HAS SOUND PLAN

The two bills offered by Texas junior Senator RALPH YARBOROUGH would provide a sound method of practical relief for one disturbing angle of our old-age situation. He would permit the retired persons to earn $2,400 instead of the present $1,200 without sacrificing the social security check and the old-age-assistance pensioner to earn up to $50 a month without penalty.

In the first case, the existing limit of $1,200 does not take into account the serious inroad on living costs made by inflation. But even disregarding that factor, terrifying to so many, it is still true that most retired persons want to go on working. The limit handicaps their plans in this respect.

Many employers have work available for older persons. When the latter must budget working time to avoid forfeiting the social security checks, the employer loses interest in this type of employee. He does not want to have to replace a worker who suddenly finds he is going to exceed the $1,200 pay limit and must quit.

The present law permits unlimited earning after age 72 is reached. But if the worker waits until the attained age, he has been out of the labor market too long to have a free opportunity at a job. Undoubtedly, too, employers will hesitate to take on a 72-year oldster as a starter.

In the case of the old-age pensioners, the checks are pitifully small, the need urgent. Even the $50 monthly limit may not help much.

Against the Yarborough proposals may be argued that, in setting up social security, one aim was to make job room for the younger folk stymied by longtime elderly workers. If that was and is sound economics, it is tragically bad psychiatry. The unoccupied human being goes quickly to seed. A job is the best medical prevention for deterioration mentally and physically in most cases.

Shall We Have a Free World Common Market?

EXTENSION OF REMARKS

OF

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. CASEY. Mr. Speaker, the Organization for European Economic Coopera-

tion has been observed closely since its inception by many of the leaders of the United States.

One of the keenest observers has been my very distinguished constituent, Mr. Will Clayton, former Under Secretary of State for Economic Affairs and Assistant Secretary of Commerce, and an officer in Anderson, Clayton & Co., Inc., Houston, Tex. Last November 30, Mr. Clayton made some observations to the philosophical Society of Texas which are now being voiced by other students of world affairs. I would like to commend to my colleagues for their thought and consideration the brief but cogent observations made by this distinguished statesman at that time.

For this reason, Mr. Clayton's letter and memorandum to the Philosophical Society of Texas follow:

ANDERSON, CLAYTON & CO., INC.,
Houston, Tex., November 30, 1959.

To Fellow Members of the Philosophical Society of Texas:

Because of my inability to attend the San Antonio meeting, I decided after conferring with president Garwood to send you the enclosed memorandum bearing on the subject to be discussed at the afternoon symposium.

Since this memorandum was written, dispatches from Europe speak optimistically of moves being made by both sides to bridge and differences between the six and seven.

Even without U.S. leadership or participation, we may in the near future see the 18 OEEC countries, plus Canada, united in a free trade area.

If this happens, with these 19 countries taking about half the U.S. exports, the United States must then either go common market or go isolationist to a degree which would make Smoot-Hawley look like amateurs.

But no isolationist haven exists in the modern world.

A very wise statesman, Lester Pearson of Canada, recently said in a lecture at Oxford: "No isolation is possible for the West today. Values that cannot embrace all men are as out-of-date as the Divine Right of Kings."

The common-market movement, properly directed, could save the world for freedom, but only if its doors are kept open to every free-world country.

The course finally taken by the poorer countries of the world will decide this war.

We cannot hold these countries by giving or lending them billions with one hand, while with the other hand we impose quotas on our imports from them and heavily subsidize our exports in competition with theirs.

After 100 years, we have again arrived at a period in our history when, to use Lincoln's words, "We must think anew and act anew if we are to save our country."

Sincerely yours,

W. L. CLAYTON.

A FREE WORLD COMMON MARKET

Except for the Marshall plan, the Communists have held the initiative and the West the defensive in a worldwide struggle between freedom and communism.

Recent events present the West with an opportunity and a challenge to reverse this situation, with profit to the entire free world.

The 18 Organization for European Economic Cooperation (OEEC) countries are now divided into the six and the seven, with five countries still on their own.

Soon, the force of competition is almost certain to cause the five to join the six or the seven.

If these two groups continue on their separate ways, the consequences to free world unity could be catastrophic.

We are looking at the beginnings of a world economic revolution.

Under adequate leadership, this movement could weld the West together as nothing else can.

Only the United States can give such leadership.

The United States and Canada are associate members of the OEEC. They should become full members of this group, which would then become the Organization for Atlantic Economic Cooperation (OAEC), comprising 20 countries with nearly one-half billion of the most highly industrialized people in the world.

Under the leadership of the United States, the 20 OAEC countries could become one free trade area under articles of agreement open to any country of the free world willing to subscribe to the conditions.

Sound industrialization of the poorer countries can be achieved only on the basis of such an economic federation of the free world.

But time is running out on us. How much longer will we have?

It will take a "giant step" to win this war.

Abraham Lincoln said in his message to Congress on December 1, 1862:

"The dogmas of the quiet past are inadequate for the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion * * * we must think anew and act anew. We must disenthrall ourselves and then we shall save our country".

Under a Free World Common Market, the standard of living throughout the world would rise, sound industrialization of the poorer countries would take place, the economic gap between the richer and the poorer countries would be progressively narrowed, communism as a threat to world peace would recede, and the world would be a more healthful and peaceful place in which to live.

WILL CLAYTON.

HOUSTON, TEX., *November 24, 1959.*

America's Stake in Its Farmers

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1960

Mr. MUNDT. Mr. President, as this 86th Congress moves well into its fourth month of deliberations of this final session, we stand confronted with what is undoubtedly our most serious domestic problem—the difficulties confronting American agriculture.

It is unfortunate that in the field of agriculture, more so than in any other segment of our economy, that our efforts seem to be always directed at finding a political solution to what is basically an economic problem.

With this year being an important time of decision for the American voter, we once again find the farmer and his problems being subjected to unusual—but not always accurate—scrutiny.

On one hand we find the American farmer pictured as an overly greedy citizen feverishly raiding the Federal Treasury. On the other he is pictured as a poverty-stricken, downtrodden individual attempting to farm a plot of land with a mule-drawn plow.

Neither of these characterizations is accurate, and I am delighted to bring to the attention of my distinguished colleagues an excellent, well-written and to-the-point analysis of the difficulties confronting agriculture as presented in a two-part editorial series in the Sioux Falls Argus-Leader, daily newspaper published in Sioux Falls, S. Dak.

In bringing these two important editorials to attention, I want to cite two or three paragraphs of these editorials which I believe place this problem in proper perspective.

The definition of the farm problem, or basically what the problem really is that is hurting the farmer, sometimes escapes those who are searching for a solution in that they lose sight of the actual cause and effect.

As the Argus-Leader points out:

The farmer's personal problem is that his income has been going down, and the price of things he has to buy have been going up. He's caught in a squeeze.

This, then is the dilemma of agriculture—the cost-price squeeze.

Another factor which compounds the difficulty of the American farmer is the fact that he has become a minority voice in our economy, and with the decrease in numbers also comes a decrease in his effectiveness in the legislative halls of government.

In pointing this fact out, the Argus-Leader renders a service from the standpoint of accuracy. Too often we have heard the statement that American farmers are leaving the farm in greater numbers than ever before.

I do not dispute the fact that American farmers are leaving the farm, but I do take issue with those who attempt to divert this statistic to the benefit of a political party simply for the benefit of votes.

This is what the Argus-Leader states:

In 1933 farmers and farm families comprised about 26 percent of the population. Today, it is 12 percent. More people left U.S. farms in the Truman administration than in any like period before or since.

I cite this statistic for one reason—the hope that in our studies of this immense problem that we need not be subjected to the propaganda of false information designed to show the farmer in worse shape than he is, or for that matter, information directed to picture the American farmer better off than he really is.

What we need is an accurate approach to this problem, and no service of value is rendered, either to the farmer or to the American people, by compounding the farm problem through erroneous political propaganda merely directed at vote hunting.

Which leads to the other side of the coin, to those advocates who wish to place the American farmer on his own in a free economy. The American farmer has no objection to participating in or being a part of our free-enterprise system.

But I strenuously object to the farmers being entitled or subjected to the "free" while the "enterprise" is left for others. By this I mean that the American farmer is willing to stand on his own in a free economy provided that he is on equal ground with the rest of the economy.

The Argus-Leader editorial points this up well in answering those who would "free" the farmer from all Government controls, assistance, redtape, and what have you with these comments:

The plot calls for the United States of America to lose all its problems of subsidizing farmers, of costs of storing grain and dumping it on the world markets, when the farmer jumps into a free economy.

The businessman will no longer have to fork up taxes to pay the farm subsidy. The consumer will get cheaper food. The Government will be out of the farm business.

Missing from the scenario is one important fact—that the American farmer is expected to sink or swim in a free economy while the others stay behind in their controlled economy. The farmer was in a "free economy" before 1933, and that didn't work very well, either.

The Argus-Leader reviews the problems which would further confront the farmer if he were cut away from Government programs while others in our economy continue in what can best be termed a regulated economic system.

I call attention to this editorial series in South Dakota's leading newspaper not with the intention of indicating that it provides an answer to our farm problem. It does not offer a solution, but what the Argus-Leader does is to clarify the difficulties facing agriculture and wipe away many of the misconceptions, and, yes, downright falsehoods, which have served only to hamper constructive efforts in seeking a solution.

I ask unanimous consent to have the editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Sioux Falls Argus-Leader, Apr. 16, 1960]

AMERICA'S STAKE IN ITS FARMERS—I

Elsewhere on this page you will find an article called "The Vanishing Small Farm." It appeared in the New Leader, a Socialist magazine published in New York.

In the last several weeks there has been an exchange of letters on this page on the same subject. M. D. Schneider, a Chicago man who visits southeastern South Dakota every summer, thinks socialized factory farming is the answer. He would have 20 small farmers get together and farm 2,000 acres with one tractor. Maynard Engelstad of Astoria doesn't agree with him. He'd like to see a farmhouse on every quarter. He wants to perpetuate the small family farm. He abhors the socialistic approach.

Politicians this year will make much of the family farm. All of them will be for it. Likely, they will not define the family farm in precise terms.

In this election year of 1960 the Democrats and the Republicans will be attempting to prove that the blame for the farm situation lies in the other camp. It seems very doubtful if anything resembling an adequate solution will be forthcoming this year.

A POLITICAL MINORITY

The farmer's personal problem is that his income has been going down, and the prices of things he has to buy have been going up. He's caught in a squeeze.

This squeeze catches many more persons than those who actually till the soil. The residents in the cities and towns of the farm area are dependent upon farm income. The cash registers in Sioux Falls and Brookings reflect immediately any change in the economic situation of the country.

The farmer's general problem is that politically he is becoming less important in modern America. Farm population has declined by 10 million in the past 20 years.

In 1933 farmers and farm families comprised about 26 percent of the population. Today, it is 12 percent. More people left U.S. farms in the Truman administration than in any like period before or since.

When Congress is reapportioned in 1961, on the basis of the 1960 census, the farmer will find that he will have fewer votes in his corner. He has become a political minority.

FARMING MUST CHANGE

America needs a farm solution. Whether the solution will perpetuate the family farm remains to be seen. It should.

We think there is a place for the family farm, but we think that such a farm is larger than we've been accustomed to thinking about it. Realistically, it's a half section and probably larger than that.

The world is changing. Farms will change with it. The family business on Main Street is often a corporation these days. They've had to increase their gross to stay in business. But they have had a much larger say in their revenues and costs than the farmer.

Most of the difficulties of farm programs have stemmed from the costs of administering supports and storage for the six basic crops: cotton, wheat, corn, rice, peanuts, and tobacco. Most of these payments are never seen by the small farmer. Yet the farmer generally has had his most satisfactory years, from the standpoint of sharing equitably in the Nation's wealth, when price supports were high.

As President Eisenhower said in February, "The wheat situation is particularly acute. Federal funds tied up in wheat approximate $3½ billion. Although this means that well over 30 percent of the total funds invested in inventories and loans of the Commodity Credit Corporation goes for wheat, this crop provides only 6 percent of the cash receipts from sales of farm products. The Government sustains a net cost of more than $1,000 a minute—$1,500,000 every day—the year round, to stabilize wheat prices and income.

"Day by day this program further distorts wheat markets and supplies. Its only future is ever higher cost. Inexorably it generates ever larger surpluses which must be expensively stored. Ultimately, if our Government does not act quickly and constructively, the danger is very real that this entire program will collapse under the pressure of public indignation and thousands of our farming people will be hurt."

The Government is put in the ridiculous position of selling its surplus in cotton to foreign mills at a price 8 cents a pound below what our domestic mills have to pay.

We dump other surplus on world markets to the chagrin of Canada and other agricultural producers. In both wheat and cotton, the Government pays two subsidies: one to the farmer in America, the other to the foreign user.

THE SEARCH FOR A SOLUTION

Fortunately, the picture is not all black. South Dakota's west river rancher has done well with cattle without price supports. The sheepman does well, although it is accomplished by tariff protection. The hog grower is having trouble with prices. The cattle feeder is in a better position.

Thus, those who seek a solution may concentrate their efforts in the areas where a change is needed most.

The general solution is that we shouldn't continue to produce much more than we need. The outpouring of our farms shouldn't be piled up in an endless series of granaries and storage bins.

The personal solution for the farmer is to assure him a fair share of the Nation's prosperity.

Can it be done without subsidies or controls? Some Americans think so. They would make the farmer sink or swim in the world market. But they wouldn't put our commerce and labor in direct competition with the low-cost labor countries of Europe and Asia.

[From the Sioux Falls Argus-Leader, Apr. 17, 1960]

AMERICA'S STAKE IN ITS FARMERS—II

On the political scene today there's a big swimming pool labeled "free economy."

The luckless individual on the diving board is the American farmer. Sitting in the audience are Secretary of Agriculture Ezra Taft Benson, the industrialists, most businessmen, and American labor.

They're all chanting: "Jump in, the water's fine." The plot calls for the United States of America to lose all its problems of subsidizing farmers, of costs of storing grain, and dumping it on the world markets, when the farmer jumps.

The businessman will no longer have to fork up taxes to pay the farm subsidy. The consumer will get cheaper food. The Government will be out of the farm business.

Missing from the scenario is one important fact—that the American farmer is expected to sink or swim in a free economy while the others stay behind in their controlled economies. The farmer was in a free economy before 1933 and that didn't work very well either.

WHO ELSE IS SUBSIDIZED?

Labor has been subsidized by the Government's hand at the bargaining table. It has pushed up labor income—and also the prices of the things the farmer has to buy. The manufacturer can adjust his prices accordingly. The farmer cannot.

The Government has subsidized defense industries, airlines, and shipbuilding companies directly. In an indirect way the import levies on steel, automobiles, and television sets subsidize Detroit, Pittsburgh, and Chicago. In either case, it comes out of the public's pocket.

We are in a world-minded era. Export, import, trade and get along is the credo of the times. Our Nation has wisely decided to trade with the world on a two-way street.

It is becoming a chilling experience for some American manufacturers. They have found themselves undersold by nations this country put on their feet. The farmer has been up against a world market and its lower prices for generations.

THE FARMERS' ALTERNATIVES

Our American farmers can either increase their gross, cut their costs or use a combination of both to survive. Let us consider how they could cut their costs.

Since 1930 the United States has levied no import duties on farm machinery shipped into this country from abroad. Theoretically, this should help the farmer by lower costs. Practically, imports are a drop in the bucket. In 1958, 6,449 tractors were im-

ported, mostly from Canada. Domestic shipments totaled 239,161.

One way the farmer could beat high American costs would be to reverse those buying figures and purchase 250,000 tractors a year from the United Kingdom and Europe.

The farmer could ask the Government to take off the 8½-percent import levy on foreign cars, so he could buy German and British automobiles instead of Detroit's more expensive models. On one popular import he'd save $100—a subsidy that has been going to Detroit, if you please, in the form of a world price differential.

He could ask Washington to stop subsidizing TV manufacturers by taking off the 10½-percent import levy. Then he could buy Japanese sets instead of American at a much lower price.

We do not believe that either American labor or industry would appreciate a "Buy Foreign" campaign, but it could help the farmer with his costs.

WHOSE PROBLEM IS IT?

It seems obvious that the farmer cannot survive by lowering his costs alone. He is already efficient. He will use even more automation in the future and produce bigger yields per acre. His production will continue to outrun the population gain.

Main Street businesses do not thrive by cutting their gross. If the farmer is to survive on a family farm of half a section or more, he will need more gross than he gets today on 160 acres.

The farmer may be able to increase his cash return by diversifying, by more concentration on livestock, particularly cattle in South Dakota, and less dependence on one cash crop.

The Government probably will have to continue to use a system of subsidies and controls, both to help the farmer and to avoid the mistakes and surpluses of the past. The controls must consider the agricultural export-import picture and the world market. The problem is how to do it without venturing forth on a program of complete regimentation or one which prepetuates inefficient farming methods.

Realistically, the farmer won't get unlimited license to produce and the country will not write an unlimited subsidy check. A compromise solution that passes Congress is better than an idealistic bill that is never enacted.

In South Dakota it is our big problem, but it is also the Nation's problem. It seems inconceivable that a prosperous America cannot solve the farm problem.

We like to believe that an urban America will act with a sense of fair play, through its city-dominated Congresses of the future, in dealing with the American farmer.

Surely, there is a practical, economic solution—not a political one—which recognizes the changes in the world and keeps a place and a fair share of our national income for that great individualist, the American farmer.

Mr. CASE of South Dakota. Mr. President, as the Congress this week turns to another examination of the farm problem and possible solutions to at least part of that problem, namely, wheat, I had intended to call attention to two recent editorials appearing in the Sioux Falls Argus-Leader on April 16 and April 17.

Written by Anson Yeager, one of the most thoughtful and conscientious reporters of the South Dakota press, they set out in some detail the dilemma of the American farmer.

Mr. Yeager points out that it is not only the farm States' problem—it is the Nation's problem—to assure these people a fair share of national prosperity.

I thank my colleague for having had the editorials printed in the Appendix.

Science Island, Casco Bay, Portland, Maine

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. OLIVER. Mr. Speaker, it is a matter of great personal satisfaction to those of us who have participated in its organization to be able to announce the start of a practical, imaginative, and urgently needed educational project, which will make a substantial contribution to America's efforts to produce more qualified scientists.

I am referring to the creation of the National Youth Science Center on Science Island, now known as Cushing's Island which is located in Casco Bay, near Portland, Maine. The stirring story of the National Youth Science Center may well be a classic example of how an American institution is rooted. In this true-to-life saga, one finds a large measure of ingenuity, a humble start, several years of hard work and the foresight and faith of a number of individuals in a bold pioneer program aimed to guide and inspire our future scientists to eventually undertake discovery as well as applied scientific efforts.

It all started prior to Sputnik I when an overzealous housekeeper complained to the SPCA and her boss, Mr. David L. Lukens, a South Orange, N.J., business executive, that Mr. Lukens' son, 14-year-old Jeff, had dissected a frog. The boy's father, seeking a method to channel the bright youngster's talents, hit on the idea of a youth science center where the boy could receive guidance under competent scientists and educators. Mr. Lukens then consulted with Dr. Vannevar Bush, board chairman, Massachusetts Institute of Technology, Dr. Mervin J. Kelly, then board chairman of Bell Telephone Laboratories, and Prof. George Sutton, president, American Rocket Society, as to the need and practicality of his idea.

The idea was enthusiastically received and then followed some 3 years of planning and legwork, during which time hundreds of educators, scientists, and business executives were personally interviewed by Mr. Lukens so that a practical and firm foundation would be built.

It was the unanimous opinion that the value of such a center would be in finding the gifted youngster and then giving him the opportunity and guidance and inspiration for development. This would be done with a minimum of formal education during the 2-month summer session at Science Island. The youngsters would engage in projects of their own choosing and carry them out under the supervision of capable teachers. An important part of the program would be visitation periods where renowned scientists who have already made their mark would meet the future scientists and discuss matters in an informal "shirt-sleeve" manner.

The permanent home of the center would be a major portion of the scenic island, some 125 acres, in which the Government had originally invested some $2 million for improvements and which housed about 1,200 Army and Navy personnel as a harbor defense during World Wars I and II.

Dr. Alan T. Waterman and Dr. Harry C. Kelly, respectively Director and Associate Director of the National Science Foundation, were others who in those early pre-Sputnik I days envisioned the need for more quality scientists and gave encouragement to the program.

Even though the program in its early days consisted of only a blueprint and words of encouragement, a small group of top business executives aided in providing funds for further development. This founding group consisted of Charles Shipman Payson, industrialist; Carl Gilbert, board chairman, Gillette Co.; George Pew, Sun Oil Co.; Dr. E. Gifford Upjohn, Upjohn Co., and William Jordon, Jr., banker.

However, the key to the entire program—its administration—was still lacking. Many colleges were interviewed, but in most cases, the college had numerous projects and problems of its own and could not give this new project the time and attention it needed. In other cases, the college administrator lacked vision and/or ability.

It was at this point that the project was brought to my attention. I suggested contact with Nasson College, in my congressional district at Springvale, Maine.

As a result, Mr. Lukens spent several days at Nasson and was greatly impressed with its spirit, its academic aims and capabilities of its administrators. He suggested an application for a grant be filed with the National Science Foundation that would enable a "trial run summer session" and the creation of the youth science center.

Nasson College has a regular 4-year liberal arts course. It is a progressive, coed, nondenominational, 48-year-old college located at Springvale, Maine. During the 10 years that Dr. Roger Crowell Gay has been president of Nasson, it has steadily grown academically and physically.

I then got together the principals, Nasson College, and Mr. Lukens, and National Science Foundation, and a plan of operation was approved.

As it is the intent of the National Youth Science Center to be self-supporting after the initial year, a nonprofit corporation, the National Youth Science Foundation, was started to provide funds from private sources which it will give to the college administering the program.

Included on the board of directors of the National Youth Science Foundation are four Nobel prize winners, Dr. Edward Calvin Kendall, former Mayo Foundation

biochemist; Prof. Percy William Bridgman, Harvard University physicist; Dr. Dickinson W. Richards, medical doctor, College of Physicians and Surgeons; and Prof. John H. Northrop, chemist, University of California. Other directors are Dr. Harold A. Edgerton, psychologist, head of the consultant firm, Richardson, Bellows, Henry & Co., Inc., and Dr. Mervin J. Kelly, former board chairman, Bell Telephone Laboratories and now special consultant to president, International Business Machines.

The initial phase of the project was announced in my office last Wednesday, April 13, when the National Science Foundation formally presented the grant to Nasson College for the purpose of administering the program. This grant covers 50 youths for a 6-week summer session. At the outset, the facilities of the college at Springvale, Maine, will be used and later the entire project is expected to be moved to nearby Science Island as facilities and additional funds are made available.

No youngster will be accepted for the National Youth Science Center unless he is qualified by ability. Once accepted, he will be given a "campship" to Science Island for 4 or 8 weeks during the summer. Any American industry, union, association or individual can sponsor a campship through the National Youth Science Foundation.

After the initial year of operation, the National Youth Science Center is expected to be self-supporting with the bulk of its income derived from the campships. The National Youth Science Foundation will provide funds for the operation of the center.

Another favorable aspect of this grant is that it recognizes the intent of Congress in having a Government agency aid in starting a project which can be taken over and supported by private sources, rather than perpetual Federal handouts.

The objective of the National Youth Science Center is to uncover America's most able youngsters in their most formative secondary school years and provide opportunity, guidance, and inspiration to become worthy and dedicated scientists.

In my opinion, this project is an outstanding example of democracy at work in its best and fullest sense.

The Federation Employment and Guidance Service: 25 Years of Community Service

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1960

Mr. KEATING. Mr. President, the month of April marks the 25th anniversary of the Federation Employment and Guidance Service of New York City. Through the years this fine organization has pioneered in efforts to find gainful employment for many citizens who might otherwise have been denied the opportunity to work.

Of particular significance is the manner in which the service has kept up with the changing needs of the times and New York's labor force. These and other attributes of the service were outlined in an excellent editorial which appeared in the New York Times on April 16. As the Times so well states, "This organization has served a valuable service in our community, and has been a source of hope and aid to many persons who might otherwise have been forgotten."

Mr. President, I am pleased to have this opportunity to salute the Federation Employment and Guidance Service on the completion of 25 years of dedicated service and to wish all concerned continued success in carrying on its outstanding activities which are contributing so much to the welfare of so many people in New York.

I ask unanimous consent to have the New York Times editorial I have referred to printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A 25TH BIRTHDAY

It is a please to salute the Federation Employment and Guidance Service, 42 East 41st Street, New York, on the observance of its 25th anniversary this month. This organization has served a valuable purpose in our community, and has been a source of hope and aid to many persons who might otherwise have been forgotten.

A quarter of a century ago, when unemployment was an acute national problem and one of its most distressing aspects was the atrophy of industrial skills of men and women out of work for extended periods, the Federation Service was founded. Its aim was to help workers maintain their specialty and assist them in finding jobs.

Since then, through a program that has been broadened to meet changing needs, the service has helped the mature worker, the handicapped and the hard-to-place pensioner and parolee. To them have been offered vocational guidance, vocational rehabilitation and job placement, services on a nonprofit, nonsectarian basis. We look forward to a second quarter century of community services on the part of this fine agency.

A Newspaper Reporter Looks at the House of Representatives

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. THOMPSON of Texas. Mr. Speaker, in common with many other Members of Congress, my distinguished colleague, the Honorable FRANK IKARD, who represents the 13th District of Texas, gets out a weekly newsletter. The current issue reports the opinions of a newspaper reporter, Mr. Dan McCrary, of not only the operations of the House of Representatives but also the personalities that make it tick. It is worthy of study by every Member of Congress and every citizen of our beloved Nation. The newsletter follows:

NEWS FROM THE CONGRESS
(By Dan McCrary)

(The following was written by Dan McCrary, a newspaper reporter, who is spending a year in Washington as a congressional fellow of the American Political Science Association. This association provides funds to send about 15 journalists and political science teachers to the Capital each year to learn more about how Congress functions. They divide their time working in congressional and senatorial offices. Dan, who is originally from Michigan, has worked in my office since late December. I thought you might be interested in some of his observations.)

Newspaper reporters, like anyone else, can get in ruts. They can become so accustomed to the atmosphere in which they work that they become a part of it. I think there's plenty of evidence that members of the Washington press corps represent good examples.

There's little doubt that there are so many topnotch reporters per square mile anywhere as in Washington. Newspapers and press services send only their best men to report from the Capital where news breaks constantly and in volume. And somehow, each day, reporters manage to surmount this mountain of news and get it in print.

But reporters here have become so closely identified with the Government that they stick primarily in their writing to what is done here, and mostly overlook how things get done.

Take, for example, the unlikely combination of pomp and confusion with which the House of Representatives conducts its business. To a casual observer it must be amazing indeed that the House accomplishes anything at all. Members mill about on the floor, converse with their colleagues, and apparently pay little attention to the course of business. Yet things get done, and you can be sure that some Member is on the floor, alert and ready to jump on skulduggery, whether it be real or imaginary. This flavor, feeling, or what have you, with which the House carries out its duties, is mostly missing in news dispatches.

Any seasoned congressional reporter can relate anecdotes by the hour dealing with the wondrous process that is Congress. But few stop to insert the colorful, vibrant atmosphere of the place into their news stories, even when they do have time for this extra twist.

There's one thing, for instance, which this inexperienced observer of a few months has noticed about the House which rarely worms its way into news dispatches. This is the two-headed nature of Congress. One head is an institution. It is bound up tightly in a set of written and unwritten rules, customs, and precedence. Some of these rules are undoubtedly outdated; some are awkward; some don't seem to make much sense. But they serve a vital function in a democratic body, and, significantly, they're double edged. They recognize that the will of the majority is the will of Congress, and they protect this majority from a militant few who might force their way. At the same time, the rules protect the minorities and recognize their right to assert themselves. The rules are designed to avoid undue haste in the passage of legislation, but they can be bent to meet clear-cut emergencies, and bills can move through the House quickly and effectively.

This is one head of the House: a black and white, unsympathetic, unyielding creature of rules. But on the other hand, the

House is a creature of men, and it is when these two ingredients—rules and men—are blended that the Congress takes on its depth and resilience. The men and women who are Members seem to be pretty much like men and women you'd meet anywhere else. Some are brilliant; some boil with ideas; some are wheelers and dealers; some mediators; some are dull and uninteresting. Put together they produce a personality strong enough to make itself felt throughout the Nation; a man-sized accomplishment, when you stop to think about it.

I'm sure experienced congressional reporters are more aware of the makeup of the House than I am. And I recognize that in the usual meaning of news, the trappings of Congress aren't newsworthy in the daily flood of happenings. But I have been amazed at the processes of Congress, and I think that others, also uninitiated to the body, would feel the same.

As a footnote, I would like to express my appreciation to Mr. IKARD for his help and guidance during my 4 months here. In my opinion, the 13th District of Texas sends to Washington a Representative who is as able as any in the House. Voters can feel proud of their choice.

International Center for Cultural and Technical Interchange in Hawaii

EXTENSION OF REMARKS
OF
HON. HIRAM L. FONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1960

Mr. FONG. Mr. President, yesterday bipartisan legislation was introduced which would authorize the establishment in Hawaii of an international center for cultural and technical interchange between East and West.

There is increasing interest and recognition of the need for such a center to better human relations between the East and the West.

The Washington correspondent of the Charleston (W. Va.) Gazette, Mary Chilton Abbot, reported last Saturday, April 16, that ignorance lends itself to mistrust among nations. She has stated that the clouds of mistrust could be disspelled through education at a center such as that proposed for Hawaii.

I wish to commend this article to the attention of other Members of Congress and I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IGNORANCE SEEN KEY IN MISTRUST—CENTER TO BRING EAST, WEST TOGETHER EYED IN CONGRESS

(By Mary Chilton Abbot)

WASHINGTON, D.C.—Many of the international problems which plague the world stem from a basic misunderstanding between peoples of the East and peoples of the West.

Many of these misunderstandings, of course, have their roots in ignorance, which breeds fear and mistrust.

A proposal made to both Houses of Congress in recent weeks should go a long way, if it is adopted, toward dispelling some of the clouds through education.

It would establish in the newest State a center to promote the interchange of the two cultures and to broaden contacts and friendships between Asians and Americans.

The proposal was made by Hawaii's two Senators, Democrat OREN LONG and Republican HIRAM FONG, and by its Democratic House Member, Representative DANIEL INOUYE. The idea has been brewing for some time, however. Senator Majority Leader LYNDON JOHNSON discussed the project at the editor's dinner given by the Women's National Press Club last April.

Legislative authorization came during the first session of the current Congress, when the Secretary of State was directed to submit a plan and program for such a center.

The center's backers envision it as a meeting ground for scholars as well as for students from the East and West. They hope that sufficient grants, fellowships, and scholarships will be available to seet up programs of higher learning and technical training which will be mutually supporting.

The center, to be administered under the existing facilities of the University of Hawaii, would contribute to the promotion of understanding and better relationships between Eastern and Western peoples, its backers say, and also would provide top-level educational facilities.

Asian students would have an opportunity to acquire English as a second language, to study American traditions and customs. American students would find Asian language studies available along with courses in problems special to the area.

The programs would rely heavily on the personal contacts between the Asians and Americans, both students and faculty, at the center. Similar programs are being carried on, in a limited way, by the International Cooperation Center in Hawaii which has assisted more than 3,000 foreign participants from 30 different countries during the last 4 years.

The center would be organized into two principal units, the International College and the International Training Center. The former would coordinate all the services of a university. The latter would provide nonacademic training in technical and specialized skills along with opportunities for on-the-job training.

Scholarship grants would be large, to cover the cost of travel to the center and the expenses of living in Hawaii over a 2-year period. It is estimated that $3 million would be needed for the scholarships to provide grants to 75 Asian and Pacific students and 25 American students. Some of the money could doubtless be provided in foreign currencies to cover travel costs for students coming from other countries.

Grants would cost $135,000 each year for five Asian or Pacific and five American scholars to be combined with grants from other sources.

The proponents of the plan foresee that the center would attract additional supporters and participants and would create a core around which related projects could gather, thus broadening its scope and increasing its usefulness.

While the money needed to establish such a center may appear, at first glance, excessive—particularly to opponents of Federal aid to education—its backers believe that the contributions it would make to world peace and to international understanding will be worth many times the cost.

The proposed sums for operating expense and capital improvement during the first year add up to almost $11 million. The second year would cost more than $9.5 million, the third more than $15 million and the fourth more than $17 million. All these figures are maximums.

Already there has been editorial comment in favor of the proposal from the other side of the world. A Korean newspaper, the "Republic," called it a "great inspiration" and said it would fulfill "an important and increasing need." The paper cited the racial tolerance found in Hawaii and pointed out that peoples of all colors and creeds live in the islands "in harmony and without discrimination."

If the center achieved no other goal than that of racial harmony which would prove to the rest of the world that diverse races need not fear one another, it would justify every penny of the cost. We would like to see an even broader program projected into the future for the center. We would like to see it made a truly international seat of learning not limited just to Americans and Asians but welcoming all peoples from all parts of the world to exchange knowledge and culture.

Maryland Sixth District Weekly Newspapers Win Statewide Honor

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. FOLEY. Mr. Speaker, once again it is my pleasure to report the exceptional quality of weekly newspaper publishing which exists in the Sixth District of Maryland.

This year the annual better newspaper contest for all daily and weekly newspapers members of the Maryland Press Association was judged by representatives of the West Virginia Press Association.

First prize for general excellence was won by the Montgomery County Sentinel of Rockville. Roger Farquhar is the editor. Hugh Gillespie of the Sentinel won first prize in "News Photography" for the second successive year. The Sentinel also won first prize for "Best News Photo," and placed third in "Community Service."

The Suburban Record of Silver Spring, published by Dr. John R. Steelman, carried off first place honors in community service. It also placed third in general excellence. Thomas Y. Canby, Jr., is the editor of the Record.

The Maryland News of which Byron Sedgwick—Wick Byron—is the editor won second place for its editorials. In being so recognized, it topped all other weeklies in the category. In addition, it received second place for typography.

Mr. Cy M. Campbell is president of the Sentinel and Maryland News publishing companies.

For weeklies with a circulation of under 5,000, the Blade Times of Brunswick placed second in news pictures. It took third place for best editorials in competition with all other State papers. James Bryan is editor of the Blade Times.

FREEDOM OF THE PRESS

"The press is the best instrument for enlightening the mind of man, and improving him as a rational, moral, and social being * * *. Where the press is free and

every man able to read, all is safe," so said Thomas Jefferson.

The first amendment to the Constitution states that "Congress shall make no law * * * abridging the freedom * * * of the press." Each State in the formulation of its State constitution has been cognizant of this freedom. It was high on the list of liberties for which our forebears fought. Today it is basic in our priceless heritage of democracy.

The most important and dramatic victory for freedom of the press in colonial America occurred in 1734. Any discussion of the subject would be incomplete without mention of the Zenger trial with which I am sure you are all familiar with.

John Zenger, printer and journalist, was arrested for seditious libel and after 9 months in jail was put on trial for writing and printing political attacks on the Governor of New York, William Cosby. Zenger, defended by Andrew Hamilton, of Philadelphia, was acquitted by the jury. In defending Zenger, Hamilton pointed out that it was pretty clear to him "that in New York a man may make very free with his God, but he must take special care what he says of his Governor." While the main point at issue in the trial itself, had been the question of what constituted a libel, the point really gained was the assertion by implication of the right of the people to criticize the government. Hamilton's speech, in Zenger's defense, has been referred to as one of the greatest oratorical triumphs won in the Colonies; and most important it pointed straight toward the American Bill of Rights. Following Zenger's trial the liberty of the press was secure from assault and the people became equipped with the most powerful weapon for successfully exposing and opposing arbitrary power, that is, the right of freely criticizing the conduct of public men.

Thoman Erskine was probably England's greatest courtroom lawyer and most eloquent defender of freedom of speech and press. In 1792 Erskine defended Tom Paine in an attempt to uphold the right of an Englishman to criticize political institutions. In his defense Erskine laid forth an underlying principle for freedom of the press which always has and always will underlie this freedom, that is the most valued privilege of the people of a country is to watch over everything that affects their happiness, whether in the system of government or in the practice—for this purpose the press must be free. Since this has been so, much evil has been corrected by it. "If the government finds itself annoyed by it, let it examine its own conduct, and it will find the cause—let it amend it and it will find the remedy."

Freedom of the press means not only freedom for but also freedom from. Although the press must be free from external compulsions, to demand that it be free from any pressure which might distort or warp its utterances would be to demand that our society be void of contending forces and beliefs. Persisting and distorting pressures—financial, popular or institutional—must be known and counterbalanced. The press must be free for the development of its own conceptions of service and achievement; free to make its contribution toward the maintenance and development of a free society. The press must also be held accountable—accountable to society for meeting the public need and for maintaining the rights of citizens. In this modern era of advance communications the faults and errors of the press have ceased to be private whims but have become public dangers.

In an article published in the New York Times magazine, Henry Commager said: "Freedom of the press we must keep ever in mind carries with it responsibilities—the responsibility to present news fully and fairly, to restrain from the merely sensational, the merely trivial, the merely partisan, to refrain from spreading lies and hatred. * * * Freedom involves a positive responsibility to contribute to further freedom, to enlightenment, to truth."

Our Government at all times has been striving toward perfection. A free press has examined and detected its errors, and the people have, from time to time reformed them. This freedom has alone made our Government what it is; this freedom alone can preserve it. The liberty of speaking and writing is the basic liberty which guards all other liberties.

As Jefferson said to President Washington: "No government ought to be without censors; and where the press is free, no one ever will."

U.S. System Viewed as "Revolutionary"

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1960

Mr. WILEY. Mr. President, as we know, the Communists continue to try to convince the world that communism is a new system; that it can best provide for the necessities of life and progress of a people; that it will excel freedom and free enterprise; that it is the political and economic system of the future.

To us, who believe in freedom, however, these are not truths, but falsehoods—the pretexts under which a philosophy of state dictatorship—old in world history—again attempts to maintain its power and extend its influence and control.

As a nation, however, we recognize that our free system is in competition with the Communists. Also, the so-called uncommitted countries of the world—including millions of people and vast land areas and natural resources—are avidly watching the competitive battle.

As the East-West struggle tosses to and fro—in the propaganda, political, economic, psychological contests, with the nations at a standoff militarily—the world, I believe, could well benefit from a clearer, comparative picture of the Communist and free systems. Among other things, this could result in swinging the so-called noncommitted nations to the side of freedom.

Recently, the Christian Science Monitor published a thought-provoking article by George Telfer, entitled "U.S. Systems Viewed as Revolutionary." Presenting a useful comparison of our own, and the Communist systems—in terms of their historical significance, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. SYSTEM VIEWED AS REVOLUTIONARY

(By George F. W. Telfer)

BOSTON.—The American way is more revolutionary than Communist statism, and the Communists today are fighting a ghost, George C. Lodge, assistant Secretary of Labor for International Affairs, said here April 14.

Addressing the Municipal Bond Club of Boston, Mr. Lodge, son of Henry Cabot Lodge, Jr., present U.S. Ambassador to the United Nations and former U.S. Senator from Massachusetts, also said, the American way "renders the Marxian view of capitalism, socialism, and communism obsolete.

"The exploitative capitalism that Mr. Khrushchev boasts he will bury has long since died in the United States—if in fact it ever actually existed. We have produced instead the most effective and egalitarian social and economic system the world has yet known, and it is still evolving, providing an ever-widening distribution of wealth."

ELEMENTS NAMED

Recognizing that the American system has evolved under extraordinarily favorable conditions, Mr. Lodge named three revolutionary elements through which laissez-faire capitalism was contained, controlled, and transformed in the United States, without blowing up the whole system.

These were the professionally managed corporation, organized labor, and refusal of the people to let the Government become an expression of the ownership class as Karl Marx forecast in the 19th century.

Mr. Lodge cited great and diversified natural resources, early political democracy, universal suffrage, and abundant food supplies as among the favorable conditions. Also, he said, "We have never been subject to the terrific strains of overpopulation. * * * Our greatest strength may well be the fact that we never had to suffer the feudal system."

ENLIGHTENMENT URGED

Earlier, Mr. Lodge told this writer he felt U.S. citizens who go abroad should be better informed about this country's economic system. In this way they can better answer criticisms or questions posed by inquisitive persons they meet abroad.

His special concern, he said, was with people in the Government service who travel overseas for the Government. But this was to be the first of many public appearances he would make around the country, carrying essentially the same message.

"But Americans have difficulty communicating our experience to others," Mr. Lodge said. The problem is that foreigners, undazzled with our wealth, see little relationship between our horn of plenty and their immediate problems.

FOREIGN VIEW NOTED

"The system by which our horn has been filled is simply known to them as capitalism, without qualification.

"In many foreign countries a capitalist is thought of as the economic descendant of the feudal lords who once were their rulers; as the representative of monopoly business, depositing his profits in foreign countries, with little sense of social justice or community responsibility. Capitalism is also a word associated with colonialism and exploitative land tenure.

"There is little understanding abroad of the role the U.S. Government plays in protecting the public against abuses of economic power."

The system in this country has been evolving so fast, Mr. Lodge continued, "there has been no time to articulate for it a proper classical philosophical base." But he tried:

"Its essential characteristic is efficient, competitive production causing economic progress through social justice by democratic means. It is * * * pragmatic,. responsive to the will of the people and subject to countless checks and balances imposed internally by labor, management, and competition, and externally by government.

"The public consensus is the final arbiter of power in the American economy. If the public consensus is not recognized, the Government intervenes to assure its recognition."

EXAMPLES GIVEN

Mr. Lodge gave examples of what he called regular invasions by the Government of the normal sphere of private enterprise. He cited the monopoly-curbing Sherman Anti-Trust Act, the Pure Food and Drug Act, Securities and Exchange Act, Interstate Commerce Commission, Tennessee Valley Authority, and Rural Electrification Authority, as well as President Truman's indication in 1949 of his readiness to put the Government into the business of making steel when there was a critical shortage.

"It is important to note," Mr. Lodge pointed out, "that this sort of governmental activity is not a matter of doctrine or ideology. It is rather the pragmatic voice of the people speaking through the State."

There is little awareness abroad, "even in Western Europe," Mr. Lodge said, of governmental expenditures for social security, public welfare, health and medical care, child welfare, veterans' aid, housing and education, unemployment compensation, agricultural programs, and Federal power establishments.

Finally, Mr. Lodge spoke of the graduated income tax, the corporation tax, the role of small business in spite of great corporations, and nonprofit cooperatives.

"Every bank clearinghouse, rural telephone and electric coperative, mutual building and loan association, mutual insurance company, mutual savings bank, credit union, and cooperative apartment" is evidence that "people in a free society demand and have achieved freedom to organize for their own best economic interests."

A Challenge That Can't Be Ducked

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. FORAND. Mr. Speaker, I offer for printing in the RECORD as a part of my remarks an excellent editorial that appeared in the April 16 issue of Business Week on the subject of "Health Insurance for the Aged."

The editorial follows:

A CHALLENGE THAT CAN'T BE DUCKED

Health insurance for the aged is fast becoming the No. 1 issue facing Congress this year. And there's political dynamite in it: Any candidate suspected by the millions of old people (and those concerned about their health problems) of taking a cold or know-nothing attitude toward the issue is likely to be in serious trouble this election year.

One thing about the issue is clear. Although plenty of politicians may see it as a vote-catching device, there is nothing synthetic or phony about the problem. Everyone who has seriously studied the situation has concluded that the provision of better health care for the aged is a serious—and growing—problem. Thanks to medical progress, the number of aged is increasing rapidly. In 1930, there were 6 million people over 65 in the United States; today there are 16 million.

For far too many of these, long life has meant shrunken incomes, increased sickness, loneliness, and the shame of being a candidate for a handout from society. Health, Education, and Welfare Secretary Flemming, in his thorough report to the House Ways and Means Committee last year, concluded that 3 out of every 4 aged persons would be able to "prove need in relation to hospital costs." That is to say, they would be able to prove that they simply could not afford to pay for the care they needed when taken seriously ill.

The issue, then, is not whether there is a problem but rather how to meet the problem.

TWO APPROACHES

Representative AIME FORAND, Democrat of Rhode Island, has proposed to deal with it through a system of compulsory Federal insurance within the framework of the Social Security Act. The Forand bill would provide insurance covering 60 days of hospital care, or 120 days of combined hospital and nursing home care, together with surgical services, to all those eligible for old-age insurance benefits. It would be financed, initially, by boosting social security payroll taxes one-half percent—divided equally between employees and employers.

The Forand bill has been attacked for a number of reasons by various groups, especially the American Medical Association, which sees it as the camel's nose of socialized medicine coming under the tent.

But the main weakness of the Forand bill, as specialists in the health field see it, is not that it does too much but too little. They condemn it as too narrow and as an encouragement to "hospitalitis"—the tendency, inherent in many of our present voluntary insurance programs, to put the sick into hospitals because there are no provisions for covering treatment at home or in doctors' offices.

The bill sponsored by Senator JAVITS, Republican of New York, strikes at this weakness. As JAVITS points out, though hospitalization costs comprise a large part of an aged person's annual medical bill, the average older couple spends $140 a year on health costs unrelated to hospitalization. "One out of every six persons 65 years and older," says JAVITS, "pays over $500 in medical bills annually." Yet 60 percent of the old people have annual incomes under $1,000 and can't afford home or office care that might cut down the length of hospitalization or eliminate it altogether.

JAVITS would deal with the problem by a voluntary program that would combine Federal and State subsidies, contributions scaled to income by the aged themselves, and both commercial and nonprofit insurance companies such as Blue Cross and Blue Shield. The program would not become operative in any State until the State put up the money, arranged with the insurance carriers, and agreed to certain standards for the program.

Although the Javits bill makes a hard effort to provide a "voluntary" (and heavily subsidized) program, it does not appear to meet the test of practicality. The program would take a very long time to negotiate with 50 individual State governments and with the insurance carriers—assuming that it would be possible at all to get them involved in a program whose costs are unpredictable.

Indeed, after studying Flemming's able report, and the arguments on all sides of this issue, we are forced to conclude that the voluntary approach simply will not do the job.

The problem basically is that the aged are high-cost, high-risk, low-income customers. Their health needs can be met only by themselves when they are young or by other younger people who are still working. The only way to handle their health problem, therefore, is to spread the risks and costs widely. And that can best be done through the social security system to which employers and employees contribute regularly. By comparison with the heavily subsidized schemes, this approach has the advantage of keeping old people from feeling that they are beggars living off society's handouts.

We do not pretend to know all the answers to the problem of enlarging the social security system to include a health insurance program for the aged. Even a modest study of the problem immediately convinces anyone of its difficulty and complexity. At this point, we don't think that the complete answer to it has emerged.

Nevertheless, no democratic government can refuse to grapple with a problem of such demonstrated urgency and importance. The issue cannot be evaded and, before it becomes a political football, the politicians of both parties should accept responsibility for finding the best possible answer in the shortest possible time.

Tribute to the Late Aubrey Steen McLeod

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1960

Mr. BRIDGES. Mr. President, in the April 25 issue of U.S. News & World Report, there appeared an article entitled "A Story of Courage" by David Lawrence.

This is a story about Aubrey Steen McLeod, an unknown American soldier who passed away a few days ago. Mr. Lawrence points out how at the age of 23, this soldier lost both his legs fighting for our country, and yet had the courage and enthusiasm to accomplish great things in life, and to inspire other disabled veterans to do the same.

I knew "Mac," as he was called, personally, and I am among the many people who admired and respected him. I ask unanimous consent that Mr. Lawrence's article concerning the unfailing courage of an outstanding American be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A STORY OF COURAGE

(By David Lawrence)

Aubrey Steen McLeod passed away a few days ago. To the vast majority of the American people he is an "unknown soldier." For the epic of his courage is the untold story of a man who, at the age of 23, lost both his legs above the knees but managed in the 43 years thereafter to achieve a success in life.

"Mac," as he was called by his friends, was one of the first half-dozen Americans wounded in an air raid in France in World War I. He was a volunteer with a U.S. Army ambulance unit which reached France in May, 1917.

Here, in a letter written from a base hospital in France in October, 1917, to his parents in Indiana, is young McLeod's own description of his experience:

"Practically three weeks I have been lying on my back at the hospital and although it is very tiresome, I cannot complain, for I am exceedingly lucky to be alive.

"On the night of September 4, I was on guard with nine others and was sleeping in the reception tent when I was awakened by an explosion. No sooner was I on my feet than a bomb exploded across the street, and then one exploded just 5 feet from me. It shattered my left foot and filled both my legs with shrapnel, a piece passed through the fleshy part of my side. Added to this, it was a poisonous shell.

"They amputated my left foot that night. Then gas poisoning set in, and they had to

take off both my legs near the hips in order to save my life. If it had happened on the battlefield, I probably would not have lived. I was very fortunate being hit low, for five of our men were killed that night near here. I am receiving the best of care, and my legs are getting along splendidly.

"If everything progresses favorably, I should be home about November 1. Now please don't worry about me, for I am getting along fine. I shall be given artificial legs and will be able to get along OK."

The wounded man was treated at Walter Reed Hospital in Washington for 11 months and then was transferred to a Boston hospital, where he was fitted with artificial legs. He decided to continue his studies. He graduated in 1921 from Massachusets Institute of Technology as a chemical engineer, and then earned a master of arts degree in economics at Harvard in 1925. He attended classes in a wheel chair and took part in social activities as if he were as able-bodied as the rest of his classmates. He once said, as reported in the Boston Globe during his college days:

"The way I look at my case is this. There are numerous people who, in the excess of sympathy just at present for a wounded man, wish to do everything for him; but in the years to come, when the enthusiasm has dropped, the man has got to be able to make something for himself.

"So, as I lay in the hospital for so many months, I decided that I would gain the best education I could and not let my misfortune interfere in the continuation of my studies which were interrupted by the war. I made up my mind I would go on as though nothing had happened and to let nothing make me sour or discontented.

"I eat well, sleep well, and have all kinds of ambition and optimism. I want every wounded or disabled man back from the war to take note of my case. There could hardly be a more used-up man than I am, and yet I want the boys to take heart and go to work and make men of themselves.

"Why, a disabled man can do many things and, very often, can fit himself for a place in which he can earn more money than he ever earned when he was sound."

"Mac's" excellent judgment on investments enabled him to accumulate a small fortune. He became one of the most expert of forecasters of business conditions. He was appointed Actuary of the U.S. Treasury Department and served there from 1930 to 1937. He was noted for the accuracy of the estimates of future tax receipts which he annually gave to congressional committees.

Never did "Mac" falter. Never did he refer to his handicap as a barrier to anything he wanted to accomplish in life. Two years ago he lost his wife, the high school sweetheart who married him atfer his return from France. She, too, lived a life of courage. The parents, moreover, instilled courage in their only child. Norman Bruce McLeod, who volunteered in World War II for the hazardous duty of a U.S. Navy "frogman," and later was awarded the Silver Star.

Nearly 20 years ago, "Mac" joined the staff of this magazine as an economist. At the time of his death of a heart attack on April 9, 1960, in a Washington hospital, he was chief of the economic unit of U.S. News & World Report.

We salute an able economist, but we salute as well a man of unfailing courage. May his fortitude and determination always be an example to all who suffer physical handicaps. For, while the body may be maimed, the spirit of a man can be invincible.

Farmer Cooperatives

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. THOMPSON of Texas. Mr. Speaker, the district which I have the honor to represent is predominantly agriculture. In it, we have many well established farmer cooperatives. They are, to the best of my knowledge and information, operated scrupulously by and for their members. They are the truest form of such organizations and I almost never have any kind of a complaint in regard to them. These members view with considerable concern the operation of some so-called cooperatives, none of which incidentally are located in our area but which encroach on many fields far removed from their intent. They escape taxes which competing private organizations must pay and if they are permitted to continue they could conceivably prejudice the entire cooperative program.

This morning I received a letter from the Texas Federation of Cooperatives. It reads, in part, as follows:

Just a note to remind you that the farmer cooperatives of Texas are still steadfast in their position that legislation related to taxation of farmer cooperatives and their patrons should be passed which would put into effect the intent of the 1951 law.

In brief this 1951 intent was (1) that patrons refunds, when made pursuant to a preexisting obligation are excludable from income at the corporate level regardless of whether such refunds are made in the form of cash, capital stock or other media, and (2) that all such refunds should be taxable to the patron at par value for the years received regardless in what form received.

I believe you are in general agreement that this is a sound, just and equitable tax program. I hope you will continue to maintain the position that these principles be clearly embodied in the statutes, the Internal Revenue Code and in the regulations of the Internal Revenue Service.

The farmers and ranchers of Texas through their 525 self-owned processing, marketing, and service institutions will support and assist you in every way possible to get this type legislation enacted.

There also came to my desk a copy of an editorial which appeared on April 11, 1960, in the St. Louis Globe-Democrat. This also I submit for the consideration of the Congress. Perhaps some of the thoughts contained will be helpful in providing the proper protection and ensuring the continued operation of the pure and altogether praiseworthy farmer cooperative which operate in the Ninth Congressional District of Texas:

The Nation's co-ops, launched a few generations ago to help local groups of little farmers, have now become big, flourishing business. One reason is because they have found a gaping loophole in the income tax laws, a gimmick by which many of the co-operatives escape paying millions of dollars in Federal taxes yearly.

It's all legal enough, but the result is a flagrant injustice to Government and to private enterprise, into whose fields the co-ops have heavily expanded. Private concerns must pay corporate income taxes up to 52 percent. The amount rendered Uncle Sam by the co-ops is generally no more than a token payment.

There is no reason why cooperatives should not be taxed as other business is taxed. Most particularly is this true in manufacturing fields, where the co-ops have widely encroached under their tax-free status.

It has been reliably estimated, during recent hearings before the House Ways and Means Committee, that at least $400 million of net co-op income goes free of Federal taxation annually. Taxing this income would produce between $150 million and $200 million.

This testimony was offered by Roswell Magill, a tax expert, in behalf of the Grain and Feed Dealers National Association. Mr. Magill was named by President Roosevelt Undersecretary of the Treasury. He is president of the Tax Foundation, a private research organization.

Orginally cooperatives were born among small groups of farmers, who intelligently banded together to purchase farm machinery they could not individually buy. Or they joined in acquiring grain storage space so they wouldn't have to dump their harvests on the market at depressed prices. They lumped their resources to purchase seed, fertilizer, and other necessities at discounts for large purchases.

But that was 40 years ago. At present co-ops are often massive business operations, covering a State, or a region embracing as many as 16 States.

The estimated gross business of farm cooperatives in 1957 was $13 billion. Mr. Magill suggested this gross now bulks in the neighborhood of $15 billion a year.

That total would approximately equal the combined sales of such giant companies as A. & P., International Harvester, Standard Oil of New Jersey, and National Dairy. These four corporations paid $540 million in Federal income taxes in 1958. The tax payment of co-ops, doing about the same business volume, paid only a nominal tax.

Like other large industry, the co-op has diversified its operation into all kinds of areas. It acquires, processes, and sells cotton, dairy products, grains, wool—handling virtually every kind of farm product, from the field to the consumer.

The co-ops supply building materials, paint, brick, fuel, feeds, hardware, fertilizer, gas and oil trucks. They handle about 25 percent of the country's fertilizer business.

They are in the grocery business, selling retail meats, furniture, appliance, drugs, cosmetics and office supplies. They operate auto repair shops, barbershops, beauty parlors, even funeral establishments.

In addition cooperatives have been buying private businesses, like Welch Grape Juice, eliminating competition and further taxes.

All this is accomplished usually with little or no Federal burden—while other corporations pay taxes through the nose. Such a condition obviously is an injustice, not merely to taxpaying competitors but to every individual taxpayer who has to pay his share up to the hilt.

The reason for the co-ops' tax loophole is simply because the legislation passed by Congress in 1951 was a sleazy job. The intent was to have cooperatives pay income tax—at the source if they retained net earnings, or

through patron members if earnings were distributed.

The law didn't work that way. Co-ops devised a system of distributing certificates of holdings. These certificates bear no interest and are not negotiable. Federal courts held them nontaxable.

The result—co-ops can hang on to their earnings for tax-free expansion. And neither they nor their members have to pay income levies.

The double tax on private corporations—at the source and against investors—is a rank injustice. It should be abandoned for all corporations. But the co-ops should be forced to pay Federal taxes on held earnings, or their members on cash disbursements.

The preferred status of co-ops, with their built-in tax loophole, should be changed by this Congress. There are too many exemptions and inequitable concessions in the hodge-podge tax structure. Federal levies should apply equally to every taxpayer.

Address of Floyd E. Dominy Before Oklahoma Reclamation Association

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1960

Mr. KERR. Mr. President, Oklahoma was honored on April 5 by having the Commissioner of Reclamation, Floyd Dominy, in our State to address the annual meeting of the Oklahoma Reclamation Association.

His address was very informative and points to the need of careful study of the use of our limited water supplies, in light of increased population and accelerated per capita uses.

I ask unanimous consent that his remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY COMMISSIONER OF RECLAMATION FLOYD E. DOMINY BEFORE THE OKLAHOMA RECLAMATION ASSOCIATION AT ALTUS, OKLA., TUESDAY, APRIL 5, 1960

It was just a year ago that I was here in Oklahoma to address a utility association meeting, the members of which wanted to know something of the water resources development opportunities in your State. At that time, I said, I was gratified to receive the invitation because it indicates a growing awareness of the importance of water in Oklahoma's future. The reactivation of the Oklahoma Reclamation Association and its active participation in and sponsorship of reclamation in the State is another evidence of determination to push ahead with needed and vital resource development.

In the year since I was last here, you have seen a very good crop grow to maturity even when dryfarming is practiced. You also have come through a winter in which repeated storms have swept over the State with more moisture than could be used at that time. Right now every indication is that you have another good crop year ahead. But do you?

No one can tell positively that this will be another year in which the rains will come at the right time to supplement the moisture now in the ground. I am a farmer, grew up on a dryfarm in Nebraska, spent many years in county agent work in Wyoming, and have a farm now in Virginia, so I know the ups and downs of seasonal changes and the despair that comes with long stretches of cloudless sky. I have not yet found a way to tell, in December, whether I am going to have enough rainfall in July and August to mature my crops. But because I have worked in reclamation territory most of my life, I am aware that something can be done about those dry years. I know that if that reservoir back in the hills, in which I have a big interest and a firm water right, is full in the spring, I will be able to pull through. I know the importance of proper conservation and use of our water resources. I know that it pays.

And so, today, I want to talk a little with you about the reclamation situation in Oklahoma and what you can do about increasing your usable water supply.

As a matter of history, Oklahoma Territory was included as one of the original reclamation States in the Reclamation Act of June 17, 1902. This was the act of Congress that made the United States a participant in the development of the water of the arid West. Oklahoma is not a truly arid State. You are in the subhumid belt or twilight zone of water supply. Nevertheless, even in those early days, various preliminary studies were made throughout the State by the Reclamation Service to make a determination of the need for, and possibilities of, reclamation projects. It is worthy of note that some of these early investigations were made by the late Dr. Charles N. Gould, who later became head of the department of geology at the University of Oklahoma, and also became director of the Oklahoma Geological Survey.

In 1903, the Reclamation Service made fairly extensive investigations in southwest Oklahoma. They mapped the Mountain Park Reservoir site on Otter Creek, and studied the possibility of diverting water from the North Fork in the vicinity of the present Altus Reservoir, eastward to lands in Kiowa and Tilman Counties.

But nothing further was done until 1917, when the Lawton project in Comanche County was authorized by the President. Upon entry of the United States in World War I, water that would otherwise have been available for irrigation was placed at the disposal of the War Department for use by Fort Sill. The project was later deauthorized because an assured water supply was no longer available.

Little further work was done in Oklahoma until 1924, when C. T. Pease, of the Bureau of Reclamation, wrote a report on "Proposed Irrigation Projects in Southwestern Oklahoma." He concluded that the Lugert project was the most promising of those investigated. He did have reservations as to the advisability of attempting irrigation projects at that time, as there was little local interest evidenced in irrigation. In general, the feeling was that Oklahoma had not reached a stage of development justifying expenditures necessary to create an irrigated agriculture. They were having good weather years then.

The drought of the thirties brought a change. In 1937, under the sponsorship of Jackson County citizens, ably led by the late Judge W. C. Austin, who lived right here in Altus, an investigation was made. The project, which we know today as the W. C. Austin project, was authorized in 1941 and construction was carried out in that decade. Most of you are familiar with this project, but let me state briefly that it consists of the Altus Dam and Reservoir on the North Fork of the Red River and a distribution system for irrigation of about 48,000 acres of land in the Lugert-Altus district. It also provides water supply to the city of Altus and the nearby Air Force base. The reservoir provides flood control and substantial fish and wildlife benefits to an area seriously lacking in such opportunities. Also, your fine Quartz Mountain State Park has been established at the reservoir.

Project farmers are using irrigation as a tool to obtain fine crop production and real agricultural stability. Over $6,500,000 worth of crops were produced on a harvested irrigated crop area of about 40,000 acres in 1958. This is an average return of about $160 per harvested irrigated acre, which is well above the returns from dry-farm operations. In years of drought, of course, the difference is even more sharply defined. In the dry years irrigation is the difference between success and failure.

Since irrigation started about 1946, the project has produced crops worth approximately $50 million. We estimate that at least $33 million of this is new production over and above what would have been realized without irrigation.

Based on studies in a similar area, an increase of $1 in crop production creates an additional $1.10 in local labor income. This, in turn, creates $1.50 worth of increased labor income in the regional trade area. Thus, the increased production of $33 million created by the project has created $36 million in local labor income and $50 million in regional labor income since 1946.

These figures relate only to the irrigation phase. The benefits of having a more assured water supply for Altus and the Air Force base and the recreational and fishing use of the reservoir have been of inestimable value.

Let me note here also that the W. C. Austin project is in the hands of the irrigation district, which has done an excellent job of operating and maintaining the facilities. It is our policy to get project operations into the hands of the water users just as quickly as possible.

The W. C. Austin project is a blue-ribbon example of what can and is being done in other parts of Oklahoma.

The Washita Basin project was authorized in February 1956 and construction initiated early in 1958. The Fort Cobb Dam was completed last fall, and the reservoir has stored sufficient water to meet the total contracted water requirements of the Fort Cobb Reservoir Master Conservancy District for several years. The aqueduct system for delivery of water from Fort Cobb Reservoir to Fort Cobb, Anadarko, and the Western Farmers' Electric Cooperative generating plant is under construction. We expect it to be completed during the coming summer and clear water of good quality will be available to that area.

Construction is well advanced on Foss Dam and will be completed next year. We plan to start work soon on the Foss aqueduct. Foss Reservoir will furnish water to Clinton, Bessie, Cordell, Hobart, and the Clinton-Sherman Air Force Base.

The Fort Cobb Dam and aqueduct will be completed at a cost substantially below our estimate, and we believe there will also be a saving in the cost of Foss division.

We are studying the irrigation phases of the Washita project, but are confining those studies to a project size we believe could be served under any reasonable adjudication decree. The extent to which irrigation may be developed depends entirely upon the quantity of water the court determines is available for this purpose.

The Norman and Canton projects in Oklahoma are now before Congress for authorization.

The Canton project on the North Canadian has been before Congress since 1954. Plans contemplate about 16,000 acres of land for irrigation in the vicinity of Geary, Okla. Water supply would be provided by the Canton reservoir which was constructed by the Corps of Engineers and has been used primarily for flood control since the 1940's.

The Canton Irrigation District was organized in the mid 1940's with the intended purpose of providing an organization to contract with the United States for repayment, but the Congress has not as yet acted on the authorization.

The principle unresolved problem is lack of agreement as to a firm allocation of reservoir storage capacity for irrigation purposes throughout the repayment period. There is a lesson in this—we must always look ahead and develop the full water supply potential of a reservoir site so that all beneficial purposes can be served. We can no longer afford construction of single, or limited, purpose reservoirs. I hope that this problem can be resolved as landowners in the Canton Irrigation District have worked long and faithfully to obtain project development. The area is capable of providing a fine irrigated agriculture.

The Norman project in Oklahoma and Cleveland Counties is the other reclamation project now being considered by Congress and several Oklahomans testified at hearings in Washington only 2 weeks ago. The project consists of a multiple-purpose dam and reservoir on Little River about 13 miles east of Norman, Okla., and pipelines to provide water to Norman, Midwest City, and Del City.

Sponsors of the Norman project completed organization of the Central Oklahoma Master Conservancy District last fall. This master conservancy district, which has been organized under Oklahoma law, has the authority to contract with the United States for repayment of reimbursable costs. It seems that good progress can be expected on this project.

There are several other projects in the State on which feasibility investigations are now being completed or are underway. The Waurika and Arbuckle project investigations are now being completed. Sponsors of both have cooperated by providing funds and furnishing other assistance needed.

The Waurika project consists of a multiple-purpose reservoir on Beaver Creek to furnish municipal and industrial water supply to nearby communities and cities, and irrigation of about 2,000 acres of land. It will also provide flood protection to valley lands and the town of Waurika, and recreation and fish and wildlife opportunities. The report on this project has already been completed and submitted to my office for review before it goes to the Secretary of the Interior for consideration.

The Arbuckle project is on Rock Creek in Murray County, Okla. The reservoir as planned will provide water supply for Ardmore, Davis, Wynnewood, and Sulphur, and will include flood control storage to provide flood protection to limited areas downstream. The reservior site is in a picturesque area and will provide excellent recreation and fish and wildlife opportunities.

A draft of the report has been prepared but final completion has been delayed because of indecision by some potential water users as to how and on what basis they will participate.

Projects require united area support, particularly by the water users who must pay the bill. Progress can only be as rapid as is consistent with the wishes and support of local interests—where there are conflicting uses, it is essential to compromise differences and reach agreement.

The Mountain Park project is also currently under investigation. It will provide for a reservoir on Otter Creek about 25 miles east of Altus, a diversion canal from Elk Creek, and conduits to supply water to the city of Altus, the Air Force base, Snyder, and Frederick, and possibly Roosevelt. The project will also provide flood control and other benefits, including recreation and fish and wildlife. This investigation is another one that will require the continued cooperation of project sponsors and the State in order to work out the best plan possible.

Investigation of the Mangum Reservoir on the Salt Fork of Red River was initiated back in 1938 as a possible supplemental water supply for the W. C. Austin project. The investigations were carried forward through 1942, when detailed study of the project was suspended because of the war.

The investigations were resumed last year, and geologic investigations are being made of the reservoir site to determine its suitability for storage of the flows of the Salt Fork River. If current geologic studies show that the reservoir would be watertight, the Mangum reservoir would be capable of materially increasing the water supply of the W. C. Austin project.

However, the Salt Fork of the Red River is an interstate stream, and development upstream in Texas could affect the water supply that would be available at the Mangum Reservoir site. We are currently studying potential developments on the Salt Fork and Prairie Dog Town Fork in Texas. Final decision on developments in the Salt Fork Basin should be preceded by a Red River compact. This is now under negotiation between the affected States.

Another project investigation that we have underway here in Oklahoma is the Liberty Bottoms project in southeastern Oklahoma, immediately below Denison Dam. Current investigations are being directed toward developing a plan for irrigation of several tracts of land by pumping from Red River. A project-type irrigation system will make it possible to reach a larger part of the available irrigable lands than would be possible through development by individuals who own lands more favorably located along the river.

This brings us up to date on reclamation development in Oklahoma. I should mention, however, the hexadecanol tests conducted at Lake Hefner, near Oklahoma City, in 1958 with the cooperation of the city and many State and Federal agencies. These tests were the first large-scale field experiments in research which may lead to materially reducing the evaporation losses from our ponds, lakes, and reservoirs. The Geological Survey has estimated that we lose more than 24,850,000 acre-feet of water annually by evaporation from open water areas in the 17 Western States and if we can save even a fraction of that, we will save the equivalent of a good-sized reservoir full of water for beneficial use.

Now let's try to look ahead. The national population is ever increasing. Latest projections show that our national population will increase to some 230 million people by 1975. Not only is the population increasing, but our ever-rising standard of living and changing habits create new demands for goods of all kinds. Consumption trends show that people are eating more, particularly specialty, health-giving foods, which are principally the products of irrigated land.

It is obvious that our Nation must provide many new industries to supply products for our people, increased agricultural production to feed and clothe them, and many, many new homes so that they may be housed. Where this expansion occurs depends to a large degree upon resources that are available and how effectively these resources are developed—how intelligently they are used.

Water is one of our key natural resources. Your State's future growth and economic stability depend to a large degree upon how wisely available water resources are used.

There is a tendency to oversimplify a problem such as water resources development. Here in Oklahoma, you have an average of some 37 million acre-feet of water flowing out of the State each year, including those waters which flow into and across the State from neighboring States. The average precipitation for the State of Oklahoma as a whole is about 33 inches. All this sounds fine because we are using average figures but don't be misled by averages.

There are wide variations in annual amounts of rainfall and runoff. As I have mentioned, no one can predict in December what the rainfall will be next summer. The recent drought that began in 1951, and continued until the spring of 1957, has brought into clear focus the problems of water development and utilization.

It is axiomatic that when rainfall is low, needs for water are greatest. Yet it is during these periods that available streamflow, and even ground water, is in shortest supply.

Here in Oklahoma, streamflow is extremely erratic. Although an average of some 37 million acre-feet of water flows out of the State annually, there are years when the runoff falls far below this figure. During the last 5-year drought period, the average outflow from the State was approximately 18 million acre-feet, or less than half the long-time average.

Even more significant is the fact that about two-thirds of the total runoff occurs in the eastern one-third of the State. It follows that water supplies in the more arid western part of your State are most erratic. Pollution is another complicating factor that causes streamflow at many points to be unsuitable for most uses.

We must recognize that development of the additional water supplies needed to support your growing municipal, industrial, and agricultural requirements is becoming more difficult and expensive. You will need to think big in setting your goals in water development and formulating a wise water policy. Then you must display a forceful unity of purpose in developing plans and excuting them in a logical manner.

An overriding factor is that remaining undeveloped streamflow must be conserved and be made available for beneficial uses to the maximum extent possible. I underline and emphasize beneficial and maximum. Thus far Federal reservoir projects constructed in your State by most Federal agencies have provided storage capacities principally as added capacity for conservation and water supply purposes in conjunction with flood control. That is natural because, until recently, the greatest water problem here in Oklahoma was flood control.

I know from talks that I have had with your State officials and leaders in resource development that a new era in reservoir planning is at hand. The Bureau of Reclamation has long advocated the multiple-purpose development in connection with developing the water resources throughout the West. I am confident that this is the only sound basis for achieving development which will most likely meet the needs of your State. Our scarce reservoir sites should be developed to the optimum capacity and should serve the maximum purposes possible. Provision must be made for the safeguarding and development of the fish and wildlife resources. Recreation opportunities should be utilized at any reservoir site where practicable as there is an ever-increasing need for this type of activity by the growing population. Flood and pollution control and other purposes which a reservoir site may serve must not be overlooked.

The Water Supply Act of 1958, sponsored by your senior Senator from Oklahoma, is a far-reaching step in providing for conservation storage in reservoirs throughout the United States. This act allows inclusion of conservation space for future use, and deferring repayment of that part of the cost of conservation storage which may not be required immediately.

Of course, conservation of water does not mean the indiscriminate storage of water at every site where a dam can be constructed. Impoundments must be planned so they do not result in unnecessary losses through transpiration and evaporation. Such lost water may be sorely needed at other points.

Finally, let me emphasize that it has been and continues to be the policy of the Bureau of Reclamation and its parent agency, the Department of the Interior, to operate within the framework of State water laws. However, the water laws and the climate in which they are administered must be attuned to development needs. This is of particular importance in your own State. You must take a positive approach to the development of water supplies for beneficial purposes.

Oklahoma has reached a point where intelligent and firm decisions must be reached concerning your water resources and the manner of their development and priority of use.

Your association has a primary interest in the water resources development of the State and is in a position to set the path for a useful future. In addition to the very important function of liaison between local interests and State and Federal agencies, you can do a great service to your State in helping to develop and support a sound water policy.

Fundamental in such a policy is legislation which will permit water development to proceed in an orderly manner by the clarification of water rights and establishing priority for the important uses which are essential to the future growth of your State. You have our best wishes and support in your endeavors.

Hoosier Majority Favors Federal School Support—Seven Indiana Congressmen Take Strong Position on Federal School Support for Construction and Salaries

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. BRADEMAS. Mr. Speaker, I am pleased to insert the following article from the March 1960 issue of the Indiana Teacher in the CONGRESSIONAL RECORD.

The article makes clear the strong support of a majority of Hoosier Congressmen for increasing our national investment in education by using our Federal funds in support of State and local efforts to build more classrooms and improve teachers' salaries.

The article follows:

HOOSIER MAJORITY FAVORS FEDERAL SCHOOL SUPPORT—SEVEN INDIANA CONGRESSMEN TAKE STRONG POSITION ON FEDERAL SCHOOL SUPPORT FOR CONSTRUCTION AND SALARIES

President Eisenhower likely will have on his desk, before this session of Congress adjourns, a Federal support for school construction bill to sign or veto.

The House Education Subcommittee has reported out Representative FRANK THOMPSON, Jr.'s moderate-size school construction bill which, party leaders hope, will win the approval of the House Rules Committee which has had the Murray-Metcalf bill bottled up since last session.

The New Jersey Democrat's school construction bill (H.R. 10128) calls for $325 million a year for the fiscal years 1961, 1962, and 1963. The States are required to match their grant dollar for dollar. Indiana's share at $260 per classroom unit would be $8,300,000. This would help to alleviate the critical shortage of classrooms in Indiana which William E. Wilson, State Superintendent of Public Instruction, says now stands at 3,000 classrooms.

The Thompson bill does not call for any of the Federal moneys going for teachers' salaries as the Senate bill 8, the McNamara-Clark-Monroney bill passed several weeks ago, provides.

Indiana Congressman JOHN BRADEMAS of South Bend, a member of the House Education and Labor Committee, helped to write the House bill.

Speaking of the urgent need for additional sources of funds for needed school construction in Indiana, Robert H. Wyatt, ISTA executive secretary, says that a Federal support must be passed " if we are to avoid a real strangulation of further progress in Indiana growing out of the squeeze play that is now on State and local funds."

He cited the fact that property tax rates in some Indiana communities have passed the $10 mark which means an annual tax payment of over 10 percent of assessed valuation. Prospects for more money from the State are dim, he says, because so many State services are absorbing the money raised by the State gross income tax.

Seven of Indiana's 11 Congressmen have expressed themselves as being in favor of Federal support for schools. Here are their statements following the Thompson bill's release from the House Education and Labor Committee:

MADDEN reiterates support: "I have been a consistent supporter in other sessions of Congress for Federal legislation that will relieve the school crisis as it exists in so many metropolitan and some other areas throughout the United States. In the last session, by reason of the coalition between the Republicans and southern Democratic leaders, we lost the school construction bill by only six votes. I do hope that a satisfactory school construction and salary bill will pass this session"—RAY MADDEN.

BRADEMAS pushes bill: "Because State and local revenues are inadequate to provide the increased investment necessary for American education, I believe we must make use of Federal funds to build more classrooms and improve teachers' salaries.

"I am confident that the McNamara-Clark-Monroney bill will go a long way toward meeting the Nation's needs in education without infringing on State and local control of our school systems"—JOHN BRADEMAS.

ROUSH pledges support: "From the beginning of our country's history the initiative and responsibility for educating our youth has rested primarily with local and State groups. Congress recognizes this, but it also recognizes its own responsibility and, where, in the national interest, the need for adequate and equal educational facilities is not being met Congress should act; and I have every confidence it will act"—J. EDWARD ROUSH.

WAMPLER, exteacher, says: "From the standpoint of personal knowledge and actual experience as a former educator, I have in the past and will in the future give my wholehearted support to legislative proposals designed to aid our Nation's school system, particularly in view of our current and continuing need for high levels of education, skills, and training to fill national defense requirements.

"The bill, S. 8, which provides a $1.8 billion, 2-year program of grants to be matched by the States under a variable formula, and to be used for school construction or teachers' salaries or both, would, in my opinion, constitute meaningful legislation.

"I think the necessity for such legislation can be clearly demonstrated when one considers that the State of Indiana currently is suffering from a classroom shortage of more than 1,500 rooms, has about 20,000 pupils in excess of normal capacity, and approximately 3,000 teachers operating on substandard credentials"—FRED WAMPLER.

Congressman DENTON's support: "I strongly favor legislation providing for Federal help to improve our educational system. In order to meet the Soviet challenge, we must improve our schools. While education is primarily a local responsibility, and must so remain, the States cannot do the job alone. States and localities are already overburdened with taxes. The Federal Government has a responsibility to aid the States in carrying out this important function. Federal help in this area is a necessity if the United States is to continue her world leadership role."—WINFIELD DENTON.

Congressman HOGAN writes: "Increased school enrollment and spiraling construction costs have placed heavy burdens on the shoulders of local taxpayers who are endeavoring to provide the best possible educational advantages for their youth.

"The school construction bill recently reported out of the House Education and Labor Committee will provide much-needed relief to the local taxpayer if amended so that the local community can decide how the funds will be used—either for school construction, or for teachers' salaries, or for a combination of both."—EARL HOGAN.

Congressman HARMON says: "It has long been my opinion that the local communities have failed to have adequate schoolrooms, operation moneys, or adequate salaries for our fine career teachers. I will try my very best to support a bill that will meet the requirements and approval of the very fine people of Indiana. I am hopeful that when this bill comes to the floor of the House, the necessary amendments and deletions will be made in order that the much-needed aid will be forthcoming."—RANDALL HARMON.

Aloha Ambassadors

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1960

Mr. LONG of Hawaii. Mr. President, last week six "aloha ambassadors" left Hawaii on a privately financed, 80-day good will mission to the Orient. They were former Senate President Herbert K. H. Lee, Duke Kahanamoku, State Senator Kazuhisa Abe, and their wives.

Before he left, Mr. Lee wrote about the objectives of the trip. I ask unanimous consent that his article, published in the Honolulu Advertiser of April 13, 1960, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIX ALOHA ENVOYS' GOAL: SHARE SPIRIT OF HAWAII

(By Herbert K. H. Lee)

On the event of our departure, with the many good wishes of our friends, the "aloha ambassadors" were frantically getting their respective business straightened out for an 80-day tour of Asia and India.

At several of the parties, discussions ranged long into the night about the East-West Center—how the people of Hawaii could help make this symbol a reality and whether the "aloha ambassadors" might develop soundings during the tour as what this type of

institution would mean to the countries of Asia.

It was generally conceded that the purposes and objectives of the tour represented a definite manifestation of our people to share the spirit of Hawaii with the peoples of Asia.

I am reminded of our mission:

That the people of America and Hawaii all came from immigrant stock—immigrants who came to America and sought to improve their economic position and obtain religious freedom.

That it will be our job to reveal that America is not a land only of one racial stock but that Americans of foreign extraction battled for the rights of the individual to life, liberty and the pursuit of happiness.

That Americans of foreign extraction fought in the Revolutionary War, the Civil War, and World Wars I and II. That very fact helped to make Hawaii a State today.

That Hawaii for the first time has established the fact that a majority of its citizens have ancestral ties with Asia—rather than in Europe.

That this is the reason for the spontaneous desire of a group of people to share this understanding of America with a people seeking the same things that the immigrants who came to America sought—the opportunity to advance to the limit of their individual capacities in a free society.

We will expect to find this same desire to exist on the part of one-third of the world's population we will be visiting.

We will be going to countries bearing a mental vision that most of the people of Asia are illiterate, ill-fed, ill-housed and for hundreds of years have been exploited by people with white skins.

The lure of the Communists' utopia propaganda will be compared with the fact of what actually happened in countries which believed such propaganda, as compared with the actual destiny of Hawaii, sometimes in the past called a colonial possession by our opponents.

The records of Hawaii's progress in the field of human relations will be a wonder to all of these people. And it will be our duty to show that America's reality of today was nothing but a dream in the year 1776 just as theirs are today.

These are the thoughts that buzz through our minds as we prepare for our departure tonight by Pan-American jet for Tokyo.

A Legislative Program for the Aging in New York State

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following statement of policy adopted by the Public Affairs Committee of the New York Democratic State Committee on January 28, 1960:

A LEGISLATIVE PROGRAM FOR THE AGING IN NEW YORK STATE

One of the more challenging problems of our time is that of an aging population. Facts and figures concerning the increase in the human life span are now well known to everyone. Fifty years ago those who had reached or passed the age of 65 represented only 1 out of every 30 in our population. Today in New York State 1 out of every 10 persons has reached or passed that age, and the proportion of older people is still climbing.

Longer life is now ours, thanks to science and medicine. What is still not ours is disposition on the part of government, and particularly the Rockefeller government in Albany, to do what is necessary to make that life more productive, satisfying and enjoyable. The basic needs of older people are the same as the basic needs of all people. The ability to satisfy those needs by one's own efforts, however, tends to diminish in later life. Government should lend a helping hand if other resources are unavailable.

Older people are faced with problems of income maintenance; employment; health, medical care, and rehabilitation; housing; education and leisure-time activities. It is estimated that about 75 percent of aged couples in New York State have family incomes of less than $3,000 a year; and 65 percent of aged men and 89 percent of aged women incomes of less than $2,000 a year.

An historic beginning in extending the helping hand was made by the Harriman administration. It was a Democratic Governor who made the problems of the aging a central concern of State government by appointing a special assistant to deal with these problems and by establishing an interdepartmental committee, composed of commissioners heading up his departments, to aid him in the task.

During the 4 years of Democratic administration under Governor Harriman, the State of New York became the Nation's undisputed leader in the field of the aging. This leadership was expressed in bold, enlightened programs of legislation; it was exemplified as well in the type of thoughtful, concerned and interested administration without which even the best legislative programs are apt to founder.

Here is a partial listing of the State's new and expanded programs, activities, benefits, and protection for our senior citizens, during the 4-year period 1955–58:

Increase of job counselors for the 45-plus.

Widening of employment opportunities for older workers.

Banning of age discrimination in employment.

State aid for recreation for the elderly.

Nursing home certification.

Establishing new fire and sanitation standards for homes for the aged.

More State aid for infirmary care for the aged.

Extension of rehabilitation services.

Sheltered workshops for the aged.

Improved care of senile psychotics.

Expansion of treatment facilities upon admission to mental institutions.

Research programs in arterio-sclerosis and geriatric psychiatry.

Establishment of a Bureau of Chronic Disease and Geriatrics.

Establishment of an Interdepartmental Health Resources Board.

Improving quality of home care projects.

Physical checkups for old age assistance clients.

Improved facilities for teaching rehabilitation in medical schools.

Meals-on-wheels for "shut-ins" at home.

Day-hospital care.

Expansion of cancer reesarch.

Chronic Disease Research Institute, with facilities for screening of patients, and pilot grants to communities in this field.

Nursing home supervision workshops.

Health insurance for State employees.

More low rent housing for the aged.

Limited profit housing program for the aged.

Special exemptions for the aged in eligibility for public housing.

Extension of social security benefits to public employees.

Reemployment of retired teachers.

Public employment of retirees.

Supplemental pensions for civil service and teacher retirees.

Special service retirement for teachers.

Preretirement counseling services.

Special income tax exemptions for the elderly.

The people of the State were led to believe that this record of accomplishment would be continued by the Republican Rockefeller administration. In his annual message of January 7, 1959, his first message on becoming Governor, Mr. Rockefeller declared:

"For older persons advances must be made in programs of employment, retirement income, health, housing, and recreation. The activities of all the departments and agencies of the State government will be coordinated from the Governor's office to help achieve this."

No pledge to the people ever was more highhandedly and unceremoniously broken. The office of the special assistant on aging was abolished. The interdepartmental committee became a pale replica of its former self, whose sole function has been to get out a new edition of a Harriman brochure on State services for the aging and have Rockefeller take credit for all that was accomplished, as he also did in an article in Life magazine. In matters of the aging things were restored to the situation that prevailed under Governor Dewey, when do-nothing was the policy—with one exception. Federal law calls for a White House Conference on the Aging in January 1961, with prior conferences in the various States. Federal funds have been provided the States for such preliminary conferences. Governor Rockefeller is cooperating to the extent of allowing a temporary consultant in the social welfare department to arrange the conferences. In Albany today the dead hand of inaction is guiding the destiny of the aging.

If life and vigor is to be restored to the State government in the field of the aging, it will have to be done by the Democrats, even though a minority in the legislature. It is the Democrats, and they alone, who will have to press a reluctant Republican legislative majority and Governor to act in the interests of the people.

New York is the wealthiest and most productive State in the Union with an outstanding record of past performance and the promise of an even more outstanding record for the future. The deficit-mongers, calamity-howlers, and budgeteers, invoking the principle of "pay as you go" to sanction the illegitimate practice of paying out of current revenues the prospective costs of capital projects in use 30 or even 50 years hence, threaten to stop governmental progress in this State dead in its tracks.

The people of this State and Nation will not be persuaded by these Republican Cassandras—of whom Governor Rockefeller appears increasingly to be one—that America today is faced with potential disaster because of the cost of our public services. Science and technology have given us the tools to create economic abundance. We have the resources to establish a way of life undreamed of in any other period in human history. What is lacking is not the means, but the will, the courage, the imagination and the good sense to find a socially responsible way of mobilizing the great economic abundance now within our grasp. An aging population is a drain on the public treasury only to officials of narrow vision who are unable to visualize the vast contributions to the Nation's health, wealth and even taxpaying capacity that can be achieved from a more intelligent utilization of our human resources among the aging.

The following is the program we recommend as the Democratic legislative program for action in the field of the aging, for

charting a course to break the existing freeze on programs of deep concern and interest to the people of this State:

1. Legislation should be introduced to increase the State job counselors for the 45-plus. While it is the responsibility of the Federal Government to provide funds for State employment service programs, these funds have not been sufficient to support the necessary State programs for the counseling and special placement of older workers. In 1956 and again in 1957 and 1958, Governor Harriman requested and received additional State funds for these purposes. The additional funds enabled the State to assign 38 older worker counselors to offices in 17 communities in the State.

These specialized job counselors have helped to increase employment for older workers. By 1957, the placements of persons over 45 years of age had risen to 28 percent of all placements. In addition, during the first 6 months of 1957, the special older workers counselors were able to find employment for 2,988 men and women in the "hard core" category, who had suffered long-term unemployment principally because of their age.

Governor Rockefeller withdrew State support of this program in the very first year of his administration. The only specialized placement and counseling programs for older workers in the employment service today are those supported by Federal funds.

As a start, we propose legislation to restore the number of State job counselors and offices that existed in 1958, the last year of the Democratic administration.

2. Legislation to provide State grants to private agencies for experimental research on job placement. Under legislation passed and approved in 1956—and again in 1957 and 1958—State funds were made available to private nonprofit groups for experimental research in such fields as group counseling, placement of retired persons in part-time jobs, and other related projects to aid older job applicants. This legislation has enabled five private nonprofit agencies to undertake pilot projects to aid older jobseekers.

The private nonprofit agencies have been able to provide vocational counselors and placement specialists for these older jobseekers. Projects of community education have been successful in obtaining the support of employers in widening employment opportunities for older workers.

Governor Rockefeller has withdrawn State grants to agencies engaged in these projects, and they are scheduled to end on March 31, 1960. Again, as a start, we propose legislation making possible this important work of job counseling and broadening employment opportunities for older workers.

3. Legislation to provide State aid for sheltered workshops for the aged. In 1956 cities were authorized to equip and maintain "sheltered workshops" established by nonprofit organizations for persons who could not find remunerative work elsewhere because of age or physical handicaps. And in 1957 the State social welfare department helped the city of New York to establish a sheltered workshop for retraining and economic rehabilitation of persons over 40 years of age.

Self-support is vital to maintenance of health and dignity, and economic rehabilitation is the avenue to self-support. As has been demonstrated time and again, money spent by Government for rehabilitation is returned ten-fold in decreased expenditures for welfare and increased tax receipts from the individuals who have become self-supporting.

We recommend legislation to provide State aid for sheltered workshops for the aged.

4. The law enacted in 1958 barring discrimination in the hiring of older workers today is receiving the same unimaginative and lackadaisical attention of the Rockefeller administration that was accorded discrimination on the basis of race, color, and creed by the Dewey administration. New vigor in administering this law is required. In addition, consideration should be given to expanding its application.

We Democrats are opposed to discrimination in hiring; we are just as much opposed to discrimination in firing. Careful study should be given to proposals to outlaw rigid systems of compulsory retirement. Such systems serve only too often as a modern equivalent for age discrimination in firing. They are inconsistent with the principle that a man or woman capable of doing a particular job should not be prevented from doing it by reason of age alone.

5. Legislation to support multipurpose day centers for the elderly. Under legislation sponsored by the Democrats in 1956, cities providing or maintaining approved recreation projects for older men and women as a regular municipal service were entitled to State aid based on a matching formula of $1 for each 10 persons over 60 years of age. Under the program 13 cities initiated or received help for recreational projects or day centers for older persons. In 1958, under Democratic leadership, legislation was enacted to broaden the program to towns as well as cities, and to increase State aid for leisure-time activities from 10 cents to 25 cents for persons 60 years of age and over.

These centers provide a great deal more than mere recreation. They contribute to mental and emotional health by providing opportunities for socializing, hobbies and crafts, and education in new fields. To the limit of their abilities they also provide preretirement counseling and necessary referral services for welfare, housing, and medical care. The relatively small cost involved for the operation of these centers is saved many times over in decreased expenditures for State mental health services alone.

The time has come to recognize the unparalleled services these centers can provide and to set them up as multipurpose day centers ministering to the health and medical care, housing and employment needs of older persons. No public service for older persons can be more important for filling their varied needs in a central setting. At the present time they are required, with rare exceptions, to go hither and yon, under great difficulties and expense, to secure the public services they require.

6. Legislation to provide State funds for the aged who are medically indigent. The State contributes funds for the medical care and hospitalization of recipients of public assistance. It contributes nothing for medical care and hospitalization for the medically indigent—for the most part, older individuals who have been self-supporting except for medical and hospital bills that have reduced them to public relief. At the present time municipalities and volunteer agencies are compelled to shoulder the entire medical and hospitalization costs for the medically indigent older person without even partial reimbursement by the State. This situation should be corrected by appropriate legislation.

7. Legislation to enable the State health department to purchase prescription drugs and medicines in large quantities for resale at cost to older individuals with limited incomes.

The vast majority of individuals begin at age 65 a period of lower income and increased medical need. The cost of present-day prescription drugs is high for almost anyone; it is prohibitive for those who require these expensive drugs day-in, day-out, as recent congressional hearings have brought out.

The Federal Government has provided for its own needs for drugs and medicines by wholesale purchases at considerable discounts from manufacturers. Public assistance and social security involve similarly huge expenditures of public or quasi-public funds. The marketing leverage of these funds in terms of obtaining lower prices should not be wholly lost.

We, therefore, propose that a study be made of ways in which drugs can be made available at lower prices to persons receiving social security benefits or to those whose gross family income is less than $3,000 a year. In this regard the interests of the retail drug industry should not be overlooked, and their cooperation should be sought in determining the best procedure to follow.

8. Legislation exempting assets in the amount of $1,000 to qualify for public assistance. In order to qualify for public assistance in this State an individual must be a pauper or be reconciled to becoming a pauper. He is expected to be without assets of any value. This is unfair and unrealistic, particularly in respect to older individuals who have spent a lifetime in accumulating the few resources they may still have. As some other States have done, New York State should exempt $1,000 of a family's or couple's assets in determining whether they qualify for public assistance.

9. Legislation to provide State aid for home care, day hospitals and rehabilitation for older persons. The Democratic administration of Governor Harriman undertook a series of pilot demonstration projects dealing with older persons in order to determine their feasibility prior to encouraging municipalities to embark on mass programs financed in part by the State. The pilot demonstration projects in home care, day hospitals and rehabilitation were most successful and the time has come to make the services provided to some individuals available to all who are in need of such services.

The purpose of the State aid home care program in Westchester was to provide hospital-type care for residents in their own homes at a cost they could afford, thus relieving overburdened hospitals of patients who could be treated at home. Home Care, Inc., with State funds, provided nursing, medical care, speech therapy, nutrition, family counseling, drugs, appliances, and sickroom equipment. Costs of home care average less than $5 per day; costs in a hospital, $30 or more a day. Even when hospital charges to patients amount to $21 for a bed that costs $30 to maintain, the difference, borne by the taxpayers, is more than home care would cost.

As the day hospital demonstration project in Schenectady showed, day hospital care is also far less expensive than ordinary hospital care and, in addition, provides a needed supplement to overtaxed hospital resources.

Rehabilitation for older persons on public assistance is obviously of tremendous value, both in human terms and in terms of the saving of public funds. We recommend legislation to provide State aid on a matching basis for home care projects, day hospitals, and rehabilitation for older persons. Here again we believe that the expense of such a program would be more than offset by resultant savings in other public and quasi-public expenditures.

10. Legislation to expand cancer and heart research. The Democratic administration of Governor Harriman established a bureau of chronic disease and geriatrics in the State health department, and provided the funds necessary for expanded research in cancer and heart disease, the two dreaded killers in middle and old age. Roswell Park Memorial Institute in Buffalo is one of the foremost cancer research facilities in the world; the Chronic Disease Research Institute is a leader in the study of coronary artery diseases. These magnificent State institutions received wholehearted support from the previous Democratic administration, undertak-

ing new programs of research vitally important to the welfare of the people.

We urge that legislation be enacted to assure that these research programs be expanded and developed to the extent practicable, within the limits imposed by the availability of the proper trained personnel.

11. Legislation to provide health and life insurance protection for senior citizens. "In too many cases," Governor Harriman declared in a special message to the legislature in 1958, "persons who have had group coverage before retirement have lost that coverage thereafter, just when they needed it most. Also, in too many cases aging persons with badly needed individual policies had their policies canceled." The Governor thereupon submitted 11 recommendations for legislation to provide wider insurance coverage for our senior citizens and necessary protection from the hazards of cancellation or termination of such insurance. The program would also have eliminated any gap in health insurance coverage at time of conversion and insured a more moderate premium after conversion.

This program was turned down by the Republican leadership in the 1958 legislature (which put through a wholly inadequate substitute), and Governor Rockefeller did nothing to revive it in the 1959 session, although as a candidate he had promised to take action in this area.

Adequate legislation to protect our senior citizens from unfair cancellation and termination of health and life insurance is urgently needed.

12. Legislation to prescribe housing for the aging. Progress was made by the Democratic administration in increasing from 5 to 10 percent the number of dwelling units in public housing for senior citizens and in providing specially designed units with community facilities for congregate activities; in encouraging the setting aside of dwelling units for older people under the Mitchell-Lama limited profit housing program; in liberalizing the income eligibility requirements for low-income aged in public housing projects; and in sponsoring the $200 million housing bond issue ratified by the voters in 1958.

The housing problems of older persons of low or middle income are not receiving the measure fo support they deserve from the Rockefeller administration. Whatever interest there has been is exclusively on dwelling units for older persons in connection with hospital or nursing facilities, and even such facilities have yet to be planned, let alone built. There is a place for such facilities in a rounded and well conceived housing program.

What is more important at the present time, however, are dwelling units for older persons who are able to get around and live as members of the community. It is necessary to assure that housing facilities for the aging be provided within the normal framework of publicly aided housing—both in subsidized and limited profit developments. Wherever practicable, such facilities should include a variety of ancillary services enabling the aged person to live independently in a household of his own— such personal services as homemaking and housekeeping, help with shopping, meals on wheels, and help with heavy cleaning; counseling service for everyday living problems, help in securing part-time employment, recreational facilities, and referral services for placement or for care in nursing homes.

13. Legislation to provide $50 million in State loan funds by State referendum for nonprofit nursing home facilities attached to hospitals and medical centers. A larger proportion of our aged population live to a longer, if not riper, old age; the onset of prolonged infirmity often makes home care impractical, if not impossible. The type of care provided by private nursing homes often leaves much to be desired and the cost of the best care in the proprietary homes is prohibitive to large numbers of older people and their families.

There are 1,245 nursing and convalescent homes and domiciliary institutions in the State with a combined capacity of 53,509 beds. Of these, 14,341 beds are in voluntary nonprofit, 5,671 in church operated, 15,284 in public and 18,213 in proprietary institutions. Of the 1,245 institutions, 963 are of the type usually referred to as nursing homes. Many of them operate in nonfire-resistive structures, many in converted private dwellings, and most have meager bed capacities. It is estimated that the cost of care of 50 percent of their patients is met by public welfare funds. Most of these institutions neither have nor envision the provision of comprehensive medical service or working relationships with their respective community general hospitals and their organized medical staffs. Thus is posed an acute problem for those charged with the care of the chronically ill and aged and the establishment of sound, modern rehabilitation procedures and services.

The Federal Government has sought to meet these problems in the expanded Hospital Survey and Construction Act—the so-called Hill-Burton Act. Unfortunately, the annual allocation for nursing home facilities in New York State has been pitifully small—a little over $144,000.

Voluntary hospitals in this State have expressed interest in nursing home facilities for older patients who do not need the expensive treatment facilities of a hospital and yet are unable to take care of themselves at home. These facilities would be operated by hospitals, with medical and surgical attention always available in event of need. Capital funds for such nursing home facilities should be provided in part by State loans to voluntary, nonprofit hospitals and medical centers, repayable over 50 years.

A $50 million loan fund would provide approximately 7,500 additional beds—by no means all the modern beds required. The provision of these much needed modern beds would serve as a stimulus to raise standards throughout the State, however, and encourage the proprietary nursing homes to provide better services at lower cost.

14. Legislation providing partial reimbursement by State for care of older persons with demonstrable mental symptoms in homes for the aged and nonprofit nursing homes. The average age of the clientele of nursing homes and homes for the aged has gone up considerably in recent years. These institutions now provide custodial care for an ever-growing proportion of our aged population with demonstrable mental symptoms. This service is a function imposed by the deterioration in the mental health of older residents and by the lack of appropriate facilities, public or private, to which they might be sent.

Some of the better voluntary homes and nonprofit institutions provide some specialized care for these people, although there is some risk involved in this where the individuals are recipients of old-age assistance.

The problem of providing adequate facilities for older persons with demonstrable mental symptoms has been complicated enormously by the U.S. Social Security and Public Assistance Act which denies old-age assistance for the mentally ill. State social welfare departments have been reluctant to provide the facilities and services required by these older persons for fear of jeopardizing Federal aid in this category amounting to many millions of dollars.

As far as public responsibilities are concerned, therefore, the situation is as follows: The State is obligated to provide for the mentally ill; the Federal-State-local governments jointly for old-age assistance to the nonmentally ill. The older person who is senile, confused, disoriented but nonpyschotic, who is harmless both to himself and to others—in a word, the older person who is neither sane nor insane but falls somewhere in between—is not provided by law with services or facilities addressed to his needs. All too frequently such individuals are committed to a State mental institution, to the chagrin of family, friends, and committing judge, for want of a more appropriate facility to which they might be sent.

The time has come to implement by legislation the studies made since 1956 by the consultant on services for the aged of the State department of mental hygiene, the substance of which is that under proper safeguards certain types of mentally sick older persons can be properly cared for in community facilities for the aged rather than in State mental institutions.

As one step, the legislature should memorialize Congress to amend the Social Security and Public Assistance Act so as to prevent the loss of Federal funds to States providing treatment facilities for recipients of old-age assistance who might be regarded as mentally ill. For its part, the State has a positive duty of encouraging the development and expansion of such facilities by providing partial reimbursement for care of older persons with demonstrable mental symptoms in homes for the aged and nonprofit nursing homes, and legislation to that end is needed.

15. Legislation to permit more extensive public employment of retirees. Retired State and local employees and teachers are permitted to earn up to $1,800 a year in public employment without losing any retirement benefits if these do not exceed $3,500 a year.

In view of the shortage of trained personnel in many categories, the rise in the cost of living, and the contribution it will make to the health and well-being of older persons, we recommend legislation extending to all retired State and local employees and teachers the privilege of earning up to $2,500 a year in public employment. In the case of both retired teachers and civil service employees, there should be no loss of any retirement benefits upon such employment if benefits do not exceed $4,000 a year.

16. Legislation granting deferred vesting of pension rights for State and local employees. Employees of the Federal Government have been granted deferred vesting of pension rights—that is, even though they have left the Federal service before the normal retirement age, when they reach that age they are entitled to draw a pension from the Federal Government based on their years of service beyond a set minimum of 5 years. Analogous retirement features operate for workers covered by social security.

The time has come to grant similar deferred vesting of pension rights to State and local employees.

The argument is sometimes made that if deferred vesting were introduced, many valuable employees would leave the public service. This problem should be met by the payment of realistic salaries, not by the continuation of a kind of modern peonage.

In order to minimize any sudden fiscal effects, we recommend that deferred vesting be introduced on a gradual basis, with a minimum of 5 years of service, ultimately, for enjoyment of such rights.[1]

17. Legislation establishing a center for human resources development in the State University. The problems of the aging pose a series of complicated practical issues which permit only ad hoc solutions until additional knowledge is developed. We have accumulated a great deal of knowledge in

[1] Following the issuance of this report, a limited proposal for vesting has been made by the Rockefeller administration.—Ed.

recent years, but there has been a lag in making this knowledge available to those who are in need of it, and there is much knowledge still to be developed.

The primary functions of a center for human resources development would be the organization and direction of an interdisciplinary committee for research on aging; the review and recommending of support for research proposals; the stimulation of interest in research in the various units of State University; the securing and channeling of grants from agencies and foundations for research in aging; the provision of advance instruction and training through courses, conferences, institutes, and workshops to those with professional responsibilities in the field of the aging; the preparation of programs of general instruction in human development and aging for nonspecialists, college students and the general public.

There is great need within the framework of the State University for a center devoted to teaching and research in vital areas of human resources development.

18. Legislation to establish a permanent Commission on Aging in the Executive Department. The almost complete cessation of interest in problems of the aging on the part of the Rockefeller administration serves to underscore the need for a formal, permanent State agency equipped to deal with these problems—a State commission on the aging.

Such a commission would operate in a manner not unlike the State Youth Commission in its field. Its primary purposes would be to assist communities in the development of comprehensive plans for meeting the needs of the aging; to channel State aid for planning and other purposes; to promote cooperation among private and public agencies in programs for the aging; to foster educational programs to enable the aging to find productive employment and integration with the rest of the community; to develop a center for the collection of information on all problems of the aging; and to coordinate the activities of other State agencies in the field of the aging.

The need for such a commission on aging is clear. It would provide leadership, guidance, stimulation and assistance to local communities in their programs. It would assure the continued progress and expansion of such programs. It would explore areas of noninstitutional services, such as job retraining, sheltered workshops and adult recreational and educational services, and it would assist in developing these services in communities where they do not exist.

19. Legislation to supplement pensions of retired teachers and other public employees affected by inflation. The postwar inflation has caused acute distress to former teachers and other public employees who retired on fixed pensions many years ago. Supplemental pensions enacted during the Harriman administration contributed to easing the plight of retirees who in many instances were dependent on public relief to make ends meet. There has been no general adjustment of retirement allowances to correct for the ravages of inflation. One-time relatively modest retirement allowances are now in many instances inadequate for basic needs. Legislation should be enacted to supplement pensions of retired teachers and other public employees to correct for the changes produced by inflation by establishing a sliding percentage based on year of retirement.[2]

We submit this as a proposed Democratic legislative program on the aging in the knowledge and faith that it is in the best interests of all the people.

[2] It is gratifying to note that action in this area was taken by the Republican administration in Albany following the issuance of this report.—Ed.

The Mutual Security Program: A Central Pillar of Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1960

Mr. HUMPHREY. Mr. President, we are now engaged in the annual debate on our mutual security program. This is one aspect of our foreign policy in which the Congress plays an important and direct role. Foreign aid has become increasingly controversial, and some of the arguments in opposition to it seem to be increasingly irrelevant.

It is for this reason, Mr. President, that I would like to bring to the attention of my colleagues a brief but convincing statement from five distinguished Americans, Will L. Clayton, William H. Draper, Jr., Hugh Moore, Lithgow Osborne, and Hans Christian Sonne. These men insist that the Congress provide for the full mutual security program requested by President Eisenhower and they point to the new needs and challenges we confront to sustain their conclusion.

I agree with them when they assert that our mutual security program is an "essential element" in our grand strategy for survival and for peace. It is important to note that these five men speak not only for themselves, but also in behalf of the U.S. signers of the Declaration of Atlantic Unity which was made 6 years ago.

Mr. President, I ask unanimous consent that this statement on the mutual security program be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On behalf of the U.S. signers of the Declaration of Atlantic Unity, we urge the Congress to provide for the full mutual security program requested by President Eisenhower.

Six years ago the original 244 signers of the declaration from NATO countries stated: "This is no time for half-hearted measures."

During these 6 years our situation has grown even more critical. Communist capabilities to apply military, political, and economic pressures have been greatly expanded. The future of the Atlantic Community and our own liberties at home depend, in major degree, upon whether the underdeveloped countries of the world maintain their freedom or are forced into the Communist bloc. Progress, and even freedom in the West, cannot continue if the ramparts of the free world crumble elsewhere.

This year of unprecedented negotiations with Soviet Russia is crucial. It is a year in which we must support the strength of our allies and friends, and maintain our forward defenses, not weaken them.

As the report of the President's Committee To Study the U.S. Military Assistance Program stated: "The only alternative we can see to the interdependent allied free world, strengthened by our aid where needed, would be the fortress America concept—taking our first stand in the last ditch."

The mutual security program has long been a central pillar of our foreign policy. It has been the foundation of the success of NATO. It has preserved, the frontiers of freedom in Asia. As an investment in security it has provided us more defense per dollar than our military expenditures at home. With its predecessor, the Marshall plan, it has made possible the recovery and present prosperity of Western Europe. It now affords our best hope that the newly independent developing countries will remain free.

Crippling cuts in this year's mutual security program would jeopardize all these gains of the last decade. They would undermine the common defense efforts of NATO and reduce the effectiveness of our other defensive alliances. They would weaken free institutions in the developing countries and increase their vulnerability to Communist pressures.

We must all face up to the fact that our mutual security program is an essential element in the continuing effort we are compelled to make to survive as a free nation. Our country must either go forward on the road it has followed since 1947, or retreat in weakness. To go forward effectively in this critical year requires carrying out the mutual security program in full.

WILL L. CLAYTON,
WILLIAM H. DRAPER, Jr.,
HUGH MOORE,
LITHGOW OSBORNE,
HANS CHRISTIAN SONNE,
U.S. Sponsors, Declaration of Atlantic Unity.

David A. Cheavens Marks Quarter Century of Service

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1960

Mr. YARBOROUGH. Mr. President, Mr. David A. Cheavens, son of a Baptist missionary, married to the daughter of one of the most learned Baptist ministers of all time in the Southwest, and in his own right the author of religious texts, has been honored for 25 years of service with the Associated Press.

Mr. Cheavens has been capitol correspondent for the Associated Press at Austin, Tex., in the State Capitol, since 1942. In this key position, his influence on Texas politics, Texas political campaigns, and Texas government has been considerable.

Before going to the Associated Press, Mr. Cheavens worked on newspapers from El Paso, Tex., to New York City.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Dallas Morning News of April 6, 1960, entitled "David A. Cheavens Cited for His 25 Years With AP."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DAVID A. CHEAVENS CITED FOR HIS 25 YEARS WITH ASSOCIATED PRESS

AUSTIN, TEX.—David A Cheavens, Associated Press correspondent at the State capitol, was presented a gold pin Tuesday marking 25 years of service with the Associated Press.

The presentation was made by Gov. Price Daniel in behalf of Frank J. Starzel, New York, general manager of the Associated Press.

Daniel remarked that he thought it was fitting for him to make the presentation to Cheavens since Cheavens gave the Governor his first newspaper job—as reporter on the Baylor University student newspaper. Cheavens reminded the Governor of the salary paid for the reporting job—"you got two passes a week to a second rate movie, but I got a first rate job."

Cheavens has been capitol correspondent of the Associated Press in Austin since 1942. He began covering sessions of the Texas Legislature in 1938 while he was on the Associated Press staff in Dallas.

Before joining Associated Press in 1936, Cheavens had been managing editor of the Marshall News-Messenger and had worked for the Baptist Standard, New York Morning Telegraph, Waco-News Tribune, El Paso Times, and El Paso Herald (now the Herald-Post).

Establishment of a New York State Commission on the World's Fair

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1960

Mr. KEATING. Mr. President, I am pleased to announce that the State of New York on April 12 established a New York Commission on the World's Fair to prepare for the active participation of the State in this exciting and far-reaching international event to be held in New York City in 1964.

The planning and operation of a World's Fair is indeed a difficult and complex endeavor. As each step along the way is completed, the excitment and activity of the fair comes closer to being a reality. I enthusiastically look forward to the 1964 New York World's Fair and am heartened by the progress that is being made towards the fulfillment of this goal.

The establishment of a New York State Commission on the World's Fair is another and significant step in preparing for the fair. I am delighted to call attention today to the setting up of this important commission.

Mr. President, I ask unanimous consent that the Governor's memorandum filed with the bill establishing this commission be printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, April 12, 1960.

Memorandum filed with Senate bill, introductory No. 3509, print No. 4461, entitled "An act creating a temporary State commission to prepare for participation by the State in the World's Fair to be held in the city of New York, and making an appropriation therefor."

This administration measure establishes the New York State Commission on the World's Fair.

The commission will prepare for active participation by the State in the World's Fair to be held in New York City during 1964 and 1965.

It is most appropriate that a commission be established at this time to start the necessary detailed planning for an event as important as the forthcoming World's Fair. The fair will make a valuable contribution to the cultural, educational and economic life of the people of New York and, it is to be hoped, will constitute a significant step toward achieving greater international understanding and friendship.

The bill is approved.

NELSON A. ROCKEFELLER.

Opening the St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1960

Mr. WILEY. Mr. President, the opening of the St. Lawrence Seaway for its first year of deep-draft operation heralds a new economic era for the Great Lakes region.

We recall that—even though the Seaway was dedicated about midway in the navigation season in 1959—the trade and commerce expanded substantially.

We realize, of course, that attaining maximum traffic through the great waterway will not be clear sailing.

To the contrary, we can expect problems that will need to be resolved, not only for the Seaway itself, but also in terms of encouraging the expansion of the flow of traffic through the Seaway, resolving pilotage problems, encouraging good labor-management relations, and generally promoting a climate in which the nation can best benefit from its great—and well justified—investment in this significant waterway.

As the 1960 navigation season gets underway, the Nation, I believe, needs to take a realistic look not only at the promises, but also at the problems ahead.

Recently, the Milwaukee Journal published an informative article depicting the outlook for trade and commerce through the waterway in 1960.

I ask unanimous consent to have the article, together with a brief statement by myself, printed in the Appendix of the RECORD.

There being no objection, the article and statement were ordered to be printed in the RECORD, as follows:

SEAWAY YEAR MAY BE BIG—THERE IS AN "IF"

The deep draft St. Lawrence Seaway will start its second season Monday amid expectations of a gain in cargo volume * * * "if."

That was brought out Saturday in an Associated Press survey.

Some port spokesmen coupled their predictions of better business with the qualifying "if"—if no labor or other troubles develop.

Some officials speculated that more freight would be carried by fewer ships.

In its first season, the new seaway carried 20,103,767 tons, a big increase, but 5 million tons below advance estimates.

OUTLOOK TERMED BRIGHT

Martin Oettershagen, deputy administrator of the St. Lawrence Seaway Development Corp., described the 1960 outlook as bright. He forecast substantial movement of iron ore and grain and an increase in general cargo.

Oettershagen said the trend was toward larger, more efficient vessels. Many small canal boats will drop out of the traffic, he said.

Clusters of vessels at the Welland canal and some ports at times last year caused delays. The salt water ships also found inadequate loading and unloading equipment and shortages of skilled hands at some docks. New facilities and other improvements at some ports, plus a year of experience, should add up to smoother operations this year.

REPORTS FROM CITIES

Here are brief reports from port cities:

Chicago: Maxim Cohen, general manager of the Chicago port district, commented: "If we're not tied up in labor trouble, we should do as well as last year and have a reasonable increase." George Weiss, a steamship agent: "Without question, there will be a further expansion of cargo volume through the port of Chicago."

Detroit: Fewer ships but a larger gross tonnage are expected. Labor relations are stable. Several additional lines will serve the port.

Cleveland: William J. Rogers, port director, estimated volume would be 20 percent higher than last year, provided there were no strikes or other unforeseen developments. Rogers figured that, within the overall increase, there would be more oversea shipping and less domestic cargo.

Toledo, Ohio: Shippers said volume would be heavier. Their estimates of gains range from 15 to 50 percent. The Army Transportation Corps, which has Great Lakes headquarters in Toledo, said it would ship 20 percent more oversea cargo through lake ports. In 1959 it shipped 91,333 tons, mostly vehicles.

Erie, Pa.: Calvin Dingler, port director, predicted that tonnage would be doubled. State of Pennsylvania has appropriated $500,000 for improvements this year.

Duluth (Minn.)-Superior (Wis.): Exporters predicted grain shipments of 125 to 150 million bushels this year compared with 86 million in 1959. General cargo volume outlook is uncertain.

STATEMENT BY SENATOR WILEY

The 1960 navigation season promises to be the greatest shipping year in the history of the St. Lawrence Seaway and the Great Lakes Waterway system.

Dedicated in June 1959, the completed Seaway during its first year of operation experienced greatly increased traffic; oversea traffic stepped up; port incomes jumped; waterfront employment expanded; and, overall, the flow of trade and commerce increased promisingly.

In 1960, traffic is expected to be even greater.

As a sponsor of the Seaway law, I am naturally delighted with the brightened economic outlook created by the deepened, improved and modernized waterway.

In addition to economic benefits, however, we can expect to face serious, though not insurmountable, challenges. Among these may well be: Need for further modernization of port and harbor facilities, including better docks to accommodate ships, equipment for handling incargo, warehouses for goods, and other facilities; hitting the target date of 1962 for deepening and improvement of the Great Lakes connecting channels—to bring Wisconsin—and other States west of Lake Erie, the full benefit of deep-sea shipping as early as possible; dovetailing water traffic with highway, rail and air transportation systems—to assure expeditious handling of traffic; searching for new markets for the products of our farms and factories to better utilize this less-expensive trade route to

the world; encouraging cooperation between labor and shipping interests—so as to stimulate, not handicap—the expansion of trade. Why? To create more jobs, as well as economic health; and finally, we need to be alert to head off efforts to kill off the Seaway by its long-time enemies—who have special interests elsewhere in the country.

Overall, the challenge is great. However, the promise of reward is even greater.

If we vigorously, practically, and creatively carry forward constructive efforts to resolve the problems, the economic benefits—I am confident—will prove the Seaway a sound investment for the American people.

County ASC Employees Are Entitled to Full Benefits of Federal Employment

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. SMITH of Mississippi. Mr. Speaker, Mr. C. T. Norris, of Marks, Miss., is president of the National Association of County ASC Employees. He is doing an excellent job in behalf of this new organization.

Under unanimous consent I include his recent testimony before the House Post Office and Civil Service Committee. The House of Representatives must not fail to give the county ASC employees all the benefits of other Federal agricultural employees.

The testimony follows:

TESTIMONY BEFORE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, APRIL 12, 1960, C. T. NORRIS, PRESIDENT, NATIONAL ASSOCIATION OF AGRICULTURAL STABILIZATION AND CONSERVATION COUNTY OFFICE EMPLOYEES

Mr. Chairman and members of the committee, my name is C. T. Norris. I am the county office manager of the Quitman County (Miss.) Agricultural Stabilization and Conservation County Office. I am also president of the National Association of County Office Employees. This organization represents the employees of county offices in 44 States, comprising over 95 percent of the county office employees in the United States, in matters concerning general welfare of these employees. It is in this capacity that I appear before you here today.

Our concern for the welfare of county office employees is of long duration. I have been a county office employee for over 22 years and I believe that I am entitled to be recognized as a Federal worker. It is for this reason that we ask this committee to so recognize all Agricultural Stabilization and Conservation County Office Employees as Federal employees and so designate them in the language of your H.R. 9–833 or whatever bill adopted.

In order to show you why we are so absolutely convinced that we are fully Federal workers and therefore should be recognized as Federal employees for purposes of pay raises for Federal employees, for retirement purposes, and for low-cost Government life insurance and health insurance, my colleagues and I would like to familiarize you with the background of the working conditions of county office managers and other employees. We think this is particularly pertinent in view of a past report to your committee by the Civil Service Commission, which report we in no way agree with.

To begin with, we say that we substantially meet the three guide rules laid down by the Civil Service Commission for Federal employees. The only area in which we do not meet this would be in employment by the local county Agricultural Stabilization and Conservation Committee who are not recognized as Federal officers, even though they sign an oath of office the same as you do. Even so, they cannot hire an office manager who is not approved by the State Agricultural Stabilization and Conservation personnel (Federal officers) and one who meets the employment requirements as set out in State and National instructions.

We do meet the other two requirements because:

(1) We are under the direct supervision of State office employees. A farmer fieldman visits county offices at regular intervals to review and help plan and direct the county office work. State office reviewers, or auditors, make regular visits to county offices to determine the adequacy of county office operations and to recommend the necessary corrective action if deficiencies are found. CSS auditors visit county offices at least once a year to determine the correctness of its operation. All work instructions and regulations are forwarded by State ASC offices for county offices to follow. Certainly this constitutes supervision and direction of a Federal officer.

(2) The third item used by the Civil Service Commission to determine a Federal employee is whether he is engaged in the performance of Federal functions under authority of an act of Congress.

Gentlemen, attached to the back of your copy of this testimony is a picture of county office instructions which I, as a county office manager, must follow to the dotting of an "i" and the crossing of a "t." The first four of these books cover our administrative work such as management standards; county administrative handbook, secretary's regulations, and incentive award handbook, all issued by USDA, CSS; and the Mississippi State ASC office instructions. The fifth book covers fiscal operations; the next three books cover the agricultural conservation program. The next two cover the farm storage facility loan program and the next four cover the various marketing quota and acreage allotment programs enacted by act of Congress. The 15th book covers determination of performance on allotment programs. The next eight books cover the various price support programs authorized by Congress; and the last three books cover the soil bank program. Gentlemen, there are approximately 3,750 pages in these 25 books which my clerks and I must be so thoroughly familiar with that we can answer questions of our farmers without going to the book, and yet be right so that the programs authorized by Congress may be properly carried out. All of these program functions were authorized by Congress or by an Executive order. Those are all of the instructions we have. We do no other work than that authorized by you or an Executive order and whenever a new action program is authorized by Congress it usually winds up in the county ASC office for administration.

To further show the direction of our activities by a Federal officer let me point out the following examples:

Book 1 states that it is the responsibility of the county office manager to see that programs are carried out effectively and efficiently, to keep the committee informed on program development and the operation of the county office; advise the State office of budget needs; to see that funds are properly safeguarded and accounted for; to see that fiscal records are carefully and accurately prepared and maintained; that the office is efficiently organized; to hire, train, and properly supervise good employees; for seeing that farmers and others receive necessary information about programs; for seeing that the public is dealt with fairly, understandingly, and courteously; for making sure that reports are accurate and on time; that Federal and State procedures are properly maintained; that files and records are kept in accordance with a system prescribed by the State office; for seeing that the extension agent, SCS technician, Forestry Service representative, and the FHA county supervisor are adequately informed about ASC programs (incidentally these are all recognized as Federal employees and the instructions for operation of all of their programs combined are not one-half those shown here). These instructions further require that county office employees should, of course, strive to build a high degree of public confidence in the county office and the programs authorized by act of Congress. The county office manager is also responsible for properly receiving, accounting for, and disposing of all Federal funds, including negotiable instruments, coming into custody of the county office. In Mississippi, county office manager applicants must have completed 4 years of study in a recognized college or university unless waived for demonstrated ability and experience requirement.

Book 16 states that the county office manager, or an employee designated by him in writing, shall approve all CCC loans, purchase agreements, loan repayments, loan settlements, and all forms and documents involved in the loan program. He also has the responsibility for issuing certificates of interest and sight drafts on Federal Reserve Banks. This, plus additional responsibilities for this program too voluminous to detail here. We disburse millions of dollars of Federal funds under this Federal function.

One of the most recent agriculture acts of this Congress was Public Law 86–80, making nonrecourse price support available to any person in excess of $50,000 on any designated 1960 field crop only if it is found he has made the necessary reduction in the acreage devoted to the commodity to qualify. The operating procedure issued by USDA, CSS, for this program is referred to as 5–PS(60) and states "the county office manager in the county in which an application is filed shall be responsible for fully explaining the provisions applicable to the exemption, for providing application forms upon request, for assisting a producer in his application; for the determination, review, and approval of the data within his applicable county, and for distributing the forms in accordance with the applicable instructions."

Gentlemen, these are but representative examples of the designated responsibilities and duties of an office manager as outlined in these instructions.

How, then, can anyone say that we do not work under the supervision and direction of a Federal officer, and that we are not engaged in the performance of Federal functions under authority of an act of Congress or an Executive order.

As to our need for the salary increase I would like to point out the comparative salary of other agricultural workers in my home country. I believe these are fairly representative. These workers will get the increase for designated Federal employees if the Congress passes the legislation being considered.

	Per annum
County ASC office manager	$6,450
County FHA supervisor	6,485
County SCS technician	7,080
County extension agent	8,250

I receive as much salary, I'm told, as any office manager in Mississippi. Our work requirements and qualification requirements are as high as those for these other employees. Certainly our responsibility is as great or greater. The requirements of

my family for living expenses are as great. Certainly it appears to me that this committee, out of fairness to our approximately 15,000 coworkers, should put into your legislation a designation that we be considered Federal employees for the purposes mentioned above and stop once and for all time the injustices created by the delay in our pay increase such as occurred 2 years ago when we were delayed for 18 months in getting our increase, resulting in a loss of about $900 for office managers and a corresponding loss to all other ASC employees.

We earnestly petition you gentlemen to consider our plea and grant us equal consideration with other Federal workers. We ask nothing more than to become legitimate members of USDA after 26 years of hard work. Gentlemen, we thank you for your time and when Mr. Payne has presented his testimony we will be glad to answer any questions you may have. Seated in the committee room are the State association presidents from Florida, Louisiana, Mississippi, South Carolina, Virginia, Massachusetts, Pennsylvania, Michigan, Arkansas, Iowa, Nebraska, Kansas, Georgia, and California. I am sure they would like to join us in answering any questions concerning this problem.

Independent Offices Appropriation Bill, 1961

SPEECH

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 11776) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices, for the fiscal year ending June 30, 1961, and for other purposes.

(Mr. GEORGE P. MILLER asked and was given permission to revise and extend his remarks.)

Mr. GEORGE P. MILLER. Mr. Chairman, I support the committee in this matter. I am as conscious of the fact that we need a new hospital in northern California as any man present. I have long worked for it. But when these hospitals are constructed, I want to see them located where they will best serve the interest of veterans and for no other purpose. I offer a challenge to anyone to say that the site selected for the hospital at Martinez is the logical one or one that meets this criteria.

I have before me a letter dated March 23 from the Chairman of the Committee on Veterans' Affairs in which he tells me that three times they have investigated this hospital and they find that the Martinez site is not the proper site for it. The hospital presently is located in Oakland and the only reason it was moved to Martinez, which is on the periphery of the district to be served and not in the center of it is because at the time the matter first came up there was an order issued by the Office of Civilian Defense that you could not locate such a hospital in a so-called target area. Oakland, Calif., because of its strategic position, was designated as a prime target area. So were Washington and Cleveland. The restriction has been removed from these cities.

Attitudes Toward Governmental Participation in Medical Care

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. DINGELL. Mr. Speaker, in view of the recognized urgency of securing immediate passage of the Forand bill, I would call to the attention of all Members a most enlightening report recently brought forward by Prof. Wilbur J. Cohen. I feel this report provides useful and valuable insights on the way in which Americans as a whole, and residents of a large metropolitan community like Wayne County—Detroit—Michigan, view the necessity of Federal assistance to reduce individual medical costs.

Prof. Cohen headed a select study group in conjunction with the University of Michigan coordinating committee on Medical Care.' This well-documented released a report entitled: "Attitudes Toward Governmental Participation in Medical Care." This well-documented study is the result of careful analysis of data gathered from two recent surveys; one based on a national sample of all U.S. residents 21 years of age or older, and the other based on a sample of all adult residents of Wayne County—Detroit—Michigan. These surveys sought to impartially determine citizen attitudes toward Federal aid to reduce individual medical expenditures.

As a general conclusion, drawn from both surveys, the committee found:

A majority of adults in both the United States as a whole and in greater Detroit favor governmental assistance in the provision of low-cost medical care. In view of earlier research, this finding is not surprising. Several national studies and a 1952 survey of greater Detroit have shown general support for some form of governmental action in the field of medical care.

In summarizing some of the major findings, it is noted that:

A majority of the American people and the residents of Wayne County (Detroit) favor governmental action to help finance low-cost medical care.

Fifty-five percent of all adults in the United States believe the Government ought to help people get doctors and hospital care at low cost; 25 percent oppose such action; and 20 percent are not sure or have no opinion on this issue. Stated somewhat differently, of those Americans who express a specific attitude, two persons are in favor of such Government support, for everyone who is opposed.

As compared with the United States as a whole, Detroiters are somewhat more likely to be in favor of the principle of governmental assistance (64 percent). They also are less likely to be unsure of how they stand on the matter, or to have no opinion at all.

A substantial proportion of the American people believe present governmental aid for medical care is not enough.

Aged persons in the United States overwhelmingly favor Government aid for low-cost medical care. Over 6 out of every 10 Americans aged 65 or older favor governmental aid for low-cost medical care.

In the age group 21–34, the proportion is 50 percent. The likelihood of favoring assistance consistently increases with age. It should be noted, however, that the proportion favoring governmental aid is at least 50 percent or more for every age group.

The results for the United States are as follows:

Attitudes toward the principle of governmental assistance

Age group	Favor	Oppose	Not sure; no opinion	Total	Number of cases
	Pct.	Pct.	Pct.	Pct.	
21 to 34	50	27	23	100	576
35 to 44	53	28	19	100	485
45 to 54	57	27	16	100	367
55 to 64	56	25	19	100	257
65 and older	63	15	22	100	229

It is significant that the general results presented above are similar to those of an independent survey taken in 1957 by the National Opinion Research Center of the University of Chicago in cooperation with the Health Information Foundation. In the NORC study, Dr. Ethel Shanas reported that a majority of aged respondents (54 percent) declared themselves in favor of Government insurance paying doctor and hospital bills; a somewhat smaller proportion (43 percent) of the older population were not in favor of this. Only 3 percent of the sample used in the Shanas research, however, had no opinion on this issue.

Older residents with large medical care requirements clearly would benefit from any governmental program. The relationship between increasing age and increased approval of governmental aid which is discussed above is therefore not surprising. Of perhaps more interest, however, is the absence of this relationship in Wayne County. Detroiters over 65 years old are no more likely than are very young adults to be in support of or in opposition to, the principle of governmental assistance in meeting medical costs. However, since the proportion of all persons under age 65 in the Detroit area favoring governmental aid was higher than those in comparable ages in the entire United States, it may be reasonable to assume that a 60 to 63 percent favorable response represents the effective limit of favorable opinion on this subject. It should also be noted that the proportion without an opinion, or not sure, in the Detroit area was somewhat less than that for the country as a whole.

There is a tendency for political "conservatism" to increase with age in the Detroit area as elsewhere. The substantial proportion of the older groups in favor of some governmental participation in medical care is thus of significance. It indicates that older persons who mighth otherwise favor a smaller role for government in general make an important exception to this principle when it comes to financing medical care costs.

The principle of governmental aid has wide acceptance among the middle socioeconomic groups. Both nationally and in greater Detroit, the "middle class" levels of the population are much more likely to favor than to oppose governmental participation in medical care plans. In fact, majority op-

position to the principle of governmental assistance appears only among those residents of Wayne County whose incomes exceed $10,000.

The Nation's farmers are in strong support of governmental aid for medical care. Nearly two out of every three farmers in the United States state that they are in favor of governmental aid. Farmers are at least as much in support of this principle as are urban workers.

At least three times as many Democrats favor governmental aid as oppose it, whereas only slightly more Republicans favor it than oppose it. The survey points out that political party preference is strongly correlated with attitudes toward governmental assistance in meeting the costs of medical care. Republicans in the Nation and in Detroit are considerably more likely than Democrats to be in opposition to aid. Even among the Republicans, however, the number of supporters of this principle is slightly larger than the number of opponents. But Democrats, either in Wayne County specifically or in the Nation as a whole, are much more likely to approve than to disapprove governmental assistance. It may also be noted that among those with an opinion a rather large minority of Republicans (43 percent in the United States and 37 percent in Wayne County) feel that the present extent of governmental aid in meeting the costs of medical care is not enough.

In explaining the methods employed in making the surveys Professor Cohen's committee pointed out:

The use of terms such as "compulsory health insurance," "socialized medicine," or "socialism," was purposely avoided in the wording of the questions in these surveys. The amount of controversy which has centered on these concepts in the past indicated that their use in a study of this type would not aid in any analysis of the medical care problem. It was noted in the Detroit area study's survey whether or not the respondent used terms such as the above. Fourteen percent of the Detroit residents spontaneously employed the term "socialism" or "socialized medicine" in answering the question. Almost all of those Detroiters who used these labels were in decided opposition to governmental participation.

Moreover, it appears that many Americans simply do not know what the term "socialized medicine" means. In a national poll taken by the Gallup organization as early as February, 1949, respondents were asked what the term "socialized medicine" meant to them. About 40 percent didn't know, gave no answer, or gave incorrect or vague answers. Moreover, of those replying to a question of whether they would approve or disapprove of socialized medicine for this country, nearly as many said they approved it as said they disapproved it.

These data indicate that "socialized medicine" is neither as widely understood nor as widely opposed as its opponents believe it to be.

How the surveys were conducted, the sources of data, questions used, footnotes, tables and relevant statistics are included in this excellent report.

In my judgment, this report demonstrates that the majority of our citizens recognize the necessity of increased Federal aid in reducing medical costs. Our older citizens especially are faced with the specter of failing health, increased need for hospital and medical care just at the time when their earning potential is lowest. Common decency demands we join with the thinking of most of our citizens and act forthrightly upon this serious domestic issue. Let us take the Forand bill out of committee in time for it to be enacted into meaningful legislation before this session of Congress adjourns.

Money, Trade, and Freedom

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. PHILBIN. Mr. Speaker, we have good reason to be concerned by developments in trade, money, and economics. There has been kaleidoscopic and rapid change in our entire economic and trade position and posture, and in our international balances and monetary stability. Our gold supply has gravely diminished and huge claims are now pending against it by foreign interests. If these claims should be called at any time, it is estimated that we would have something like $6 billion or less left in our reserve gold supply, or less than enough to serve as a basis for the 25-percent minimum gold cover required for currency in circulation.

Bankers and experts do not believe that foreign countries will withdraw these balances, but the fact that we are operating our economy and our currency system at the sufferance of foreign debtors who could, if they chose, demand payments in gold and cause this Nation some real perplexing monetary difficulties is not reassuring.

Some people are of the opinion that within the next 3 years we will have to devalue the dollar. One European banker, so a reliable report goes, has wagered a case of champagne with the Chairman of the Federal Reserve Board that the dollar will be devalued within 3 years.

If our gold continues to be drained off into foreign hands, that will bring about a situation never seen in America before, not even in the depression, because it would break confidence in the dollar at home and abroad and in the stability of our Government as well.

Some people have suggested that we repudiate further demands for gold payments. Can you imagine what would happen if this great Nation were to repudiate its debts and commitments? This would, in truth, be likely to cause chaos in international exchange the like of which we and the world have never known.

If the Soviet Government decides to cash in on the weakness of our position it could by the judicious use of gold in various foreign markets cause us incredible harm and produce the greatest of confusion, anxiety, and economic chaos.

Can we afford to leave our financial or economic affairs at the mercy of international manipulators?

How long can we continue to conduct trade at the sufferance of the shrewd foreign monetary and exchange experts?

I do not profess to be an expert on monetary questions, but I have given them a great deal of study, and I am genuinely concerned about present trends and believe if they are not reversed, this country could very well face a crisis in our foreign trade, monetary exchanges, and in our domestic economy.

Why is our real export trade falling off? Obviously it is for one understandable reason—because American goods have been priced out of the market by high production costs and also because some cheaply produced foreign goods are flooding foreign markets and have been permitted to come into this country under the reciprocal trade treaties almost indiscriminately.

The country is flooded with cheap goods of all kinds and they have already wrecked great segments of the textile industry and they are well on their way to wrecking other industries.

We are taxed at a higher rate than ever, probably paying more taxes than have ever been paid before in the history of mankind.

We have poured billions of dollars into foreign countries subsidizing trade and adding the tax burdens of other countries to those already being carried by the American people already struggling under a gargantuan and virtually unbearable tax load.

We have not only sent money overseas in huge bundles, we have sent goods of every kind, modern machinery, modern equipment, modern know-how, modern technical services and assistance which have enabled foreign countries to steal American markets in every part of the world and to outcompete domestic industries in the American markets.

While all these fearsome and awesome economic events are taking place we have very conveniently reduced our tariff rates so that they are now 80 percent below what they were 25 years ago, notwithstanding the fact that many foreign countries are drastically excluding or greatly limiting imports of American goods and have resorted to high tariffs, blocked exchanges, import licenses and other harsh, anti-American measures to stifle American competition in their respective countries.

Some of our Massachusetts production industries which were originally the strongest, most enthusiastic sponsors of reciprocal trade treaties and free trade on the theory that their business would be improved are now becoming the worst threatened victims of increased imports. Automobiles, steel, sewing machines, typewriters, and so forth, have now experienced sharp declines in exports and have become net importers.

Some of the so-called sophisticated American capitalist entrepreneurs who set up very costly plants in foreign countries to try to bypass trade barriers have also come croppers and are threatened with the loss of their investments; in fact, their only chance to be bailed out is through mutual aid funds, and that is now their great drive in Washington. I will not mention the large beneficiaries of the mutual aid programs, because in

many respects they are not the peoples of the countries we are seeking to help. They are vested, privileged interests, big banking and related groups in many countries who are infinitely enriched from this multi-billion-dollar handout that has cost the American taxpayer almost $100 billion since World War II.

Automation is a factor, and will be an increasing factor, not only in foreign trade, but in domestic trade. There is unquestionably pressure for more rapid automation in order to compete with cheap imports. Anyone with sense knows that other countries are doing the same thing; that there has been a widespread, wholesale migration of industry skills, techniques, and know-how all over the world as a result of recent policies of this Government; and that any unemployment that comes out of automation is likely to last a long while. The transition period is bound to be attended by mischievous maladjustments.

Subsidies and bounties for foreign marketers, foreign distributors, and foreign producers have been widely placed, and now we are paying the price for shortsighted policies that set up the very competition of which we now complain, and allowed it to roll across the United States like a huge economic tidal wave.

The end is not in sight, let me assure you. If we do not find some way of checking cutthroat foreign competition, the drain on our taxpayers and the various trade, economic, and monetary manipulations that are dissipating our assets, dwindling our gold supplies to the danger point, reducing the prestige and value of the dollar abroad, threatening us with devaluation, we will live to rue the day.

High interest rates here are attracting some money from abroad but here again our own producers, our own businessmen, particularly our small businessmen, are paying the price—because money that should be available in our own loan markets is being sent overseas thus creating scarcities here that have stepped up interest rates causing dislocation and downward trends in some American business and unemployment in the midst of prosperity and plenty. There has been no special aid program for the suffering and unemployed people in parts of our own country.

Now the proposal is to empower GATT in the next 2 years to still further reduce our tariff rates and thus start further complications and worsen the conditions that plague us at present. If we yield to this type of unsound economics we will be cutting our own throats and leaving more and more of our industries, businessmen, and loyal workers at the mercy of foreign cutthroat competition.

This country needs a realistic trade policy that will encourage mutually advantageous foreign trade and drastically check cutthroat trade. In fact, we may not have many more chances to prevent the flow of cheap foreign imports that are destroying American markets and American industry and threatening the jobs and well-being of sincere, earnest and hard-working men and women.

In a word, this country needs to get down to fundamentals. The economic binge of the past 20 years and its frightful hangover of debt, headaches, costs, taxes, upset social and political conditions ought to be enough to convince the average American that it is time to call a halt and get back on the track of sanity.

It is about time we gave more thought and attention to the welfare of our own people and our own country. I think we should put foreign aid on a solid basis that would eliminate waste and extravagance and eliminte the multiple aid that has been spread injudiciously and indiscriminately around the world which as one great American said, "is like pouring money into a rathole and at the same time producing serious and grave economic problems for our economic system."

If we do not cope with these great trade, monetary, debt and wasteful giveaway programs to my way of thinking the American Nation could well face great economic peril before long.

The present situation is fraught with gravest possibilities because if we fail to resist and reverse current social and economic trends, the end of the free enterprise system may be only a question of time.

It is for us now, while the opportunity is at hand, to decide whether we intend to maintain here for the benefit of ourselves and for the world a great, free, liberal democracy committed to the transcendent importance of the individual, or whether by neglect and inaction we will allow conditions to develop here which will usher in and establish the despotic absolutism of totalitarian government and suppress personal liberty for centuries to come.

Undertakers Versus Health Insurance for the Aged

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. FORAND. Mr. Speaker, on March 9 I inserted in the RECORD a resolution adopted by the Indiana Funeral Directors Association, Inc., opposing the Forand bill, H.R. 4700.

A few days later I received a telegram from the National Funeral Directors Association stating it has taken no position on the bill and that the Indiana group had acted without contacting the parent organization.

As a part of my remarks I include the following telegram:

MILWAUKEE, WIS., *April 2, 1960.*
Congressman AIME J. FORAND,
House Office Building,
Washington, D.C.:

Statements about your bill leave the impression the funeral directors of the country are opposed to it. The National Funeral Directors Association made up of more than 14,000 members objects to this because our group has not and will not take a stand on this measure. As far as we know only one State funeral directors association has opposed your bill. This was done without contacting us. In fact we did not know of the resolution until we read it in the CONGRESSIONAL RECORD. We hope this telegram makes the record straight.

ARTHUR E. TAYLOR,
National Funeral Directors Association.

Sun-Sentinel Born—Our Aim: To Fulfill Area News Needs

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. ROGERS of Florida. Mr. Speaker, it was my pleasure Monday to attend a breakfast in honor of a new morning newspaper in the Sixth District of Florida.

This paper, to serve the fast growing area of North Broward-South Palm Beach Counties, actually could trace its origins back 31 years to the establishment of the Gore Publishing Co. by Gov. R. H. Gore, Sr. This company has published the Fort Lauderdale News since 1929 as an afternoon paper, and now adds the Sun-Sentinel as a morning paper to serve the area north of Fort Lauderdale.

At the breakfast Monday Executive Editor Fred Petijohn presented the men who will lead the new paper in the years to come. The list included several whose families have been connected with the Gore Publishing Co. through the years, such as Ted Gore, president of the Gore Publishing Co., and Jack Gore, editor and publisher of the Fort Lauderdale News, sons of R. H. Gore, Sr., and Bob Dickey, son of J. W. Dickey, chairman of the board of the Gore Publishing Co.

Editor Harvey Call pointed out the aims and policies of the new paper and introduced his staff. In a front page editorial in the first edition Monday the editor stated the ideals which will guide the policy of the paper. Because his words reflect the kind of new enterprise we welcome in Florida and indicate the faith in the future held by our people I would like to include his editorial here in the CONGRESSIONAL RECORD:

SUN-SENTINEL BORN—OUR AIM: TO FULFILL AREA NEWS NEEDS

(By Harvey A. Call)

The Sun-Sentinel makes its bow today abounding with ambition to fulfill completely the morning news needs of this fast-growing, dynamic area.

We aim to do that by providing a thorough coverage of local news, happenings of the nation and world, last minute lively sports coverage, reports of business and full stock market lists, the women's interests and all that goes to make up the history of the day.

Anything less would fail to do justice to the varied interests of nearly 100,000 people.

Into this edition has gone the experience the Gore Publishing Co. gained in 31 years of continuous service devoted exclusively to this area.

Every effort has been made to provide a newspaper featuring the very latest news in one complete, orderly package for enjoyable reading.

The Sun-Sentinel is a companion publication of the Fort Lauderdale News which has been providing constantly expanding coverage in this area and will continue to provide afternoon news coverage.

Readers who want to keep abreast of everything that is going on 24 hours daily will find, however, the two newspapers will be entirely independent editorially.

The Sun-Sentinel editorial policies will be formulated at our new quarters, 1530 N. Federal Highway, Pompano Beach, and attuned strictly to the interests of the community.

In the coverage of the local scene, we will provide news and features through our staff of experienced, able reporters, special writers, and editors.

Locally and nationally, we will present reports dealing with all walks of life and philosophies. We will not close our eyes or ears or our minds to things merely because we may not agree, because an idea is new or because of other personal feelings.

In our editorial expressions, however, you will find us adhering to the basic principles that have made America great, ideals that have contributed to its advance and development under a system acknowledging man's dignity, individual freedom, and right of self-determination.

We will present our views entirely as we evaluate the facts in any given instance, and our prime concern will be the interests of our readers, the State and the Nation.

Politically, our position will be nonpartisan as we will evaluate the performance of all officeholders and candidates for public trust individually.

We cannot and will not subscribe to the belief any political party has a monopoly on brains, ability or the exclusive right to represent the people.

We do believe fervently the actions and programs of all public servants constitute news the public has every right to know.

We are cognizant of our responsibilities and alert to the vast opportunities to serve our readers and the communities.

Within these rather broad, general areas, the Sun-Sentinel aims to bring to your door each weekday morning the best newspaper we can put out.

Persecution by Chinese Reds

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. PHILBIN. Mr. Speaker, I desire to compliment the distinguished Secretary of State, our friend and former colleague, the Honorable Christian A. Herter, and the State Department for interceding so strongly to try to effect the release of Bishop James Edward Walsh who has been sentenced to 20 years' imprisonment by the Chinese Communist regime, and other Americans in a similar predicament.

It is encouraging to note that the State Department has expressed its revulsion about the unconscionable imprisonment of Bishop Walsh and has lodged the strongest possible protest with the representative of the Chinese Communist regime.

Very many people in the Nation and throughout the world will applaud the State Department for the efforts it is making to free Bishop Walsh and his colleagues.

As the Department points out, the rest of the world joins in condemning the action taken against a citizen of the United States and a distinguished member of the Catholic clergy.

It is true as the Department asserts that his only mission was religious, and his personal devotion to the spiritual welfare of his fellow Catholics was so deep as to compel him to remain on the Chinese mainland despite the persecution of his church by a godless regime.

I am pleased to have the assurances that the Department will continue to seek by every feasible means the release of Bishop Walsh as well as the four other Americans still held in prison by the Chinese Communists in violation of the 1955 pledge to free them. As pointed out, these five men are in effect political hostages of the Chinest Communists who refuse to release them regardless of all humanitarian considerations.

I know that a great many people in this country as well as in the world will be thankful to Secretary Herter, Assistant Secretary William B. Macomber, Jr., Ambassador Beam and other leaders in the State Department for their intercessions and efforts to free Bishop Walsh and his fellow political prisoners being held captive by the Chinese Reds.

Independent Offices Appropriation Bill, 1961

SPEECH
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 11776) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices, for the fiscal year ending June 30, 1961, and for other purposes.

Mr. GEORGE P. MILLER. Mr. Chairman, I want to emphasize what the chairman of the Committee on Science and Astronautics has told you about the NASA organization. While it is true that it is a new organization in name it is not in anyway a new organization in fact. The National Advisory Committee on Aeronautics, its predecessor, antedated the war. It did a great job in the field of aeronautics.

When NASA was set up, its entire organization was transferred to NASA. Then, also transferred to it, was the group at Huntsville known as the Von Braun team. If this team, one of the greatest groups in the country, headed by one of the greatest scientists, the man who developed Jupiter, the first successful missile that we attained, if this team, I repeat, is to be fully utilized to the maximum, you have to give it the space, the tools, and the facilities with which to work. That is what you are denying him when you cut $16 million out of the proposed construction appropriation for NASA. I ask you to consider very seriously the effect this will have upon the program that some people in the United States are critical of because they say we are not moving fast enough. That we should be doing more in overtaking the lead that the Russians now have in this field.

Mr. McDONOUGH. Mr. Chairman, will the gentleman yield?

Mr. GEORGE P. MILLER. I yield.

Mr. McDONOUGH. Is not the action before us contrary to the recommendations of the committee in considering the authorization bill, and also contrary to the President's budget?

Mr. GEORGE P. MILLER. It certainly is.

Letter to the Editor of the New York Times Protesting Birmingham Stories

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. HUDDLESTON. Mr. Speaker, today I have addressed a letter to the editor of the New York Times, in which I point out certain glaring errors, distortions, and exaggerations which appeared in his newspaper in a series of two articles written by Mr. Harrison E. Salisbury last week. Mr. Salisbury's articles were entitled, "Fear and Hatred Grip Birmingham," and, "Alabama Shaken by Racial Issue." These articles were highly inflammatory and I can only come to the conclusion that they were written for the sole purpose of slandering a community of decent people.

No doubt, many Members of Congress read the Salisbury articles when they appeared in the New York Times and, naturally, came to the conclusion that they represented an accurate report of the race situation in Alabama. I urge that all Members of Congress read my letter to the editor of the New York Times, which I am inserting in the CONGRESSIONAL RECORD herewith, in order that they may see for themselves that the articles are not good reporting but, on the contrary, represent a very severe example of journalistic irresponsibility.

My letter to the editor of the New York Times is as follows:

APRIL 19, 1960.

EDITOR,
The New York Times,
New York, N.Y.

DEAR SIR: It is shockingly ironic that, only days after the New York Times was selected by certain editors and publishers of the American press as the newspaper which best lives up to the high journalistic standards

set forth by Joseph Pulitzer, the Times should print the purported factual reports by Mr. Harrison E. Salisbury on Birmingham, which two articles constitute, in fact, gross falsehood.

Sadly, there will be those who, because of the generally excellent reputation the New York Times has always enjoyed, will accept the innuendos, half-truths, and totally unrealistic conclusions of Mr. Salisbury as pure truth.

Birmingham is my lifelong home and, with surrounding Jefferson County, comprises the Ninth Congressional District of Alabama which I have represented since 1955. I spend a considerable portion of each year in the city, have visited there quite recently, am in constant touch with friends and family (including the hundred or more constituents who write me daily), read every Birmingham and Jefferson County daily and weekly newspaper consistently, and can state unequivocally that the picture Mr. Salisbury has painted of the community and its racial problem bears no semblance to reality.

I protest most vigorously against such irresponsible reporting and against the practice of publishing such slander against a decent community which is, with sister cities throughout the South, now faced with and working toward the solution of a most serious problem. Surely, the result of Mr. Salisbury's inflaming words can but increase southern resentment against those who have never been sympathetic with the South and its efforts to solve its own problems, and can but harden our conviction that hypocrisy reigns over the minds of many members of the northern press when racial problems are considered. These two articles contain so many statements which are at variance with the facts that it would be impossible to refute each of them in such a communication as this. My pointing out several examples of Mr. Salisbury's fallacious reporting will perhaps serve the purpose.

Given great prominence as an indication of typical Alabama politicians and a typical southern attitude was the example of Adm. John G. Crommelin. Mr. Salisbury states that though the extreme viewpoint of Mr. Crommelin is deplored by many "violent segregationists," it seems to have wider acceptance than many Alabamians will admit in public. Admiral Crommelin ran for Governor in 1958 and in the secrecy of the voting booths only 2,245 persons cast their votes for this man whose views, according to Mr. Salisbury, are typical, out of a total vote of 618,000. Further, in Jefferson County, where Mr. Salisbury would have it believed that he enjoys wide popularity, he received only 218 votes.

Mr. Salisbury claims there are "schemes" in Alabama to undermine the electoral college system to enable electors on the Democratic ticket to vote against election of a Democratic presidential nominee. This is not a "scheme." It is a legal effort and will be put to a vote of the people next month. Eleven electors are running as loyalist Democrats. Eleven are running as States rights Democrats who, if elected, may or may not cast their electoral votes for the Democratic nominee. The people of Alabama, with all the facts available, will vote on these two slates in May. It is not by any means a "scheme." It is a wide-open, hotly debated, completely legal issue to be decided at the ballot box and not, as intimated in the article, by politicians in a smoke-filled backroom.

The article mentions volunteer horse patrols and likens them, through implication, to self-appointed vigilantes. In two or three towns in the State, responsible citizens who own horses have been deputized for a special purpose or situation, but to imply that such a practice is voluntary in the sense of being unwanted, unnecessary, or unconnected with the established law enforcement machinery of the community is incorrect and to state that it is an extralegal device is patently untrue.

Another strange innuendo contained in Mr. Salisbury's article is that local newspapers attempted to whitewash the serious and exceedingly regrettable incident of a young 16-year-old Gadsden boy's attempting to bomb a synagogue and attack the congregation. Newspaper articles did describe the youth as a "clean-cut blond youngster devoted to his parents and his stamp collection," but this was by way of pointing out into which circles the poison of neonazism could reach. The entire Gadsden community has through various and public means made it quite clear that they do not in anyway condone such attitudes and actions and the Alabama press, in toto, has strongly condemned that particular incident and the ideology which inspired it, thus voicing the thoughts of the people of the State.

Mr. Salisbury asserts it is not inconceivable that the whole county structure of the State might be modified in a gigantic gerrymander, or redivision of boundaries, to create stable white majorities in each county unit. May I point out that in New York and other States, congressional districts have been so redistricted as to put incumbents outside the district which they represented. Reasons for gerrymandering an area are numerous and quite often honorable, and most assuredly they always seem so to the people who use this implement. Otherwise, it would not be done.

To imply that Birmingham law enforcement officers have not done everything within their power to apprehend those responsible for bombing of synagogues and churches is slanderous. After the attempted bombing of a synagogue in Birmingham, which was charged to be a part of a pattern extending over a large area, city officials met with those of other southern municipalities and cooperated with Federal officials in an attempt to catch the criminals and to break up any ring which might be sponsoring such outrageous practices. There is absolutely no truth whatsoever in Mr. Salisbury's indication that telephones have been tapped by Birmingham officials, nor in his charge that mail has been intercepted and opened. Especially if the latter were true, as Mr. Salisbury well knows, postal authorities would be forced to investigate thoroughly and Federal authorities would promptly be called in. If Mr. Salisbury has facts to back up this charge, he should certainly feel compelled to make them known to officials of the Post Office Department.

Mr. Salisbury mentions that Alabama has not reapportioned its legislature since 1901. That is true. But this has nothing to do with the racial issue. Nor is Alabama alone in this failure. This is strictly a political issue in which the rural and now smaller counties refuse to surrender their legislative power to the cities. The problem is not peculiar to Alabama. This situation is acute in many States, including New York.

Many of the examples Mr. Salisbury cites in his arrogant attempt to justify the ridiculous thesis that Birmingham is a "community of fear" are completely erroneous. He mentions a "white pastor" being mistreated at a local bus depot while in the company of a Negro minister and his wife. The incident to which Mr. Salisbury alludes occurred in 1957 when a person who previously was sentenced to 18 months imprisonment for the violation of Federal laws, and who certainly is not a minister of the gospel, continued his history of lawlessness in a professional and preannounced attempt to agitate racial violence by violating local statutes. Mr. Salisbury's references to tampering with the mails must have been confused with this man's conviction on such a charge.

In citing some of the errors of Mr. Salisbury's report, mention should be made of the most glaring error of ommission of many to be noted. He failed for some peculiar reason to state clearly that of the major southern cities which have recently been troubled with "sitdown strikes," Birmingham is practically the only one where there has been no violence whatsoever. Is this not very much to be commended?

To repeat, it is impossible in a letter of this sort to refute all the inaccuracies and misstatements which have been proclaimed as fact to the people who read the Times. It can only be hoped that intelligent persons will not be utterly misled by the writings of a man who has obviously begun with the point he wanted to prove and grabbed up such stories, true or untrue, as he thought would apply to embellish on his preconceived and immediately recognizable intention.

It is also to be hoped that the city of Birmingham will continue, despite such inflammatory attacks, to maintain the peace and order and lack of violence which prevails now, in contrast to other cities, including some Southern communities, and especially, including such cities as New York itself where violence and racial discord are commonplace.

Very truly yours,

GEORGE HUDDLESTON, Jr.,
Member of Congress.

Hospital Aid for Aged

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert in the RECORD an editorial from the Washington Post of April 19, 1960, entitled "Hospital Aid for Aged":

HOSPITAL AID FOR AGED

There is now a realistic hope that Congress will adopt a measure to provide some degree of medical help for the aged before its Members scatter to take part in a national election campaign. It is no disparagement of the health insurance proposal to say that it is politically motivated. Support of social security was politically motivated at its inception 25 years ago. Support of most social legislation is politically motivated in the sense that it represents a response to a felt and forcefully expressed national need. Health insurance for the aged is just such a need; and it is high time for Congress to be responding to it.

The response, as is so often the case when some innovation is involved, will be but halfway—for the time being. The Democratic Party leaders in the House and the Senate are apparently willing to provide through compulsory social security taxes for a modified version of the controversial Forand health insurance plan which will cover the hospitalization of retired workers and their dependents. They are unwilling to go so far as to cover the costs of medical or surgical care. Why prepayment of hospital care is less "socialistic" than prepayment of medical or surgical care has not yet been made manifest to us.

Nevertheless, insurance which will take care of hospital costs in retirement years is a giant stride forward, the success of which, we have no doubt, will insure before very long a second stride to take care of the inescapable medical and surgical expenses which are the unhappy incidents of age.

That neolithic lobby of the medical profession, the AMA, insists upon regarding security as synonymous with socialism. For the time being, therefore, the doctors will have to be left out of the health program. They will be obliged to care for the elderly indigent as they have done so generously in the past, without being paid for doing so. And the elderly indigent will be obliged for a while longer to accept the humiliation of this medical philanthropy. But the arrangement will prove so burdensome to both that it is bound to be abandoned.

The Eisenhower administration has still to come forward with a health insurance plan of its own. The President has voiced adamant opposition to any compulsory insurance system. But no other system seems to have any capacity for meeting the national need. If the President chooses to veto a compulsory social security tax passed by Congress, he will furnish just the kind of political issue which ought to be taken to an electorate in an election year.

Ralph A. McAlister, Water Conservationist

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. DOWDY. Mr. Speaker, last Friday morning the Honorable Ralph A. McAlister, of Nacogdoches, Tex., departed this life. I have lost a good friend, and water conservation has lost one of its most faithful and strongest supporters. To his wife, daughter, and other relatives I express my deep sympathy. I join with his many other friends in mourning his passing. All of us will miss him.

I ask that the accompanying two items from the Daily Sentinel, Nacogdoches, Tex., for April 8, 1960, be included in the CONGRESSIONAL RECORD as a part of my remarks.

R. A. McALISTER DIES SUDDENLY

Funeral services for Ralph A. McAlister, 58, of 308 East Austin Street, Nacogdoches, will be held Saturday morning, April 9, at 10 o'clock in the Cason, Monk Chapel with the Reverend Charlie Lamb, pastor of the First Methodist Church, officiating.

Interment will be in Sunset Memorial Park in Nacogdoches.

Mr. McAlister died Friday morning at 3:45 o'clock at his home. Death came suddenly, although Mr. McAlister had felt slightly ill Thursday night and had had a visit from his physician.

Born February 15, 1902, in Woodville, Mr. McAlister was the son of Samuel McAlister and Margaret Ann Young McAlister. He was married May 12, 1927, to Sarah Vaughan McAlister who survives him.

An attorney, Mr. McAlister did prelaw work at Marshall Junior College in Marshall. He attended the school of law at the University of Texas in Austin where he was an outstanding member of the baseball team.

In 1926 Mr. McAlister came to Nacogdoches to begin the practice of law and became a partner of the late Moss Adams.

Shortly after he came to Nacogdoches, Mr. McAlister became interested in water conservation and was one of the founders, a director, and a former president of an organization now known as the Neches River Conservation District. The organization's principal project through the years has been the construction of McGee Bend Dam and Reservoir. The reservoir, which will be the largest man-made lake entirely within the State, is expected to be complete in the next 4 years.

Mr. McAlister practiced with the law firm of Adams and McAlister until 1940. From 1940 to 1943, he practiced alone and in 1943 he formed a partnership with F. I. Tucker. In 1954 Mr. McAlister's son-in-law, Ed Benchoff, was taken into the firm and in 1955 Mr. Tucker withdrew from the firm.

For a number of years after coming to Nacogdoches, Mr. Alister was secretary-treasurer of the Piney Woods Country Club. He was instrumental in many civic enterprises in Nacogdoches, serving many times in an advisory capacity. He maintained a lifelong interest in politics from the view of the constituent.

Mr. McAlister was a member of the State Bar Association and of the Nacogdoches County Bar Association. He was a member of the Methodist Church.

Survivors are his wife, Mrs. Ralph A. McAlister of Nacogdoches; one daughter, Mrs. Ed Benchoff of Nacogdoches; five sisters, Mrs. Floyd Smith of Lohn, Mrs. Hugh Perry and Mrs. J. R. O'Daniel of Forth Worth, Mrs. Don Carnes of San Antonio, and Mrs. Edgar Phillips of Woodville; one brother, Sam McAlister of Woodville; and two grandchildren, Ed Mack Benchoff, 4, and Sara Elizabeth Benchoff, 2, of Nacogdoches.

Pallbearers will be Ed Morgan, Edward Tucker, Jr., Branch Patton, Roy Blake, S. M. Adams, Jr., and Fred Tucker, all of Nacogdoches, and Paul Colley of Henderson.

Cason, Monk & Co. Funeral Home is in charge of arrangements.

DOTS AND DASHES

(By Victor B. Fain)

He led the way: With the passing of our longtime friend, Ralph McAlister, water conservation in deep east Texas lost the most persistent supporter it has ever had.

If there should be a list of those who pioneered the movement in our area, Ralph's name would have to be right at the top.

He talked for it, fought for it, worked for it, and led the way for saving our water long before such action became popular. He was always from 10 to 20 years ahead of the general thinking on the subject. Passing of the years and adoption of projects and practices which he preached so devotedly proved that.

Probably no other man, living or dead, had as much to do with bringing McGee Bend Dam this close to reality as Ralph McAlister.

Eventually, it would have been built, maybe; but because Ralph took the leadership in the thirties and forties, the project was kept alive and finally overcame the strong opposition which certain interests built up against it. Otherwise, McGee Bend Dam today would still be in the planning stage.

In our mind, McGee Bend Dam and its reservoir of water forever will be a living memorial to Ralph McAlister.

We are glad that he came along in our time.

The Needs of the Nation for Special Education and Rehabilitation

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. GIAIMO. Mr. Speaker, pursuant to permission granted, I am pleased to insert in the RECORD the text of an address delivered by my friend, Hon. JOHN BRADEMAS, at the annual conference of the American Personnel and Guidance Association held in Philadelphia on April 13, 1960. In his address, the gentleman from Indiana comprehensively set forth needs of the Nation for special education and rehabilitation and the work which the Subcommittee on Special Education has been doing to meet these needs. For the past year and a half, I have had the pleasure of serving with the gentleman on this subcommittee, and I now deem it a privilege to draw the attention of this House to his fine address, which follows:

THE NEEDS OF THE NATION FOR SPECIAL EDUCATION AND REHABILITATION

"No man is an island, entire of itself," said John Donne. "Every man is a piece of the continent, a part of the main; any man's death diminishes me, because I am involved in mankind; and therefore never send to know for whom the bell tolls; it tolls for thee."

Those of you whose chief responsibility is the education and care of the handicapped will appreciate more than most persons the meaning of the phrase, "I am involved in mankind," for John Donne's lines nobly express the sense of responsibility which the members of a humane and civilized society ought to have toward those who are in some way handicapped or in need of special attention.

Because of my own concern about the general problem which is the subject of our discussion here today and because of my high regard for the man who asked me to be with you, my distinguished colleague of the House Education and Labor Committee, the chairman of the Special Education Subcommittee, CARL ELLIOTT, of Alabama—in my judgment, one of the finest public servants ever to sit in Congress—I am pleased to take part in this annual conference of the American Personnel and Guidance Association.

CONGRESS RESPONDS TO NEEDS OF HANDICAPPED

As the American people have come to understand that the handicapped have both special needs and special potentials, the Federal Government has responded with programs to meet these needs and potentials. The Vocational Rehabilitation Act was passed in 1920 to help the handicapped who were employable to reenter the labor force. The Social Security Act contains various provisions for handicapped persons. More recently Congress has made possible supplies of materials for the blind through the Library of Congress and the American Printing House for the Blind. The 85th Congress enacted legislation to provide Federal funds for the training of the mentally retarded.

In the first session of this Congress over 100 different bills have been introduced to deal with the problems of one or more of the categories of the handicapped.

Those who deal with the difficulties of the various types of handicapped persons have come to see that many of these groups have similar needs. All of the groups apparently require more trained personnel, more clinical diagnosis and treatment, more educational materials and more research into the causes and effects of the handicapped.

Some of the bills introduced during the 86th Congress have reflected this perception of the similarity of needs and have attempted to fashion one piece of legislation which would meet the more critical requirements of the several groups. The basic philosophy underlying these proposals is that every handicapped person should receive the best possible special education and rehabilitation services in order to be able to achieve the maximum development of which he is capable.

SPECIAL EDUCATION AND REHABILITATION DEFINED

Let me pause for a moment to make clear what we mean by the phrase, "special education." To quote the recent inventory of services published by the House Special Education Subcommittee, we mean "education for those, who in order to reach full development, may be in need of special services, equipment, facilities, curriculum, and specially trained personnel. The field studied includes all physically and mentally handicapped, emotionally and socially disturbed, and the gifted."

In the same study Congressman ELLIOTT defines rehabilitation as "the restoration of disabled persons to the fullest physical, mental, personal, social, vocational, and economic usefulness of which they are capable."

Although the major emphasis of rehabilitation programs has been to assist the employable, a bill introduced last year by Congressman ELLIOTT and Congressman JOHN FOGARTY, of Rhode Island, would provide for independent living services to help those severely handicapped persons who may not be able to achieve vocational rehabilitation but who may, by means of the services afforded in the proposed program, achieve a significant degree of independence.

HOUSE SPECIAL EDUCATION SUBCOMMITTEE SETS STUDY ON NEEDS OF HANDICAPPED

In view of the many bills now before Congress and the question of whether a comprehensive approach or piecemeal legislation directed to each type of handicapped was preferable, the House Subcommittee on Special Education last year determined to carry out a special education and rehabilitation study. The objectives of the study were three: (1) To discover the unmet needs in these areas, (2) to review the adequacy of services now available, and (3) to recommend legislation to meet the needs.

Because the subcommittee felt that no individuals were better acquainted with the needs of the handicapped than the people who worked with them, it set up workshops to be held in each region prior to the scheduled subcommittee hearings. These workshops included representatives of public and private agencies, organizations, clinics, and schools from throughout the region who met to consider the various problems of handicapped individuals. The workshop groups then presented their reports on urgent needs and their proposals to the subcommittee at hearings.

WORKSHOPS HELD THROUGHOUT UNITED STATES

The first such workshops and hearings were held in New York City in mid-October 1959. Representatives from throughout New York State assembled for 2-day workshops on the blind, the emotionally disturbed, the gifted, the mentally retarded, people with hearing and speech impairments, the neuromuscular, orthopedic, and chronic handicapped, and those with limited vision. Each workshop group presented virtually unanimous reports to the subcommittee at hearings on the following day.

Since the first hearings in New York City, workshops and hearings for the New England area have been held in New Haven, Conn.; in Atlanta, Ga., for representatives from 14 Southern States; Philadelphia, Denver, San Francisco, and in Portland, Oreg., with a visit to Chicago scheduled for mid-May. I believe you can see that Congress will have the benefit of a nationwide survey.

I should like to devote the rest of my time today to discussing the reports of these various workshops on the Nation's needs for special education and rehabilitation services for our handicapped citizens.

Wherever they have met in the United States, the workshops have consistently found the same problems and the same shortages which are causing heartbreak and despair and the loss of human dignity and self-respect.

Because the workshops studied the needs in the three areas of personnel, services, and research, I shall organize my remarks along the same lines.

NO. 1 PROBLEM: SHORTAGE OF TRAINED PERSONNEL

Without any doubt, the most consistently cited problem during the workshops was the critical shortage of trained personnel. In virtually every geographic area, and in every handicapped category, there is a serious lack of trained teachers, social workers, psychologists, psychiatrists, nurses, doctors, and clinicians. For example, the New York workshop on speech and hearing impairments reported that there are currently at least 30,000 deaf children of school age in the United States. If the minimal educational needs of these children are to be met, said the workshop, we need approximately 500 specially trained teachers each year. Yet there are only 150 persons training in this field.

The New England workshop estimated a current need in New England for 1,027 additional teachers for those with speech and hearing impairment. The Southern regional workshop reported that in 9 Southern States there were 350 actual vacancies for speech correctionists alone—positions where money and facilities were available but no personnel.

TRAINING FACILITIES LACKING TO PREPARE SPECIALISTS

There are several reasons for this shortage. One is the lack of training facilities to prepare specialists. Workshop after workshop cited the need for additional funds so that our colleges and universities can expand their programs of training to supply personnel.

But the problem is not that simple. In many areas there are facilities and teachers available for training such personnel, but no students apply. The workshops have reported an urgent need for scholarships and fellowships to enable the student to undertake the extra period of training necessary to become a qualified worker in the field.

Yet even scholarships would not be enough, according to the workshop reports. Part of the problem is that personnel available to work with the handicapped are generally untrained in and unaware of the special problems and techniques of each handicapped person. Group after group stated that the social worker or the clinical doctor or nurse or the persons responsible for aid to the disabled were not familiar with the special problems of the blind, the deaf, or the chronically ill, and therefore were unable to give them maximum assistance. The workshops therefore suggested programs of in-service training, short-term intensive workshops, and increased circulation of written material on the needs and problems of our various handicapped groups.

NO. 2 NEED: MORE SPECIAL EDUCATION AND REHABILITATION SERVICES

Perhaps most critically in need of such assistance are our regular classroom teachers who are increasingly faced with severely handicapped children in their schools, and the social case workers, who are often the only persons available for contact with the family of the handicapped person. It was apparent to virtually all participants in all of the workshops held so far that this lack of trained personnel was resulting in overhandicapping millions of our citizens. It seems clear that many persons can be cured completely, and many others enabled to lead more productive lives if only more trained personnel were available to work with them.

LACK OF TRAINED PERSONNEL OVERHANDICAPS MILLIONS

The second and perhaps most obvious general area of need indicated by the workshops was that of services to these individuals. The workshops stated, first of all, that there was a wide range of difference in both the number and the quality of the services available in the different areas of the country. Invariably the urban centers were more adequately served than the rural or semirural communities. In areas of more scattered population the incidence of any one type of handicap is frequently too small to make special facilities economically possible. But even in our urban centers the lack of services from infancy to the aged is critical. Almost every workshop group stated that we need more facilities for clinical diagnosis, treatment, counseling, and assistance to the preschool handcapped child and his family. The New York Workshop on Limited Vision, in describing its own requirements, spoke to the general need of all handicapped children with this statement:

"There is a great need for care finding of infants and preschool children with visual defects. Many ocular defects are easily remediable during early childhood; these same defects may be resistant to all forms of treatment during the rest of an individual's life."

EARLY DIAGNOSIS, TREATMENT, AND COUNSELING ESSENTIAL

The groups who work with the blind, the deaf, the emotionally disturbed, the mentally retarded, the gifted, and the orthopedically, neuromuscularly, and chronically handicapped—all the groups—regarded early diagnosis, treatment, and counseling as prerequisites to better education, treatment, and rehabilitation as well as to better mental and emotional adjustment by the child and the family.

The need for increased physical facilities for the handicapped student is equally crucial. Not only is there a lack of trained personnel at this level, but there is an even greater shortage of instructional materials and equipment, and even of information as to the best techniques and approaches to the education of these children.

A CLEAR-CUT NEED: COORDINATION OF VARIOUS TYPES OF AID TO HANDICAPPED

It is perhaps at this point in our discussion that we ought to focus on a need that is clearcut—coordination of all forms of assistance to all types of the handicapped.

In our specialized society there is no one group of workers who can even remotely attempt to fulfill all the needs of the handicapped. Handicapped persons require help from teachers, social workers, medical personnel, and clinical technicians. Unfortunately, in most areas the services of these various groups are in no way coordinated. The duplication of the services of public and private agencies, organizations, and schools means a waste of valuable resources and facilities.

I should also report that there is little coordination in the dissemination of information to these various groups concerning the best means of diagnosis, treatment, education, and rehabilitation of the handicapped. Virtually all of the workshops called for increased Federal, regional, State, and local efforts in improving coordination of existing programs.

Let me speak of another related problem to which the workshops gave considerable attention: The lack of facilities to assist in the difficult transition of the handicapped child from school to the outside world. It is obvious that we must have much closer cooperation in this respect between school counselor and rehabilitation workers. Many groups called for an expansion of sheltered workshops and halfway house facilities

to assist in this transition. The pioneer work done with these two types of facilities has been most promising, but they are only a minute beginning.

FEDERAL LEGISLATION SHOULD INCLUDE MORE OF HANDICAPPED, GIVE GREATER ASSISTANCE

Finally, the workshops gave voice to the feeling that existing Federal legislation should be broadened to include more of the handicapped and to give them greater assistance. Groups already helped, such as the blind, felt that the restrictions placed on aid were too tight and pinned the recipient down to a bare subsistence level of existence. Other groups such as the emotionally disturbed and the visually impaired found that they were generally not included in Federal assistance programs at all.

We have been making considerable progress in rehabilitating those who can potentially be gainfully employed. We have however, woefully neglected the adolescent or the adult who is not capable of working but who can be trained to care for himself and to meet the general needs of living in society, so that institutional care or attendant care in the home is no longer necessary.

We need substantially to increase the services available to every type of handicapped person if we are to realize our hope of helping him to reach his maximum potential.

NO. 3 NEED: MORE RESEARCH INTO PROBLEMS OF HANDICAPPED

The final general area of need cited by the workshops is research. The sense of inadequate effort in this field is represented by this conclusion of the New York. Workshop on the Blind:

"The pressure of meeting basic, rudimentary, educational needs has been so great that little study has been possible."

These research needs are many and varied. First is the need for investigation of better methods of prevention and of early diagnosis of these various handicaps, and publication of the results of such studies. Listen, for example, to this startling statement of the New England Workshop on the Mentally Retarded:

"We feel if the information we already have were disseminated, perhaps 25 to 40 percent of the defects that are occurring at birth could be eliminated."

We also need to study the best methods of treating the actual impairment or handicap itself so that its effects can be minimized. This effort would include the developing of new machinery, new materials, and new techniques, and then bringing these developments to the attention of the public.

We must learn about techniques, methods and philosophies for educating the handicapped child. We must develop and make available appropriate instructional materials.

Research is needed to determine the advantages and disadvantages of the various approaches and techniques used to rehabilitate the adolescent and the adult. Very few studies have been made and very little has been published on many of these methods.

And finally we must begin to gather accurate statistical data on the incidence of the various types of handicaps. At what age do handicaps occur? What types are most prevalent? In what geographical areas are the needs most pressing? There is no accurate statistical data at all with respect to many types of handicaps. In other fields, the relevant information is outdated or incomplete. We cannot adequately prepare to meet a problem when we do not know what the extent of the problem is.

WORKSHOPS HOLD FEDERAL FUNDS ESSENTIAL TO MEET CHIEF NEEDS

In recommending proposals to help meet these three areas of needs, the workshops generally felt that Federal funds were essential in nearly every area. Federal scholarships and fellowships would help more persons to receive training. Federal grants-in-aid are required to enable the schools to expand their existing programs or initiate new ones. Federal assistance would help make possible the in-service training and short-term workshops so urgently called for.

Federal funds are needed to increase the physical facilities of clinics, schools and hospitals. Many groups suggested the expansion of such existing legislation as the Hill-Burton Act to include funds for such purposes. Federal assistance is needed to make educational and rehabilitational equipment and material readily available.

FEDERAL FUNDS NEEDED FOR RESEARCH

And finally Federal funds are necessary for research. Many workshops suggested that existing Federal research programs could be broadened to include these fields. They argued that Federal assistance was especially important in the area of research not only because State and local funds were most noticeably lacking here, but also because much of the essential research cuts across lines of specialization—that is, it touches on medicine and education and psychology and other related fields. The Federal Government, it was held, is far more able than any other agency to carry out such collaborative research.

In addition, the workshops proposed that considerable Federal leadership should be offered by the Children's Bureau, the Office of Education, the Office of Vocational Rehabilitation and the National Institutes of Health in investigation, coordination, and publication. Each group felt that either the Office of Education or the Office of Vocational Rehabilitation or both should have a full-time consultant on each of the categories of handicapped people, and should furnish field conultant services to the States and local areas.

Finally a great need was expressed for more State and regional workshops, and for more State and regional cooperation and sharing of scarce personnel and facilities.

SUMMARY OF MAJOR FINDINGS OF WORKSHOPS

In my time with you today I have attempted to provide you some general indication of the major findings of the workshops conducted across the United States during these last several months to determine what America needs in the fields of special education and rehabilitation.

I have tried to suggest to you what some of your colleagues whose chief concern is special education and rehabilitation believe ought to be done if we are effectively to meet our responsibilities as citizens and as human beings to our fellow-citizens who are in some way handicapped or exceptional.

I have pointed out that there are three areas in which the persons who took part in these workshops believe we stand in most need of serious effort: we need more trained personnel, we need more services, we need more research.

Finally, I have attempted to indicate the appropriate role of the Federal Government in responding to these needs.

AMERICANS MUST HELP HANDICAPPED FELLOW-CITIZENS LIVE IN DIGNITY AND SELF-RESPECT

Those of us who have not ourselves known the tragedy of handicap ought to feel a special sense of concern to help lift the level of life of our brothers in society who are in some way afflicted. If we set both our hearts and our minds to the task, we can, I am confident, use the vast resources of our great country to enable these citizens to live in dignity and with self-respect.

Those of you whose lives are dedicated to helping the handicapped achieve their maximum potential development have the admiration of your fellow-citizens. We must now offer you and the handicapped our fullest cooperation and support as well. For "no man is an island, entire of itself * * *."

New York Times Has Rather Odd Sense of Values

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. HUDDLESTON. Mr. Speaker, every day this week I have been inserting in the Appendix to the CONGRESSIONAL RECORD various editorials, newspaper articles, and letters from over the country protesting the vicious slanders against Birmingham which appeared in the New York Times on Wednesday, April 12, and Thursday, April 13. These slanders were written by New York Times reporter Harrison E. Salisbury. The first of the two articles was headlined, "Fear and Hatred Grip Birmingham," and the second was captioned, "Race Issue Shakes Alabama Structure." These two articles were gross distortions of the true situation in Alabama and were designed to create an exaggerated and erroneous impression of the situation in our State.

In the article in the Times on Wednesday, April 12, Mr. Salisbury dwelt at length on the deplorable incident at Gadsden, Ala., recently when a 16-year-old boy threw a firebomb at a Jewish synagogue and wounded with rifle fire two of its members. It is interesting to note that the next day, Thursday, April 13, the New York Times, hidden back on page 24, ran three paragraphs, under a minor heading, describing the desecration of a synagogue in Buffalo, N.Y., and threats received by the rabbi.

Under leave heretofore granted, I am inserting herewith in the CONGRESSIONAL RECORD an editorial which appeared in the April 18, 1960, issue of the Birmingham News, in which the editors ponder the distinction the New York Times apparently draws between these two similar incidents. The editorial is entitled, "A Rather Odd Sense of Values."

The editorial follows:

A RATHER ODD SENSE OF VALUES

Is desecration of a synagogue in the South a more heinous crime than the desecration of a synagogue in the North?

The Wednesday edition of the New York Times, in an article originating on page one and datelined Birmingham, dwelt at length on the deplorable incident at Gadsden recently when a 16-year-old boy threw a firebomb at a Jewish synagogue and wounded with rifle fire two of its members.

The writer employed the incident to imply that a wave of anti-Semitism is engulfing Alabama and that hatred and bigotry are the way of life in this State. No mention was made of the shock and anger that swept the State following the attack or the reaction in Gadsden, expressed in a community-wide prayer session which overflowed the synagogue.

However, in the Thursday issue, hidden back on page 24, three paragraphs, under a minor head, were given over to describing desecration of a synagogue in Buffalo, N.Y., in the same State in which the Times is published, and threats received by the rabbi.

If we are to accept the New York Times evaluation of news, there must be highly significant differences between desecration of a synagogue in Gadsden, Ala., and a similar incident in Buffalo, N.Y. But whatever the difference is, it escapes us.

For What Avail—If Freedom Fail?

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. McINTIRE. Mr. Speaker, the 69th Continental Congress of the Daughters of the American Revolution convened on April 18, with the opening address being delivered by Mrs. Ashmead White, president general of the organization. This address identified the theme of the congress and issued a call for the preservation of freedom in the American tradition.

Mrs. White, I am proud to say, is a citizen of the congressional district which I have the privilege of representing in the Congress, and because her remarks contain poignant references to the principles of freedom, I commend them to the attention of my colleagues:

FOR WHAT AVAIL—IF FREEDOM FAIL?

(By Mrs. Ashmead White, president general, NSDAR)

It is my proud and happy privilege to welcome you tonight to the opening session of the 69th Continental Congress held here in our own Constitution Hall during April's springtime, cherry blossom time in the city of Washington.

We are gathered together for 5 important days and I hope the congress will prove not only an interesting but a happy time for all of us.

Coming as you do from every State in the Union, and from many foreign countries, you represent a great society organized with definite objectives, one of which is "to cherish, maintain, and extend the institutions of American freedom."

Those patriots from whom we are descended had ideals, visions, and a sense of purpose. Because they adhered to these ideals, you are gathered here today.

It is well for us to consider the national and world situation and the existing threats to the ideals underlying the American Revolution. We see those ideals attacked, both at home and abroad, with ever-increasing virulence. It behooves us, therefore, as Daughters of the American Revolution, to support with renewed force and vigor those ideals for which our society stands. To be effective, we must intensify and sharpen our faith in our ideals. To do this, we must study the philosophical basis for that faith. We must understand the theories and tactics of those who would destroy it. We must promote an enlightened public opinion in support of American ideals and institutions.

What are the ideals of the American Revolution? Are they not the firm belief that individual rights of life, liberty, and property, freedom of religion and of the press and the other rights set forth in the Constitution of the United States and the first 10 amendments are conferred upon each individual citizen by Almighty God as the Father of His children upon this earth and that governments exist to carry into effect those individual rights of freedom divinely conferred? This faith of individual freedom is set forth clearly in the Declaration of Independence and is the same today as it was on July 4, 1776.

To protect this individual freedom so dearly won by our forefathers, the Federal concept of a national government of limited powers was devised with specific constitutional guarantees of individual rights protected by independent courts even against the Government itself. Individual freedom cannot long exist without limitations upon the power of government. As President Wilson aptly stated: "The history of human freedom is the history of limitations on the power of government." The process of limitation on the power of government began with the signing of Magna Carta; it came to fruition in the adoption of the Constitution of the United States and the first 10 amendments.

The ideal of American individual freedom is essentially a spiritual concept. It sets free the spirit of man to control his own destiny without the control of an all-powerful government. It is not freedom from responsibility, from material want or from the consequences of bad judgment, evil activity or sloth. Rather, it is freedom to plan one's own life, to have the benefit of one's own labor, to enjoy the fruits of hard work, thrift, and personal rectitude. It promotes the best in man and discourages his evil propensities.

It is not by accident that the great enemy of the American concept of individual freedom is communism, based as it is on atheism and dialectical materialism, with rigid control of each individual person by an all-powerful government from the cradle to the grave. That enemy of human freedom now has in bondage 900 million people and is preparing to obliterate human freedom from the face of the earth. It goes without saying that we must study and understand the beliefs and tactics of the Communist conspiracy in order to combat them more effectively.

In addition to the activities of the Communists, however, there are groups in this country which no longer believe in the American ideals of individual freedom. They are willing to give up constitutional guarantees for temporary material security. They are willing to exchange individual determination for Government planning. They prefer Government control and regulation to the free enterprise system. They are unwilling to wait for development by private methods and desire immediate action by the Federal and State Governments to bring their plans into operation. Within the last three decades, these groups have made alarming inroads into the thinking of many Americans. The power and control of Government over the individual is on the increase. This development strikes at the very roots of the American philosophy of individual freedom. We must study and analyze the theories and methods by which these groups operate, on both the national and State levels.

An examination of history, and especially American history, indicates the dynamic quality of human freedom. In less than 200 years it has transformed a wilderness and 13 struggling and bankrupt colonies into the most powerful nation in the world, with more leisure, more wealth, and more opportunity for individual advancement than enjoyed by any nation in the world. In the miraculous success of individual freedom in producing the material comforts of life, we may find the danger to freedom itself. Undue emphasis upon material things, the idea of security at all costs, even at the expense of freedom and justice, may in the end destroy the very freedom which produces the material blessings. As Gibbon, in analyzing the fall of the Athenian and Roman Empires, warns us:

"In the end, more than they wanted freedom they wanted security. They wanted a comfortable life and they lost it all—security, comfort, and freedom. When the Athenians finally wanted not to give to society, but for society to give to them, when the freedom they wished most for was freedom from responsibility, then Athens ceased to be free and was never free again."

The conflict, then, is between the concept of individual freedom, on the one hand, and slavery to the all-powerful state on the other. There can be no compromise in this conflict. One concept or the other must prevail. All that we hold dear is in this struggle. The worship of God, the dignity of man, the material blessings of the free enterprise system all rest upon freedom. The theme of the national society for this year sums it up in a line from Ralph Waldo Emerson: "For what avail—if freedom fail."

The New York Times—"How the Mighty Hath Fallen"

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I insert herewith in the CONGRESSIONAL RECORD an editorial which appeared in the Sunday, April 17, 1960, issue of the Anniston (Ala.) Star entitled, "How the Mighty Hath Fallen." In the editorial, Col. Harry Ayers, the newspaper's editor, discusses news stories which appeared in the New York Times last week describing in very distorted, exaggerated terms the race conditions in Birmingham, my district. Truly, the "Mighty hath fallen," as Colonel Ayers so ably writes:

HOW THE MIGHTY HATH FALLEN

From time almost immemorial to American journalists of this day it has been the custom to direct the attention of every young reporter to the New York Times as the ultimate authority on good English, honest reporting, and unimpeachable editorial policies.

Those policies were laid down by the late Adolph S. Ochs, the paper's publisher for many years, and to all intents and purposes its founder. He ordered that his paper print all the news that was fit to print "in concise and attractive form, and in language that is permissible in good society."

Moreover, it was the Ochs policy "to give the news impartially, without fear or favor, regardless of party, sect or interest involved"; to make his columns "a forum for the consideration of all public questions of public importance, and to that end to invite intelligent discussion from all shades of opinion."

Those are policies that well might be framed and hung on the walls of every newspaper in the civilized world. We felt certain that they would not be violated by the present management. For we had sat beside Arthur Sulzberger, a relative of Mr. Ochs, at his first attendance of the Associated Press annual meeting.

He expressed a fear that the publishers from the South, for some unknown reason, would vote against him as a board member. We assured him that his fears were unfounded, however, as Mr. Ochs had attended many of the meetings of the Southern Publishers Association and was highly admired, as was his paper.

For a long time thence we had no reason to regret the assurance given the new publisher. And when he appointed a native of Mississippi, and one of his ablest assistants,

to become managing editor, we felt more assured than ever before. But in the last few years we have been sadly disillusioned.

For not only has the Times departed from the principles laid down by Ochs, in its news, editorial and advertising policies; but that grand old paper of yesterday which we all loved, has turned its hand against the South for some unknown reason, and has actually violated its ethics in order to punish us southerners.

This about face was made quite evident when the famed Putnam letter to President Eisenhower was submitted to the Times as a matter of public information in relation to the position of this region in regard to the Supreme Court decision of 1954. It even went so far as to refuse the letter as a paid advertisement.

That certainly was not in keeping with the Ochs policies as outlined above, but instead of giving the news impartially, without fear or favor, it was in strict negation of fair play. And in view of the prestige of the Times, other well-known papers, including the Washington Post, likewise refused to present the South's opinion.

It has been the boast of the Times, also, that it practices the highest standards of newspaper ethics even in its advertising columns. Yet, it recently published an ad that was patently unfair to the South and libelous in context. And just last week the paper sent one of its ablest writers down here to defame Birmingham, our largest city.

The gentleman in question is Harrison Salisbury, former Moscow correspondent. He has but recently written a book on Russia that has received considerable attention. We had intended to read it for review in this paper, but after pursuing his articles in the Times we now have been given pause.

There is, of course, a modicum of truth in what Mr. Salisbury has to say in his two page-1 articles, but he stretches the truth to such an extent that it would be difficult to place any credence in anything else he would have to say. Evidently he learned how to lie while in Moscow.

We would not have been surprised if the articles in the famed morning daily had appeared in one of the gum-chewing New York daily tabloids, which are used to exaggeration of the truth; but we believe Adolph Ochs would turn in his grave could he but see what his successors have done to his paper.

Aside from these lapses of the Times, however, that paper and others outside of the South have closed their columns to the Putnam letter and everything else favorable to this region. Hence, the meeting of the American Society of Newspaper Editors this week in Washington might well disband its committee "On the Right of the People To Know."

Yet in spite of the dereliction of the northern press, Mr. Putnam has decided to print his two letters in book form, with suitable comment. And we agree with him that his second letter was better than the first, as it contains more ethnological reasons as to why the white and the colored races should remain apart in their social relations.

My True Security—The American Way

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. NELSEN. Mr. Speaker, checking through our weekly papers, I noticed a reference which was made to an essay delivered by one of the high school girls in my district.

I contacted this young lady requesting a copy of her essay and I received the following letter from her:

JACKSON, MINN., *April 16, 1960.*

ANCHER NELSEN,
Member of Congress,
House of Representatives,
Washington, D.C.

DEAR MR. NELSEN: I have enclosed a typed copy of my essay which I hope will be satisfactory.

I wish to thank you for your interest in my essay. If it will help to restore even a few people's faith in the American teenage it will be very worthwhile.

Sincerely yours,

CAROL WIDDIFIELD,
Senior Class,
Jackson High School.

After reading the essay, it occurred to me that there is much that all of us could learn from the philosophy represented in the product of this young lady's pen.

Under unanimous consent, I insert this in the RECORD for the examination of the House of Representatives:

MY TRUE SECURITY—THE AMERICAN WAY

About 30 years ago an ugly seed was planted in the sour soil of our depression. The seed grew into a weed sometimes called the insecurity complex. The seed was "suffering" and the weed was "fear." It was, and still is, an ugly and poisonous thing. Fear of failure can cow strong men until they beg for the deliverance of some guaranteed mediocrity. In their search for security men abandon their hopes and destroy their dreams, only to realize that they have lost the very thing which they set out to find. There are many material things in this world which appear to grant security, but true security can come only from self-understanding. You cannot rely upon others for your strength and courage; you have only your God and yourself. A man's real wealth cannot be measured in terms of material things; neither can his true security be measured in terms of wealth. Both should be measured by the faith he has in himself.

This country and the American way were not built upon mountains of gold. Her security is not in her machines, but in the inquisitive, inventive, inconquerable souls of her people—the honest, simple, hard-working people who have placed their faith and self-reliance above all things.

Our forefathers did not come here seeking security as we know it. They sought instead a land in which to build a new nation founded in faith and based upon freedom. They found security in what they gave, not in what they received. They were secure in the knowledge that they had taught their children the way to happiness through their own efforts.

Each successive generation has had its own accomplishments, its own struggles, its own disappointments, and its own security—security, not in receiving, but in giving to America. America is great not because of what she has, but because of what she is and what she stands for.

No other nation has ever given its people religious freedom, civil liberty, freedom of speech, press and security of individual rights in such abundance. "We the people—" states the preamble of our Constitution, a sacred compact binding the dead, the living, and the unborn * * * signed in the snow of Valley Forge—sealed with the blood of the men who gave their lives that this Nation might live. So that men no bigger than you and I might be free.

But this freedom and the security it gives, like all sacred things, is not free; nor is it easy to obtain. We have seen the spirit of the Old World fade away because men traded this sacred freedom for security and eventually—lost both. A man in slavery is secure, but what does this type of security offer?

"Men are slaves," said Berdyaev, "because freedom is difficult; slavery is easy." History is full of people sinking into servitude, because they would not face the hard fight to stay free.

Freedom gives security because we are free, above all, to worship any God we chose, to believe in ourselves and to be as great or as small as we, by our initiative, care to be. Do not destroy your dreams to seek an intangible, unexplainable thing called security. Because this, people of America, is what you have, so long as you have freedom. I feel it is the obligation of every person in America to recognize and preserve this freedom. Because this is our true security—the American way. If this freedom begins to slip away—it is wise for you to remember these words of former Chief Justice Charles Evans Hughes—"The peril to this Nation is not in any foreign foe—we the people are its power, its peril, its hope."

In Winchester, Ind., stands a monument—atop of which is a Grecian lamp. The inscription on the lamp reads: "Behold, friend, you stand on hallowed ground. For here burns freedom's holy light. This lamp will be kept burning. Always to remind all men that freedom is not permanent unless there are enough keepers of the flame."

The New York Times, the Abolitionist Hellmouths

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I insert herewith in the CONGRESSIONAL RECORD an editorial which appeared in the Montgomery (Ala.) Advertiser on Sunday, April 17, 1960, in which Mr. Grover C. Hall, Jr., editor of the Advertiser, discusses recent actions of the New York Times in printing two scurrilous and slanderous articles about race conditions in Birmingham, Ala., my district. It is urged that every Member of Congress direct his careful attention to Mr. Hall's editorial:

THE ABOLITIONIST HELLMOUTHS

The Commonwealth of Alabama, with its 3 million people, has been painfully and savagely injured by the New York Times.

It is not inflation of grievance to say that the New York Times is misleading the United States and much of the civilized world.

The Times is read more widely and by more influential people than any other newspaper in the world. Not only is the Times heard by the leadership of the civilized world, it serves many American newspapers in syndicate fashion through the New York Times News Service.

One of the newspapers the Times has misled is the Louisville Courier-Journal. The Courier-Journal printed the Times report on race strife by Harrison Salsbury and the frenzied wasps of its afternoon editorial page,

the Louisville Times, swallowed it and denounced Alabama in terms of South Africa—a shockingly superficial and spurious comparison.

With despair is it observed that any list of America's 15 most highly regarded newspapers would have a standard inclusion of the Times and the Courier-Journal.

These papers are owned and guided by dedicated, high-toned gentlemen. The managing editor of the Times is Turner Catledge. He is a Mississippian, a fine person and next week will be elected president of the American Society of Newspaper Editors.

Harrison Salsbury, the novelist who wrote the series on Birmingham, is a gentleman and a reporter of distinction. The editor debated him once in Chicago and found him winsome, genteel, and rather remotely concerned about race matters.

Barry Bingham, editor and owner of the Courier-Journal, is a man so conscientious that in Asheville once the editor saw him scurry back to put a nickel in the parking meter with only 3 minutes till 6 o'clock. He is as highminded a man in the field of journalism as there is.

The executive editor of the two Louisville papers is a distinguished Georgian, Jim Pope, who will retire in Panama City Beach and who has orthodox Southern views.

The editorial writers employed by Bingham are brilliant but scandalously doctrinaire and dogmatic concerning anything stenciled "liberal." Yet some have Deep South backgrounds and know the truth.

So to say, it is not the systematic abolitionist ragpickers such as the New York Post or Time, the Goebbels memorial news magazine, that have inflicted this painful injury. It is the elite of the newspapers in a stage of dereliction and emotionalism that has done so.

The Advertiser has received no response to its challenge to the Times and members of the committee that signed the lying full-page advertisement about Montgomery. It seems incredible that men of honor could be challenged by a famous Southern newspaper to check the facts and ignore that challenge.

The only response was indirect. A Times editor asked the Times Montgomery correspondent to check the facts. The report went back in the direct quotes of a Negro college president. It made the advertisement out a greater lie than had the Advertiser's editorial.

The Salsbury series on Birmingham naturally went to the outrageous extreme of equating the city with Hitler's Germany.

Birmingham is raw, like any industrial metropolis, and is likewise given to violence; but it is simply untruthful to equate it with Hitler.

Salsbury ignorantly pokes at the independent slate of presidential elector candidates as though it were a stealthy putsch or an attempted Reichstag fire, when as a matter of fact it is a constitutional exercise sanctioned by the Supreme Court. It employs the same election process by which George Washington, Thomas Jefferson and other of our early Presidents were elected.

The explanation here seems to be, considering Salsbury's character and decency, that he won his great distinctions as The Times Moscow correspondent. All of his thinking, we noticed in our debate, is geared to this major experience in his career. It dominates his thinking.

He approached Birmingham as though it were Moscow revisited.

The country has recently seen other Times reporters go sour. A widely publicized case was that of Herbert Matthews, who became the lionized stooge and apologist for Castro and his Cuba.

Government Takes Before It Gives

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. CURTIS of Missouri. Mr. Speaker, for the past several weeks the Committee on Ways and Means has been meeting in executive sessions considering amendments to the social security program. One of the issues before the committee involves the question of whether or not a program of medical care should be started within the framework of the Social Security Act.

In the April 25, 1960, issue of Newsweek magazine Mr. Henry Hazlitt in his Business Tides signed signed comment captioned "Age, Needs, and Votes" has made some very well considered observations in regard to the health care issue. As Mr. Hazlitt comments "Security can come only out of production. The policies of the welfare statists penalize and discourage production."

Mr. Speaker, there is no question that the Government can give notihing to the people but what it first must take from the people. If we undertake at this time to launch a program of Government paid for medical care, we will be enacting a program that will eventually be a charge on our taxpayers of upward of $20 billion a year. The cost of such an expensive program will have to be paid for by taxes and it is my prediction that the quality of medical care now available to our citizens will deteriorate under the domination of a Government bureaucracy.

Mr. Speaker, as a part of my remarks I will include Mr. Hazlitt's editorial comment:

AGE, NEEDS, AND VOTES

(By Henry Hazlitt)

"One of the most intensive and broadly based lobbying operations in recent history has made health insurance for the aged easily the No. 1 issue before Congress this year." So begins a New York Times news story describing the tremendous campaign to promote the Forand bill.

The propaganda and pressure are skillfully organized and timed. They are backed by the Americans for Democratic Action, by Walter Reuther and the Committee on Political Education of the CIO–AFL, by Senator KENNEDY, who has introduced a companion in the Senate to the Forand bill in the House, and by a group of columnists who have begun suddenly and as if on signal to wail and weep in chorus about the plight of the aged. Anybody who doesn't immediately join up is denounced as heartless and cruel. We are back in the revivalist atmosphere of the Townsend plan of 25 years ago—though today $16 billion a year is already being spent on old age and other OASI programs.

THE FORAND BILL

The Forand bill would add hospitalization and surgical insurance to the social security program. It would profess to pay for this addition out of an increase in the OASI tax of ¼ of 1 percent on the employee and ¼ of 1 percent on the employer. Actuarial estimates by the insurance industry are that costs under the Forand bill would range from $2 billion to $2.4 billion for the first year and, by 1980, from nearly $6 billion to more than $7.5 billion a year. This would require a level premium not of ½ of 1 percent, but of 2.32 to 2.97 percent of taxable payroll. Social security taxes are already scheduled to reach 9 percent of payroll by 1969, without any Forand bill, and in later years to soar to 11 to 16 percent of payroll.

These and similar facts were brought out in the brilliant speech in the CONGRESSIONAL RECORD of March 24 by Congressman THOMAS B. CURTIS of Missouri. At what point, asks CURTIS, will the taxpayers rebel? Some of them are now paying more in social security taxes than they pay in income taxes. The Forand bill has been supported by grossly misleading statistics concerning poverty and need. In any case it would deny benefits to the 4 million aged persons who, through no fault of their own, do not have social security protection.

There are much deeper criticisms,. In 1949, Edna Lonigan, in a pamphlet published by the American Enterprise Association, pointed out how, since 1933, there had been a constant expansion of the concept of the "needy": "A zealous staff in a public-welfare agency can find unlimited opportunities to add to the number of 'needy' families * * * and to the number of 'needs' which must be met by the public through taxes." The last decade with social security "liberalization" in every election year, has confirmed that thesis.

SOCIALIZED MEDICINE

The Forand bill is a foot-in-the-door for a complete program of socialized medicine. Walter Reuther testified last July: "It is no secret that the UAW is officially on record as backing a program of national health insurance." After this new aid to people of 65, people of 62 and 63 would want it. Then it would be argued that the medical needs of families with growing children were no less urgent. Finally everyone would be covered.

Socialized medicine is based on compulsory, not voluntary providence. Social "insurance" is a misnomer; individual benefits bear little relation to the individual tax. It is a program for the redistribution of income. The young will have to accept less than they produce in order that the old can get more than they produce. Pressure will build up for reducing an insupportable burden on the young by an inflation that reduces the real benefits of the aged. It is those who today weep most ostentatiously over the plight of the aged who are mainly responsible for the inflation that has already cut the purchasing power of their pensions in half.

"Security" can come only out of production. The policies of the welfare-statists penalize and discourage production. As Bastiat pointed out more than a century ago: "The state is the great fiction by which everybody wants to enrich himself at the expense of everybody."

Congressman Tom Steed Expresses His Views on Greater Opportunity in a Growing Country

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. ROOSEVELT. Mr. Speaker, perhaps the committee which has rendered

the most direct service to our colleagues during this session of the Congress is the Special Subcommittee on Problems in the Dairy Industry, of the House Small Business Committee.

The chairman of that subcommittee is the distinguished, able, and friendly gentleman from Oklahoma, the Honorable TOM STEED.

The current issue of the trade magazine American Milk Review—April 1960—contains a most interesting exclusive interview with Congressman STEED by the American Milk Review's correspondent, Mr. Larston D. Farrar. This interview is so revealing that I am hopeful that my colleague will have time to read it; and it is, therefore, with great pleasure that I include it in the RECORD.

It would be difficult to find a clearer statement of the problem than that given by our distinguished chairman.

GREATER OPPORTUNITY IN A GROWING COUNTRY—NOT TO DESTROY BUT TO GIVE

(By Larston D. Farrar)

LARSTON D. FARRAR. Mr. STEED, in behalf of the readers of the American Milk Review I want to thank you in advance for agreeing to answer my many questions about your work in the dairy industry. We realize how busy you are in your legislative and committee work. We are grateful for this opportunity.

TOM STEED. I am delighted to do it, LARSTON. I feel keenly that the more all of us know about our basic economic problems, the more apt we are to come to agreement on solutions that will be fair and equitable to business and to the consuming public. I am convinced that most of us—and that includes many, if not every one, of our very largest businessmen—want to develop a better America, in every good way, all the time. We want business to prosper and the public to be able to buy at fair prices all the produce of our farms and factories. The problem naturally is how to accomplish these goals. One thing is certain: Sound action comes from sound thinking, which must be based on adequate and reliable information. If we are to find solutions to our problems, we must have more knowledge about them. I congratulate you and the magazine you represent for probing deeply into these issues. I feel that you are fulfilling the function required of a magazine serving a tremendously important industry.

Mr. FARRAR. Speaking of the dairy industry, have you any general statement you would like to make about its problems, and the cooperation—or lack of it—which you have received from the various segments of the industry?

Mr. STEED. As we both know, every American is dependent upon the dairy industry, just as surely as we now are dependent on the automobile, the electricity which powers our homes, and the oil and gas we use in a mulitude of ways each day. Milk is a lifegiving food that is absolutely indispensable to our national good health. The people who raise the cows that give our milk, the companies which distribute it and many auxiliary products which come from milk deserve our encouragement and support. They deserve to make money and to prosper, just as our public utilities, our gas and oil companies, and other industries which serve us vitally deserve to prosper in our capitalistic economy. The charge sometimes is made that those of us in Congress who investigate a particular field have some design other than to strengthen our system. It is not necessary, I think, for me to deny such charges here. We must investigate, in order to build up a body of knowledge so that we can refine our laws in order to keep them in line with the economic realities. We want milk—of course. We want consumers to have milk as cheaply as they can be provided with it economically. But we also want a business community in which there is opportunity for new people to get into business.

More than 60 years ago, when a few companies in other fields unrelated to dairying were gobbling up everything in sight, Congress passed the first of several antitrust laws, designed not to destroy big business or any kind of business, but to give increased opportunities in a growing country to all segments of any business. Certain practices—in other fields—which led to the adoption of those original antitrust laws still are being undertaken, with variations, in distribution of milk and milk products, as well as other food products. If we find that such practices are working against our economic growth, against the development of a diffusion of power among businessmen, and against the long-range interests of the consumer, it is not only our desire as Congressmen to thwart these practices, which tend to promote monopoly, but it is our duty to do so.

The dairy industry today, in a sense, is a very sick industry. I think that I have never investigated one that in many ways, is sicker.

As to the cooperation I have had, it has been all that I, or any Congressman could expect. The gentlemen representing the various segments of the industry we have investigated all have been uniformly courteous and responsive to our desires for information.

Mr. FARRAR. Can you tell us something of the House Committee on Small Business and the makeup of your special subcommittee?

Mr. STEED. The House Committee on Small Business was first a special committee. Several years ago it was made a permanent committee of the House of Representatives. It is in existence because Congress recognizes the need of a continuing flow of information on the various and varied problems of small businessmen in all fields. The committee is not a legislative committee. It cannot report bills to the House for direct action. For that reason, legislation is not referred to it for study. Any legislation which members of the Small Business Committee want enacted must be introduced, referred to another of the standing legislative committees of the House, be considered by those other committees, and reported out by them.

The special subcommittee which I have headed, in investigating the dairy industry's problems, consists of myself as chairman; Representative JAMES C. ROOSEVELT, Democrat, of California, Representative CHARLES H. BROWN, Democrat, of Missouri, Representative HOWARD W. ROBISON, Republican, of New York, and Representative EDWARD J. DERWINSKI, Republican, of Illinois.

Mr. FARRAR. Just what stimulated your subcommittee's interest in the dairy industry?

Mr. STEED. My first contact with this subcommittee's work began in December 1958, when I interrupted my Christmas vacation at home to lend a hand to the chairman of the House Committee on Small Business, my friend, Representative WRIGHT PATMAN, Democrat, of Texas. Mr. PATMAN had scheduled an inquiry into a milk price war in Dallas, Tex., in response to complaints by independent businessmen in that area. Since the hearings were set for December 30–31, 1958, Mr. PATMAN had difficulty finding a committee member available. I attended the hearings as an accommodation to him. Mr. PATMAN was in Texas when the price war flared. He wanted to complete the inquiry on complaints from Dallas before the new session of Congress began in January. We thought at the time that this single hearing would constitute the fieldwork of the special subcommittee.

Mr. FARRAR. What were your original purposes or goals at the time you began your investigation?

Mr. STEED. The hearings had been called because of complaints from small businessmen. These complaints alleged that large distributors had attempted to eliminate small competing distributors through the use of price discriminations, rebates, special allowances, and other unfair trade practices. At the Dallas hearing, we sought to get the facts available about the milk price war as evidence of how abuses can exist, under laws already on the statute books, and how such price wars could prove detrimental to small business. At the time, none of us imagined the long workload ahead for the subcommittee.

Two months after the Dallas hearing, complaints came in from the Kansas City area, relating to a price war that had spread throughout Missouri and Kansas. Again, I agreed to participate in field hearings with Mr. PATMAN, solely because I had become familiar, to some extent, with the problems raised at the Dallas hearings. It was not until after the Kansas City hearings were set that Mr. PATMAN asked me to serve as subcommittee chairman. Pressure of other work prevented him from carrying on. Thus began the chain reaction that has kept me involved in milk price war complaints from Denver to Boston, and many other points in the Nation.

Mr. FARRAR. Have you been surprised at the facts you have uncovered through the 2 years you have headed this investigation?

Mr. STEED. To say that I have been surprised, as we have studied the many complaints reaching us, is putting it mildly. I have been very distressed and dismayed at the widespread evidences of ruthlessness in economic warfare that has swept this vital industry in recent years. Everyone who learns of it must deplore the vicious toll it has taken, especially among the smaller independents. I feel it is a conservative statement to say that the milk industry, in many areas of the Nation, is unstable, chaotic, and upset to a point of economic illness not being experienced by any other segment of our entire economy.

Mr. FARRAR. Just what ground rules did you lay down at the beginning? What or who determines the areas of what you will investigate, or have investigated?

Mr. STEED. We make our investigations only after complaints by local dairies have been submitted to us. These complaints may be made to us directly by mail or by personal visits, or they may be made through the Member of Congress from the district in which the dairy is located.

When we get a request for an investigation, our staff members make field investigations. These are followed by public hearings if members of the subcommittee feel that the situation is of sufficient interest to build up a public record on it for study by the full committee and other members of Congress. The subcommittee confines all its inquiries, during an investigation, to the factfinding level. Particular attention is given to facts that indicate a lack of adequate law, or facts that indicate existing laws may have been violated.

As subcommittee chairman, I have called the attention of the Attorney General to a number of instances in which, my subcommittee feels, the law is being violated.

Mr. FARRAR. What other techniques have you and members of the subcommittee staff used in probing into the economics of the dairy industry?

Mr. STEED. Besides public hearings, the subcommittee obtains a great deal of information by staff inquiries and through questionnaires which we send to companies in areas from which complaints originate. The pricing data studies are of particular interest and importance, I believe.

Mr. FARRAR. What factors determine just where you will conduct a public hearing?

Mr. STEED. Public hearings usually come about in areas in which a number of small businessmen are particularly disturbed, and where it is evident that a public airing of the controversy can be helpful. The public interest is paramount in places where conditions can lead to monopoly and to harmful trade practices, such as curtailment of quality, service and sufficient health safeguards. Price wars never serve to alleviate any of these ills, but rather in the long run, add to them.

Mr. FARRAR. When you do hold a public hearing, are witnesses subpenaed, or do they appear voluntarily, or both?

Mr. STEED. When public hearings are scheduled, witnesses are called both by subpena and by voluntary agreement. Some witnesses, while ready and willing to cooperate by appearing voluntarily, prefer to be subpenaed because of a fear of reprisal if they testify as volunteers. Subpenas also help in providing the subcommittee with company records we deem essential to the studies being made.

Mr. FARRAR. Out of the mass of testimony that your subcommittee has gathered so far, can you discern a general pattern, or patterns? This applies both to complaints and causes of complaints.

Mr. STEED. By and large, milk price wars follow a fairly similar pattern. In almost every instance into which the subcommittee has inquired, the claim always is made that the entry of the gallon glass jug into the market brought about the first evidence of price disturbance. Pressures created by a prolonged oversupply of milk, by the efforts of a new company to break into the market, and by the constant efforts of the large chainstores to increase and expand their share of the market, also show up in almost every case investigated. Only in a few instances did the difficulties involve the distributors in a clash of interest with producers.

Mr. FARRAR. There is a tendency on the part of independent milk distributors to blame the large chain organizations for their troubles. Do you find this to be justified by the evidence you have compiled?

Mr. STEED. The charges by small companies as to the guilt of the large chains in fomenting price wars have never been admitted, of course, by those accused. However, there is an obvious advantage held by the larger companies when price wars break out. So far, we have not been able to find any evidence which would indicate that the larger companies sought to minimize the opportunities that such wars give them, to say the least. Some evidence has been gathered to indicate that the first disturbance arose in retail grocery outlets seeking to use milk as a "loss leader" item, or as a "tie-in bargain" item.

Mr. FARRAR. Just how great a problem—to the independent dairyman—is the private label, or private brand milk?

Mr. STEED. The private brand labels used by many companies do not constitute a pressing problem to the smaller firms, according to what we have learned so far. Fluid milk is sold in many areas under brand names familiar to the local consumer. It is in the field of milk products other than fluid milk that the brand name is used more effectively as a competitive device. This is particularly true of ice cream, cottage cheese, and condensed milk.

The information we have indicates that private label or private brand milk sales for the most part are through the retail stores of some of the largest chain food retailers. For example, Safeway Stores has its private label or private brand milk—"Lucerne." First National Stores, which is a leading chain food retailer in New England, markets milk under its private label, "Brookside." It is obvious that the heavy volume of milk sold by these and other chain food retailers under their private labels reduces the marketing opportunities of individual processors and distributors of milk and other dairy products. However, the information we have also indicates that the total volume of private label milk handled by these few large chain food retailers amounts to only a small percentage of the total volume of milk marketed in this country. It is understood that Stop & Shop, Inc., the second largest chain food retailer in the Boston (Mass.) metropolitan area, is proceeding with plans to market milk under its private label. We do not know how many more are proceeding with similar plans. Obviously, if private label milk should be marketed by all the chain food retailers, independent processors and distributors of dairy products would be shut out of a substantial part of the total milk market in the Nation.

Mr. FARRAR. One of the chief economic and competitive problems in the milk business seems to be sales below cost. There is some difference of opinion as to what cost is, or, indeed, whether it is possible to determine cost for a specific market. Do you have any ideas on this phase of the problem?

Mr. STEED. We recognize that various people have differing opinions about how to determine cost of any particular item, such as milk, in a specific market. Some hold to the view that it is quite difficult, if not impossible, to determine cost. For that reason, laws designed to prevent sales below cost have been challenged as unconstitutional, as being too indefinite, and as making it impossible to express intelligently a lawful course of conduct. Fortunately, we recently have had decisions by the Supreme Court of the United States, and by the highest court in a number of the States, dealing with this problem. The Supreme Court of the United States, in the case of *Safeway Stores, Inc.* v. *Oklahoma Retail Grocers Association, Inc., et al* (360 U.S. 334), held that the Oklahoma law, designed to prohibit sales at prices below cost, was not too indefinite and was constitutional. Also, within recent weeks, the Colorado supreme court has upheld the law of that State, which prohibits sales below cost. In doing so, the court said that reasonableness must be taken as guide in determining the validity of the standard prescribed by the statute, that cost does not have to be established "with mathematical precision and exactness." The court rejected the contention that it is not possible to allocate costs accurately in industries where accounting is complex.

Mr. FARRAR. The Federal Trade Commission decision in the Ice Cream cases seemed to take the line that trade practices in the dairy industry were not as serious, or as bad, as the independents represent them to be. Does this coincide with the results of your investigation?

Mr. STEED. I'd like to be excused from discussing the findings and decisions involved in pending cases. Therefore, I am refraining from discussing at this time decisions which have been reached in the Federal Trade Commission's Ice Cream cases. I do not hesitate to say that small businessmen in the dairy industry, who have testified before our special subcommittee, have presented evidence about trade practices involving loans, gifts and the practice of providing rent-free cabinets and other equipment by large processors and distributors. It appears from the evidence presented to us that these practices present serious problems to small and independent business concerns in the dairy industry.

Mr. FARRAR. What remedies or corrective measures does your committee suggest?

Mr. STEED. Our special subcommittee has presented two reports to the House Committee on Small Business, both of which were adopted by the full committee without dissent, and submitted to the House of Representatives. Those reports are House Report No. 2713 (85th Cong.), submitted January 3, 1959, entitled, "Price Discrimination in the Distribution of Dairy Products," and House Report No. 714 (86th Cong.), submitted July 27, 1959, entitled, "Small Business Problems in the Dairy Industry." In those reports the remedies suggested were included in the recommendations made by the special subcommittee. The recommendations included in House Report No. 2713 (85th Cong.) were as follows:

1. The Department of Justice, the Federal Trade Commission, and the Department of Agriculture increase and expedite the use of provisions of existing law to bring to a halt the injurious and unfair competitive practices found by this committee to exist in the processing and distribution of dairy products.

2. Congress should enact new legislation to strengthen the antitrust laws and provide relief from the injurious and unfair competitive practices herein found to exist in the dairy industry.

3. Specifically, Congress should enact legislation which would (a) strengthen the antitrust laws by providing that the "good faith" defense of subsection (b) of section 2 of the Clayton Antitrust Act shall be a complete defense to a charge of unlawful price discrimination "unless the effect of the discrimination may be substantially to lessen competition or tend to create a monopoly;" (b) amend the Clayton Act so as to supplement existing laws against unlawful restraints and monopolies by providing that violations of section 3 of the Robinson-Patman Act shall constitute violations of the antitrust laws; and (c) amend section 11 of the Clayton Act to provide for the more expeditious enforcement of cease-and-desist orders issued thereunder, and for other purposes.

4. The Deaprtment of Agriculture should review the Federal milk marketing orders with a view to taking such action as would be appropriate to remove unjust discriminations in the prices paid by dealers for milk and cream.

The recommendations of the special subcommittee presented in House Report No. 714 (86th Cong.) were to the following effect:

The special subcommittee urges early consideration by the appropriate legislative committee of the Congress of the recommendations of the independent dairymen as contained in the record of hearings to date and the report (H. Rept. 2713, 85th Cong., 2d sess.) of the special subcommittee on small business problems in the dairy industry of the House Committee on Small Business.

These industry recommenadtions, in substance, are as follows:

1. Require publications of prices, discounts, rebates, allowances, commissions, loans, and gifts by all sellers;

2. Prohibit price discriminations which would have the effect of substantially lessening competition or tending to create a monopoly; and

3. Provide for process under the Federal Trade Commission Act for temporary injunctive relief pending issuance of final orders in litigated cases.

These conclusions and suggestions are tentative, but are made at this time in order to get them presented through this interim report for consideration.

Mr. FARRAR. Have these corrective measures been incorporated into proposed legislation?

Mr. STEED. A number of these suggestions and recommendations have been incorporated in proposed legislation. One of the recommendations has been enacted into law. I refer to the last part of the recommendation under No. 3 set forth in House Report No. 2713 (85th Cong.), January 3, 1959, for amendment to section 11 of the Clayton Act. This recommendation provides for the more expeditious enforcement of cease and desist orders instituted thereunder. The Congress on July 23, 1959, enacted Public Law 86-107 to do what was provided for in that recommendation. A number of additional legis-

lative proposals have been made in keeping with the recommendations I have mentioned. Those additional proposals are pending at this time. They include the proposal to empower the Federal Trade Commission to issue temporary cease and desist orders, pending the completion of the litigation in those instances where litigation is prolonged. Bills for that purpose during the last session of this Congress (H.R. 8841, H.R. 8842, H.R. 8843, H.R. 8844, and others) were introduced by myself and other Members of Congress.

On February 8, 1960, Representative PATMAN, chairman of the House Committee on Small Business, introduced H.R. 10235, which provides for a strengthening of the antitrust laws by adding prohibitions against certain types of price discriminations which would have the effect of substantially lessening competition and tending to create a monopoly. Also, Chairman PATMAN introduced H.R. 2215, which would require publication of prices, terms, discounts, rebates, allowances, commissions, loans, and gifts by all sellers.

Mr. FARRAR. What chance do you see for early enactment of any of these bills?

Mr. STEED. I have made reference to the fact that Public Law 86-107 was enacted to amend section 11 of the Clayton Act. It is difficult to predict whether any of these other bills to which I have referred will be enacted before the end of this session of the Congress. I understand that the prospects are good for hearings on some of them.

Mr. FARRAR. Tom, it has been most kind of you to take this time to help our readers to understand these matters, and to be informed as to the situation. I want to thank you again in behalf of them.

Mr. STEED. It has been a pleasure, Larston. I hope that, by thinking on these problems, all branches of the dairy industry can formulate solutions in line with the public good, that will help to ease some of its most pressing problems. We must think of the small businessman, we must think of the consumer, and, above all, we must think of the future, for, as more than one philosopher has pointed out, we are all going to have to spend a lot of time there.

Salute to Marjorie Post May

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including two newspaper articles which show a wonderful woman, Mrs. Herbert A. May of Pittsburgh and Washington as a woman with a good heart.

I am calling these articles to the attention of my colleagues in the Congress and the American people so that they may know Marjorie May for her many civic and charitable interests, and particularly her interest in young America.

The articles follow:

[From the Pittsburgh Sun-Telegraph, Jan. 31, 1960]

WASHINGTON WONDERLAND—100,000 THANK YOU LETTERS

(By Ruth Montgomery)

WASHINGTON.—Post Toasties Heiress Marjorie Post May is making no comment on rampant rumors that she has willed her fabulous collection of jewels to the U.S. Government for the future adornment of First and Second Ladies.

Her eyes sparkle like some of her own diamonds, however, as she speaks of another of her pet philanthropies that is bringing joy to hundreds of thousands of high school seniors.

"Music for Young America," a project of the National Symphony Orchestra which Mrs. Herbert May underwites to the tune of $100,000 a year, is preparing for its fifth season here in Washington.

The concerts, free to all visiting youngsters, will be held almost nightly between April 21 and May 23, with Mrs. May picking up the tab for the full complement of 86 orchestra members.

PRIZES GIVEN

Schools throughout America are already swamping the Symphony with ticket requests for students who will be pouring into the Capital during the spring tourist season.

They are also busily grooming their most gifted musicians to compete for the "Merriweather Post" prizes which Marjorie awards each May to the three winners in the piano, violin, and cello divisions.

Washington's wealthiest hostess points with pride to more than 100,000 thank you letters she has received from some of the youngsters who have attended the youth concerts in the exotic Pan American Union Building.

She further finds time to take a highly personal interest in the gifted youngsters who have captured the $2,000, $500, and $100 prizes each year since 1956.

TALENTED YOUTHS

Each of the winners, after surviving regional elemination contests, has the unique honor of playing with the National Symphony Orchestra in Washington for the finals.

Thirteen-year-old Abbott Lee Ruskin, a pianist who placed third last year for his performance of Dmitri Kabalevsky's "Youth Concerto," was invited to play with the orchestra in October when Kabalevsky came from Russia to serve as guest conductor.

The excited lad came down from New York, but lacked a first-class piano on which to practice.

Mrs. Post, learning of his plight, promptly invited him to practice at Hillwood, her fabulous establishment overlooking Rock Creek Park which dwarfs all other Capital estates.

"Music for Young America" was the brainchild of Director Howard Mitchell, who figuratively "drooled" at the untapped music audiences every time he saw the hundreds of tourist buses swarming with eager school children from every State of the Union.

"We're muffing a priceless opportunity by not introducing these students to good music," Mitchell remarked at a meeting of the symphony board, as he unraveled his expensive plan.

"I think I'd like to do that," the then Marjorie Merriweather Post remarked quietly, as she excused herself to call her investment counselor."

A few minutes later she returned and announced that she would underwrite the exciting venture.

SHUNS SPOTLIGHT

Understatement is the word for Mrs. May in this Capital where almost everyone else is busily trying to sell himself.

Even her rivals would have to concede that she could effortlessly capture the title of Washington's first hostess, if she cared for the glitter and publicity.

Several times each season she invites a hundred or so of her friends to a square dance—and just about lets it go at that.

[From the Washington Post, Apr. 12, 1960]

'FIRST WOMAN IN UNITED STATES' PINNED BY B.S.A.—SCOUTS GIVE MRS. MAY PLAQUE

(By Marie McNair)

Because of her many years of personal interest in the Boy Scouts of America, Mrs. Herbert May was guest of honor at a reception yesterday at the Boy Scout Service Center. During the afternoon she received a bronze plaque in appreciation of her generosity to the nationwide organization.

In fact, Marjorie May was largely responsible for the establishment of the service center where the reception was held yesterday.

She also helped to establish and equip a 400-acre Scout Council Camp in Post, Tex., named for her father the late C. W. Post; is actively interested in the Adirondack Boy Scout Council at Saranac Lake, N.Y., and has for years supported individual troop units in the Washington, D.C., area.

The more than 100 guests for the ceremony and reception were mostly Mrs. May's personal friends.

The plaque, unveiled and presented by Dr. Delmer H. Wilson—director of the division of personnel of the Boy Scouts of America—read: "To Marjorie Merriweather Post May, in deep and everlasting appreciation. Scouting's golden anniversary year, the National Capital Area Council and the Boy Scouts of America, April 11, 1960." Expressing the hope that perhaps the tablet will go in "Friendship Walk" a corner of Hillwood's famous gardens, given to her by her friends, "Skipper" Wilson was assured that it would.

Said Marvin Braverman, chairman of the occasion, opening the ceremony:

"This is Marjorie May Day; as we all know one of the most outstanding and lovely women in Washington * * *"

Herbert May sat beside his wife during the presentation and was with her in the receiving line when the party opened. In accepting the honor Marjorie May said she had just been told that she was the first woman in the United States to be given a Scout pin. "I didn't believe it, but now I'm terribly proud."

The Philippine Ambassador and Mrs. Carlos Romulo, Justice, and Mrs. Tom Clark, Mrs. Augustus Riggs 4th who is Mrs. May's daughter; former Italian Ambassador and Mrs. Augusto Rosso and Engineer Commissioner, Brig. Gen. Alvin C. Welling, were in the gathering.

Also, there was Mrs. Thors, wife of the Icelandic Ambassador, who is in New York; Mrs. J. William Fulbright, Mrs. George A. Garrett, Gen. and Mrs. Wade Haislip, Lady Lewis, Mr. and Mrs. Daniel W. Bell, Mr. and Mrs. Garfield Kass, Mrs. Wiley Buchanan, Vice Adm. "Jerry" Land, and National Symphony conductor and Mrs. Howard Mitchell.

Mrs. May, who adores flowers, wore a toque of giant yellow and mauve pansies and was pinned with white orchids when she arrived.

Tabulation of Questionnaire

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. AVERY. Mr. Speaker, it is essential that a Congressman be properly informed on the views of the people he represents. In this connection, a public information questionnaire was sent to

the constitutents of the First Congressional District of Kansas. The following are the results. Approximately 90,000 questionnaires were distributed. They were mailed to every person with a telephone, to all post office boxes, and to all rural routes. In addition, questionnaires were sent to any individual who requested copies for distribution, all colleges and universities in the area, and all groups and clubs requesting copies for the membership.

A total of 7,976 questionnaires or about 9 percent were returned and over 50 percent included a special letter or additional comments.

Questionnaires originally mailed to district addresses were forwarded and returned from many areas outside of the State of Kansas, including such communities as Rochester, N.Y., Washington, D.C., and San Diego, Calif. Even servicemen serving overseas replied. The office is now receiving questionnaires at the rate of approximately one or two per day.

When analyzing the results, consideration was made for the fact that it is difficult to answer some of the questions with a simple "yes" or "no." The questionnaire method has limitations but generally speaking it does reflect the views of the persons in the First District.

If anyone desires extra copies of this tabulation, I will be happy to send such.

I am grateful for the fine response and I hope everyone will continue to write me on matters of interest.

With reference to question 4, asking if an increase of taxes is favored and if so, what taxes, the response by county was generally the same. The great majority suggested either excise taxes or postage rates on third- and fourth-class mail be increased if necessary to balance the budget. As a third alternative some suggested the income tax. In many cases it was suggested that instead of raising taxes a greater effort be made to cut down on needless Government spending in order to obtain additional revenue to balance the budget.

The tabulation follows:

Question	Yes	No	No opinion
1. Do you favor a national fair trade law?	33	45	22
2. Do you favor extending the coverage of the minimum wage law of $1?	54	34	12
3. Under existing conditions at home and abroad, do you consider a balanced budget:			
Percent			
Unimportant 3			
Essential 45			
Desirable 39			
4. Would you favor increasing any taxes if necessary to balance the budget?	47	40	13
5. Do you favor curtailing our domestic programs, if necessary to balance the budget?	62	28	10
6. Do you favor cutting defense spending, if necessary, to balance the budget?	37	52	11
7. Do you favor Federal aid to education for:			
School construction?	41	53	6
Teachers' salaries?	27	59	14
Do you think such will result in Federal control of education?	49	38	13
8. Do you think the Agriculture Department should devote more effort in research for the development of industrial uses for farm commodities?	77	13	10
9. Do you favor medical care for social security beneficiaries—to be financed by increased social security taxes?	32	59	9
10. Should cooperatives be taxed the same as other businesses?	77	14	1
11. From the information available, are you satisfied with our missile and space efforts?	40	41	99
12. Do you favor:			
Elimination of all agriculture price supports?	44		
Sliding scale supports from 60 percent to 90 percent of parity?			
Fixed supports at 90 percent of parity or above?	20		13
Graduated parity based on production units from 95 percent down?	10		
13. Do you favor continuing our foreign aid program?	13		
Do you think the program is helpful in our efforts to promote peace?	50	33	17
14. Do you favor G1 educational benefits program for peacetime veterans?	49	34	17
15. Do you think the Federal Government should spend more on soil conservation work?	35	58	7
16. Do you favor increasing the interest rate on Government loans to REA co-ops from 2 percent to the average rate the Government pays on its own bonds?	42	44	14
17. From the information available, do you believe this country's defense program is adequate?	75	13	12
18. Number the following issues in the order of their importance to you:	57	25	18
1. National defense	5. Labor problems		10. Civil defense
2. Balanced budget	6. Farm problem		11. Federal aid to education
3. Inflation	7. Juvenile delinquency		12. Veterans' benefits
4. Reduction in Government spending	8. Foreign affairs		
	9. Social security

Inter-American Cooperation Moves Forward

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. FULTON. Mr. Speaker, as we take up the Mutual Security Act of 1960 I am including under leave to extend my remarks in the RECORD, an excellent expression of inter-American cooperation as outlined in a speech given this morning by the Honorable Christian A. Herter, Secretary of State in the Pan American Union:

INTER-AMERICAN COOPERATION MOVES FORWARD

(Address by the Honorable Christian A. Herter, Secretary of State, in observance of Pan American Day, before the Council of the Organization of American States, Pan American Union, Washington, D.C., April 20, 1960)

I am grateful for this opportunity to meet here with the Council of the Organization of American States today as it gathers in celebration of Pan American Day in the 70th year since the founding of the inter-Ameri-

can system. Not only is this my first appearance before a protocolary session of the council, but it happens by circumstance to be almost the first anniversary of my appointment as Secretary of State. The year has indeed been a momentous one in the history of the organization, full of events of tremendous significance to the continued growth and development in the unique cooperative relationship which this organization represents.

Speaking personally, I value highly the good fortune that has made it possible for me to journey twice to Latin America, once last August to attend the Meeting of Consultation of Ministers of Foreign Affairs in Santiago and again in February when I accompanied the President on his trip to Argentina, Brazil, Chile, and Uruguay. The pleasure and stimulation gained from this experience of travel could only have been increased had my good fortune been extended by visiting all 20 of your countries.

Two such trips only half a year apart bring me to the inescapable conclusion that Latin America, still emergent and even nascent in some aspects within its present high level of attainment, is an area of tremendous development potential. It has most of the natural resources and all of the human resources for a steady and predictable rise in prominence and importance among the world family of nations. The surge and pulse of this rise is a visible and tangible circumstance, to be seen and measured in the construction of new cities, the laying out of networks of roads, the building of schools, the spread of new industries. One can sense the trend of movement from rural areas and agriculture to urban living and industrial development, from limited suffrage to universal suffrage, from narrow exercise of authority to fully representative government. Here are many of the world's last great frontiers—the jungles of the Amazon Basin, the isolated mountain valleys of the Andes, the almost inaccessible mineral deposits, the extensive farmlands of high potential in almost every country—all awaiting the conquest of advancement through new methods of health and sanitation or the construction of new means of communication. Here, too, one can sense the race between a bursting population growth and the upsurge of economic development that must provide more and more products and develop more and more jobs for larger numbers of people.

It seems to me that such convictions as we in the United States had on this score were reinforced by the President's recent visit to Latin America and that a new sense of urgency was communicated to us with respect to such participation as the United States, within the framework of its worldwide commitments, can contribute.

Looking back across the intervening 70 years since the founding session of the "Commercial Bureau of the American Republics," conceived principally as a clearinghouse for the interchange of commercial information, who among our predecessors then in attendance could possibly have foreseen that the humble seed they planted was to grow into the all-encompassing structure that the Organization of American States is today? The soil that nurtures this rich growth is mutual cooperation.

Represented here today are 21 Republics; each sovereign and separate, each with its distinctive identity and national aspiration. For each the Charter of the OAS confirms sovereign equality regardless of size or power. Each uses its equal voice in determining issues by the exercise of its vote in the democratic process of decision by the majority. Yet with all the express individuality and distinct character of its respective members, with all the diverse interests and separate aims of the various countries, with all the divergencies between widely differing peoples, this international assembly works with remarkable harmony toward its objective—and that objective, simply stated, is to provide a steadily improving way of life for the 360 million people it represents.

These 360 million individual human beings, wherever they may be in whatever country, provide the measure by which their chosen representatives must guide their actions. The individual citizen is today the common denominator of all representative government and of all foreign policy wherever there is freedom of choice. The "common man" is the initial charge that sets in motion the dynamo of democracy that impels the forces of change toward a better way of life.

At the present stage in the evolution of international affairs within this hemisphere, attainment of the normal aspirations of the individual citizen may require drastic revisions in existing social, economic, and political institutions. These aspirations toward a general improvement in living conditions, toward the elimination as rapidly as possible of the consequences of poverty and ignorance, must be recognized by the OAS itself and by the individual countries that are represented here. They should be achieved in liberty, and with a dedication to international peace and harmonious cooperation as reflected in the guiding principles of the Organization of the American States, which are prime requisites to the accomplishment of its objectives.

Throughout the many years of its history, the genius of the inter-American system has been its capacity to reconcile principles and forces that have at times appeared to be in conflict. If sovereign states had refused to yield when purely national interests appeared to conflict with the general international interests of the whole assembly of nations, if each had chosen to adopt only principles that were in perfect accord with its individual goals, the Organization of American States could not have moved forward to the high level of attainment that it has reached today. Many of these conflicts have proven to be more apparent than real, especially in the light of shared benefits that have accrued to every nation through mutual international accord.

In similar respect, a partial success in improving the living standards of the individual citizen is not enough. The achievement of material progress, for example, falls short of the need unless it is accompanied by the equally important attainment of liberty based upon respect for human rights and representative democracy as described in the Declaration of Santiago agreed upon at the fifth meeting of Consultation of Ministers of Foreign Affairs last August. This statement declares that the "principles and attributes of the democratic system in this hemisphere" must include such essentials as the rule of law assured by separation of powers, free elections to choose governments, judicial procedures to protect individual freedom and human rights, freedom of information and expression, and effective control of the legality of governmental acts. It further points out that political proscription, perpetuation in power, and the exercise of power without a fixed term are manifestly contrary to democratic order in the Americas.

However lofty and hopeful might be the fundamental principles of an international organization, their application within the borders of the member nations is often not easy. All of us will do well to bear in mind that those who judge will also be judged. It seems to me that the organization as a whole must be willing to concede that each member may have its own special problems and its individual circumstances that may make progress appear very slow in the translation of broad principles into specific actions within each country. Yet it would be a matter of no small concern to the organization as a whole if its member nations agree to the broad principles but seek to travel only their separate paths in application. My view is that for member nations to maintain their own self-respect in the community of this hemisphere there needs to be a genuine endeavor to implement within their respective borders the fundamental principles to which their international representatives have signed agreement. We can all hope that recognition of this essential fact will bring with it the maturity and calm judgment required for the official conduct of governments in our present day relationships.

To reach the root of many problems facing our hemisphere requires a methodical study of the existing and potential resources to meet present and future needs. Many of these studies have been underway through the various entities of the Organization of the American States. The farsighted initiative of Operation Pan America, calling for detailed economic surveys of the countries of the Americas, is an important concept that will bear fruitful results within the near future in planning and organizing new projects on the basis of specific needs.

That the Organization of American States has been an instrument of accomplishment is manifest in many ways. Defense against aggression, from within or without the hemisphere, is now the concern of the whole American community rather than any single nation—and sums formerly spent for defense against neighbors can increasingly be safely devoted to economic development. The twin pillars of nonintervention and collective action are now firmly cemented into the foundations of our tested and proved system of inter-American security. Astonishing progress has been achieved toward the goal of eradicating malaria and other diseases from our hemisphere. A regional development bank has become a reality. A major breakthrough has been registered in the discovery of a highly nutritious food, called Incaparina, to combat the high mortality of young children. Important groundwork has been laid in establishing a common market and a free trade association. The benefits of agricultural research already are evident in many ways, such as the development of new cattle breeds more adaptable to Latin American conditions. Even the launching of promising young artists on careers of worldwide acclaim, plus a long list of other achievements in the general field of culture and education, are commendable efforts that likely could not happen except for the existence of some form of international organization.

In my view, the achievements and the work actually underway in the areas of cooperation are often less noticed than they should be—given the apparently irresistible attraction of controversy and conflict. Steady, constructive, carefully planned progress in any of the many fields of human interest and endeavor in which we cooperate, both in the OAS and between ourselves, may not be as dramatic as if it were actively punctuated with sweeping slogans—but in the long run it may actually move further. For example, the OAS has long recognized the need for extensive efforts in the field of housing. The many activities of the Inter-American Housing and Planning Center in Bogotá, Colombia, are demonstrating results in the development of new building materials and inexpensive construction methods that will be of enormous importance in the solution of one of the most fundamental problems of our people. I am well aware of the close cooperation between the center and certain of the projects in this significant field that have been aided by my Government. Among others, these include the low-cost housing project in Chile which President Eisenhower visited recently, and

which he and others of us who accompanied him found to be among the interesting points of the tour. These and similar endeavors are carried forward under the concept of self-help and mutual aid that might well be taken as key words in our international relationships.

If we support the premise that the dignity of the individual in a free society is strengthened when he acquires his own home, so must we also recognize the importance of land ownership to the man who works the land. While there is much arable land not in economic use—properties owned both publicly or privately that are difficult of access or not put to full use—small farmers by the hundreds of thousands must make their living from tiny plots that yearly become more depleted from too intensive development. Land distribution is a problem of the hemisphere, demanding the attention of all nations and the Organization of American States as a whole. The establishment of adequate credit facilities to assist small farmers in purchasing land, the establishment of adequate facilities to confer title to new owners, and the adoption of appropirate fiscal policies to promote more effective use and facilitate transfer of poorly utilized land are measures demanding urgent attention.

It will serve us well to remember that the mind of the individual citizen is the object of a great ideological conflict that divides our world. One side thrives on the ills of mankind—poverty, hunger, disease, ignorance, upheaval—while the other strives for man's natural desires, for individual freedom, human dignity, and personal well-being. Any international organization that hopes for and works for solid accomplishment will need to recognize that its framework must be solid and durable to withstand the constant probing of new and subtle forms of exploiting whatever forms of weakness may exist.

Under a system of free elections and representative government, the day will likely never dawn in this hemisphere when the majority voter of any country will freely choose his own complete subjugation to the state. It is contrary to all reasonable supposition to conceive that the voter of the Americas, in any considerable number, would ever willingly enslave himself to a monolithic economy, surrender his individual freedom, renounce whatever religion he may hold, or relegate himself to the status of landless servitor to a new class of bureaucratic aristocracy. Since the imposition of such a system through force, threat, or subversion would be a denial of basic principles for which the OAS stands and, therefore, could not be allowed to exist, and since its appeal to the voter is traditionally small in all areas of the world, the continued progress toward ever more valid democracy in each of our native lands is the real promise of life in our hemisphere.

If an ideology that is foreign to our hemisphere has little chance of taking root here, the state of harmony within the hemisphere will bear some attention. Each country should assume a certain responsibility toward the fundamental principles of the inter-American system. To quote from the Santiago declaration:

"Harmony among the American Republics can be effective only insofar as human rights and fundamental freedoms and the exercise of representative democracy are a reality within each of them, since experience has demonstrated that the lack of respect for such principles is a source of widespread disturbance and gives rise to emigrations that cause frequent and grave political tensions between the state that they leave and the states that receive them."

The truth in these statements is self-evident. After all most of the basic principles of the Organization of American States are as hallowed in time as that ancient day when separate civilizations first realized they had to try to exist in harmony together. In many ways the Declaration of Santiago is an echo of the words so wisely stated many years ago by that great freedom fighter, José Marti:

"America must encourage every means of bringing the American peoples closer to one another, and reject everything that keeps them apart. In this, as in all human problems, the future is of peace."

By the fact of the frozen wastelands that lie above and below and the great oceans that swirl on either side of our continents, we are all neighbors. Give us, each one of the 21 republics, each independent and yet interdependent, the maturity and foresight and thoughtfulness to be good neighbors. There is not one among our countries that cannot help the others, there is not one that cannot receive help from the others, there is not one that will not profit through the mutual well-being of all.

New York Times Overlooks Racial Turmoil in Its Own Back Yard

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. HUDDLESTON. Mr. Speaker, as you know, on April 12 and 13 there appeared two articles in the New York Times, written by one Harrison Salisbury, which purported to give an accurate account of race conditions in Birmingham, my district. These articles were in fact gross distortions of the truth and I am convinced Mr. Salisbury went about his preparation of the articles without any intention of giving a true and correct picture of the situation in Birmingham.

On Friday, April 15, 1960, Mr. Gene Wortsman, Washington correspondent for the Birmingham Post-Herald, ran an article in the Post-Herald in which he pointed out the fact that while Mr. Salisbury came 950 miles to write his stories of alleged racial terror in Alabama, he could have written a much more accurate story of racial turmoil in New York City by going only three blocks. Mr. Wortsman's article follows:

NEW YORK TIMES OVERLOOKS RACIAL TURMOIL IN ITS OWN BACKYARD

(By Gene Wortsman)

WASHINGTON.—The New York Times, which sent a reporter 950 miles to write of racial terror in Alabama, could have written a story of racial turmoil in New York City by sending a reporter only three blocks.

Although this story was available to the Times on April 8, as far as can been learned here, the newspaper to date has devoted one paragraph to it.

The story was the State-by-State report of advisory committees to the U.S. Commission on Civil Rights.

These committees described discriminatory conditions in their own States. Of 48 State committee reports, that of the New York committee was tied for second in length.

It required 16 pages.

Only Minnesota exceeded it with 22 pages, and only Oregon tied it.

The Civil Rights Commission summary was given to the President and to Congress.

The Times story began on page 1 of the April 9 edition. The headline and first five paragraphs discussed testimony before Congress by Commission members.

Paragraph 6 then told that the State-by-State findings had been issued. But only in paragraph 9 did the newspaper mention New York problems. It said:

"The New York report said there had been 'daily complaints from parents of Negro children guided to nonacademic careers, discouraged in their ambitions, scorned and stereotyped, categorized as difficult, of low cultural background and as coming from broken homes.'"

This report was issued by the Civil Rights Commission whose office is three blocks from the Washington bureau of the Times.

The following day, April 10, in its large 10-section Sunday edition, the Times still ignored the report. It ran six out-of-State stories involving racial matters. These stories came from Alabama, Texas, Georgia, Mississippi, Tennessee, and Washington, D.C.

What did the New York Advisory Committee have to say of the city's and State's racial problems?

Here are examples:

"Since the May 17, 1954, school decision of the U.S. Supreme Court instead of the number of * * * segregated schools being diminished, there has been a growth and extension of such schools. In 1954 * * * there were 51 * * * segregated * * * schools in New York City. Today, there are 84 segregated schools.

"We observe the inequity of overcrowded, part-time education in Negro schools, side by side with hundreds of empty seats and enriched, full-time education in the predominantly white schools nearby.

"We observe the continuing evils of contrived and gerrymandered school zones and of patterns of containment all working to the end of the separation of the races.

"We note that the ability of these children to read and write is years behind that of children attending schools a mile or two away."

The report gave examples of Negro attempts to integrate schools, but of white refusal to comply.

In Public School 3 in Brooklyn, parents are petitioning to remove the principal for insulting behavior. He has said the neighborhood is evil and parents of the children are depraved, the report stated.

The report discusses housing, saying it remains a serious problem:

"Many individuals regardless of their personal qualifications, are denied the opportunity to acquire decent accommodations in buildings and neighborhoods of their choice. Segregated living areas are created and maintained * * * contributing to numerous * * * social evils. * * *

"Age combines with overcrowding to make dwellings in Negro areas largely unfit for human habitation.

"The high disease, death, and crime rates common to Negro areas represent the social costs we pay for requiring people to live in such surroundings."

A Constituent Writes: "I Am Afraid To Think of Old Age"

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. ROOSEVELT. Mr. Speaker, recently I received a letter from a constituent and longtime friend that car-

ried a postscript which relates a matter that frankly appalls me.

The postscript concerns an elderly lady who had the misfortune to suffer a serious injury from a fall. The story of her mishap, the subsequent financial pressures and the attitude of the hospital, furnish another striking example of the need for this Congress to support a Federal hospitalization and health bill.

I urge my colleagues to read this true story of a lady 88 years young, whose experience prompts my friend and constituent to observe: "I think I will stay at Jack Benny's age of 39. I am afraid to think of old age."

The postscript to my constituent's letter follows:

DEAR JIM: Just one more P.S. I have the sweetest old lady tenant of 88 years of age in my front apartment. She fell last week and broke her hip, or rather fractured her hip.

It happened at midnight. We finally found a doctor to come to the house. He ordered an ambulance to the Culver City Hospital. I went with her and her companion to the hospital, as she has no relatives here.

Between the three of us, her lady companion, Margaret Masart, our good neighbor, and myself, we managed to get $120 together. Scraped the bottom of the barrel.

Twenty dollars for ambulance and $100 for downpayment at the hospital.

When we signed her in at the hospital, they asked for $250. I was furious. It was an emergency, and at midnight besides.

The doctor called in a bone specialist. A week in the hospital in an eight-bed ward at $22.50 a day plus. Then 6 months in private sanatorium at $250 a month.

She receives a small social security benefit, plus she has a small nest egg in bank. But how long will this last when the money is going at this rate?

Imagine, if she only had just her social security, like many of our senior citizens? It is frightening, to say the least.

President Eisenhower and his administration and the American Medical Association are against medical aid for our old people. This is just one example of the need for some kind of a decent bill in this field.

I read that the AMA said any old person can raise $500 for doctor bills without undue hardship. I have news for them.

I spoke my little piece at the hospital in regard to the $250. They accepted the $100, but her companion had to sign papers that she would go to the bank as soon as possible for the balance of the money.

I think I will stay at Jack Benny's age of 39. I am afraid to think of old age.

The Late Brigadier General Hines

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. LANE. Mr. Speaker, I wish to include a well-deserved eulogy to a man who served as our Administrator of Veterans' Affairs for years with honor and distinction, Brig. Gen. Frank T. Hines, that appeared in the Stars and Stripes recently:

BRIGADIER GENERAL HINES

The news tells us of the death of Brig. Gen. Frank T. Hines, U.S. Army, retired, who served for many years as head of the Veterans' Bureau and later as Administrator of Veterans' Affairs when all veteran agencies were combined.

General Hines took over the administration of the old Veterans' Bureau when it was in a sad state with scandals of one kind or another threatening its existence.

He had already demonstrated his ability as an organizer when the Army placed him in charge of the port of embarkation in Hoboken, N.J., in World War I.

Once in charge of the veterans' agency he continued to show that he had not lost his touch and it was not long thereafter that the Veterans' Bureau and later the Veterans' Administration was working on a smooth basis.

We knew General Hines quite well and had occasion in the late twenties and early thirties to come in conflict with some of the groups set up to adjudicate veterans' claims.

At the time we were younger and perhaps a bit stubborn when we felt a veteran was not being given a fair shake. We are still stubborn when it comes to veterans' rights but perhaps a bit mellower.

Quite naturally in our enthusiasm and belief in the veterans' cause we laid the blame for most of the things we considered wrong at the door of the boss—General Hines.

However, as the years passed we were to change our opinion of the agency's head. Despite the multitude of affairs which crowded his desk and took up his time, we found him ever willing to listen to the veteran's side of the story, even to the extent of sitting in on discussions between us and the VA officials.

At such times he listened carefully, asked questions and, if he felt our cause was a good one would remand the case for further study and sometimes with the recommendation that the adverse decision be reversed.

This consideration by the head of the Veterans' Administration of an individual case has gone by the boards long since. It disappeared when General Bradley succeeded General Hines as Administrator of Veterans' Affairs and has never been resumed.

Down through the years with the experience thus gained by personal contact with this very busy man we learned to respect him and cast aside all the early bitterness that once existed.

Getting to know him better we found him a patient man and a just one and we realized that if he said "No" he did so only after thorough study of the situation. As a consequence we can only say now that the Government has lost a fine and capable servant and the veterans and the organizations which represent them a kind friend.

To his widow and family we offer our sincere condolences and look only with regret at his passing. May his soul find the repose it so justly deserves in the life hereafter.

H.R. 11666

SPEECH
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 11666) making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

Mr. SIKES. Mr. Chairman, the amendment offered by the gentleman from Iowa to the State Department appropriation would make it impossible for necessary public functions to be carried on by the Department during the next fiscal year. It is just as simple as that. The State Department must deal with representatives and citizens of other nations other than in purely formal negotiations, and a representation allowance is needed for this purpose. The money in this bill for representation allowance is now down to a rockbottom figure. I do not think we can properly reduce it. But before I talk about his amendment, I do want to take a few moments to say that I personally appreciate the studious, diligent, and patriotic effort that the gentleman from Iowa [Mr. GROSS] makes in this House day after day after day after day. I think he knows more about more bills than any one of the rest of us. He is one of the most valuable men in the Congress. I want the RECORD to show that I appreciate his efforts for a better America.

Now, Mr. Chairman, we have recommended the sum of $835,000 for representation allowance. This is $40,000 less than the State Department felt it must have for this job. It is only $10,000 more than the Congress appropriated for the fiscal year 1960. In other words, we are recommending about 1 percent more than the amount of money that was appropriated last year for this purpose, despite the fact there has been an increase in all costs during that period, and despite the fact that 8 or 10 new American posts must be established with the funds that are available. We have 183 diplomatic posts spread around the whole world, and each of them must carry on certain diplomatic social activities which require expenditures from the representation allowance.

Actually, per diplomatic post, there will be less money for this year's requirements, even though the costs are higher than they were a year ago.

Now let us face it. This is not a whisky allowance. Of course some whisky is bought. It is served at most social functions, including those to which we Congressmen are invited in Washington. Certainly it is a part of diplomatic functions. So is food. So are flowers. So are service costs. In other words, this is just what it says, a representation allowance. Our representatives are entertained at social affairs by diplomats from other nations. We have to reciprocate. It is to our advantage to show the proper courtesies to the leading figures in the nations to which our representatives are accredited. People are human. They appreciate these things. What is more, they expect them. Everybody does it. There are national days to which all the diplomatic corps are invited, such as our own Fourth of July. When those things take place it is very important to show proper recognition of local customs and to maintain cordial

relations with the people in other embassies and in the other nations where we have our own representatives. Each of us on the floor recognizes the value of social gatherings. We attend them quite frequently. We participate in them. We do these things because we can see the advantage of maintaining contact with other people. Sometimes more can be accomplished or more learned at a social function than in any other way. The State Department does exactly the same thing with its representation allowance in order to further the interests of this Government. If we were not to follow this procedure we would be the only country, major or minor, that fails to do so. We would be looked upon with scorn by our neighbors in the world. Our representatives abroad have a big and important job to do and that job they must do for the good of this Nation, and for our world interests.

I trust the amendment will be rejected.

That Needs Clause

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. LANE. Mr. Speaker, I wish to include a very frank, sincere, and truthful editorial that appeared in the National Tribune on Thursday, April 14, 1960, which should give all of us some food for thought on a very important subject matter of much interest to all of our veterans:

[From the National Tribune, Apr. 14, 1960]

THAT NEEDS CLAUSE

While the Veterans of World War I of the U.S.A. were gratified by the fact that at last the House Committee on Veterans' Affairs had agreed to recognize the organization and permit its representatives to offer its views to the committee, and while the chairman of the committee, Representative OLIN E. TEAGUE, of Texas, was quite gracious in his reception of the men who represented this comparatively new group of veterans of the First World War, and while the thought was offered by Chairman TEAGUE that there might be some modification of the present pension law and the one which goes into effect on July 1 of this year, he did state that he still believed in the "needs" provision as far as pensions for veterans was concerned.

We have discussed this "needs clause" many times and at great length. We have shown how high ranking, retired officers of the armed services are permitted to quit their military jobs after a certain amount of service and go out into the civilian world and accept positions from private industry paying anything from $10,000 to $100,000 a year and still receive their retirement pay because of their military service.

We have even suggested that many of these retired officers have never fired a shot in anger against an enemy of the United States, yet, their length of service or their acquisition of some disability or other permits them to retire with pay and go on to secure lucrative employment in civil life.

We have also stated that we had no objection to this because we felt that many of these high ranking, retired officers had particular qualifications which they had acquired during their services with the Government, which entitled them to go out and earn anything that civilian employers thought they were worth.

We would not have brought this subject up at this time had we not read of a survey conducted in the Department of Agriculture which shows that the average total income for employees in that particular Department is $10,000 a year.

Now, these employees of the Department of Agriculture have been paying for civil service retirement during their years of employment and will be permitted to receive that retirement pay upon the completion of a certain number of years of service and nothing will prevent them from seeking private employment to augment their civil service retirement pay.

The same holds true of Members of the National Legislature who also pay into a retirement fund. The amount of retirement depends on their years of service and, if we may say so, it is not too little.

We do not begrudge them this retirement. They have paid for it and they have it coming to them. Yet, be they doctors or lawyers or skilled in any other profession or trade, there is nothing to prevent them from earning as much as the freight will allow in order to add to their retirement benefits.

We can go along with this in propriety because we feel that when a man or woman has paid for benefits to tide him or her over in their later years, he or she should receive this benefit and not be stopped from adding to it by their future endeavors.

Now, if all this is true from the standpoint of retired military men, retired Congressmen, or retired civil servants, why should it not be true for those who receive pension for service in time of war—men who saw actual combat or men who might be sent into combat at the behest of their Government?

The man who entered service in World War I, either willingly as a volunteer or under the Draft Act, had no choice as to the place where he was required to serve. It might have been Kelly Field in Texas where he sweated out the war or it might have been as a replacement—poorly trained—in some combat division on the Western Front. Once in the military service the individual had no choice. Some were lucky and some did not fare so well. The fact remains that they served their country when their country called them and we believe that this is a poor time in which to invoke a "needs clause" when it comes to paying them a pension in their older days.

Statistics provided by the General Accounting Office have shown that there are few veterans of World War I who are so affluent as not to need a little help thru their declining days. As a matter of fact, we also believe that the few veterans of the first World War who are really well off would not make application for a pension. Those veterans are proud men and they will not, as a whole, ask for something which their own ability had provided for.

This holding out for a needs clause sounds quite plausible and realistic but when it comes down to reality there are very few World War I veterans who are so well off that they cannot use the aid suggested in H.R. 9336, without restrictions to to income.

True, there will be a few chiselers for some people love money more than anything else, but we feel certain that many more needy veterans will profit by such a measure as H.R. 9336 than will take advantage of its provisions.

It must be remembered that just as the retired military men have earned their retirement by reason of length of service and just as Members of Congress have earned their retirement by reason of their contribution to a retirement fund, so, also, are veterans now at retirement age, who have paid into social security, entitled to receive that benefit without a restricting clause and still be entitled to a war pension.

We have learned that the highest social-security payment at this time is $119 a month. This amounts to $1,428 a year and thus, a single World War I veteran can be deprived of his War I pension, no matter how badly handicapped he may be, for the sum of $28. Certainly, there is no justice in such a provision of the pension law.

For this reason we ask, once again, the chairman of the House Committee on Veterans' Affairs to reconsider his position and realize that while his objections to no restrictions on income in any pension law for veterans of World War I are sincere, admit it does not necessarily follow that they are sound.

Representative TEAGUE seems to be a kind man, a decent man, but we feel that he has been warped just a little bit by the attitude of younger veterans who, at this time, feel no need for Government aid and thus do not realize why others, less able than they are to cope with the present economic situation, could use the pension called for in H.R. 9336.

Interest Rates Then and Now—Truman versus Eisenhower

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. GEORGE. Mr. Speaker, although the administration's drive to increase interest rates on long-term Government obligations seems to have collapsed, such an objective remains a threat so long as the Republican Party is in control of the executive branch of Government.

The interest cost, alone, to the taxpayers on our national debt has increased some $5 billion since 1953 and this amounts to approximately $125 per year for each American family. At the same time, the rate of our economic growth under President Truman has been cut in half since the present administration took office. This reduction in our economic growth is principally due to the high-interest-rate policy of the administration in power.

The housing industry of this country, Mr. Speaker, has reached a new low which can be attributed to the high cost of money, and unless and until a new administration, with a different economic philosophy, is placed in charge of our Government there is little hope that this great industry can reestablish itself on a firm financial footing and supply the thousands of needed homes for the American people.

In the Washington Post of this morning, Mr. Speaker, there appears an article by Seymour E. Harris, littauer professor of political economy, Harvard University, in which he criticizes the administration and points out just what has happened to our economy during the past 7 years because of the high interest rate.

The article follows:

[From the Washington Post, Apr. 20, 1960]

HIGHER INTEREST RATES OR MORE GROWTH?

(By Seymour E. Harris)

This is a statement in support of those Congressmen who are not disposed to yield to the President's request for a removal of the interest rate ceiling on long-term Government securities.

A removal of the ceiling on Government issues would be a signal to the Federal Reserve to raise rates further, and to starve the economy for money even more than in the past. The Federal Reserve needs no such encouragement. They see inflation everywhere, which they try to contain through restrictions on the supply of money and higher rates of interest.

How much damage can be done by the high rates of money, for which the President is now pleading, is suggested by the following: Growth rate from 1947 to 1952 was 4.6 percent; from 1952 to 1959, 2.3 percent. The dear monetary policy, that is high rates, probably more than anything else, explains the difference. By 1959, the cost of stunted growth since 1952, not in relation to the highest goals but in relation to the achievements under Truman from 1947 to 1952, was about $60–70 billion per year.

Why has the Treasury had so much trouble of late?

Obviously, the dear money policy largely induced by Washington is the main source of embarrassment.

Higher rates are partly the result of increased competition from other borrowers. The percentage rise of debt since 1952 has been 42 percent; 116 percent by State and local governments, 97 percent by individuals, 54 percent by corporations, and only 10 percent by the Treasury.

Many of these borrowers are prepared to pay much more than the Federal Government. These competitors to some extent are the Government's doing. In its determination to get everyone heavily in debt but itself, the Government paid in part in an unequal competition for funds.

Here are a few suggestions to improve the market for Treasury issues.

Why not issue securities payable in stable dollars to low-income groups? Why not auction securities? Why not exploit the 4–5 year market, of which the Treasury was largely unaware until it was pushed into it by the obtuseness of the Congress? Why not force the Federal Reserve to abandon a bills only policy, which means a conscious attempt to abandon the Government bond market, and besides means that the Federal Reserve disarms itself of a potent weapon?

Why not require the Federal Reserve to finance increased monetary needs through open market operations, which add to the revenue of the Treasury and should increase the market for Government securities by about $600 million a year?

Finally, and most important, why not require financial institutions to put a percentage (varying) of its assets into Government securities? In this manner the Government (the people) would be compensated to some extent for delegating its money-creating authority to the banks.

Surely, if the financial institutions in fact are required to purchase securities in wartimes, they should be required to do so as long as we are in great danger.

Dear money has yielded the largest gains to the least productive though useful members of society, the rentier class. Whereas all personal income rose by 36 percent from 1952 to 1959, interest income rose by 120 percent.

The President feared that the ceiling would force the Treasury to issue excessive amounts of short-term issues which the banks would have to purchase with newly created money.

Despite the forced issue of short-term securities recently, the holdings of Government securities by banks have tumbled—a decline of $8 billion in 1959 or from 30 to 25 percent of assets. Actually, a good part of the Treasury's embarrassment arose in 1959 from a net decline of banks' investments in Treasury issues of $7.8 billion even as Treasury debt rose by $7.9 billion.

In the writer's opinion, the Congress would err badly if it acceded to the President's request. The broad limits within which the Treasury is allowed to saddle the taxpayer with interest charges should remain in the domain of the people's representatives. In this connection, Senators DOUGLAS and ANDERSON have shown that the Treasury advisers on prices to be charged for lending to the Government are those who are to lend the money.

Congress, in return for any concessions, should demand important changes in monetary, debt and fiscal policies. Above all, Congress should not validate a rise of 1–2 percent since 1952 in long-term rates by raising ceilings correspondingly. To do this would be a validation of mistaken policies.

A good part of the improvement in the market rests with the administration. Relaxation of dear money policies and less dependence on monetary policies; more modern therapy for inflation; improved marketing procedures for Government securities; a directive to the Federal Reserve to abandon (1) the bills only policy and (2) expansion only by cutting reserve requirements. Then we shall have less recession, more growth, more public welfare, a more equitable relation between the Government and financial institutions, and a larger and more orderly market for Government securities.

Sergeant York Should Be Assisted by Congress

EXTENSION OF REMARKS

OF

HON. EUGENE SILER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. SILER. Mr. Speaker, certainly one of America's greatest soldiers was and is Sgt. Alvin C. York, of the east Tennessee mountain country. Although not one of my constituents, yet he lives just across the Tennessee border from my own district and I have visited his place and talked with him on one or two occasions. It seems to me if any one man might deserve some special consideration by Congress, that one individual would be the humble but exalted Sergeant York of Tennessee. "The spirit of the Lord came mightily upon him" and then he decimated the enemy for our country in his hour of greatness and in our time of national peril.

Below is an editorial taken from the Los Angeles Examiner of March 29, 1960, and I think it deserves our profound consideration:

IKE, TRUMAN GET BREAK DENIED YORK

(By Vincent X. Flaherty)

Congress passed special laws which permitted Dwight D. Eisenhower, then a five-star general, and President Truman, to skirt the full blast of internal revenue and write their memoirs on a capital-gains basis.

Both of these distinguished Americans cashed in heavily on their book sales. They were able to do this because it was argued neither of these gentlemen was a professional writer, and each had only one story to sell.

Congress speedily passed the favoring laws. Nobody raised a voice against the legislation. Everybody seemed to approve except, probably, many professional bookwriters who are lucky, indeed, if they are able to write one big money-making book in their entire lifetimes.

If Eisenhower and Truman were allowed to hit the literary jackpot, then the same kind of legislation should be passed in favor of another distinguished American—Sgt. Alvin C. York, most famous foot soldier of World War I and winner of the Congressional Medal of Honor.

York, now 75 years old and invalided since 1954, had only one story to sell, too. He isn't a professional writer, either. He sold his story to the movies. Gary Cooper performed a masterful portrayal of York and won an Oscar. The picture was a smash hit.

Eisenhower's and Truman's books combined earned a million dollars. York was paid around $100,000. He is a simple man of the soil, unfamiliar with handling a large sum of money. After all these years he now owes Internal Revenue $85,442, almost as much money as he was paid for his story.

Confined to a wheelchair since suffering a stroke in 1954, York has been unable to take care of his little Tennessee farm. November 18, 1957, the Nashville Tennessean quoted the ailing York as saying "The Government is hounding me to death. They're trying to drive me to the poorhouse."

At the time the story was published, nine Government representatives had prepared a tax case against York and had gathered to give him a hearing. Most of them were sent all the way from Washington, D.C. Because of illness, York was unable to appear. The case is still dragging on.

Last week you probably read about York aplying for social security benefits. He now receives a $60 per month disability pension, plus $10 a month as a winner of the Congressional Medal of Honor. Otherwise, his farm nets him a meager income. I never knew, until I read the story, that Medal of Honor winners get $10 a month. What a tawdry sum to pay for America's loftiest honor.

By golly, I'd like to start a Sgt. Alvin C. York club and try and urge Congress to give the great old soldier the same break it gave Truman and Eisenhower.

International Center in Hawaii for Cultural and Technical Interchange Between the East and the West

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. WIDNALL. Mr. Speaker, it is a great privilege for me to join my distinguished colleague, the Representative from Hawaii [Mr. INOUYE] in sponsoring a bill introduced April 19 to establish an international center in Hawaii for cultural and technical interchange between the East and the West.

The bill is the answer to one of the great needs of our time, and I would like to commend the distinguished senior Senator from Hawaii [Mr. FONG] and his colleagues, the distinguished junior Senator from Hawaii [Mr. LONG]; the distinguished majority leader, the Sen-

ator from Texas [Mr. JOHNSON]; the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN]; the distinguished senior Senator from Wisconsin [Mr. WILEY]; and the distinguished majority whip, the junior Senator from Montana [Mr. MANSFIELD] for their bipartisan efforts that have resulted in the emergence of this legislation.

Enactment of my bill H R. 11823 or one of the companion bills will be the forging of a mighty link in the chain that binds East and West in a bond of friendship, mutual understanding, respect, and cooperation.

Mr. Speaker, President Eisenhower has at once, in this statement of his, interpreted the need and suggested the solution:

I propose to you that while governments discuss the meeting of a few at the summit, universities consider the massive interchange of mutual understanding on the grand plateau of youth. More enduringly than from the deliberations of high councils, I believe mankind will profit when young men and women of all nations and in great numbers study and learn together.

The University of Hawaii, in a most favorable sociological climate of blended ethnic elements, and of which the East-West center is to be a part, already is geared to the role of international interchange and has long served in that capacity.

As the distinguished senior Senator from Hawaii [Mr. FONG] has pointed out, Hawaii's statehood has brought the United States 3,000 miles closer to the people of Asia. The 50th State thus is ideal—from geographical as well as sociological and other points of view—as a location for the East-West center.

Let us lose no time in forging one of the greatest links in the immensely important chain of good will and good deeds that hold together the East and the West in peace and progress.

Address by Chairman Overton Brooks on Government and Outer Space

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a major address delivered by the gentleman from Louisiana [Mr. BROOKS], who is chairman of the Committee on Science and Astronautics, of which I am a member.

Congressman OVERTON BROOKS spoke at the University of California at Los Angeles on Wednesday, April 13, 1960, in the fourth of a series of 12 lectures on "Peacetime Uses of Space." Other speakers in the series include Lt. Gen. J. H. "Jimmy" Doolittle, Lloyd V. Berkner, Ralph J. Cordiner, Dr. Willard F. Libby, Vice Adm. John T. Hayward, and Dr. Edward Teller.

In this distinguished company, Congressman BROOKS delivered a sound and discerning address on "The Place of Government in the Utilization of Space." He pointed out that our space lag, in comparison with the U.S.S.R., resulted from our own past decisions and not from any inability to do things in outer space as well and as fast as the Russians. In fact, he said, we have apparently taken only about half as long as the Russians to develop IRBM's and ICBM's. Congressman BROOKS proposed a number of steps that would enable this country to make the best possible effort in outer space.

I particularly welcome the statements by Congressman BROOKS that new international accommodations will be necessary in the peaceful uses of outer space, and that the space age will increase the incentives and opportunities for nations to live together in peace and harmony.

The address follows:

THE PLACE OF GOVERNMENT IN THE UTILIZATION OF SPACE

I. INTRODUCTION

It is a great pleasure to take part in this exceptional series of lectures on the peacetime uses of space. The University of California has earned the gratitude of all Americans by providing a forum for a distinguished array of speakers to examine in detail the sweeping implications of space technology. Dr. Simon Ramo, who suggested the series, has expressed the hope that public understanding and responsiveness will be enlarged and heightened. All of us who have been honored with the opportunity of speaking here must share that hope and accept its challenge.

My topic is the place of Government in the utilization of space. In dealing with so broad a subject matter, it will be necessary to pick out certain aspects as most suitable to the purposes of the lecture series.

I will begin with the present circumstances of the national space program; the values we can expect it to achieve; its importance to our international position; proposed changes, and historical background.

Then I will take up some problems of space regulation and control. Space law is not only needed, but needed urgently, in view of the facts of space and the participation by other countries in space exploration and research. Later, it will also be necessary to regulate the activities of private enterprise in space. Up to now, all American space activities have been conducted by the National Government. For some time to come, the Government will continue to be the principal space entrepreneur. In a society dedicated to private enterprise, however, it seems inevitable that space will sooner or later be used for private purposes. Space law must anticipate this development.

Finally, I will list some steps that would enable this country to reap the benefits of space technology both sooner and more certainly. Time is short. The opportunities are vast.

II. NEED AND VALUE OF ASTRONAUTICS

The year 1960 began in Washington with a great debate over the national space program. I wish I could tell you that the outcome was a clear set of conclusions. Unhappily, the charges and rebuttals are still flying through the air like ballistic missiles. Many outsiders complain that they feel confused. Some insiders may secretly feel the same way, though they may never admit it. And no wonder. For example, at least four different sets of comparisons of American and Soviet missile strength have appeared in major newspapers of the Nation.

I am not going to try to clear up the missile gap or even the space lag. The roots of the disagreement go deeper. If you want to know about the prospects and problems of using outer space, including our chances of outstripping the U.S.S.R. in the long run, and what our Government can do to help, you need information of a more fundamental kind. Perhaps we should return to fundamentals, and start with the need and value of space flight. The debate in Washington has revealed a difference of opinion on this subject, even within the executive branch of the Government.

People have been dreaming about space travel for thousands of years. Now that we have the means to make the dream come true, however, many people begin to doubt the value of our space program. Is it merely political and psychological—that is, are we going into outer space just for reasons of national prestige and advantage in the cold war? Or is it military—to prevent outer space from being used against us, and to use it, if need be, against our enemies? I would answer that the value of our space program is both psychological and military, in the cold war and the hot war alike, and could be amply justified on either ground, in the perspective of 10 or 20 years. Or we can justify it on the ground that it leads mankind further along the roadway toward his destiny.

More directly, for most of us, the value of our space program is also scientific and economic. If you happen to be a teacher or a housewife, it may be hard to think of outer space as something that affects you. Yet it does just this; and sooner or later, a lot of our prosperity as well as our national security is going to be wrapped up in outer space.

For example, we can look forward to better and cheaper methods of radio communication, weather forecasting and navigation by means of satellites. Already new developments in treating diseases and in analyzing the human anatomy, which will have a direct effect upon human beings, are being developed in our space program. New space exploration may unlock the ancient secrets about the origin and use of the solar system and even of life itself.

Admittedly, such wonders lie in the future. Yet I expect to see some of them myself in the next 10 years or so.

At present, space exploration is first and foremost a new means of scientific research. Naturally, this aspect appeals to the scientific community, both at home and abroad. It is only the beginning.

III. MILITARY AND CIVILIAN USES OF SPACE

From what I have just said, you can see that the benefits we hope to gain in outer space are both military and civilian. We all welcome the fact that the value of space exploration is apparently much greater than just the military possibilities. At the same time, the relationship between the military and civilian space programs has raised problems from the very beginning. The first successful American satellite was launched with a military missile in the hands of military personnel. We thus began to acquire the ability to explore space, in the first place, through military efforts to develop missiles as weapons of war. The U.S.S.R. had the same experience.

All concerned, including our military leaders, agree that space exploration is not solely a military program. Neither can we deny that space has tremendous military significance. The problem, then, is either to separate military and civilian space functions, or to link them in some effective relationship.

As many of you know, this kind of problem is not confined to space alone. It is a perennial problem of government in dealing with new technology. For example, the Atomic Energy Commission was given the job of providing nuclear warheads for mili-

tary missiles. The armed services, however, remained responsible for the means of delivery and for developing and using the military weapon systems. In the field of atomic energy, then, civilian and military functions are not entirely separated. This arrangement has worked well.

The Space Act of 1958 created a new civilian space agency. The result is a system of cordinate civilian-military control, which was recommended by the President in his message to Congress of April 2, 1958. In its final form the act had the full approval and signature of the President.

The civilian space agency was given general authority to plan, direct and conduct aeronautical and space activities. At the same time, the act provided for full cooperation between the civilian agency and the defense establishment. Because civilian and military interests in space are often difficult to separate and unavoidably overlap, machinery was created both for coordination and for overall control. For this purpose the act established a National Aeronautics and Space Council, of which the President has been chairman, and a Civilian-Military Liaison Committee for the day-to-day coordination of civilian and military space activities.

As time has gone on, it has become apparent that neither the Space Council nor the Liaison Committee was used effectively. On the other hand, there is general agreement that the Space Act provides an adequate basic framework for national space activities.

In a recent message to Congress, President Eisenhower declared that—

"A single program embracing military as well as nonmilitary space activities * * * does not exist and is in fact unattainable."

There are certain questions that trouble me on this score: Are the military and civilian space programs really so separate and distinct? How should they be coordinated? How should the space effort be divided between military and civilian agencies? Is there a need for long-term planning, direction and coordination, encompassing both the military and the civilian space programs; and, if so, how should the need be met?

On all these questions there is a clear-cut difference of opinion. For example, in contrast to President Eisenhower's views, General Medaris told the Committee on Science and Astronautics:

"I believe strongly, and feel that it is wholly demonstrable, that the fields of ballistic missilery and space exploration and exploitation are in fact naturally indivisible elements of a single broad technology and that a continuance of divided efforts in this broad area cannot but result in delay, duplication, and waste of both money and manpower.

"From a purely technical viewpoint, there is so little difference between civilian and military space programs that there is no justification for their division and resulting duplication."

In dealing with the various proposals to proceed with space development, the U.S. Government must draw upon the thinking of its ablest leaders—in politics, science and economics. As time moves along and developments indicate shortcomings in the space program, changes in space legislation as well as in the organization of the executive branch may be necessary.

In order to make wise decisions, the Federal Government must determine what priorities should be assigned to the space program; and, as time goes on, this decision will have to be reviewed repeatedly.

President Eisenhower has indicated that in his mind this Government is not engaged in a space race with the U.S.S.R. For example, he was asked whether he felt any sense of urgency in catching up with Russia either in space exploration or in military missiles. He replied (according to the New York Times):

"I am always a little bit amazed at this business of catching up. What you want is enough, a thing that is adequate."

We may naturally ask: "Adequate for what?" Surely not adequate for catching up with Russia.

Again, when he was asked whether our national prestige was at stake in space exploration, he replied:

"Not particularly, no."

At that time he seemed to take issue with the overwhelming, if not unanimous, opinion of vigorous leaders who have come by the hundreds before the committees of Congress declaring that our national prestige was, in fact, in great jeopardy. Every witness who has stated his views on the subject to the Committee on Science and Astronautics has agreed that our status in space development is a major factor in the cold war, and tends to be taken abroad as an indication of our civilian and military prowess.

President Eisenhower also said in his state of the Union message:

"Our effort in space exploration * * * is often mistakenly supposed to be an integral part of defense research and development."

This fits in well with the other statements I have quoted. The view that we are not, or need not be, in a space race with the U.S.S.R. in my opinion, ignores both the effect of space achievements on other nations and the military potential of space technology—which I believe cannot be denied.

And, of course, space developments do have a vital military potential. It is difficult to conceive of any major development in space that may not in time fulfill vital military needs.

Like the automobile and the truck, space vehicles must in time fulfill military needs. All means of communication and conveyance have military potentialities, and having these potentialities, are subject to military use. Nuclear energy in time may be diverted entirely to meet civilian energy requirements, but will continue to have important military applications. Space developments, too, may be devoted to peacetime pursuits and requirements, but they will still have vital military applications which we should not attempt to deny.

Under these circumstances, what is most needed in space research? Surely, basic research is fundamental to the needs of the military as well as to peacetime necessities. It is fundamental, not only in the field of space but also in other types of research and development. For example, the knowledge that we gain from the man-in-space program will apply to the medical treatment of man-on-earth.

All these considerations affect the question whether the space program should be divided among different departments of the Government or should be placed entirely in the NASA. Of course, no one would deny to the military the development of weapons in their field applications.

I know that there are, in this country, people to whom competition is still the "space of life," and who urge that it will make for better progress if basic research is divided among different Government agencies. They argue, naturally, that the need of economy in these new developments will be met by efficiency and reducing unnecessary effort. Of course, no system can avoid some degree of duplication. But competition in pure science is costly in both time and money.

It would be better to have competition among individual scientists, and complete cooperation among the various agencies of Government in our space program. America has neglected basic science. Only in recent years have our leaders given thought to better, more aggressive and more efficient programs for building up our treasures of basic research. In our official program of pure (as contrasted with applied) space science, NASA can be expected to put forth its full effort with a minmum of overlapping and duplication (and without the bickering and back-biting which in the past have muddied our major space efforts).

IV. STATUS AND PROSPECTS OF THE NATIONAL SPACE PROGRAM

At present, the space program is drifting with the winds of expediency. While continuing to deny that our space program involves national prestige, competes with the Soviet program or requires any particular urgency, the present administration is nevertheless devoting more money to the development of this program. Federal funding of the space program must of necessity increase year by year. The demands of NASA will increase, and the space development of the armed services will not diminish for many years.

Only three Polaris submarines were included in the current budget. Without prior warning, Admiral Burke state on February 8 that the Navy will ask for funds to build six more.

The administration had directed a drastic cut in funds requested by the Atomic Energy Commission to develop a nuclear-powered space rocket (Project Rover). As a result, the project was expected to be delayed by a year or more. There are those who say that the delay was not justified on technical grounds. On March 8, 1960, the AEC transferred funds within its own budget to add $11 million to Project Rover.

Naturally, I am pleased that these vital programs will be getting more support. It does seem to me, though, that they should have had adequate support at an earlier date in accordance with an overall plan. Must we proceed by fits and starts—one step forward and two steps back? Surely it is costly and dangerous to play our national space policy by ear.

Suppose we take a longer look ahead. What are the long-term plans for our space program?

On January 28, 1960, the National Aeronautics and Space Administration gave the Committee on Science and Astronautics an estimate of its budget needs for the next 10 years. The total was less than $15 billion, or an average annual rate of some $1.5 billion. Recall that the agency received more than $500 million for this year—its first full year of operation—and is requesting $915 million for fiscal year 1961.

Yet the agency presented its 10-year budget forecast as sufficient to wrest space leadership from the U.S.S.R.

Although it seems to lack sufficient urgency, the 10-year program is technically well thought out. It calls for the flight of a Mercury astronaut (not in orbit) in 1960; an unmanned "hard" landing on the Moon in 1961; planetary probes of Mars or Venus in 1962; and an unmanned "soft" landing on the Moon in 1963.

By the standard of meeting our competition, however, it seems too low, overoptimistic, and unrealistic.

For example, the only big space boosters included in the 10-year program are those already under research and development: the Saturn and the Nova. As you know, our space lag is mainly in boosters. The Saturn is expected to become available by 1965. Four F-1 engines (six in some versions), each producing 1½ million pounds of thrust, will be clustered to make the Nova. The first flight test of the F-1 engine is not scheduled till 1968. No date has been set for completion of the Nova. If the U.S.S.R. develops even bigger boosters in the meantime—before 1970—ours space budget will need to be raised very sharply, or we will fail to reach the goal of catching up. Dr. Wernher

von Braun told my committee: "I consider it quite likely the Russians have a larger rocket than any they have flown so far."

To give another example, manned flight to the moon is not scheduled in the 10-year program until after 1970. Dr. von Braun also told my committee that he "would not be surprised if Russia makes a soft landing on the moon this year."

Can we catch up with the Soviet Union? I believe we can, and I have yet to meet any American who thinks otherwise. Even Khrushchev seems to agree. At the U.S. Fair in Moscow last summer, Khrushchev talked with Dr. John Turkevich, a Princeton professor who speaks fluent Russian. Dr. Turkevich later reported that he said to Khrushchev:

"We will catch up to you and beat you in satellite weight before you surpass us in wheat production" (an astute remark in more ways than one).

Khrushchev replied seriously: "America is a strong and powerful country. If it sets its mind to do something, it will succeed."

V. THE SPACE LAG

Ever since the first Russian satellite was launched in 1957, we have heard loud cries that we were lagging behind the Russians in space. This charge is not to be lightly brushed aside. Qualified witnesses have agreed that the mainstage rocket, or booster, used in Soviet space missions produces from six to eight hundred thousand pounds of thrust. In this country, the largest rocket booster is still the 300,000-pound-thrust Atlas. We are trying to bridge the gap by developing high-energy upper stages as well as bigger boosters. Within a few years, we may have perfected the giant Saturn rocket. In the meantime, however, the U.S.S.R. is not likely to stand still.

According to testimony given to my committee, the Soviet space lead is based primarily on this 2-to-1 superiority in rocket thrust. Greater thrust permits the U.S.S.R. to carry out space missions that would otherwise be impossible. It also shortens leadtime, and increases reliability.

As you all know, the result has been a string of firsts and other exhibitions of Soviet prowess in rocketry. These are not hollow triumphs; they reflect an ability to put men and instruments into orbit, or into deep space, for a variety of purposes. They have also convinced many people around the world of Soviet leadership not only in rocketry but in broad areas of science and technology. While it is clearly a delusion to take rocketry alone as a proof of general scientific progress, the fact that many people do so has affected the world position of the United States.

The impact of Soviet space feats on world opinion has now been recognized by many high officials of the present administration—including Dr. George Kistiakowsky, the President's scientific adviser, who recently said that we "cannot ignore the very real political implications of various spectacular accomplishments in outer space that have come to have symbolic meaning to the world at large."

A month or so earlier, Dr. Kistiakowsky observed that this country is engaged in "a scientific and technological contest with the Soviet Union, which today involves our national prestige, and tomorrow, perhaps, our very survival."

Now, I am not recommending national self-flagellation, though I think a little self-criticism is good for the soul and good for the country. On the contrary, I believe that Soviet superiority in rocket thrust, while undeniably an important index of space capabilities, should be kept in proper perspective.

Whether in space research or military astronautics, the best results are not always obtained with the biggest boosters. Nor can progress in space research be measured by the chronology of spectacular feats. There are too many partial measures which cannot simply be added up—for instance, the variety and types of missiles and space vehicles, the number of successful launchings, instrumentation, reliability, tracking and control devices.

Dr. Homer Newell of the National Aeronautics and Space Administration recently completed a study of American and Soviet space research programs. He concluded that the U.S.S.R. leads us in high-altitude measurements, biological experiments, payload package ejection, deep-space probes, and vehicle technology. On the other hand, he said, the two countries appear to be nearly equal in upper air research and in satellite studies of the earth's environment; and the United States has taken the lead in solar radiation experiments and in studies of the atmosphere up to an altitude of about 200 miles.

The detailed comparisons made by Dr. Newell may be cause for concern but hardly for despair. In fact, he might well have included a list of the very creditable American "firsts" in outer space—for example, putting the first satellite into a polar orbit; putting the first satellite into a (near) circular orbit; the first ejection of capsules from satellites; and the first use of a satellite for communications relay. It is widely believed, furthermore, that we have more than held our own in guidance, miniaturization, and data recovery. There is even some feeling, though it is hard to verify, that we have acquired more useful scientific data.

I particularly wish to point out that our space lag, in comparison with the U.S.S.R., is the result of conscious choices.

It is not the result of inability to do things in outer space as well and as fast as the Russians. In fact, the Russians have developed more powerful rockets than ours because they began their development 5 or 6 years earlier.

We did not give high priority to ballistic missiles until 1954, when we first knew that we could make light, small nuclear warheads. Government witnesses told my committee that we made a choice at that time between lighter warheads and more powerful rockets. We chose the lighter warheads. Why could we not pursue both courses, and make both the lighter warheads and the more powerful rockets? If we had done so, according to expert testimony, we might not now be trailing the Russians in outer space.

Is it possible that the space and missile programs have been tailored to fit budgetary preconceptions?

In August of 1955, Dr. von Braun told a high-level meeting that he had the hardware to put the world's first satellite into orbit. He was not allowed to proceed.

In 1956, General Medaris received an order from Washington, instructing him not to let the Jupiter C go into orbit. At that time, General Medaris and his scientific colleagues were about to test-fire the Jupiter C. They believed it could be put into orbit at will.

Remember, the first Russian satellite was not launched until October 1957.

Yet, as you know, our Thor and Jupiter IRBM's are now available in quantity, and our Atlas ICBM's became operational at about the same time as their Russian counterparts. Considering the dates when we began our programs, it appears that we developed IRBM's and ICBM's in about half as much time as the Russians.

This is an accomplishment in which we can all take pride. But it was made necessary by our own earlier decisions not to develop large rocket boosters and not to engage in a satellite program. The same decisions have hampered our efforts in outer space up to this very day.

VI. SPACE LAW AND INTERNATIONAL COOPERATION

So far, I have been talking about our own national space program, what it means to us, and how it seems to be progressing. Now I should like to turn for a moment to the less evident but no less vital problems of space regulation and control.

There is a need now to begin work on the establishment of general space law. Man's ability to explore and use outer space is developing rapidly. Not only the United States and the U.S.S.R. but many other nations will soon be in the game. Any delay in creating applicable rules of international law may make our later efforts more difficult.

The need for space law is more than a mere matter of traffic control, important though that may be. Perhaps it would help to give a few examples.

A pressing problem of space law concerns responsibility for the effects caused by the return of spacecraft to earth. In addition to the need for international agreements dealing with liability for the resulting injury or damage, it may well be necessary to change domestic law. At present, it is by no means certain that an American citizen harmed by an American space vehicle could recover damages in an action against the Government.

Another problem is the allocation of radio frequencies for space use. Frequencies have been used in violation of treaty provisions, and transmissions have continued, interfering with normal communications, long after their purpose had been served. Looking to the future, we can see a coming "war" of the radio frequency spectrum. In effect, the spectrum is a scarce natural resource, already overloaded, which will be required to carry more and more traffic. The growing overload will come not only from military but from scientific and commercial use. Rapid communications will be needed among an increasing number of points for production, transportation, and other economic activities. In outer space, unless agreement is reached on frequency allocations, the information acquired by difficult and costly experiments may well be lost.

To give another example, scientists are beseeching their governments to help in keeping space clean. At the first international meeting on space science, held at Nice in January of this year, great concern was expressed over the dangers of contaminating other planets with living organisms from the earth and of contaminating the earth if space vehicles return from other planets. In H. G. Wells' novel, "War of the Worlds," man himself could not overcome the invaders from Mars, but man's diseases did. The dangers of interplanetary contamination are far-reaching and not at all fanciful. They are certainly a proper subject for space law.

It is apparent that new international accommodations will be necessary in the peaceful uses of outer space. Without trying to make a complete list, we can see now that conflicts may arise, unless an understanding is reached, in a number of fields including the extension of national sovereignty into outer space, interference among space systems and rivalry on the moon and the planets.

There is a more positive side to the novel forms of international cooperation which are likely if not certain to develop as a result. It is true that the use of outer space may create new international problems and tensions. We should not forget, however, that it also increases the incentives and opportunities for nations to live together in peace and harmony.

I will not trespass any further on the domain of the space lawyers except to repeat that their work and its practical applications are of great concern to us all. In order to benefit from the full fruits of space exploration, I believe, we must proceed at once to develop the principles of space law, and try to reach early agreement on the scientific and commercial uses of space.

VII. CONCLUSIONS

To me, the most hopeful omen of our future space progress is the growth of public understanding and support. Two years ago, there were many doubters. Today, most informed people in this country seem convinced of the necessity for going ahead in space at urgent speed.

Let me suggest some definite steps that would enable us to make the best possible effort. My suggestions will not be startling. In fact, I believe that each of these steps is self-evident and that most of you will find yourselves in agreement that each should be taken.

First, recognize that we are engaged in a long-run space race with the U.S.S.R., and make up our minds to compete.

I am speaking, of course, about the scientific and peaceful investigation of outer space. In the field of military missiles, however, there are two matters that deserve special mention: defense against the ICBM and the Polaris program.

An adequate means of defense against ICBM's has not yet been developed. We should not rest until it has been perfected.

Polaris is not just another missile system. It is a different kind of weapon—an almost invulnerable means of inevitable retaliation, if it can be made ready in time. The Minuteman, with mobility made possible by trucks and rail transportation, has a finite ability to land nuclear warheads at the end of an 8,000-mile range, doubtless within a mile of its target, as the Russians claim for themselves.

To close the missile gap by matching the U.S.S.R. missile for missile would be costly, protracted, and perhaps unprofitable at this time; to leap it with Polaris and Minuteman could transform our whole strategic situation. To develop Nike-Zeus as a sure, effective means of stopping nuclear warheads launched from 8,000 miles away would give us in America the possibility of returning to a posture of composure which is badly needed.

Second, emphasize large rocket boosters and high-energy upper stages, including the possibilities of nuclear and ion propulsion.

Third, improve the management of our military and civilian space programs. I will not try to predict what precise form of organization will finally emerge. There is a crying need, however, for comprehensive long-range planning, clear lines of authority, vigorous leadership, and continuity of effort.

Finally, further emphasize basic and supporting research and scientific training—the indispensable reservoir on which all our future progress must depend.

VIII. EPILOGUE

In conclusion, I want to say that we are now crossing the threshold into a new and expanding era of human development—the space age. It is perhaps the most interesting and exciting age through which mankind has ever passed. It is an age filled with tremendous developments, discoveries, and changes, the character of which we cannot at this hour even predict.

At the inception of this entirely new era, the Government must take the leadership in space. As time moves on and the age of space takes form and becomes more sharply focused, activity will tend to move from complete Federal control and direction into the hands of private commerce and enterprise. As it grows, space will become a human activity, felt in the channels of commerce, industry, and even in the normal and routine activities of everyday home life. We today are laying the basis for life in this new age.

Upward Spiral in Cost of Natural Gas

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. WOLF. Mr. Speaker, consistent with my policy to inform the people of the unneeded rising prices of natural gas companies, I would like to bring to my colleagues' attention the following letters which I have just received:

McMANUS & McMANUS,
Keokuk, Iowa, April 18, 1960.

Hon. LEONARD G. WOLF,
U.S. Representative from Iowa,
House Office Building, Washington, D.C.

DEAR LEN: Because of the great public concern in Iowa arising from the continual upward spiral in cost of natural gas charged by pipeline companies, I thought you might be interested in the enclosed comments of Keokuk Gas Service Co. relative thereto. If you have any comments or suggestions, Mr. W. W. Mullikin, manager of Keokuk Gas Service Co., 428 Main Street, Keokuk, Iowa, would deeply appreciate them.

With best personal regards, I am,

Sincerely,

NICK McMANUS.
By E. J. McMANUS.

KEOKUK GAS SERVICE CO.,
Keokuk, Iowa, April 18, 1960.

FEDERAL POWER COMMISSION,
Washington, D.C.

(Attention: Mr. G. H. Gutridge, Secretary.)

DEAR SIRS: In reply to your communication of April 8 regarding the above matter, we submit for your consideration the following comments expressing our position in regard to the proposed change in rates for the sale of natural gas by Michigan Wisconsin.

The undersigned during the months of May, June and July, 1959, appeared as an intervenor during the Power Commission's hearings in docket No. G-17512. Involved in those hearings was the question of changing the form of the rate to be charged distribution customers of Michigan, Wisconsin from a flat rate to a two-part demand and commodity rate. This intervenor strenuously objected to the proposed change in rate form. Essentially we resisted the change in rate form because it alone would cause such an increase in cost of gas as to reduce our company's net income before taxes by 5 percent. However, the Presiding Examiner in Docket No. G-17512 in his decision, which was subsequently affirmed by the commission, permitted Michigan Wisconsin to change the form of its rate.

Now, pursuant to the commission's order in Docket Nos. G-18313 et al, Michigan Wisconsin has submitted its proposed change in the level of its rates from $2.62 demand and 24 cents commodity, which is presently being collected under bond pending the Commission's approval, to $3.50 demand and 26 cents commodity. We strenuously object to this proposed increase in rate level because, if permitted, it will further reduce the net revenues before taxes of our company by at least an additional 10 percent. Thus by the two steps of changing the form and level of its rates Michigan Wisconsin will reduce our company's net income by at least 15 percent. If we are to continue in the business of distributing gas to our 3,700 customers in and about Keokuk and parts of Lee County, Iowa, this increase must be passed on to them.

We are in a peculiar position in the State of Iowa in that our State has no public utility commission empowered to fix rates. Each city council in the upwards of 900 cities and towns in our State are the ratemaking bodies. They are naturally antagonistic toward any increase in the retail cost of natural gas to the citizens under their jurisdiction and we are in complete agreement with them on this subject. We are of the opinion that, if the proposed increase is allowed, our competitive position with respect to other fuels will be jeopardized to such an extent that our natural gas customers will be forced to turn to our competitors and thus eliminate our chance of economic survival. Natural gas will be priced out of our fuel market.

In the event the Commission sees fit to permit Michigan-Wisconsin to raise its rate level as proposed, we submit that an equitable system of rate zones be established. This would permit those distribution customers of Michigan-Wisconsin as well as the public which they serve to reap a small measure of economic benefit from their geographic location with respect to the source of Michigan-Wisconsin's gas supply. It seems unfair to us and contrary to the public interest that our customers should be paying the cost of transmitting gas to existing customers as well as prospective customers under Michigan-Wisconsin's expansion program who are not located in as favorable a geographic position with respect to the source of supply.

In conclusion we submit that the proposed change in the level of Michigan-Wisconsin's rates is not only economically unfair to us, but it's patently contrary to the public interest, convenience, and necessity.

Respectfully submitted.

W. W. MUCEIBIN,
Manager.

Congress Should Enact an Educational-Rights Bill

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. BAILEY. Mr. Speaker, permit me to direct the attention of our colleagues to the following timely editorial which appeared in the April 14, 1960, issue of the New York Times:

EDUCATIONAL RIGHTS

After acting on the voting-rights bill, it is important that the House turn its attention to another kind of civil rights measure. This is what might well be called an educational rights bill, one that would recognize the Federal Government's inescapable responsibility in the present crisis in American schools.

Early in February the Senate passed a bill providing $1.8 billion on a matching basis over a 2-year period for teachers' salaries or school construction or both. One of the great advantages of this measure is that it gives the individual States a choice in spending the money; one of its great disadvantages is that in the light of the administration's narrow view of school needs the President would be almost sure to veto it. To avoid such a fate, the House Education and Labor Committee last month reported a bill providing

half the amount of the Senate proposal, stretching it out over a 3-year period, and limiting it to matching grants for school construction only, with an administration-approved bond-retirement plan thrown in for good measure.

The administration, backed by the usual conservatice-Republican, southern-Democratic coalition, has shown so little grasp of the magnitude and the urgency of the school problem in the United States that even if Congress grants any aid at all, it is likely to be inadequate. Yet it is difficult to believe that this issue can once again be shoved aside, as it has been for nearly a decade. It ranks in importance with civil rights and national defense—in fact it is part of national defense.

"The public schools in the United States * * * are ill-staffed, ill-equipped and ill-housed to provide the kind of excellence in education which the era demands * * *," said the Public Education Association of this city in a recent statement. The nationwide shortage of public school teachers is 135,000 (average annual salary $5,160); the nationwide shortage of classrooms is about 130,000; within the decade, school enrollments will increase by 25 percent, and expenditures "sufficient merely to maintain existing standards" will jump even more sharply. It is no longer simply to improve the quality of education that Federal support is vital; it is necessary to prevent a decline—and it is necessary now.

Patriots Live To Slay Tyranny

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an excellent article written by Richard Cardinal Cushing, of Boston, which appeared in the April 16, 1960 edition of the Pilot, of Boston, Mass.:

PATRIOTS LIVE TO SLAY TYRANNY

(By Richard Cardinal Cushing)

On April 19, 1960, we commemorate the 185th anniversary of the Battle of Lexington and Concord. On this day of April in 1775 the siege of Boston began; the American Revolution began; freedom as we so gratefully know it in America began.

Familiar and noble names shine out of the stirring story of the overwhelmingly unequal struggle into which the brave leaders of the colony of Massachusetts plunged when they saw their inheritance of freedom threatened, their human rights in peril. Names which sound like a litany as they fall upon our ears: John Hancock, Samuel Adams, John Adams, Dr. Joseph Warren, Paul Revere, William Dawes. There are other names with equal claim upon our perpetual gratitude, names less well remembered but of equal distinction wherever the tocsin of liberty rings: names such as that of Benjamin Austin, a man long in public life and honored with responsible offices; Nathaniel Barber, no officeholder but notably an influential citizen; David Jeffries, town treasurer of Boston and earnest propagandist of ideas which later gave life to our Declaration of Independence; Henry Hill, a man of wealth, greatly beloved for his generosity and his rectitude; William Molyneaux, a successful merchant and protagonist in the drama upon whose prelude the 19th day of April raised the curtain.

Farmers left their cattle and their lands and crowded down the roads and lanes of this quiet countryside—embattled farmers, nameless on the pages of the ordinary history book, each carrying his simple weapon and wearing his signs of embattlement as never more proudly have been worn the insignia of high degree.

Mechanics were there, too—Gibbons Sharpe, whose name we know, and many whose names have been forgotten but whose measureless services in the furtherance of liberty are indelible on the scrolls of time. The mechanics were no newcomers on the scene; they had been watching the Tories and the British troops for months, comparing notes and sharing information when their clubs held their meetings or whenever they came together at the Green Dragon Tavern. It is to such vigilance as theirs that Lord Percy, second in command to General Gates, paid grudging tribute when on the afternoon of April 18 he reported to his general that the Americans already knew that the British troops were to move that night and to strike at Concord.

AIM TO PRESERVE

All these men of 1775 were sincere, devoted, and ready for the sacrifice of life, if need be. Their devotion and sincerity were replete with activity and before they should lay down their lives they meant to fill them with every sort of peacetime maneuver which might accomplish their purpose short of war. There was no room in their thinking for anarchy nor for any of the points of view to which the revolutionists of our century have given expression. These patriots did not aim to overturn but to preserve. To them, as Richard Frothingham wrote in his "Siege of Boston" freedom did not appear as the instigator of license but as the protector of social order and the guardian genius of commercial enterprise and moral progress.

There are writers who toss off the engagement at Lexington and Concord as a skirmish. That is as it appears to be when the number of men involved and the maneuvering of the opposing forces are compared with the great and decisive battles of history. Of the Americans, only 49 were killed, 39 wounded, and 5 missing; of the British, 73 were killed, 174 wounded, and 26 missing. These are insignificant figures placed alongside the casualties of modern warfare. But there was nothing of insignificance in the action itself. Even from the military angle, this so-called skirmish made a contribution, for it confirmed at the start that the Indian style of fighting—firing from behind trees and stone walls—was far superior for the locale and the era than was fighting in closed ranks as the European system of the age decreed, and this valuable military lesson was illustrated time and again up to the very surrender at Yorktown.

There was, however, much more than military victory gained in Lexington and Concord. There was a moral victory from which derived the supreme courage which union in a great cause engenders. There was the respect for this courage which the British recognized, to which any adversary perforce pays tribute. There was, one may well say, the birth of our Nation, for along the road from Concord to Cambridge, as the British soldiers scampered in pell-mell flight, if not in actual rout, was born the United States of America, for which we are, one and all, ready to die in order that its freedom may be preserved.

No nation in all time has been born out of so little self-seeking by the individual, out of greater devotion to the common good. Those informal troops embarked that April night on a war so long, so filled with difficulties as to have chilled all but those in whose veins flowed the warm blood of a holy purpose.

OPEN DOOR

Success attended their efforts and the Nation which in 1783 rewarded their sufferings, their sacrifices and the unquenchable fire of their dreams was a new and glorious kind of Nation. Geographically it was a small Nation but the nobility of its purpose and promise inflamed the pioneer to take his little bundle of household goods, his wife and his children and make his way over harsh and dangerous country to open up frontiers and eventually to spread our civilization to the edge of the Pacific and beyond.

As soon as it became apparent that our resources afforded enough and more than enough for all, our Nation opened up its doors and called to the oppressed of other lands to come and share our blessings, to invest their labor and their love in an ever growing America. Within the very lifetime of those who fought at Concord and Lexington the political institutions which should insure justice and guard the natural rights of man were firmly planted, functioning and flourishing. The Revolution had succeeded in the new world and had received the blessing of the mother countries beyond the sea.

In the years since our revolution we have fought other wars—wars which the generation involved believed to be necessary for the preservation of our heritage. In our own century we have fought two frightful wars, both of them waged with a high degree of unselfish devotion. In 1917 the boys went out—tens of thousands of them to their death—to make the world safe for democracy, and those who came back were, poor fellows, a disillusioned generation. In 1941 fathers saw sons shouldering rifles and shipping off to unknown lands to fight again in a war to abolish tyranny and to preserve what we now call the freedoms of the Western World. Theirs was a new kind of war, different in environments, different in sort of battle, and at the end, different in the mode of peace. But these differences were not of their own making, and in their hearts and minds was the same devotion to freedom that had been so herocially exemplified in 1775 and in all the wars between.

BATTLE FOR MINDS

What about us—we who must fight the battle of the present—call it, as you will, the cold war or world war III. Our war is more intensely total war than ever World War II. It is being waged, seemingly not for territory but for trade and, much more devastatingly, for the conquest of the mind. In satellite states freedom has long since been lost as the Communist conspiracy has closed in, terrified men's souls, weaken their wills, and set up a minority dictatorship that holds in bondage entire nations, nations scarcely less devoted to freedom than were our own men of 1775.

Many of these nations are Christian nations. In their faith in the one true God and their desire to follow Christ in thought and act they find the meaning of their lives. They cannot without courting the concentration camp stand up in fervent affirmation of their faith. They cannot proclaim their belief in God or declare, as the delegates from our Massachusetts counties of Essex and Worcester and Middlesex declared in Faneuil Hall, the 25th of August 1774, that they stand for "life, liberty, and the means of sustenance by the Grace of Heaven." But they know, no less than our delegates of 1774 knew, that those who fight tyranny are fighting God's own battle against the powers of evil and that the obligation they have of enlisting in the war is twofold: as patriotic citizens of their various enslaved nations and as devoted children of God.

The foe hides behind no subterfuge: he boldly proclaims that he is anti-God and that the purposes of all his tyranny, the final goal of Soviet communism is the ob-

ligation of the idea of God from the hearts and minds of men, to be accomplished by whatever degrees of force and persecution each case may call for.

It is the atheistic nihilism of communism and its adherence to the interpretation of human society in accordance with the tenets of dialetical materialism which make it impossible for a nation like ours whose motto proclaims our trust in God to have any confidence in dealing with Soviet Russia, for we know that to its rulers the vocabulary we use—such as freedom, liberty, the rights of man—can have no like significance, no concurrent meaning with our own. The very source of Russia's being impels it to use fair means or foul to create a regime on earth in which totalitarianism will crush beneath its turgid mass all the noble concepts which we hold dear, all the great hope of mankind for which the men whose heroism we celebrate today fought and gave up their lives, if needed.

NO COMMON GROUND

In the unshakeable resolution of the leaders of Communism to hold fast to their atheism and dialectical materialism many of our thinkers of today find their reason to despair of any achievement at the coming summit meetings. They see no common ground. They believe that Russia looks forward to this meeting nothing more than another opportunity to advance toward a Red Germany and a further Sovietized world.

What happens when Russia takes over a country? It crushes the heart of the people, it forces them to abandon the principles which the nation has held dear and to eradicate the institutions through which they expressed their faith in God. We have seen it again and again. We saw it in the martyrdom of Bishop Francis Xavier Ford. We saw it in the persecution of the Catholic Bishop of Shanghai, the noble Ignatius Kung Pin-mei, who was sentenced to life imprisonment because he refused to break his ties with the Holy See. In Yugoslavia Bishop Franjo Cekeda is under arrest on the same sort of framed charges as were brought against Cardinal Stepinac, of blessed memory, and in Hungary, Cardinal Mindszenty, the beloved of his people is at present safe only through the good offices of the American Government.

I am sure that those of you acquainted with the story of your churches and synagogues in these Red-dominated countries can match this list of leaders gone to their death or languishing in prison, and that all of us, Protestant, Jew and Catholic can unfurl long lists of white-robed martyrs whose names do not reach the columns of our press but which, nevertheless, shine as brightly for those of us for whom they carried the torch.

RED CHINA

How far are we, the great majority of American citizens, responsible for Russia's grave crimes by our failure to make our voices heard and our position clear in one major matter after another on the international scene? What are we doing now in this matter of recognition of Red China and its admission into the United Nations? We cannot be complacent about it and we cannot plead ignorance. In its 17th annual convention, held in December 1959 in New York, the Communist Party of the United States adopted the following resolution: to advance the cause of peace and progress, by ending the cold war, by furthering the policy of peaceful coexistence with peaceful relations, by establishing the recognition of normal relations with People's China. Such news as was given to the press pointed to a new deluge of demands for the recognition of Red China and the seating of the Peiping regime in the United Nations—all this despite the foul crimes committed by that regime against religion, against God.

The day that Red China is seated in the United Nations will mark another milestone in the weakening of the machinery for world peace. The United Nations is already beset with difficulties due to the Soviet use of the veto, and will certainly be well on its way to the status of a Communist preserve, if Red China—whose leaders are dedicated to the worldwide triumph of Marxist Leninism—is seated on the Security Council.

I am not a pessimist. I do not despair of the intelligence, the perseverance, the love of liberty or the patriotism of the American people. I do not believe that the American of 1960 means to fail the men who died at Lexington, nor the generations whose devotion and service have built this country from a seaboard colony to a great nation. I do not believe that America of today will betray the armies which even in our day have died that freemen may not be denied their freedom. We possess among us the moral and intellectual force which inspired Adams and the rest. One thing alone we seem to have lost: their singlemindedness in the face of danger, their wholehearted concentration on the commonweal.

If we as a people were fully alerted, every citizen with sufficient schooling to understand the trend of events would be aware of all that has transpired in Germany since the close of World War II. He would know that Chancelor Adenauer is strong in his purpose to accomplish. He would have noted in the press the Communist-directed effort to discredit him as a neo-Nazi. He would watch with close attention the reception of the delegation of the National Maritime Union now en route to Moscow.

He would rejoice in the two great American labor parties who have rejected trade union exchanges with the slave labor system of Soviet Russia. All these things he would ponder, as Sam Adams pondered the future possibilities of a republic composed of states united under a wise and noble constitution. He would not be at the mercy of radio or TV commentators, of chance opinions however vehemently expressed. His mind would be informed, his opinion served by constant and careful reading, by thought and discussion, by a resolution that as a citizen he would help preserve the America he loved, with a vigilance unsurpassed even by those who fashioned it nearly 200 years ago.

INFLUENCING YOUTH

The plans of the Communist Party are plain for all to read, at least those plans whose publicity they hope will advance their cause. We know that the party in the United States adopted in their last convention the resolution to launch a 2-month ideological campaign from March 1 to this coming May Day on the affairs of youth, to stir young men up against compulsory ROTC, and against loyalty oaths for Federal scholarships. We are forewarned of the infiltration of youth organizations, of this frank approach to subversion of our Government, subversion at least in spirit.

What are our opinions on loyalty oaths? How many young people do we listen to that we may discover the source of their ideas? Are we for or against ideas on purely emotional grounds or do we care enough to endeavor to reach a well considered stand, and then to act upon it in the many ways at our command as members of American society?

We have watched Soviet Russia ruin the beautiful culture that was once Europe, cleave it apart, shatter it, intimidate it, enslave it. Only a little remains in comparative freedom, and within the territories of that little the Communist Parties are hacking away in the hope that soon the supergovernment of Moscow will envelop all. Here in the United States the party is struggling to recover its lost prestige. Again it is working in university circles, in youth organizations of many sorts, in discussion clubs on and off campuses. A new society called "Advance," secret in membership, has as its objective—so it is said—to smuggle their members into larger organizations and to spread their ideas everywhere. New impetus is being given to the areas of mass work—to labor, to the Negro, to the young intellectuals.

There are few, if any, Americans—if we except those tarred with the Communist brush—who would not lay down their lives for our country. We may lack the vigilance and the earnestness of the men of 1775, but we do not lack their patriotism nor are we surpassed by them in love of country or in appreciation of our political blessings.

As we honor those men we recall the comment of Lord Percy made on April 20, 1775, "these rebels are determined to go through with the business of winning freedom." Let us of 1960 be no less eager to go through with the business of preserving the freedom they won, no less ready to fight for it with every fiber of our being.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Strategy for the Dollar

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1960

Mr. ENGLE. Mr. President, the April 1960 issue of the Foreign Affairs magazine contains a thoughtful article by Mr. Richard Gardner on the American balance of payments problem, entitled "Strategy for the Dollar." As I pointed out in a recent speech on the floor of the Senate, "the present trade gap is as dangerous to the health of our national economy as the ICBM gap is to the defense of our national security." Mr. Gardner presents a series of practical steps that could be taken to close this gap in a manner that both meets American domestic economic policy needs and also provides for a healthier international economic trade pattern. While I do not agree with several of the suggestions made for ending the present drain of American dollars, I do believe that this article makes a valuable contribution to current economic thinking on this problem. I ask unanimous consent that it be printed in the Appendix of the RECORD. I am advised by the Government printer that the insertion will run beyond the two pages permitted, and will make approximately 3¼ pages, at a cost of $263.25. I ask unanimous consent that the matter may be inserted in the RECORD notwithstanding the additional cost.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STRATEGY FOR THE DOLLAR

(By Richard N. Gardner)

The most important new influence on American policy to emerge during the past year came from the most unexpected quarter. For more than a decade we had been worrying about the dollar shortage—the supposedly persistent tendency of the United States to run a surplus in its balance of payments. But sometime last summer we woke up to the startling fact that the United States was running a large payments deficit.

During the years 1958 and 1959 the excess of our foreign payments over receipts totaled some $7 billion. This deficit was financed by a $4 billion increase in foreign holdings of dollars and a $3 billion reduction in the U.S. stock of gold. As these lines are written, we continue to run a deficit, though at a somewhat reduced rate, and later this year foreign holdings of dollars will surpass our holdings of gold for the first time in American history.

There is no question about the ability of the United States to close the deficit in its balance of payments. We could strike a balance by drastically curtailing foreign military spending and economic aid, restricting our imports and our private foreign investment, or painfully deflating our domestic economy. But these measures would solve our balance of payments problem at the cost of our security and prosperity and that of the entire free world.

The real question is not whether we can reduce our deficit but how much we ought to reduce it and how we can make this reduction without sacrificing policies which are vital for the achievement of our national aims.

In the first excited reaction to the turnabout in our payments position we seemed in some danger of upsetting vital foreign policy programs. The administration started to tie our foreign aid spending to purchases in the United States. It was reported to be contemplating a drastic reduction in our military establishment abroad and deep cuts in aid to less developed countries. It was under heavy pressure to modify its moderately liberal trade policy. Except for the decision to put a "Buy American" label on Development Loan Fund spending, however, we weathered the first winter of concern with the payments deficit without overturning any important elements in our present foreign policy.

The threat to existing policies will recur, of course, if we fail to reduce the deficit below the high level of 1958–59. But this is not the only danger. Preoccupation with our payments deficit may smother new and creative policies now struggling to be born. To promote our national objectives in the decade of the 1960's we shall need bold programs to reduce our import restrictions and increase our aid to less developed countries. Such programs are unlikely to be adopted if we continue to run large payments deficits.

II

Much of the discussion about our payments deficit has assumed that our national interest would be served by eliminating it as soon as possible. Unfortunately, the problem is not so simple. The payments question has to be looked at not solely from the U.S. viewpoint but from the viewpoint of the free world as a whole.

In order to have an expanding free-world economy, monetary reserves must grow at about the same rate as international trade. In the 1950's, the free world's gold supply grew only one-third as rapidly as free-world trade. The rest of the reserve needs of the free world outside the United States were met from the deficit in the U.S. balance of payments. During the decade as a whole we fed $14 billion in reserves to the rest of the world, $4 billion in the form of gold, $10 billion in the form of increased foreign holdings of dollars. The dollar thus became the world's principal reserve currency. Without this supplement to liquidity the substantial economic achievements of the 1950's would never have taken place.

It would be unwise for the United States to seek to solve the liquidity problem all alone during the next decade by running deficits of the present size. Such large and recurring deficits could eventually destroy foreign confidence in the dollar and trigger a massive conversion of dollars into gold. This would force us to trim our foreign payments drastically through restrictive measures destructive of free-world security and growth. Yet if we eliminate our deficit entirely, or convert it into a surplus, we leave the free world short of reserves it desperately needs. The answer to this dilemma will not be found in the International Monetary Fund in its present form, since the national quotas are not large enough to cover future liquidity requirements and are not regarded by member countries, in any event, as reserves. In the years ahead, therefore, we shall have to find some new multilateral solution to the liquidity problem. Whether the answer lies in converting the Fund into a world central bank as proposed by Dr. Robert Triffin, or in some other institutional innovation, is beyond the scope of this article.

It may take several years to find a generally acceptable multilateral solution to the free world's liquidity problem. What do we do in the meantime? Probably the best compromise is for the United States to aim at very moderate deficits in the years ahead, deficits on the average of about $1 to $1.5 billion a year. This would feed the free world's reserves much less rapidly than we have done during the last 2 years, but about as rapidly as we did during the 1950's as a whole.

Annual average deficits of $1 to $1.5 billion would not impose an intolerable strain on the United States. Various measures are suggested later which could minimize the risks involved and insure that the deficits were financed mainly through the accumulation of foreign dollar holdings rather than withdrawals of gold. Although it may not serve the interests of private holders to accumulate dollar balances at interest rates low enough to support our domestic economic expansion, the foreign governments and central banks which are the only holders in a position to demand gold and start a run on the dollar must act on larger economic and political considerations. They have every reason to agree to small annual increases in their dollar balances, especially since there is no immediately available alternative for increasing free world reserves. They would go a long way to avoid weakening the very currency in which they hold a substantial portion of their reserves. Moreover, the United States, as the biggest importer and the biggest supplier of funds for free world growth and defense, has unequalled sanctions at its disposal to induce the cooperation of the principal foreign dollar holders. These countries are not likely to take any action which would embarrass or weaken the very country on which they most depend for their prosperity and defense.

III

Just how strong is the tendency toward imbalance in U.S. payments? Will a reduction in our deficit take place as a result of natural economic forces or will a balance be increasingly difficult to achieve?

To begin with, the events of the postwar years should warn us against jumping to the conclusion that an imbalance in world payments is permanent. Only a few years ago a considerable body of expert opinion accepted as inevitable a tendency for the United States to run persistent surpluses in its accounts with the rest of the world. As late as 1957 Sir Geoffrey Crowther, former editor of the Economist, proudly reminded a Harvard audience that for 20 years he had preached the doctrine of "a permanent and organic shortage of dollars; the more time passes the more convinced do I become that I am right. It is difficult to believe that there can ever have been another case of a

country where the demand of the rest of the world for its products was so urgent and its demand for the products of the rest of the world so indifferent." [1]

Where the experts talked of dollar shortage a few years ago they now debate the dollar glut. What has happened in the interim? To begin with, our definition of the problem has changed. We used to measure the imblance in world payments in terms of our commercial surplus minus foreign investment, on the grounds that our oversea military spending was temporary and foreign aid was a balancing item to finance the surplus. Today we no longer exclude foreign aid and military spending in measuring the imbalance in world payments. Some time during the last few years we came to regard these as relatively permanent items necessary to finance the growth and defense of the free world. With this recognition the problem changed from how the rest of the world could finance our troublesome commercial surplus to how the United States could generate a sufficient commercial surplus to finance payments for free-world growth and defense. Accordingly we now measure imbalance in world trade by our payments deficit—the extent to which we lose gold and foreigners accumulate dollar balances.

This, of course, is only part of the story. The size of the U.S. deficit has increased. It was some $2 billion larger in the period 1958–59 than 1953–56. The increase in the deficit resulted almost entirely from a decline in the surplus of our merchandise exports over merchandise imports. This was due, in part, to some temporary adverse factors—lagging business recovery abroad compared to recovery here; special circumstances hampering key exports like cotton and civilian aircraft; and the steel strike. The elimination of these temporary factors is expected to result in a substantial increase in our merchandise surplus in 1960 and a reduction in our payments deficit this year to less than $3 billion.

The drop in our commercial surplus durin 1958–59 led some people to conclude that the United States has lost its ability to compete—that "we have priced ourselves out of world markets." Plausible as it seems on the surface, this theory is supported by very little evidence. Wage rates, wholesale prices, and consumer prices in the United States have all increased rather less in recent years than in Britain and France and at about the same rate as in Germany, Italy, and Japan. To be sure, our prices have risen more rapidly than prices elsewhere on certain commodities (some steel products, automobiles, and farm products under price supports). But there is no evidence of a substantial increase of our average export prices relative to the average export prices of our principal competitors.

We are facing keener competition in world markets than a few years ago, but price changes are not primarily responsible. Thanks in large part to the Marshall plan and our other postwar aid programs, Europe and Japan have markedly increased their capacity to produce and deliver goods at existing prices—goods of high quality and new kinds of goods in anticipation of changing consumer demands. We have also promoted competition for our exports through the establishment by American companies of branches and subsidiaries overseas.

Yet despite this encouragement of foreign competition by foreign aid and investment, our ability to compete in world markets remains fundamentally unimpaired. Recent studies by the U.S. Department of Commerce confirm that the recent drop in U.S. exports reflected difficulties—some temporary—in three or four big items and not a loss of markets all along the line.[2] Our share in world exports remained virtually unchanged between 1950 and 1958. Moreover, as of today, we have a larger share in world exports of manufacturers than we had before the Second World War.

Accompanying the drop in merhcandise exports has been a substantial rise in merchandise imports. As in the case of exports, this increase can probably be explained less by price changes than by the growing capacity of our industrial competitors to deliver the goods. Probably there has also been some shift in American consumer demand in favor of imports as a result of higher income levels, greater sophistication in taste, and increased tourism and business travel. Yet even in 1959 imports barely exceeded 3 percent of our gross national product—the share they have held with remarkable consistency over the last 30 years except during the war and immediate postwar period.

Even if we leave aside the temporary circumstances which made our payments balance particularly adverse in 1958 and 1959, our present payments for world growth and defense still overbalance our commerial surplus by around $3 billion a year. Our problem is to bring this deficit down to the $1 to $1.5 billion target outlined earlier by increasing our commercial surplus or reducing our foreign payments and doing so without impairing policies necessary for the growth and security of the United States and the entire free world.

IV

Sound domestic politics are first of all the ultimate foundation on which our new dollar diplomacy will stand or fall. If we are to finance the foreign economic and military expenditures necessary for free world growth and freedom, we must increase the size of our commercial surplus. To do this we must check the creeping inflation of our costs and prices, or insure at least that we inflate somewhat less rapidly than our main industrial competitors. Labor will have to show greater restraint in limiting demands for wage increases to increases in productivity. Moreover, our balance of payments should not be subjected to the strain of another nationwide steel strike. This underlines the need to find better ways of settling industrial disputes in basic industries.

In the domestic field we particularly need a concert of government policies to assure a faster rate of economic growth. Unless we achieve greater average annual increases in our production we shall experience growing difficulty in providing ourselves with higher levels of consumption and basic services while at the same time financing our defense and foreign policy and paying our way in world trade. We should place much greater emphasis on investment in research and technology. Faster productivity advances will help develop large new export markets for the United States even with moderate increases in money wages.

Sounder domestic policies should be supplemented, secondly, by a national export drive. Our exporters developed some bad habits during the sellers' market that prevailed during and after the war. We can no longer afford to take for granted foreign customers for American goods or regard foreign markets as a minor extension of the market at home. To meet stiffer foreign competition we have to develop new and better products adapted to changing foreign demands. We must sell them more aggressively, service them better, and supply them on easier credit terms.

Although the primary responsibility for staging an export comeback rests with the business community, the Government can provide some help. It should support exporters with medium-term credit facilities at least as favorable as those provided by our main competitors. It should do a better job of informing American businessmen of possibilities for foreign sales by strengthening economic and consular staffs abroad and improving advisory services at home.

The third element in our dollar diplomacy must be action to speed the removal of foreign restrictions against American goods. During the postwar years our exports have been suppressed by an elaborate network of exchange controls and import quotas, some of them expressly discriminating against the United States. Others, though nondiscriminatory, severely restricted our foreign trade. The main industrial countries of Europe and Japan which have benefited from the recent redistribution in world reserves can now dispense with all or nearly all of these controls.

Some progress has been made in this direction. Britain, France, and other countries have recently announced significant liberalizations of import restrictions which will help to increase our exports in the years ahead. But much more remains to be done. We should take every opportunity in international and bilateral negotiations to press for the removal, by countries with adequate reserves, of their restrictions on American exports. In appropriate cases these countries must remove controls not merely on their imports of our goods but on their imports of services—e.g. tourism in the United States. Furthermore, we must go beyond the removal of direct controls and do some hard bargaining for the reduction of some of the high tariffs which confront us on many important export items. This is another strong reason for strengthening the President's presently inadequate tariff-reducing powers. Although further reciprocal tariff reduction will increase American imports as well as exports, the freeing of trade all around will enhance the efficacy of the adjustments we make to cope with stiffer international competition.

The liberalization of other countries' restrictions on imports from the United States should be accompanied, in the fourth place, by the easing of restraints on capital outflow. Even those of our industrial allies which have made progress in import liberalization have done comparatively little in this direction. With the continued improvement of their reserve position they could give greater freedom to their citizens to invest abroad. With the easing of restrictions on capital outflow a substantial amount of European long-term capital would come to the United States during the years ahead through the purchase of American securities and the establishment of productive enterprises.

Fifth, we should stop our encouragement of American investment in other than underdeveloped countries. In view of our payments deficit, indiscriminate incentives to foreign investment are a luxury we can no longer afford. We should enact the Boggs bill providing deferral of U.S. income tax on the income earned abroad by a new class of American foreign business corporations, but only after amending the bill so that deferral is available only on income which is reinvested in underdeveloped countries. Moreover, we should enact a Boggs bill in reverse to take away the deferral privilege now available to foreign corporations in advanced countries which are owned or controlled by Americans. This would help to slow the surge of our investment in Canada and Western Europe and stimulate the backflow of profits now being accumulated in these countries.

Sixth, a greater share in aid to underdeveloped countries should be assumed by

[1] "Balance and Imbalance of Payments," pp. 34, 48.

[2] "Foreign Commerce Weekly," Dec. 21, 1959, pp. 16–18, 21.

Western Europe and Japan. The increased aid efforts of our industrial allies should be channeled through new multilateral institutions such as the proposed International Development Association, now awaiting congressional approval. The proposal of Under Secretary Douglas Dillon to expand the OEEC into an aid-coordinating institution is a further step in the right direction.

We should remember, however, that the present level of Western aid for less developed countries is still far below the level necessary to assure a rate of growth compatible with American and free-world interests. In view of this fact, a larger aid effort by Western Europe and Japan must not mean a smaller effort by the United States. On the contrary, the United States should probably aim at a $1 to $2 billion annual increase in its economic development efforts during the next decade.

An increase in economic aid efforts by foreign countries, therefore, will provide no direct saving for our balance of payments. But it may help us indirectly. If the trend toward united lending by our industrial allies is allowed to continue, a considerable portion of their aid may be spent on American exports. It is unfortunate that we should have set our allies a bad example in this respect by tying the disbursements of the Development Loan Fund. Given liberal trade policies here and abroad, the United States can expect to be a major beneficiary of the expansion of foreign markets that will result from a faster pace of development in the less developed countries.

The seventh element in our dollar diplomacy should consist of new efforts to reduce foreign military spending. We cannot place the security of the free world at the mercy of our balance of payments. If certain military expenditures abroad are necessary to assure the survival of freedom in this world, we will have to find the means to finance them. At the same time, our payments problem does justify additional measures to prune unnecessary military expenditure.

We are currently spending some $3 billion annually on troops and bases overseas. By reducing some PX privileges and requiring some fraction of military pay to be banked in the United States we would serve the double purpose of reducing conspicuous consumption abroad by our troops and their dependents (a major cause of anti-American feeling) and cutting somewhat this $3 billion drain.

A large part of the $3 billion in our foreign military spending goes for the operation and maintenance of American bases in Europe. The benefits of these bases are enjoyed by our allies as well as ourselves; the costs should be shared in accordance with capacity to pay. The same observation applies to the several hundred million dollars worth of military hardware we have been shipping free of charge each year to our NATO allies. Payment for some of these supplies would mean a welcome increase in our export earnings. We shall have to move cautiously in this area to avoid political difficulties. But the difficulties involved should not deter us from beginning a collective reexamination of outdated formulas for sharing the burden of common defense.

V

The seven policies outlined above should be enough to reduce the deficit to our target level of $1 to $1.5 billion a year. But they may take some time to work. Moreover, we may have to run larger deficits in some years to push ourselves out of future recessions and cope with other unforeseen economic, political and military contingencies. Quite apart from these problems, we must be prepared to sustain the continuing small average deficits until such time as the free world's liquidity problem is solved by a major institutional innovation. For all these reasons, we should consider resorting to four transitional measures which, while making no fundamental contribution to balancing our payments, will buy time and give us greater freedom to maneuver. Although our reserve position is strong already, there is no reason for taking chances. We do not want to live the next few years under the lengthening shadow of a dollar crisis.

First, we should explore the possibilities for the accelerated repayment by the European countries of loans that they have received from the United States. Still outstanding are several billion dollars in Marshall plan loans and special postwar credits such as our 1946 loan to Britain. Acceleration of loan repayment by mutual agreement would mean interest savings for the foreign governments and substantial reductions in our payments deficit. Some prepayment has already taken place on an ad hoc basis. Now we might reach agreements with particular countries for further prepayment in the event that they accumulate a substantial additional amount of reserves at the expense of the United States.

Second, we could guarantee the gold value of the dollar balances held by foreign governments. This would encourage the four or five countries principally concerned to settle their surpluses with us by accumulating interest-bearing dollar claims rather than running down our gold supply. Although gold clauses in private contracts are no longer enforceable in American courts, an internationally binding gold guarantee could be given by the U.S. Government. Since devaluation of the dollar is in any case an inappropriate remedy for our balance of payments difficulties, we would only be committing ourselves to avoid doing what we do not wish to do anyway.

Third, we could eliminate, or at least reduce, our gold reserve requirement. Under present law, the Federal Reserve banks must hold gold certificates equal to 25 percent of their note and deposit liabilities. This has no effect on our monetary policy. But it ties up $12 billion of our gold stock, leaving only $7 billion free for use in foreign trade. Modification of the requirement would have no adverse domestic effects and would provide massive additional support for the dollar's international position.

Fourth, we could make use of the International Monetary Fund. With all the talk of dollar weakness in the last 2 years we have continued to be a net creditor in the Fund to the tune of $2 billion with additional unused drawing rights of $4 billion. This situation is absurd. It underlines the Fund's practical shortcomings as a provider of international liquidity. But we do not have to stand idly by awaiting modifications in the Fund agreement. We are entitled to liquidate our present creditor position in the Fund and get a standby credit entitling us to exercise part of our other drawing rights at will. To avoid possible adverse psychological reactions we should take these actions at a time like the present when our payments position is improving.

VI

The dollar diplomacy outlined above may be described as the liberal-collective—as contrasted with the restrictive-unilateral—solution to our payments problem. The policies are liberal in the sense that all of them, in greater or lesser degree, mean more economic freedom and a better allocation of resources at home and abroad. They are collective in the sense that most of them rely for their success on harmonious cooperation with other countries. Many of the policies require self-discipline and sacrifice. But all of them are worth undertaking for their own sake, quite apart from our payments problem.

Are we willing—and able—to employ this dollar diplomacy? The answer is still uncertain. We have yet to adopt most of the elements of the liberal-collective solution outlined above. At the same time we have embraced one element of the unilateral-restrictive solution—"tied-lending." Last October the administration announced that henceforth Development Loan Fund credits to underdeveloped countries must normally be spent in the United States. Later it confirmed the "Buy American" trend in U.S. foreign aid by declaring that specific capital projects of the kind presently administered by the International Cooperation Administration would be transferred as quickly as possible to Development Loan Fund—and thus be governed by the new policy.

The tied-lending policy has been justified as an important means of reducing the payments deficit. This argument will not withstand analysis. About two-thirds of the foreign aid to which the policy applies is already spent on our exports or on the exports of less developed countries heavily dependent on American aid. This portion represents no net drain on our balance of payments. About one-third of aid dollars are spent by the recipients on imports from our industrial competitors. These dollars are lost to the United States only to the extent that our allies hoard them and refuse to respend them on American goods. Now that our allies have built up their reserves and have begun to dismantle their import controls, somewhat less hoarding may be expected to take place. Even on the most favorable of estimates, the tied-lending requirement can increase our foreign receipts by only 10 to 20 percent of the foreign spending to which it applies.

In 1960 tied lending will make practically no difference in our balance of payments, because it does not apply to the $800 million of Development Loan Fund loans already committed but not disbursed. In 1961, spending by the Development Loan Fund might reach $600 million. In that event some $60 to $120 million might be saved by the tied-lending policy—about 2 to 4 percent of our present deficit.

Two more plausible arguments are frequently made in defense of tied lending. The first is that it helps to pacify the powerful forces who would want to apply much worse medicine to deal with our payments problem—quotas, tariffs, cuts in foreign aid and military spending. This argument overlooks the fact that concessions of this sort to opponents of liberal trade and aid policies rarely succeed in their objective, but rather encourage demands for additional concessions. The appetite for unilateral-restrictive measures in foreign economic policy tends to grow by what it feeds on.

The second argument advanced in defense of tied lending is that it was needed to force our industrial allies to finance their own export surpluses, i.e., give more aid to underdeveloped countries. But there is no reason to believe we could not achieve the same result by persuasion in the various international forums available to us. In view of the whole tendency of our postwar foreign economic policy, we are obliged to exhaust the possibilities of the carrot before resorting to the stick.

Since "tied lending" has applied only to the smaller portion of our foreign aid, its ill effects so far have been mainly symbolic. But it has quite practical disadvantages as well, which would be felt increasingly if the policy were extended to other parts of our foreign aid program. Being trade-diverting rather than trade-creating, the policy wastes world resources in the same way as quotas, subsidies, and high tariffs. By forcing the less developed countries to purchase in the United States even when foreign products are cheaper or better suited to their needs, it reduces the value of our foreign aid. By subsidizing U.S. exports regardless of price and quality it encourages the very slackness

which has reduced our competitiveness in world markets. By encouraging our allies to tie their loans it could deprive our balance of payments of the benefits of their growing foreign aid efforts.

"Tied lending" is not merely a retreat from liberalism in foreign trade; it is a retreat from the principle of collective action. We have expended huge amounts of energy, time, and money over the last 20 years to build agencies of free world economic and political cooperation—the International Monetary Fund, the International Bank, the General Agreement on Tariffs and Trade, the Organization for European Economic Cooperation, the North Atlantic Treaty Organization, and many others.

These institutions could help us solve our payments problem, if we use them with vigor and imagination. When defenders of "tied lending" argue that it is necessary to "force our allies into financing their export surpluses" they forget we are part of a free world alliance. As suggested earlier, our intimate connection with our allies through bilateral and multilateral financial, trade, and military arrangements gives us plenty of possibilities for adjustment. Only when we have exhausted these possibilities, which we have not even begun to do, are we justified in substituting unilateral sanctions for collective negotiation.

The tendency toward large deficits in our balance of payments may plague us for years or may disappear as suddenly as it has come. It will probably take some time to find out. Meanwhile we can solve our problems by the new dollar diplomacy described above—a diplomacy which is not really new at all except in the application of familiar principles in new and more difficult circumstances.

Why I Am Proud To Be an American

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. BROWN of Ohio. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and include therein an essay written by Dana Jean Carter, 102 North Kensington Place, Springfield, Ohio, a high school junior, on the subject of "Why I Am Proud To Be an American." This essay was a winner in the statewide American Legion essay contest in Ohio; and, as a result, Miss Carter was 1 of 12 such essay contest winners honored by the Ohio delegation in the Congress at a luncheon held here in Washington on April 19. I am sure the House of Representatives will join with me in congratulating this student on her excellent essay, which is as follows:

WHY I AM PROUD TO BE AN AMERICAN

(By Dana Jean Carter)

There are many reasons for my having pride in being an American. When a person attempts to analyze the reasons for which he is proud of being an American, he is faced with such an overwhelming number of them that his problem becomes the selection of the most fundamental. To me, the letters of the word American, serve as a source for finding these reasons.

The first letter is "A." Here we find the words allegiance, alliance, and armistice. Americans have a strong sense of allegiance which has been displayed many times throughout our history. Armistice is a word known to all Americans. How many times our military leaders signed an armistice in order that we might live in peace and prosperity. Alliances with other nations have proven to be very beneficial. These alliances were made so that our country along with those of our allies might benefit and grow stronger.

In "M" we find the words machinery, materialism, and music. Every day we are finding new machines to turn out more goods more efficiently. Materialism is evident through our possessions, property, and wealth. American music is an art in which many of us take pride. For through music, we have come into closer contact with people all over the world.

"E" might stand for education and equality. America excels in the field of education making it possible for everyone. Equality is a characteristic which we are proud of. In America everyone has equal opportunities.

"R" is the beginning for the words race, religion, and resources. In America, one's race is not important; rather it is his ability that counts. Our country was founded partly because of its religious freedom which has remained one of the most cherished rights of the American people. Our country is abundant with natural resources which are mainly responsible for the growth of our great industries.

"I" stands for independence, individuality, and integrity. The greatest fight for beliefs ever made by the Americans, was that battle for their independence. In America the individual may strive to great heights or he may be complacent. Whatever the outcome, it was the individual who was able to make the choice. This integrity of an American is displayed daily by his conduct and dealings with his fellow Americans.

"C" might stand for the words "church" and "creed." America is abundant with beautiful churches where anyone and everyone may worship according to his beliefs. Our creed is our beliefs which may always be expressed freely and without fear.

Again we have the letter "A" perhaps containing the words "athletics" and "arts and sciences." We take pride in our athletes and athletic events. What would America be without her football games and the ever-popular hot dogs? We have also made great advances in the fields of art and science. Our art has a newness to it and our scientists never stop their research in medicine, diseases, and now, space.

The last letter is "N" which is the first letter of "nationalism" and "never." The strongest feeling of the American people is the devotion to their country and its welfare. "Never" is a word which shows the number of times that America has surrendered to an enemy, or in recent history, the times that its shores have been invaded.

The people of America are like no other race in the world. They are people who love their country enough that they are willing to make the greatest sacrifice of all, their lives, if necessary. Would anyone need a better reason than that to be proud of being a part of such a nation?

New York State Vacation Lands

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 21, 1960

Mr. KEATING. Mr. President, the New York State Department of Commerce recently published a new illustrated pamphlet entitled "New York State Vacation Lands." The editors of the Herald Tribune in a recent editorial commented enthusiastically on the material contained in this publication and, more importantly, on the many significant and diverse assets that make New York State a wonderful and exciting setting for a summer vacation.

I could not agree more fully. Being a New Yorker by birth and, in a sense, by trade—I admit to being a biased observer. But I could not let this fine editorial go without comment. I cannot resist this opportunity to talk about the great State of New York. I am extremely proud of our rolling farmland, impressive mountain resort areas, countless historic landmarks, wonderful and comfortable climate, ocean beaches, rustic and scenic landscapes, Broadway theaters, many natural wonders, and, of course—the majesty of New York City—gateway to America, trade center of the world.

I certainly hope that my colleagues in the Senate will today make a mental note to visit New York this summer. Along with the many Americans who will vacation in New York this summer, I know that they will be impressed and pleased.

I extend this invitation particularly to Members of this body, to spend their vacations in the State of New York, notwithstanding the wonderful attractions of the State represented by the distinguished present occupant of the Chair [Mr. BARTLETT]. I am sure that if he were not operating under the injunction of silence as the Presiding Officer, he would say that Alaska should share equally with New York the distinction of being a prime vacation land.

Mr. President, I ask unanimous consent that the editorial referred to from the New York Herald Tribune be printed in the Appendix of the RECORD. I urge all who read it to take advantage of the opportunity here discussed to obtain a copy of "New York State Vacationlands" from the State Department of Commerce.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOOD READING FOR THE SUMMER

We don't customarily review books on this page, but we're willing to make an exception for "New York State Vacationlands," an illustrated paperback which, by no coincidence, is published by New York State.

To get the literary criticism out of the way quickly, the writing in this book is clear, the pictures colorful, the index comprehensive, and the facts undeniable. But it's the subject matter that is really unbeatable. For this book is about New York State as a place to spend as varied, enjoyable, and interesting a summer vacation as any to be found within a like-size area in the United States. Natural beauties, man-made attractions, historical sites—New York State has them all. It also has—though modesty prevents us from more than mentioning it in passing—New York City, which gets 25 pages all to itself.

All in all, we'd call this good springtime reading and the sort of literature which, when properly acted upon, can make for a better summer, too. One additional bit of

information: the book is free and may be obtained by dropping a line to the New York State Department of Commerce, room 324, Post Office Box 1350, Albany 1, N.Y.

Richard Bales, Conductor of the National Gallery Orchestra, Honored

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. SMITH of Mississippi. Mr. Speaker, on Tuesday night, April 19, the Washington Civil War Round Table awarded its gold medal to Richard Bales, conductor of the National Gallery Orchestra. This coveted award in the past has gone only to great historians of the Civil War. Mr. Bales has provided an invaluable contribution to our knowledge of the War Between the States with his recreation of the music of the period, now contained in his albums, The Confederacy and The Union.

The award to Mr. Bales was made by Col. R. S. Henry with the assistance of Miss Mary W. Lee, granddaughter of Robert E. Lee, and Mrs. David W. Griffiths, granddaughter of U. S. Grant.

Under unanimous consent I include a copy of Mr. Bales' reply:

Miss Lee, Mrs. Griffiths, Colonel Henry, Mr. President, you have placed about my neck the emblem of one of this country's great honors, and I should like to be able to call up those words which could express both immediate thanks and the sum of my feelings.

I do, indeed, assure you of a grateful appreciation for the Gold Medal of the District of Columbia Civil War Round Table. Tonight will always stand as a high point in the life of this musician who is both your 1960 recipient and, at the same time, ever your enthusiastic fellow member of some seasonal standing, exploring with you during most of the year the always thrilling story of the American Civil War.

To review the former recipients of the medal is to recite a list of distinguished gentlemen and scholars known largely for their printed words; may I, therefore, thank you for placing another art within the scope of this award? For now you have added the art of music, the deepest, most subtle of them all, and one which played a most influential role in the War for the Union.

That music, the popular music of a century ago, had been in the process of development since the days of the American Revolution. It was not folk music, for that is the music of legend, nor the absolute classic music of the imagination. It was the composed work of many men and women who wrote directly of the daily lives of the American people and their young country. Those gifted artists achieved an immense variety of expression both topical and emotional. These tunesmiths had a continuing, strong and healthy patriotism which they translated into their music. Such musicians took the pulse of America, and, through their songs, dances, and marches we can relive in part the history of our country, and, in particular, the Great War Between the States.

Composers, singers, bandsmen, and instrumentalists chose their sides as did the rest of the country. Their compositions, through some inner mystery of music (not yet understood) either went directly to inactive library shelves or played lively and sometimes lasting roles in the struggle. Several songs, composed in the years immediately preceding, marched straight into the conflict and served through the war with distinction. "Lorena," "The Yellow Rose of Texas," "Dixie," "John Brown's Body," many of Stephen Foster's, and others donned Blue or Gray, and fought with their wry and broad humor, heartsleeve sentiment, light-foot rhythms, and bloodwarming tunes.

A number of Yankee songs became captured Confederate materiel, and vice versa. "Dixie" a northern song, has never been successfully wrested back from the South, and "The Battle Hymn of the Republic" owes its melody to a pious writer of hymns in Charleston, S.C. Yet both sides played, sang, danced, loved, and died to each others' music—with but a few exceptions. When bands serenaded across the lines, an exchange of partisan tunes was inevitable.

Filers of copyrights had a field day beyond measure. South stanch northern tunes as "The Battle Cry of Freedom" and "The Vacant Chair," also, were resolutely published in the South, and sold for the same 50 cents, if not the identical four bits, backed by U.S. gold. Thousands of Yankees marched to "Dixie," and the Confederates' second favorite was "The Bonnie Blue Flag" with Mississippi words and a Philadelphia tune.

When we listen to the grand old music now, let us not forget that many of those who wrote it, and most of those who played it, gazed often on the faces of those leaders whose names I need not recite again now, saw the endless columns of dusty marching men, watched them fight, suffer, and die, and often carried them from the field or took them water there. Bandsmen on occasion stayed up all night on watch, while weary soldiers slept to fight again on the morrow. Sometimes musicians were told to lay down their instruments and pick up rifles.

We can never forget the Confederates' playing "Dixie's Land" all day in Montgomery at Jefferson Davis' inaugural and on the sidelines at Gettysburg, nor the Union bands with their legions of throbbing side drums stirring Walt Whitman to his rhythmic poetry, cheering up Lincoln and his family on the White House lawn, and the chivalry of those musicians in blue at Appomattox Courthouse, when, 95 years ago this month, they greeted their conquered Confederates, not with "The Union Forever," but "Should Old Acquaintance Be Forgot." "The last war between gentlemen" was reflected in its music to the end.

From the leaders to the ranks, from the richest civilian to the man too poor to buy his way out, the music of 1861–65 served virtually every emotional need. American music has never been the same since.

Thus you have honored the artists of those older days, also, my own colleagues: those singers and players of the present to whom I owe so much of the success of "The Confederacy" and "The Union," some of whom are here tonight. Thanks as well for my wife and daughter who managed to live through the endless hours when these compositions were being hammered out on the piano at home, day and night.

I wish that my mother, now 87, who taught me to love music and my country, could be present, but she will read this in her room and I might add, without glasses.

I know that there must be a most comfortable part of Heaven reserved for soldiers of the Civil War—indeed, they probably need an eternity to swap enough experiences for their hearts' content. But this evening, two of them I know want to turn their faces in your direction.

My grandfathers: Henry Bales in his Indiana blue, and Richard Horner in his Virginia gray, both cavalry officers, now rising in their stirrups, smiling, and, with hats off, are adding their thanks to mine.

Creaks and Groans in the Machinery of National Security Planning

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1960

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release from the office of Senator HENRY M. JACKSON, of Washington, chairman of the Subcommittee on National Policy Machinery of the Government Operations Committee.

In the release, the junior Senator from Washington, whose work as chairman of the subcommittee has been outstanding, announces new public hearings in the subcommittee's nonpartisan attack on "creaks and groans in the machinery of national security planning."

The release indicates that seven men of science will appear before the subcommittee next week. They are referred to collectively by the distinguished Senator from Washington as "seven scientific wisemen."

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the release was ordered to be printed in the RECORD, as follows:

Senator HENRY M. JACKSON, chairman of the Senate Subcommittee on National Policy Machinery, today announced new public hearings in the subcommittee's nonpartisan attack on "creaks and groans in the machinery of national security planning." The hearings, starting Monday, April 25, will focus on gearing science and technology into foreign and defense policymaking.

"Science and technology," JACKSON said, "exercise a new and decisive influence on national power, prestige, and policy. The statesman, the soldier, and the scientist must work together as never before. The question is: What is the right way to organize our Government to get the right scientific and technical programs at the right time?"

The hearings will feature testimony from witnesses JACKSON characterized as "seven scientific wisemen."

The schedule of the hearings is as follows:

Monday, April 25: Dr. James A. Perkins, vice president of the Carnegie Corp. and member of the Gaither committee appointed by President Eisenhower in 1957 to survey national security problems.

Tuesday, April 26: Dr. James B. Fisk, president of Bell Telephone Laboratories and vice chairman of the President's Science Advisory Committee; Dr. William H. Pickering, director of the Jet Propulsion Laboratory, California Institute of Technology; and Dr. Ruben F. Mettler, executive vice president of Space Technology Laboratories.

Wednesday, April 27: Dr. Herbert York, director of Defense Research and Engineer-

ing, and formerly director of the Livermore Scientific Laboratory, University of California; and Dr. Edward M. Purcell, professor of physics at Harvard University, Nobel Prize winner, and member of the President's Scientific Advisory Committee.

Thursday, April 28: Dr. Eugene P. Wigner, professor of mathematical physics, Princeton University, and recipient of the Enrico Fermi and atoms for peace awards.

All hearings will start at 10:00 a.m., in the Government Operations Committee hearing room (3302 New Senate Office Building).

The Subcommittee on National Policy Machinery was established last year for the purpose of making the first full review of the national security process since the passage of the National Security Act of 1947. Further hearings will be scheduled throughout the session.

Serving with JACKSON on the subcommittee are Senators HUBERT H. HUMPHREY, Democrat, of Minnesota; EDMUND S. MUSKIE, Democrat, of Maine; KARL E. MUNDT, Republican of South Dakota; and JACOB K. JAVITS, Republican of New York.

Why I Am Proud To Be an American

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. BROWN of Ohio. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and include therein an essay written by John Dechant, Franklin-Tremont Road, Franklin, Ohio, a high school freshman, on the subject of "Why I Am Proud To Be an American." This essay was a winner in the statewide American Legion essay contest in Ohio; and, as a result, Mr. Dechant was 1 of 12 such essay contest winners honored by the Ohio delegation in the Congress at a luncheon held here in Washington on April 19. I am sure the House of Representatives will join with me in congratulating this student on his excellent essay, which is as follows:

WHY I AM PROUD TO BE AN AMERICAN

(By John Dechant)

The men of America have always been happy and willing to fight and perhaps to risk their lives to keep America free; this is just one of the reasons that I am proud to be an American. These men have fought to keep such rights as freedom of speech, freedom of religion, freedom from want, and freedom of choice.

All of these freedoms have been important in the first 14 years of my life, and I know my inherited freedoms will mean more and more to me as I have more and more experiences with life. But, thus far the freedoms that have affected my life and that have made me glad, as well as proud to be an American, are freedom from want and freedom of choice.

I have never had to want for a good home. My parents can provide a home of the type they please, not the type some government official tells them they should provide. I have always been supplied with the proper food and have not had to beg for food in the streets as some children have to do in some foreign countries. There has always been a bed waiting at home for me, and I haven't had to worry whether the Government was going to send me off to some factory where I would stay and work. I am proud that I have never wanted love, because I have always had it from my parents. I have never worried about clothes because my parents think it is their obligation to see I have the proper clothing.

Not only have I been provided with the proper clothing, but in America, because of our high standard of living, I have never wanted for some of the luxuries, such as a new white sweater for my football letter, a new sport coat to wear the day I joined the church, and a new necktie the night of our prom. Because my parents have been free to work and earn money, I have never wanted for any of these things. I am proud that not only I, but all people in the United States, have this right.

By comparison, a Russian doesn't have the right of choosing anything unless it is approved by the government. Here, in the United States we are free to choose the kind of life we wish to lead. The success or failure of my life may depend on the choices that I make.

Last year I had the choice whether or not I wanted to join the church. This is one example of freedom of choice. In our school I had the choice of what subjects I wanted to take to further my education. After the age of 16, I have the choice of finishing high school or going to work. After I graduate, I can choose whether I want to go to college and for what profession I want to prepare. In Russia they don't have this right. They are ordered to go to work or go to school, and they are told what to study.

I can pick up any magazine and read an article for or against the United States ways, and no one would say anything to me. In some countries I would not be able to find a magazine that discussed the government.

Later in life I will have the right to choose what job I want to hold to make a living for my family; also, I will be free to choose the friends with whom my children and I want to associate.

Only in America could I have these privileges, and I am proud of them. If these rights were threatened, I, too, like my forefathers, would be proud to fight to keep these rights. Yes, I am proud to be an American.

Postal Pay Increase—The Evidence

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 21, 1960

Mr. JAVITS. Mr. President, in line with the current consideration in the House of Representatives of proposed legislation providing for a postal pay increase, I have read with great interest statements in favor of the increase prepared by Andrew T. Walker, president of branch 1, United National Association of Post Office Craftsmen, and by Moe Biller, president of Postal Union of Manhattan and Bronx Clerks. The statements of these two representatives of those engaged in a vital public service deserves the careful attention of the Senate.

The postal workers have a special call on our sense of justice. In questions of pay, job and retirement security, and competitiveness with jobs in the private sector, the postal workers depend on us and we cannot fail them.

I ask unanimous consent that the two statements may be printed in the Appendix of the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

A POSTAL PAY RAISE IS IN ORDER—"MOONLIGHTING" COMMON AMONG POSTAL EMPLOYEES

(By Andrew T. Walker)

(A presentation before the House Post Office and Civil Service Committee hearing on Federal and postal employees salary increase.)

Mr. Chairman, my name is Andrew T. Walker, president of branch one of the United National Association of Post Office Craftsmen, the oldest active postal employee union in America. I am nearing the 80-year mark, having completed 50 years of service in the Post Office Department, and continued on as president by a change in the association constitution for the past 10 years.

I am indeed grateful to have this opportunity of presenting this statement to you for the record in behalf of such a vastly important subject as is being considered before this group.

There were at least 40 varied industries granting its employees wage increases in 1959. Leading the group is the airlines and coal mining sections with 15-percent increases. Others include steel, trucking, utilities, wholesale and retail trade, cement, food and beverages, printing and publishing, textile, clerical units in manufacturing industries, combined services, electrical, stone, clay and glass, shipping, furniture, and others.

Postal employees cannot strike in an effort to secure an equitable salary increase from their employer, the U.S. Government. Without a doubt the tightfisted fiscal approach of the administration toward its 2½ million employees' appeal for a pay hike is endangering the related functions of the Nation's civil agencies by sharply reducing the employees' morale and spirit to do more than a required day's work. That once proud feeling of belonging to the governmental family of workers, particularly in the postal service, is quickly fading away; that feeling of dignity and importance associated with Federal employment has been replaced with an attitude that Congress and the executive branch of Government does not care nor concern itself with him other than that he is a statistic on an employment chart.

Nearly half of our postal workers are "moonlighters" (second job holders) and perhaps the figure is quite higher here in the East, particularly in New York City, Philadelphia, Brooklyn, and other adjacent cities.

Turnover of young, desirable employees from low-salaried civil service jobs is alarming. Particularly in the light when many municipal and State governments grant their employees some sort of relief in salary or reduced pension contributions, in either case permitting more take-home pay. False economy that denies a living wage is forcing experienced employees out of the postal service and from other Federal agencies as well, to be replaced by new men who must be trained at the expense of the Government.

POSTAL MEN AND WOMEN ARE TRAINED

It is true to say that in but few trades is it more difficult to gain perfection for advancement than in postal work. The clerk must qualify on two or three and sometimes four of the several aspects of mail distribution. These operations include schemes of separation necessitating months of study at home and then qualifying by examinations. The postal schemes involve separations of mail to all cities served by certain railroads and all other railroads connected through transfer points; separation of mail for an entire city to respective delivery stations;

separation of mail for all carrier routes out of a given carrier station and other distribution patterns. A clerk's knowledge must also include, depending on his assignment, mail classification, rates of postage, amounts of fees, serving the public with courtesy and patience; assuming financial responsibility for sums of money and registered mail. I am also mindful of the letter carrier who is also doing an excellent and outstanding job. In addition to knowing his route throughly, must start his day at an early hour and in any kind of good or miserable weather and represents to the public the good-will ambassador of the postal service. The mail handler, the custodial employee all the way down the line is doing a faithful job.

Civil service examinations are constantly being held throughout the Nation and in most instances on a continual filing basis—no closing date. This points up sharply the lack of applicants. A few years ago, Mr. James P. Googe, the regional director of the second civil service region admitted that: "Postmasters frequently report increased difference in securing enough eligibles to fill subclerk and subcarrier vacancies. In some area big wage scales and fringe benefits offered by private industry make it almost impossible to fill positions in the local post offices." I do believe that that situation is true today. Some improvement in fringe benefits has taken place in Federal employment I will admit but such improvement does not put meat and potatoes before the employee's wife and children.

PUBLIC SERVICE

The salary crisis in the postal service must be faced and solved with equivocation, gentlemen, and the simple facts are that the postal workers have earned the pay raise. True, it costs the taxpayers and incidentally that includes the 2½ million Federal employees as well, money to operate the postal service but we should be mindful that it also represents an outlay of expenditures by the Congress for the operations of the White House, the judiciary system, the Commerce Department; the Army and the Navy and other agencies. Also that very little direct revenue comes into the Treasury coffers from the functions of many of the other agencies. It is a basic understanding that the costs and operation of these public services are taken for granted. Yet, with the income of about $2½ billion a year from the Post Office Department there is still current talk of this so-called postal deficit. It is obvious that such revenue as is produced by the postal service is not duplicated by any other agency.

POSTAL RATES

The issue of increased postage rates is not related with the pressing problem of postal wages—no more than the operational costs of running the Department of the Interior or the Navy Yard with the salaries of its employees. Yet, it is an important subject and one to be deliberated upon by the committee at a later date, as I understand will happen. The citizenry of our Republic have always looked upon the postal service as a function created by our Constitution and for the people. Whether or not it pays for itself in terminology of time, cost and production is a matter for the Congress.

MECHANIZATION

We do not in the least have any objection against modernizing the mail and the allocation of funds for such equipment if it makes for improved service and provides for ample mail provisions but we do not subscribe to any counting system which will place a daily hardship upon the individual mail distributor. Electronic research must go forward in keeping with the times to prepare the way for the avalanche of mail tomorrow. It is said that within the next score of years the annual volume of mail is expected to double the 66 billion pieces of mail calculated for the fiscal year ending this June 30. The massive mechanization is on the road and the Department is expected to keep it rolling. It began 11 years ago with the cost of $49 million in 1949 This year the research spending is expected to total $11.5 million. An idea of how advanced this modern postal program is and will be is a statement by Mr. Rollin Barnard, Assistant Postmaster General for Facilities; he said "In Project Gateway almost all the equipment to go into Gateway has got to be invented." Gateway is a plan to build at Oakland, Calif., the most modern postal facility possible.

MAIL FIRMS GLAD TO HAVE POSTAL EMPLOYEES FOR SECOND JOB

Many of the mail-order firms, and mail rooms of large concerns in the East particularly in the metropolitan area of New York have come to appreciate the mail distribution abilities of our postal clerks. Here is a ready made corps of men and women trained by the post office on city and State mail schemes available at hourly rates anywhere from a dollar an hour upward. The firm not alone knows a good bargain when it sees one but is getting an experienced and honest employee at half his worth, and at hours in the evening as well. In some of these firms thousands of contest letters are handled which contain money. Sometimes mailings of valuable certificates are handled by these part-time postal employees and the firms do not worry because they know the postal employee is trustworthy. I hope in time that dual job work by postal employees will be eliminated. It is as you know, gentlemen, occasioned by the aftermath of a substandard wage in Government employment. Records will show that bank and loan companies show an all record high in loans to postal and Federal employees, also records will further show that bail and loan companies show an all record high in loans to postal and Federal employees, also records will further show that many employees have borrowed on their insurance policies. Federal and State credit unions in various postal employee unions have taxed themselves in extending loans. I can cite my own Federal Credit Union in branch 1 of the United National Association of Post Office Craftsmen. Up to today we have borrowed out in loans every single dollar and there is a waiting list. It is a healthy sign for the credit union not to have any idle cash but a sad commentary indeed that our postal employees have to borrow so heavily.

I do not believe it relevant here to speak of the billions for foreign relief but it sometimes rings an unfair note when we think of our loyal governmental family getting inadequate salaries and have to exist below the American standard of living, while billions of dolars are sent overseas.

FRIENDS IN CONGRESS

The postal worker has I believe a tremendous range of friendship in the Congress for the reason that he is and always has been one of the loyal and hardworking of all public servants. Also that when he appeals to Congress he is reasonable in his requests for equitable treatment. We stand today, united within all postal and Federal groups asking you, the members of this committee, to meet reasonableness with reasonableness. Our request to you to support the deserving Morrison pay bill is in keeping with the times. I thank you.

STATEMENT OF MOE BILLER, PRESIDENT OF POSTAL UNION OF MANHATTAN-BRONX CLERKS ON H.R. 10445 AND RELATED BILLS BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE

Officers and members of the postal union of Manhattan-Bronx clerks representing 10,000 postal clerks in the New York, N.Y., post office wish to express appreciation to this committee for holding public hearings on pending salary legislation. We also wish to thank the many Congressmen who are presently sponsoring about 60 salary increase bills before this committee.

At this time we wish to support and urge the approval by this committee of H.R. 10445 introduced by Congressman JOSEPH E. KARTH of Minnesota. This bill provides for a salary schedule for clerks in level 4 of $5,500 to $6,100 per year. The top step would be reached in four annual automatic increases. About 99 percent of the clerks in the Post Office are in level 4. The bill also provides for four longevity grades at $200 each after completion of 5, 10, 15, and 20 years in the top automatic pay grades. In addition it would grant time and one-half for substitute employees who work more than 8 hours a day. This would also correct a number of the inequities of Public Law 68.

We believe that the salary increases which are embodied in H.R. 10445 are reasonable and justified, and above all absolutely necessary in order to keep postal employees out of debt and permit them to enjoy a decent standard of living.

Postal salaries have over a period of years steadily fallen behind those in private industry. The average postal clerk with a wife and two dependent children takes home less than $75 per week. A top grade postal clerk with 25 or more years of service in the same family position as described above takes home only $83.10 per week. It is utterly impossible to adequately support a family in America in 1960 on this wage.

The Heller committee for research in social economics for the University of California has found that a family consisting of husband, wife, and two children, in order to live decently, requires an annual budget of $6,668.28 for homeowners and $6,271.10 for apartment renters. The budget represented by the latter figure allows for a rental of $780 a year or $65 a month. It is impossible in the city of New York to obtain a decent 4- or 4½-room apartment for less than $100 per month today. It must also be stated that the budget figures presented by the Heller committee do not permit for luxury items, but include only those items that go to make up a commonly accepted American way of life.

Firemen and policemen, to our knowledge, have never been paid very high wages, yet in the city of New York the salary level of firemen and policemen today ranges from $4,000 to $6,181 a year. The top salary grade is reached after 3 years of service. It is interesting to note that in 1949 the pay of a postal clerk in step 7 was $1.815 per hour, compared with firemen and policemen in New York City who were earning $1.737 per hour. In 1952 the hourly pay of firemen and policemen were still behind that of postal clerks. Postal clerks earned $2.015 per hour, while firemen and policemen earned $2.001 per hour. As of today, the firemen and policemen earn 28 cents per hour more than a clerk with 25 or more years of service and more than 43 cents more than a clerk in step 7 with 8 years of service. Firemen and policemen in the city of New York today earn $2.776 per hour and have announced that they are compelled to seek increases ranging from $6,100 to $7,500 per year in order to keep up with rising living costs. In this connection, the New York Herald Tribune and the New York Times on date of March 22, 1960, featured a report by Leon H. Keyserling, noted economist, who called the pay of New York City police "shocking." He stated that the pay of New York City police was so far behind the rising cost of living that it would take 15 years of the increase to make up the loss. If this is true of the salaries of New York City policemen, how much more true is it of the pay of postal clerks in the New York, N.Y., post office?

He recommended a $1,000-a-year pay increase for police beginners and further raises as they advance in grade.

A laborer, the least skilled and lowest paid employee in the building trades earns $2.63 per hour compared with a clerk in step 7 who earns $2.34 per hour and a clerk with 25 or more years of service who earns $2.49 per hour.

Sanitation men, in the city of New York are presently dissatisfied with their salaries Yet within 3 years' time they earn $5,350 per year, a rate of pay which under present wage scales a postal clerk cannot hope to achieve in a lifetime. These figures clearly show how far behind postal clerks have fallen through the years. The postal clerk is a highly skilled individual, who takes regular scheme examinations on which he must achieve a 97-percent correct rating. It frequently takes a clerk 2 years to complete his scheme requirements for the first time. It usually takes a few years longer for the clerk to become a competent distributor on a particular scheme. In addition, clerks perform window duties and a multitude of other required assignments.

This group of skilled employees finds themselves in such a predicament today that more than 75 percent are working second jobs in order to make ends meet. In many cases wives are working to supplement the family income. This certainly is not conducive to a good family life to which every American is entitled.

The Manhattan-Bronx Postal Clerks Federal Credit Union has loaned $1,200,000 to our members in the past year. In addition the average loan has increased from $300 last year to $420 this year, an increase of 40 percent per average loan.

It is easy to understand why the morale of postal employees today is at an all-time low. Because of these low wages it is difficult for the postal service to attract qualified new employees and to retain them. Thousands of employees enter and leave the New York post office each year. The post office department in New York has had to give examinations for the position of substitute clerk virtually on a continuing basis. The New York post office presently employs 500 career part-time substitute clerks. This new category, which is based on eligibles who refused full-time clerical positions, highlights the seriousness of the problem.

Reports indicate that this abnormally high rate of turnover in the postal service is not peculiar to New York alone.

In his state of the Union message in January of this year, the President of the United States declared "1960 promises to be the most prosperous year in our history." A postal employee is at present clearly not sharing in this prosperity; in fact, he seems to be becoming steadily more impoverished. In fact, it seems to be clear that if the postal employee does not receive a decent pay raise in this session of Congress, his standard of living will lag even further behind than it is today.

Postal employees do not have the right to strike nor do they have any contract negotiations. If the postal employee is not granted relief immediately, he will continue to suffer until at least well into 1961. The postal clerk has a right to earn a decent living wage and raise his family in keeping with American prosperity of 1960.

Enactment of H.R. 10445 by Congressman JOSEPH E. KARTH will give postal employees an adequate wage and, therefore, an opportunity to rear their families in a decent manner.

We urge the committee to report favorably the provisions in H.R. 10445. Without such an increase postal employees just cannot earn enough to support their families. These employees should not be forced to meet inflated costs with deflated incomes. We appeal to the Congress of the United States for postal salaries sufficient to give employees the essentials of life which our American standard assures. We also believe that those who are responsible in making the laws have a moral responsibility to treat postal employees fairly and justly.

We wish to thank you for the opportunity to present this statement for the RECORD.

People Meet Problem of Health Care on a Voluntary Basis

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two clippings from Michigan newspapers as a matter of interest showing how people are trying to meet the problem of health care on a voluntary basis which is certainly commendable:

MAP HEALTH CREDIT PLAN—MICHIGAN MEN FORM NEW GROUP

BATTLE CREEK.—Formation of the American Health Credit Plan, Inc., to provide credit card service for health expenses was announced here Wednesday by President W. Earle Robinson.

Under the service a credit card system will provide for all health needs with a time repayment plan for bills. Robinson said the plan was intended to supplement health insurance programs. He said the need for such a service was created because of problems of exclusions under major health insurance plans and by the difficulties encountered by the aged in obtaining health insurance. The high cost involved in processing a small claim was also said to be a factor.

Other officers are: Vice president, David D. Robinson of Muskegon Heights, and treasurer, Jack Rice of Belding.

"EARN AND SERVE" COURSES OPEN NEW ERA FOR OLDER WOMEN WHO WANT TO HELP

Older women will have an opportunity to supplement their income and play a useful role in caring for the aged through an "earn and serve" program.

Purposes of the project, sponsored by the board of education's vocational education department, the Co-ordinating Council for the Aging and the local office of Michigan employment security commission, are to provide employment for older women and to furnish trained companions and homemakers for the elderly infirm and disabled persons who can live in their own homes.

Application for enrollment in the training course are being taken by the vocational education department.

The first class is limited to 16 women and the deadline for enrollment is April 19, with classes scheduled to begin May 2.

Interested women may phone the board of education for application blanks.

To be known as the "home aide program," this service was first proposed by the Co-ordinating Council for the Aging in response to requests by older women for employment and as the result of pleas for trained companions and homemakers by elderly persons or their relatives.

Joining with the council in formulating the details of the program have been the Kent County Medical Society's geriatrics committee, the Red Cross, MESC, Family Service Association, city-county health department, county department of social welfare, United Community Services, Community Health Service and the Practical Nurse School.

The training course will include 42 hours of instruction, running Monday, Wednesday, and Friday for 2 weeks with a concluding session on the third Monday. By special permission from the American Red Cross, the Red Cross home nursing course will be included in the training given home aides.

Miss Eleanor Morrison, home service director of the Michigan Consolidated Gas Co., will conduct the nutrition, food preparation, and homemaking portion of the training.

Handling emergencies will be covered by the police and fire departments. Medical society representatives will instruct classes in handling elderly persons, and the family service staff will train the home aides in techniques of managing personal problems. Diversional therapy techniques will be given by a group of occupational therapists.

Upon completion of the course the vocational education department will present home aide certificates to the graduates. Red Cross home nursing certificates will also be given.

Actual job placements will be made by MESC, whose staff will do the screening of applicants for the training course.

After a study of needs and job requirements, the home aide study committee has recommended an hourly rate of $1 to $1.25 plus transportation. For weekly rate the committee recommended a range of $30 to $40.

The welfare department has agreed to consider supplementation of social security or old age assistance grants of elderly persons to permit employment of home aides, when this is necessary.

The local home aide program will be studied by the Michigan legislative advisory committee on problems of the aging and several other Michigan communities who have similar problems for providing home care for elderly persons, the council reported.

Senator Wiley Urges the Clarification of State-Federal Jurisdiction on Wiretapping

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, April 21, 1960

Mr. WILEY. Mr. President, several months ago I urged congressional action to help safeguard the privacy of American citizens from unwarranted wiretapping and eavesdropping. The sanctity of the American home and the right of Americans for privacy at home, in business, and elsewhere, should be securely safeguarded. Over the years, however, a growing utilization of electronic devices for wiretapping and other forms of eavesdropping, by both individuals and Government agencies, has seriously endangered this traditional right.

Under present Federal law, the divulging and publication of information obtained from the interception of wire and radio communications is made a crime. Often, however, this law is disregarded, or there is often too little effort to enforce it. Despite the Federal prohibition

of such evidence in the Federal courts, some States—contrary to the Federal statutes—specifically authorize wiretapping and admit it as evidence in the courts. Clearly, this evidences a real need for clarifying the lines of jurisdiction, as well as policy, in this field.

We recognize, of course, that the use of such practices by responsible law-enforcement agencies, such as the FBI and the intelligence branches of the armed services, may be necessary in the detection of crime, espionage, and sabotage. Also, there are certain crimes that cannot be detected and proven without wiretapping. In cases of serious crimes, society must be given adequate tools to protect itself. In such cases, however, it is important that we discern clearly between the criminal who abuses the practice and the law-enforcement officer who is charged with crime prevention.

Recently, the U.S. Court of Appeals in New York, commenting on the question of State-Federal jurisdiction on wiretapping, concluded that:

A Federal court should not intervene in criminal prosecutions by a State for a violation of its criminal laws.

All this creates a curious situation. It is widely recognized that the use of wiretapping information violates an act of Congress, the Federal Communications Act, and evidence obtained by wiretapping is, therefore, not admissible in the Federal courts.

Yet, at the same time, the Federal courts, recognizing wiretapping as a violation of U.S. statutes, are reluctant to intervene in criminal prosecutions by a State, even in cases involving unauthorized wiretapping.

The present provisions of the Federal wiretapping law were enacted in 1934. The act of 1934 never envisaged the new electronic devices. The act of 1934 never envisaged the conditions the police and the courts are faced with today in the field of wiretapping.

The Congress, I believe, has a duty to clarify the lines of jurisdiction related to wiretapping. Last year, the Constitutional Rights Subcommittee of the Judiciary Committee held hearings on wiretapping. However, I believe that this study should be concluded and legislation be enacted to clarify: First, the legality or illegality of wiretapping practices; second, conditions under which wiretapping may be undertaken; and third, the State and Federal lines of jurdiction in this field.

A major purpose of this clarification, I believe, would be to effectively protect the rights of individual citizens without unduly interfering with effective law-enforcement practices.

I should like to insert in the CONGRESSIONAL RECORD at this point of my remarks an editorial that appeared in the Washington Post on Tuesday, April 19, 1960, and entitled, "Confusion Compounded."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONFUSION COMPOUNDED

The U.S. Court of Appeals in New York has come up with a tentative answer to one phase of a tangled question: Whether a Federal court should enjoin State officials from divulging evidence obtained by wiretapping—a Federal crime—in a State criminal prosecution. It concluded that "a Federal court should not intervene in criminal prosecutions by a State for violation of its criminal laws." At the same time it indicated no doubt that the use of wiretap information violates an act of Congress—the Federal Communications Act.

This confusion stems basically from the vagueness of the language in the Federal Communications Act and the reluctance of Congress, despite the widespread use of wiretapping, to do anything to clarify the law. The Supreme Court of the United States has ruled that evidence obtained by wiretapping is inadmissible in any Federal court. But the State of New York has a statute which authorizes wiretapping under certain circumstances—if approved by a State supreme court justice—and permits the introduction in State courts of evidence obtained by wiretapping. Thus the State law places justices in the position of seeming to flout Federal law.

Considerable hullabaloo has emanated from district attorneys in New York State to the effect that Congress ought to amend the Federal Communications Act in order to permit State wiretapping. That would go far beyond the intent of the Keating bill, which would attempt to cut down on the abuses of wiretapping by authorizing it upon specific Federal court warrant for a narrow range of Federal crimes. It would be more becoming to the district attorneys if they would seek to have New York law brought more in consonance with Federal law.

Perhaps the U.S. Supreme Court will review this difficult case. If it does, it will have to weigh against its long tolerance of diversity of standards regarding the admissibility of evidence in State courts a concern for the respect due an act of Congress. The situation cries for legislative as well as judicial illumination focused specifically upon the point whether "no" means what it appears to mean or is to be construed as meaning "maybe."

Tribute to William G. Simon

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. ADDONIZIO. Mr. Speaker, I am pleased to call to the attention of the Congress the splendid and well-deserved tribute paid to Mr. William G. Simon, formerly in charge of the Newark, N.J., office of the Federal Bureau of Investigation, by the Association of Chiefs of Police of Essex County, N.J. The association's resolution follows:

RESOLUTION

Whereas William G. Simon, special agent formerly in charge of the Newark, N.J. office of the Federal Bureau of Investigation while so connected, did, most diligently and with outstanding effect and result, cooperate in the educational and training programs of the various associations of police officials, including county associations of chiefs of police, and particularly the program of the New Jersey State Association of Chiefs of Police, by aiding in the establishment of, and teaching in, schools for instruction to police throughout the State of New Jersey; and

Whereas the Association of Chiefs of Police of Essex County, N.J. recognizes that the untiring efforts of William G. Simon, his knowledge, enthusiasm and rare spirit, and through the cooperation of the Federal Bureau of Investigation did most materially contribute to the unqualified success of the aforementioned courses of instruction, merit our deep appreciation and particular and significant mention: Now, therefore, be it

Resolved, That William G. Simon, in recognition of the above mentioned special and particular qualities, and for the services he has rendered to law enforcement, be earnestly commended by the Association of Chiefs of Police of Essex County, N.J. assembled at their regular monthly meeting on March 24, 1960; and be it further

Resolved, That copies of this resolution be forwarded to the Attorney General of the United States, Hon. William P. Rogers; to the Director of the Federal Bureau of Investigation, Hon. J. Edgar Hoover; to William Webb Burke, special agent in charge, Federal Bureau of Investigation, Newark, N.J.; and to William G. Simon; and be it further

Resolved, That copies of this resolution be forwarded to the Honorable Senators Clifford P. Case and Harrison A. Williams, Jr.; Peter W. Rodino, Representative of the 10th Congressional District of New Jersey; Hugh J. Addonizio, Representative of the 11th Congressional District of New Jersey; and George M. Wallhauser, Representative of the 12th Congressional District of the State of New Jersey; and in addition, that copies of this resolution be forwarded to Hon. Robert B. Meyner, Governor of the State of New Jersey and Hon. David D. Furman, attorney general of the State of New Jersey.

FRED HESS, *President.*
HENRY LIEBERKNECHT,
Recording Secretary.

German Reunification

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1960

Mr. THURMOND. Mr. President, Dr. Walter Becher, Secretary General of the Bavarian Landtag, has called my attention to some very excellent remarks which were made on January 11, 1960, by the German Federal Minister of Foreign Affairs, Dr. Heinrich von Brentano, on the subject of German reunification. These remarks, which were made at the Overseas Club in Hamburg, express some very basic principles regarding reunification efforts which I feel merit the attention of the Congress and the people of our country.

I ask unanimous consent that these excerpts be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

BULLETIN No. 16

On January 11, 1960, the German Federal Minister of Foreign Affairs, Dr. von Brentano, held the following lecture on the international political situation, at the Overseas Club in Hamburg:

THE FREE WORLD IN DANGER

Only a fool would nowadays deny that the free world is in danger. A German is hardly

likely to think of denying this fact, since we are reminded of it day in and day out, indeed almost hourly, by the fate of the 17 million people who live in the Soviet zone of Germany, and by the fate of the city of Berlin, which, by reason of the note of November 27, 1958, has been the subject of our discussions for the past year. We realized from the outset that one small country on its own is not in a position to oppose this threat from the East, this aggressive and revolutionary policy, and that only a joint effort can ward off this pressure. The NATO came into existence as a reaction to this development, as a reaction to the events which happened in Korea and in Prague. The Federal Republic of Germany joined this alliance system because we realized and still realize today that peace can only be preserved and freedom safeguarded by the joint efforts of all the nations.

"We frequently hear the comment: These accursed blocs; to ease the tension, one must get out of the blocs. But I should like to stress that anyone who today compares the two blocs, the Atlantic Community and the Warsaw Bloc, is comparing two incommensurable magnitudes. To mention the two of them in one and the same breath, is an indication of political schizophrenia. For the activity of the one bloc consists, above all, in an attempt to organize the defense of freedom. Nobody, not even a public prosecutor, could accuse the Atlantic Community of ever having engaged in aggressive activity anywhere, whilst in the other part of the world the activity that began in 1945 has been continued, has led to a levelling down of the States of the East Bloc and was expressed in the events of June 17 in Berlin and of the Hungarian tragedy. We should all of us prefer not to have to talk about these things and not to be obliged to band together in blocs, but to have more time and money for tasks other than armament. But be that as it may, we cannot replace grim reality by wishful thinking.

"We must make a clear decision in this respect. If we advocate a legal order and a freedom-loving democracy, we must draw the logical conclusions. In that case it is our duty to protect and preserve this order and this democracy. And if we know that we are unable to do so alone and that others are in the same danger, then it is our duty to join forces with them for our own sake and for the sake of the others.

"The partition of Germany is not the reason for the international political tension. What is in evidence in the partition of Germany is the expression and the result of the international political tension. Actually, the question at issue in the conflict with the Soviet Union, as far as a reunification is concerned, can be expressed in far simpler terms; namely, the right of self-determination of the German people; that is to say, it is a question of restoring to 17 million people their right to live in freedom. By using the word 'reunification' we have perhaps created the erroneous impression in the world that the German people have been severed as a result of their own decision or as a result of false political decisions. Actually, however, these 17 million people have not severed themselves from us, but they are denied a right which one is prepared to concede to every country in Africa—a right which is discussed with great fervor in the plenary and special sessions of the United Nations, the right of free self-determination. And this is precisely what we demand for the German people—no more and no less.

"'NEW INITIATIVES?'

"I am aware that people frequently say to us: 'But you know that the Soviet Union rejects this idea; we must therefore choose another course, make new proposals and develop new initiatives.' Let me tell you candidly that I am not prepared to take part in any initiative which does not make it perfectly plain that the process of the reunification of Germany can, and, indeed, must be effected only by the free decision of the entire German people. I do not wish to polemize, but I should like to say that I was consternated at the fact that our opposition submitted a proposal with regard to Germany which threatened to neglect this question. I am speaking frankly when I say that this proposal would, in fact, inevitably lead us, against the wish of its originators, to a course which we must under no circumstances take. In my opinion it is simply unthinkable to begin this reunification process by setting up executive committees with equal representation and even giving these committees legislative power. Surely everybody who knows the conditions that really prevail, must realize that in this way we are doubly falsifying the first principle of every democratic order—I repeat, doubly falsifying, for we are giving the representation of 52 million people the same influence as the representation of 17 million people. And what is more—we are weighing the votes given by the 52 million people living in freedom like the votes of the 17 million who are living in enslavement. We are putting the representatives of the 52 million people living in a democracy on a par with the functionary class in the Soviet zone.

"Does anyone really believe that a free order can be achieved in this way? Can it be that people still fail to realize what is happening in the Soviet zone? Surely we Germans should realize this, for we know what a totalitarian system is like. Does anyone believe that one could discuss the question of a common legal order in Germany with Mrs. Hilde Benjamin? Does anyone believe that laws could be passed in such an all-German parliamentary council? I do not even wish to raise the question as to whether it is at all conceivable that such a process could provide for plebiscites. We know what plebiscites are like under such systems; the only thing one has to take care to avoid, is a result of 101 percent.

"I oppose these proposals. I do not deny that a large number of proposals have been made as the result of obvious impatience and anxiety for the people concerned. But this disquietude and this impatience must not tempt us to resort to a course for which we cannot answer. To those who submitted the above-mentioned proposal I should like to quote the words of a man who once played an important part in Germany as the president of this party, Mr. Schumacher: 'The system of Pankow is the complete de-Germanization and complete Sovietization of politics. The alleged German initiative from the East for unity is a component part of the international Russian foreign policy. It is our duty to warn the unsuspecting and the well-meaning among our people against every form of community, however friendly the terms may be under which it is offered.'

"FALSE COMPROMISES

"And this in my opinion is precisely the point to be considered. I should, above all, like to utter a warning regarding false compromises. I am well aware that compromises are part and, indeed, a sound part of political life. There are a number of questions in which a compromise is the ideal solution. But we must not forget that there are certain spheres which defy all compromise. When it is a question of fundamental principles, there can be no compromise. I repeat—there is no such thing as a synthesis of right and wrong. There is no such thing as a synthesis of freedom and enslavement. Those who affirm that one could perhaps consider certain modifications, are already overstepping the borderline. I personally am not prepared to take this step with them, for the decisions to be made, which I mentioned earlier on, are irreparable and final.

"True, it is the duty of all of us and we, all of us, feel bound to examine the question again and again: Is there a real starting point somewhere to enable us to get out of this dismal situation which is depressing us and the whole world, too? To get away from the menace that hovers over us—the menace that perhaps a new crisis will break out, that perhaps a new disaster will descend upon mankind—a disaster the extent of which we cannot visualize, as a result of the development of the modern science of armament. We should not take things easy. A few days ago, I read a formulation which so impressed me that I should like to quote it here. A clever man said in an article:'Our instinct of self-preservation is not powerful enough to make us think in an orderly way. We are laboring under the delusion of being able to blunt the teeth of a system, which seeks to destroy us, by tacit toleration and small courtesies.' And this is precisely what I am afraid of. I am afraid that we might not only endanger peace, but also lose freedom by a false policy.

"NO PEACE AT THE COST OF FREEDOM

"We must not purchase peace at the cost of freedom. There is no worse form of absence of peace than absence of freedom. And this is what everyone should bear in mind who thinks that concessions are possible and that one could perhaps go a step further and sacrifice a part of freedom. I can well believe that some persons may say: 'Yes, but what does the Federal Government intend to do; what did Mr. Von Brentano actually say; what about imagination?' Your President opened this meeting in a humorous way by referring to a fairytale in the adventures of Sinbad the Sailor, and he then pointed out that fairytales are, unfortunately, not part of foreign policy, but that in this case we are confronted by grim reality. And this gives me an opportunity to reply to this remark.

"I think quite a number of us could vie with our critics as far as imagination is concerned. But I am not prepared to apply this rivalry in the sphere of international politics. We once had some politicians for foreign affairs in the German Reich who possessed considerable imagination. And it is not so long ago. But all our imagination was not sufficient to enable us to imagine what consequences the activity of the said politicians would have for the German people. And for this reason, I think, to be quite candid, that we are all better advised—and this is not a personal question but concerns the task and the problem which I have mentioned—if we have men in the sphere of foreign political affairs who do not allow their imagination free flight, but see things as they really are, even though the discernment which we may gain in this respect may sometimes sadden us."

American Samoa Asks for Organic Legislation

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. ASPINALL. Mr. Speaker, on April 27, 60 years after the raising of the American flag over American Samoa by Capt. Benjamin F. Tilley, U.S. Navy, Secretary of the Interior Fred A. Seaton

will raise the territorial flag over American Samoa and officiate at the adoption of a territorial constitution which has been promulgated by a constitutional committee over the past 5 years. I commend the citizenry of American Samoa for this forward step and feel certain that they will rise to the new responsibilities they are assuming.

Within a few years, I am confident American Samoa will be ready for the next step in self-government—organic legislation. Our Committee on Interior and Insular Affairs plans to begin studies on organic legislation in the near future, with the thought in mind to utilize the framework established in the new constitution as the basis for the legislation. Our actions will be in keeping with House Concurrent Resolution 27, adopted by the House of Representatives and the Senate of the Sixth Legislature of the Territory of American Samoa, on November 12 and 16, 1959, respectively.

Mr. Speaker, under unanimous consent I insert this concurrent resolution in the CONGRESSIONAL RECORD:

HOUSE CONCURRENT RESOLUTION 27—REQUESTING THE CONGRESS OF THE UNITED STATES OF AMERICA TO ENACT ORGANIC LEGISLATION ESTABLISHING A CIVIL GOVERNMENT FOR OUR COUNTRY

Whereas our people expressed a keen desire for organic legislation in a petition signed by all our leaders, the matais of Tutuila and Manu'a, at a general assembly held in 1945 at Gagamoe, a historical meeting place of our people; and

Whereas a committee consisting of the Secretary of State, the Secretary of the Navy, and the Secretary of the Interior, recommended to the President of the United States in 1947 the enactment of organic legislation for our territory as a step toward the fulfillment of the obligation assumed by the United States under article 73 of the United Nations Charter; and

Whereas in 1949 the Department of the Interior, with the strong support of the President of the United States, recommended immediate enactment of organic legislation for our country in order to extend to us U.S. citizenship, a bill of rights, local legislative powers, an independent judiciary, and representation by a Resident Commissioner in the U.S. Congress; and

Whereas we firmly believe that the enactment of organic legislation for American Samoa is the most effective and satisfactory way to discharge the responsibility of the United States under the United Nations Charter and to maintain fully its traditional role as the champion among nations of dependent people, of representative government, of justice under law, and of fundamental rights and human freedoms for everyone everywhere; and

Whereas with respect to organic legislation, it is the policy of the Department of the Interior to support such legislation when our people desire it and are ready for it, and our people, through their duly elected representatives, are asking for such legislation, believing firmly that our people are ready to begin their God-given right to make their own local laws; and

Whereas the enactment of organic legislation for our country will not only furnish our people the fruits of democracy but will also serve notice to all nations in the Pacific Ocean area that the right of self-determination and freedom from oppression are granted by the Constitution of the United States by acts as well as by words: Now, therefore, be it

Resolved by the House of Representatives of the Sixth Legislature of the Territory of American Samoa (the Senate concurring), That the Congress of the United States of America be, and it is hereby, respectfully requested to enact H.R. 4500, introduced in the House of Representatives of the 81st Congress of the United States of America, as the same will be amended by the Sixth Legislature of the Territory of American Samoa and approved by a convention of the people of American Samoa called for that purpose; and be it further

Resolved, That duly certified copies of this concurrent resolution be forwarded to the President of the United States of America, to the President of the Senate and Speaker of the House of Representatives of the 86th Congress, to the chairman of the House Committee on Interior and Insular Affairs, to the chairman of the Senate Committee on Interior and Insular Affairs, to the Secretary of the Interior, and to the Governor of American Samoa.

Postal Pay Increase

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1960

Mr. JAVITS. Mr. President, the New York Times on Monday, April 11, 1960, published a letter to the editor from Philip Lepper, president of the New York Letter Carriers Branch 36, on the matter of letter carriers' salaries. The postal workers have a special call on our sense of justice, and we must not fail them. They depend on us for fairplay on questions of pay, job and retirement security, and competitiveness with jobs in private enterprise.

I ask unanimous consent that the letter may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTER CARRIERS' SALARIES

GOVERNMENT SAID TO BE OBLIGATED TO GRANT INCREASES

To the EDITOR OF THE NEW YORK TIMES:

Letter carriers and Federal employees voluntarily forgo labor's right to strike. Therefore, the Government is more than morally obligated to recognize the need to overcome the inadequate salaries of these workers.

The salary of a letter carrier ranges from $4,035 at the entrance rate to $5,175 after 25 years. It is interesting to note that the independent Heller committee recently arrived at the following figures: For normal living with reasonable security, a wage earner who owns his own home must be paid $6,638 annually; if he rents a home (at $65 a month) he requires a yearly wage of $6,271. I suggest that the areas where a workingman and his family can rent a decent apartment for $65 a month are either scarce or nonexistent. This budget also suggests expenditures for education which seem parsimonious.

It is further interesting to consider that by Federal Housing Administration standards not a single letter carrier in the United States is making a postal salary that would qualify him to buy a home under their regulations. As a result, a program designed to put homeownership within the financial reach of workers with modest income is meaningless for letter carriers. Even by FHA standards our income is not modest; it is immoderately low.

LAG IN MANPOWER INCREASE

Productivity is another aspect which should be considered. Spokesmen for the Post Office Department during hearings on fiscal 1961 appropriations stated that in the last 6 fiscal years volume increased 20.2 percent. Manpower increase has been only 7.6 percent and, excluding the 24-percent increase in city delivery service due to expanding areas, the increase in manpower was only 2.2 percent—in other words, 20.2 percent against 2.2 percent.

The wages that workers in industry receive are a reflection of the overall need for such wages. They are a reflection of the skyrocketing inflation which has left the letter carrier far behind in his economic struggle for equality. Historically, the Nation's mailmen have been engaged in a continued, and sometimes frantic, effort to catch up with the economic parade. We have been the perennial victims of inflation and certainly not the causes.

Our Government invests billions of dollars in foreign economic assistance, in agricultural programs, urban renewals, and various other projects. While I have no intention of taking issue with the wisdom or unwisdom of the multitudinous programs which are financed with the taxpayers' money, I do insist that if we, as a nation, can afford all these things, then we certainly can afford to pay a living wage to the devoted men who carry the Nation's mail.

PHILIP LEPPER,
President, New York Letter Carriers Branch 36, National Association of Letter Carriers.
NEW YORK, April 4, 1960.

Address on the Occasion of the 193d Birthday of President Andrew Jackson

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the address delivered on March 15, 1960, at Jackson State Park, Lancaster, S.C., by my good friend, D. Glenn Yarborough, prominent Lancaster attorney, on the occasion of the 193d birthday of President Andrew Jackson.

President Jackson was born in Lancaster County, S.C., a part of the district I now have the honor of representing in the Congress.

The address follows:

Mr. Chairman, distinguished guests, ladies and gentlemen, it is good that we gather here today to commemorate the birth of the man who made sacred the soil on which we stand. One hundred and ninety-three years ago, here was born of an Irish immigrant, only 2 years after he came to this country to seek freedom, Andrew Jackson. Shortly before Andrew Jackson's birth, the father died, leaving a widow with three sons to face an unfriendly wilderness.

Let us pause just a moment to contrast the periods—there were no social security benefits for the widow and small fatherless children, nor was there any welfare department to furnish them the barest necessities of life. Andrew Jackson had as his inheritance only the innate fortitude that a saintly mother and a courageous father could give to him.

When he was just a boy the terrible onslaughts of the American Revolution burst around him; at this tender age he was far more cognizant of the history unfolding before his eyes than would a child born of more normal circumstances; filled with his ancestors hate of the British he was eager to join in the affray, and he did so at the Battle of Hanging Rock when he was only 13 years of age; he saw both of his brothers die for the cause of the Revolution, and saw his mother laid in her grave for grief over the death of her sons.

Upon the cessation of hostilities, this illiterate boy, faced the grim world, and faced the future, with no family, no relatives and no financial means. Through a succession of events he was licensed to practice law in the State of North Carolina when less than 21 years of age, but the tractless West called him to Tennessee where began the events of his life, which events were to shape the destinies of a nation.

Truly can it be said that the era in which Andrew Jackson lived were the critical moments in the life of the fledgling United States; the scars of the Revolution were never quite healed during his lifetime; our Nation was comprised of a loosely united federation of States, united in name only; States rights were jealously guarded, and as Jackson was himself to exclaim later "Show me an express clause in the Constitution authorizing Congress to take the business of State legislatures out of their hands." Today, we like Jackson, espouse the cause of States rights, but it is hardly appropriate to extoll the virtues of those rights while we are willing to mortgage such rights for a mess of political porridge from the Federal "slop-bucket." Prior to this era, the destinies of this Nation were guided by the so-called landed aristocracy, even though the fight for independence was carried on largely by those of humble birth such as Andrew Jackson. Our Nation had been born of the struggles and dreams of peoples from all parts of the world who saw this wilderness as a haven of liberty, and now those dreams of those outcast people were beginning to assess themselves, and a champion was found in Andrew Jackson, a fearless soldier and lawyer, who truly believed in the innate immortality of man. He introduced into American history a new concept, the concept that true aristocracy lies in the human brain and heart rather than in ancestral family trees.

It would have been easy for this man, born into adversity and poverty, struck by the sword of a British officer and held in British prisons for months to have become embittered against humanity; yet this man dedicated his life that those who would come after under similar circumstances would not have to so endure such hardships.

It is of course true that certain events in the life of Jackson strike discords even today; it is also true that he was ruthless and it seems that he felt that the ends justified the means, and it is also true that his concepts during the Presidency did not coincide with the expressed interests of his native State of South Carolina, but yet we find ourselves today espousing his cause—Jackson almost used military force to enforce the tariff laws in South Carolina and today we seek such laws to protect our industries.

Jackson succeeded a long line of Presidents born into the landed aristocracy—Washington, Adams, Jefferson, Madison, Monroe, and Adams. He was defeated for the Presidency in 1824, at a time when apparently he did not really desire the office, but was elected in 1828 and reelected in 1832, in both of which elections he did not receive the vote of South Carolina.

The exploits of Jackson in the Indian wars, in the forceful taking of Florida from the Spaniards, and in the War of 1812 are legion, but these military exploits only indicate the restless ambition of the man to make a place in the sun for himself and for his Nation.

At the turning point of history of this Nation, as in the course of events of the history of every great nation, Andrew Jackson stood at the helm, as though called by providence. As we stand here today and dream of those days and those events, and as we look out across the horizon where in that day extended trackless wilderness, and today see endless highways, railroads, and industries, and as we see harnessed the Catawba River in which this boy fished, we are constrained to say to ourselves that there are no more frontiers, that there are no more opportunities for greatness. We today are living in an age when it is held by all political parties that the aim of the American people is to live in peace, harmony, and security, with little or no effort to secure our own individual destinies. We too often sink into a lethargy and say to ourselves, "We mortals are but like leaves cast about in the winds of fate." To so think and to so live is a sacrilege to the man whom we honor today and a disgrace to all the Jacksons in American history, the named and the unnamed. There is a greatness in every citizen if he will use the talents with which he is endowed. This country is proud of the men in its history who have changed and molded its destinies, yet the true heroes of this Nation are those who are willing to accept the responsibilities of good citizens without rewards, and without eulogies other than the self-satisfaction that comes with a job well done.

I have no fear for the destruction of this Nation nor of our way of life by conquest from without, but this Nation can of a certainty rot from within if our people lose their pride and faith in themselves, their families and rather than provide for their own future, look to the Federal Government for sustenance.

The value of history lies in our ability to apply the lessons learned to life today and to the securing of the future. The life of Jackson should well serve as a guidepost to those of us who today think the horizon has passed, and should serve as an inspiration to create new horizons, to rededicate ourselves to the premise on which this Nation was founded and for which Jackson and all other Jacksons fought, that of the inate dignity of man.

Resolution for a U.S. Postage Stamp Portraying "The Nucleus of Craftsmanship—Apprenticeship"

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 21, 1960

Mr. WILEY. Mr. President, in an age in which technological and scientific revolutions draw the world spotlight, there is, I think, too often an inclination to overlook the "motivating force" underlying progress—that is, the talent, ingenuity, brainpower of our people.

We recognize of course that technology, today, is a major vehicle upon which we, as a people, may establish a better, brighter future. As our age becomes more complex, however, the Nation, and the world, will require ever-larger armies of highly skilled workers—at all levels—to run the machines of progress.

As we attempt to train the vast core of workers, artisans, craftsmen, and others needed to undergird advancement in these fast-advancing times, there is a real concern—and rightly so—about the need for adequate apprenticeship programs.

Today, I was pleased to receive from Marvin E. Brickson, president of the Madison Federation of Labor AFL–CIO of Madison, Wis., a resolution proposing the printing of a special U.S. postage stamp.

As we know, the postage stamps of a nation present a panorama of its progress, depicting in miniature its famous men and women, the great events of its history, its organizations, its industries, its natural wonders.

As proposed in the resolution, a stamp emphasizing "the nucleus of craftsmanship—apprenticeship" would recognize the significance of apprenticeship to our ultimate productive power.

Reflecting the concern of the Madison federation on the need for adequate training programs to provide us with the highly-skilled manpower for the future, I ask unanimous consent to have the resolution accompanied by a brief statement, printed in the Appendix of the RECORD.

There being no objection, the resolution and statement were ordered to be printed in the RECORD, as follows:

RESOLUTION—TO PRINT A U.S. POSTAGE STAMP, "THE NUCLEUS OF CRAFTSMANSHIP—APPRENTICESHIP," RECOGNIZING THE BASIC PHILOSOPHY OF BONA FIDE APPRENTICESHIP AND BRINGING TO THE ATTENTION OF THE AMERICAN PUBLIC THE VALUE OF THE APPRENTICESHIP SYSTEM TO OUR NATIONAL ECONOMY

Whereas millions of our fellow workers, throughout the years, have given of their time and effort in the promotion of this philosophy, for the purpose of training competent craftsmen for the industrial welfare of our Nation; and

Whereas the future status of skilled manpower in the United States is becoming increasingly dependent upon apprentice training; and

Whereas there is a need to acquaint the American public with the gigantic strides, activities, and efforts in establishing the philosophy of bona fide apprenticeship, and the efforts that are being taken by labor and management to provide the public with the highest possible grade of products and services in conformity with approved practices of safety and skilled craftsmanship; and

Whereas it is the desire of the Madison Federation of Labor, AFL–CIO, to pay tribute to these fellow workers, apprentices, and to labor and management representatives who have voluntarily contributed their time and effort to this very necessary industrial activity: Now, therefore, be it

Resolved, That the Madison Federation of Labor, AFL–CIO, go on record as approving, and to petition Postmaster General Arthur E. Summerfield to have printed, a U.S. postage stamp using a facsimile of the imprint on this resolution and the attached analogy; also to request our congressional delegation to so petition the Postmaster General.

A copy of this resolution as passed to be sent to: Maud Wright, secretary, Boise Central Trades and Labor Council, AFL–CIO, 613 Idaho Street, Labor Temple, Boise, Idaho.

THE NUCLEUS OF CRAFTSMANSHIP

APPRENTICESHIP

Apprenticeship might well be called the nucleus of craftsmanship. Just as the sun is the nucleus of our solar system, holding in place the planets and their satellites by virtue of its enormous gravity pull, so is our economic system held in balance by the qualified craftsmen who staff the machines and build the artifacts of our civilization.

The sun nurtures and sustains all life as we know it—plantlife that men and animals depend upon for life grow from this sunlight and warmth. Similarly, apprenticeship could appropriately be termed the sustaining force of our economic life, supplying as it does, qualified craftsmen who have learned their skills through apprenticeship. Through the vitalizing influence of apprenticeship the apprentice grows in efficiency, and with the skills of his trade firmly established and thoroughly mastered, matures into a craftsman, becoming an integral part of the vital lifelines of our production system.

Truly, as the sun is the nucleus of our solar system, apprenticeship is the nucleus of our craftsmanship.

The Problem of Health Insurance for Our Retired Citizens

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. STRATTON. Mr. Speaker, no problem is of more vital concern at the moment to our citizens than the problem of providing medical care for our retired citizens. Because of our keen interest in this problem, and in the various pieces of legislation which have been introduced to deal with it, I am bringing to the attention of Members of the House some thoughtful editorials that have appeared recently in newspapers in my district which reflect, I believe, the concern which most of my constitutents feel on this important issue.

There follow an editorial from the Amsterdam Evening Recorder of April 6, one from the same newspaper on April 7, an editorial from the Schenectady Union Star of April 14, and another from the same newspaper on April 19, 1960. I commend these editorials to the attention of my colleagues:

[From the Amsterdam Evening Recorder, Apr. 6, 1960]

NO PLACE FOR POLITICS

According to Arthur S. Flemming, Secretary of Health, Education, and Welfare, the Eisenhower administration will soon present a medical insurance program for the needy aged for congressional approval.

But Democrats claim the administration will wait until Congress is ready to adjourn before submitting the plan. This, they maintain, is so the Republicans can blame the Democrats in the coming campaign for failing to set up such a program.

Whatever is done to help elderly citizens meet medical costs should be done on a nonpartisan basis. The issue is far too important to millions of Americans to become involved in politics.

The fact is that within 5 years there will be between 6 and 7 million Americans over 65 with no insurance to meet medical bills. Nine million will have some insurance, while 2 million will be eligible for welfare.

The record proves that people over 65 have two to three times as much chronic illness as the rest of the population and they stay in hospitals twice as long on an average. They spend 90 percent more on health than younger people.

The problem is how they can best be aided, and it is a problem deserving the attention of the best minds in out of Government. Certainly, there is no excuse for either party playing politics with the misfortune of others.

[From the Amsterdam Evening Recorder, Apr. 7, 1960]

HEALTH INSURANCE ISSUE

Although the House Ways and Means Committee rejected the Forand bill for Federal medical insurance for those over 65, this is not the last that will be heard on this subject. It is bound to be an issue in the coming presidential campaign.

While the Forand bill, which would have provided "free" health insurance to all pension eligibles and charged the cost against the working population in the form of a payroll tax, has been criticized as too extreme, the fact remains that millions of retired persons need medical care and cannot afford it. That puts it squarely up to the critics to say what they would do about what is admittedly a serious and growing problem.

New York State has legislated a partial answer to the medical care problem. A measure passed at the recently concluded session gives everyone covered by a group health policy the right, upon retirement, to convert it to an individual policy at "fair and equitable rates." While this is helpful, it is not going to solve the cost problem, yet it is about as far as any State can go. Broader action will have to come on a national level.

That the need for such action exists cannot be doubted, and neither can it be doubted that the problem must be met, not evaded. Developing a sound alternative to the Forand bill would be a very good place for Vice President NIXON or any other presidential hopeful to begin taking up the challenge.

[From the Schenectady Union Star, Apr. 14, 1960]

BEYOND THEIR CONTROL

In a blast against the scramble by Republicans and Democrats to hammer out some kind of health insurance program in an election year, the New York Herald Tribune remarks: "The crass assumption that millions of Americans, dignified by the title of senior citizens, can be bought by the offer of a free trip to a nursing home is as cruel and insulting as any political maneuver could be." Sounds like an echo of the Republican "line" in 1936, with social security the target. That year GOP nominee Alf Landon got 8 electoral college votes and Franklin D. Roosevelt 523—the highest of his four elections.

Many seniors will resent being accused of "selling" their votes for something that is supposed to help them cope with inflation, which the Government, not they, brought about. For example, the purchasing power—medical or otherwise—of Government bonds they bought some years ago for just such contingencies.

[From the Schenectady Union Star, Apr. 19, 1960]

FEDERAL MEDICAL AID OLD STUFF FOR MILLIONS

As discussion of extraordinary sickness aid for "seniors" goes on, much is said about the danger of getting the Federal Government into medicine. It long has been there with both feet.

For example, such service is available to about 22 million veterans who have served at least 90 days in the armed services during war. It is available for about 2.5 million members in the armed services currently, and to some extent for their families. Partial benefits accrue to retired armed service personnel. Under social security the Federal Government matches States in funds for care of needy persons, including sickness. Indians and certain Eskimos in Alaska, as wards of the Federal Government, are entitled to free hospitalization and medical service. Members of Congress and Cabinet officials may enter Bethesda Naval Medical Center or Walter Reed Medical Center in Washington, and get every kind of service except special nurses for $22 a day. President Eisenhower—or any other President—has to pay only $1.20 daily for meals to have full service at either of those centers. And Mrs. Eisenhower, as a dependent of the Commander in Chief, is eligible for medical service under the armed services program.

So Uncle Sam is doing quite a bit for his nieces and nephews in the way of full or partial free medicine. We doubt Cabinet members or Members of Congress come under the needy classification. However, a number of Senators and Representatives unquestionably fall into the oldster grouping.

U.S. Foreign Policy Reaps Gains

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 21, 1960

Mr. WILEY. Mr. President, the upcoming summit conference, scheduled for May 16, offers one more opportunity for nations of the world—with conflicting interests—to find peaceful ways to settle their disagreements.

At a conference this morning, my colleagues and I on the Foreign Relations Committee were privileged to discuss the outlook with Secretary Herter.

In accordance with past policy, the United States continues to stand firm on West Berlin and West Germany, and adheres strictly to a nonappeasement policy. However, we are ready to negotiate on issues in which it appears that the Communists are willing to act in good faith if such agreements can be safeguarded or self-enforced.

Unfortunately, in a presidential election year, politically motivated efforts are too often made by opposition candidates to downgrade the U.S. prestige in the eyes of the world—casting unwarranted reflections on our policies and program.

In the face of such tactics, which almost seem like an attempt to "sell out" the prestige of the United States for whatever political advantage it may, or may not, bring the candidate—I always welcome positive analysis of just what we are accomplishing policywise in international affairs. Recently, the Christian Science Monitor published an informative article entitled, "U.S. Foreign Policy Reaps Gains" by Joseph G. Harrison. Reflecting upon specific ways in which we are making a contribution to peace, stability, and progress, I ask unanimous consent to have the article printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. FOREIGN POLICY REAPS GAINS

(By Joseph G. Harrison)

The foreign policy of the United States, according to a great deal of available evidence, has entered the crucial decade of the sixties in a considerably stronger position than many of its critics would have thought possible a year or so ago.

Indeed, an impartial observer might well argue that America's position in the world, despite certain obvious weaknesses and failures, contradicts those who claim that this position has continued to deteriorate.

It can, in fact, be maintained that the very opposite of what these critics expected has happened, and that for several years American foreign policy has been increasingly successful along most lines and at most points.

This does not mean that many grave problems do not lie ahead. The unresolved crisis over Berlin, Washington's presently unhappy relationship with Cuba and Panama, the continuing threat to Formosa on the part of Communist China, these and certain other unsettled questions indicate how difficult remains the road ahead.

Yet a broad survey of world conditions, as they affect the United States and are affected by it, indicates that in many areas of the globe Washington's policies have both strengthened this country's international relationships and improved the picture held of this country.

TRACED TO 1958

Some students trace the beginning of this improvement, surprisingly enough, to the summer of 1958, when, in the face of civil strife in Lebanon, an extremely tense situation in Jordan, and the overthrow of the pro-Western Iraqi Government, Washington sent a powerful contingent of U.S. Marines into Lebanon. This helped end the strife, and allowed an opportunity for peaceful compromise between the warring factions.

But, equally important, the Marines were, to the happy surprise of nationalist elements in the Middle East, quietly withdrawn after a few months. Important segments of Asian-African opinion, which had earlier condemned the dispatch of the Marines, even though the Lebanese Government had requested it, were gratified at the speed with which this withdrawal was made.

This and other wise steps taken since eventually resulted in a lessening of Arab hostility toward the United States, despite the fact that Moslem resentment over America's role in the establishment of the State of Israel continues, and will continue for the foreseeable future, to raise many problems for Washington.

At present American relations with the Arab-speaking nations of the Middle East and north Africa seem, on the whole, to be moving toward a steadily better relationship. This is particularly true of Washington's relations with the United Arab Republic, the most influential of the Middle Eastern nations.

SYRIAN AID RESUMED

Within the past few months, the Syrian region of the United Arab Republic accepted American aid for the first time since the end of World War II. Similarly, American aid to the Egyptian region of the United Arab Republic is rising steadily and negotiations regarding such aid are being held in an increasingly friendly atmosphere. At the same time, the United Arab Republic has quietly but effectively begun withdrawing a considerable number of students which it had earlier sent to the Communist countries of Eastern Europe and rerouting them to American and British universities.

It is undeniable that the relationship between the United States and the revolutionary regime of Premier Karim Kassem in Iraq is far from satisfactory, with the United States being frequently lumped with other leading Western Powers as "imperialist." However, the United States has moved in such a way as to attract a minimum of unfavorable attention in Iraq, with the result that Baghdad has been finding fewer reasons for attacking this country. One proof of this is seen in the fact that Iraq has made no serious attempt to link the United States with the series of upheavals which last year kept that country in confusion and which resulted in a succession of sensational treason trials.

In fact, the Iraqi-American situation has improved so greatly of late that the Iraqi Government recently asked the United States Embassy to help it fill 230 teaching posts at Baghdad University so that it might avoid hiring further Soviet personnel.

In general, it is not easy to see how the United States could within the present context of political realities appreciably improve its present foreign policy in regard to the Middle East. Washington has already demonstrated a heightened awareness of Arab sensibilities. It apparently seeks to do as little as possible to rub these sensibilities the wrong way, and it is endeavoring through a number of reportedly effective means to convince the Arabs that the United States not only has no designs against their independence but is sincerely interested in the preservation of peace and the advancement of well-being in the area. This is an effective beginning, given the bitter relationship which began with the partition of Palestine in 1947.

NORTH AFRICANS PLACATED

In still another Arabic-speaking area the United States has also managed to steer with considerable skill through excessively difficult diplomatic waters. This area is North Africa, where interest and emotion are largely focused on the effort of the Moslem underground in Algeria to win local self-determination.

Through the personal visit of President Eisenhower to the heads of state in both Morocco and Tunisia, through American willingness to negotiate over U.S. Air Force bases in the former, and through the offer of economic aid without strings, Washington has succeeded to a considerable extent in creating a not unfavorable image of the United States in those two countries.

Similarly, its shrewd voting during crucial tests in the United Nations on the Algerian issue, while not wholly satisfying either the French or their Moslem opponents, has enabled Washington to avoid offending either side too deeply.

But it is in south and southeast Asia that one of the most noticeable improvements in American foreign relations has taken place. While communism has been having its difficulties, due largely to Chinese Communist aggression along its Himalayan frontier and its actions in Tibet, the United States has, through a number of careful steps, managed to reduce Asian belief that the United States, if not exactly imperialistic itself, nonetheless was a fellow traveler of European imperialism. Through generous economic aid, but above all by the restraint which it has shown at a number of critical junctures during the past year and a half to 2 years, America has been able to remodel to a considerable extent the image of this country held by many influential Burmese, Ceylonese, Indians, Indonesians, and other Asians.

EISENHOWER GAINS NOTED

It goes without saying that the triumphal tour through this area taken late last fall by President Eisenhower only served to confirm and forward what was already a noticeable trend toward warmer relations with America on the part of the majority of non-Communist countries of south, southeast, and east Asia. Indeed, this tour seems to have had a favorable effect even in those Asian countries not included therein.

One has only to think back to the tense situation which existed 2 years ago between the United States and the Republic of Indonesia on the occasion of the Sumatran revolt, to recognize how great the improvement has been in this important corner of southeast Asia. At that time the United States was being openly accused of aiding the rebellion.

But by patient insistence upon its innocence, by carefully refraining from actions which might lend further color to these accusations, by the extension of postrevolt aid, and above all by the skillful and friendly diplomacy exercised by American Ambassador Howard P. Jones, Washington has converted its relationship with Djakarta into one of friendship and a considerable degree of mutual trust.

An equally welcome improvement has been effected in American relations with Burma. Some 8 months ago, Burma began reaccepting American aid, which it had terminated in 1953 on the grounds that it had military implications. This renewal of close American-Burman relations is the result of patient effort on Washington's part plus the generally better picture which the United States has cut in southeast Asia during the past several years.

LATIN AMERICA IMPROVED

Taken as a whole the U.S. relations with Latin America also seem to be in a period of upswing. The Eisenhower visit during late February, American restraint over Cuba, the courage shown by Vice President RICHARD M. NIXON during his South American swing, the promise of greater economic aid, the establishment of the Inter-American Development Bank—each of these has helped repair Latin-American complaints of neglect on Washington's part and improve the average Latin-American's image of the United States.

On the other hand, it is obvious that in certain areas of Latin America, the United States faces difficult days. No statesman would dare forecast the direction in which American-Cuban relations may move. Similarly, Washington's relations with Panama give every evidence of being headed toward some sort of crisis over the latter's demand for greater rights in the Canal Zone.

These will obviously both test Washington's diplomatic skill and have a bearing upon the continued improvement in this country's relationship to the rest of Latin America. But if Washington's course so far is any yardstick, the United States is prepared to handle these situations in such a way as not to jeopardize its new gains with Cuba's and Panama's sister Republics.

Although some doubts have been expressed as to its diplomatic wisdom, Washington's move in sending a protest to the Union of South Africa deploring the loss of life in racial riots there is seen as part of America's new vigor in foreign affairs. Whatever else its effect may be, the move is almost certain to enhance American prestige among the new nonwhite nations now coming forth in Africa.

ATMOSPHERE BETTERED

Of all of the changes for the better wrought during the past several years, however, the most noticeable, in many ways, is that affecting American-Soviet relations. It is true that this is not an easy situation to evaluate, as it is susceptible to change overnight, should the Kremlin so wish. It is also true that the continuing crisis over Berlin remains a dark and somber cloud upon the horizon.

Yet it is undeniable that the present atmosphere of conversation is an improvement over the situation which previously prevailed. In like manner, the exchange of visits between President Eisenhower and Premier Nikita S. Khrushchev cannot be dismissed as merely worthless window dressing. The continued edging toward some kind of agreement on the control of atomic tests and armaments is a helpful and hopeful sign, even if it would be dangerous naivete to pin too great hopes thereon at the present time.

While this somewhat easier situation between the United States and the Soviet Union is undoubtedly traceable in large part to Moscow's belief that it best serves Soviet purposes at the moment, it should not be overlooked that the greater flexibility in world affairs which Washington has shown during the past 18 months or so has contributed substantially to this improvement.

At present criticism of the White House and State Department emphasizes the three following points which pertain, in part at least, to foreign policy. One is that the United States is not exercising adequate world leadership. A second is that foreign aid is not what it should be. The third is that America's defense position has deteriorated in comparison with that of the Soviet Union during the past few years.

The charge that the United States is not exercising adequate world leadership is an interesting one from several points of view. It is undeniable that today, 15 years after the end of World War II, Washington does not have the commanding voice in world affairs which it had, say, 5 or 10 years ago.

There are those who ask, however, whether this decline (1) was not inevitable and (2) was not actually desirable. They point out, in fact, that the entire purpose of American foreign policy during the past decade and a half has been directed toward enabling other countries to stand upon their own feet, make their own decisions, and thereby lessen, rather than increase, their dependency upon the United States.

From this point of view, may not the decline in American leadership actually represent a victory for American foreign policy? It is obvious that this line of argument cannot be carried to the point of advocating the abrogation of all American leadership. Nor does it mean that America can afford to stop thinking in global terms. This would be as dangerous as it would be foolish. But one cannot dismiss out of hand the argument that the increasing independence which many nations, which once felt obliged to follow American policy willy-nilly, are now showing may well constitute one of the greatest triumphs of American foreign policy.

In regard to the adequacy of foreign aid, if there has been any shortcoming here, it is attributable to the country as a whole, rather than to any one man, agency, or political party. Observers in Washington generally agree that Eisenhower has fought more vigorously for foreign aid than for almost any other cause. In this he has been seconded by administration officials. If he has been frustrated in obtaining the level of aid desired, the fault lies as much with one political party as with the other.

Of the varying charges made against the present administration in Washington, whether sincerely or for political purposes, the one which has produced the widest repercussions is that of having neglected this country's defenses. Specifically, the charge is made that the United States has now fallen behind the Soviet Union in both conventional and space weaponry.

INFLUENCE SMALL

Such a charge belongs in a discussion of a nation's foreign policy only so far as it can be shown that the former affects the latter. So far, and this frequently comes as a surprise to Americans, there is little evidence that the influence of the United States has declined as a result of any change in this country's military strength vis-a-vis the Soviet Union. The general feeling in the rest of the world seems to be that, regardless of any alteration in the American-Soviet military balance, both nations possess such tremendous military might that such alterations no longer are significant. How sound this view is remains to be seen. But to date there is little or no evidence that the United States has been seriously handicapped or set back in the conduct of foreign affairs through an alleged neglect of its armaments.

No serious observer would or could attempt to deny that many grave problems lie ahead of the United States in the field of foreign affairs. Equally, none would deny that this country has behind it many missed or but half-seized opportunities. On the other hand, there is citable evidence that, during the past several years, American foreign policy has had a number of quiet, yet effective triumphs and that, contrary to the predictions of critics, the United States is markedly better off in its foreign relations than these critics had forecast.

The Upward Adjustment of Residual Oil Import Levels Is Deplorable and Inexcusable

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. VAN ZANDT. Mr. Speaker, it was with profound regret that I learned the Department of Interior was again bowing to the will of import companies. There is no justification whatsoever for this about-face which defies a Cabinet committee's security standards and strikes another cruel and unnecessary blow at labor and management in the domestic fuel and railroad industry.

The import levels were created to prevent foreign oil from encrvating the American coal industry's emergency potential. For more than a decade incoming shipments of residual oil have closed mines, relegated mineworkers to the ranks of the unemployed, shoved railroad cars into an inactive state of deterioration, and taken away the jobs of maintenance and operating personnel. The effect on our whole business community has been primarily responsible for the serious labor surplus prevailing in coal communities and railroad centers.

I say to you frankly that, while I was gratified at the White House order initiating the mandatory control program on April 1, 1959, I was not at all satisfied with the import levels decided upon. Using 1957 figures to establish the criterion reflected a generosity toward importing companies that was unbecoming from the standpoint of the domestic economy. In 1957 the importers had shipped a total of 173 million barrels of residual oil into fuel markets of this country. It was a record year. Those imports amounted in energy value to more than 41 million tons of coal.

Having seen the gradual erosion of what has taken place in Pennsylvania's mining communities as a consequence of the rising tide of residual oil from foreign refineries, I favored a cutback that would reopen employment opportunities in my State and in the other regions where foreign oil had literally wrecked opportunity for miners, railroaders, and other workers whoce livelihood is reliant upon a vigorous domestic coal industry. The White House, after careful consideration of the problem, came to the conclusion that it should adopt the quota limitations recommended by the Cabinet Committee charged with the responsibility of deciding at what point oil imports become a threat to the national security. The 1957 figures were set as the safe level.

Those of us seriously concerned with the impact of oil imports accepted the decision with reluctance. We were at least pleased that the White House had finally taken this official recognition of the importance of the coal industry and its relationship to the mobilization base. So we sat by and waited for the results. We felt that the limitation on the volume of residual oil imports thus established might at least provide an indication to the coal industry of just how far importers are allowed to go. The coal industry could make its plans accordingly. Railroads could use this information in projecting their operations to conform with general economic expectations of the coming years.

Now the status has been summarily upended. The Department of the Interior not long ago gave what I considered assurance that it would not cater to the arrogant demands of importers who willfully and flagrantly disregarded quota limits in the early part of this year on the assumption that they would be bailed out of an embarrassing market situation when their allocations had been exhausted. The upward revision has indeed paid off for the importers. They have now been cleared for delivery of another 12 million barrels of residual oil over the established limit.

This concession to major shippers is deplorable and inexcusable. I charge that the Department of Interior is inviting public distrust unless it hereinafter returns the quota limitations to the originally published levels and pledges that there will be no further concessions to oil importers under any circumstances. It is a solemn duty to the many families who depend upon coal production for a livelihood and to the millions more whose very security is interlocked with the ability of the coal industry to maintain the capacity that would be required in an emergency.

Declaration by Wisconsin's Governor's Committee on World Refugee Year

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1960

Mr. WILEY. Mr. President, we recall that World Refugee Year was created by

the United Nations General Assembly in December 1958.

The purpose of designating a special year is: To focus attention on world refugee problems; to encourage financial contributions from both public and private sources; to stimulate modifications of immigration policies of nations for refugees; and generally to provide necessary opportunity for such displaced individuals to find new homes in which to seek, and attain, their individual aspirations and become members of a society.

According to U.N. estimates, about 15 million people still lack permanent homes as a result of World War II and political upheavals.

Until a successful refugee-settlement program is accomplished, this will continue to be a cause of disturbances and unrest. As well, it will remain a blight upon the face of the earth in terms of failure to provide opportunity for the needs of a large segment of humanity.

We recall that in 1958 and 1959, President Eisenhower issued a proclamation establishing the observance of World Refugee Year in the United States. The proclamation called for joint cooperation between the U.S. Committee for Refugees, private welfare agencies and the Government.

In addition, President Eisenhower this year proposed to Congress a revision of our immigration policies which—though not specifically called for in previous programs—is "in spirit" with the concepts of World Refugee Year.

According to reports, 69 governments have so far announced plans for participation in World Refugee Year. In addition, private efforts are being exerted to find constructive ways and means to deal with the problems involved.

Today, I was pleased to receive from Philleo Nash, the Lieutenant Governor of Wisconsin, and chairman of the Wisconsin Governor's Committee on World Refugee Year, declarations endorsing four goals of the U.S. Committee for Refugees.

To give the Senate the benefit of this committee's endorsement of the U.S. program for helping to resolve the difficulties confronting the refugees, I ask unanimous consent to have the declarations printed in the Appendix of the RECORD.

There being no objection, the declarations were ordered to be printed in the RECORD, as follows:

APRIL 18, 1960.

DECLARATION

The Wisconsin Governor's Committee for World Refugee Year, meeting this day in Madison, endorses the four goals of the U.S. Committee for Refugees.

(1) Immediate allocation by the executive branch of the Federal Government of $10 million already appropriated by the Congress for refugee programs;

(2) Generous allocation of additional surplus commodities now in Federal Government storage, for refugee relief;

(3) New legislation permitting the annual immigration of 20,000 refugees beyond those authorized by existing quotas;

(4) Intensified action by voluntary agencies in their continuing programs and in their efforts to raise from the American people during the year at least $20 million over their normal campaign goals for refugee aid.

This committee calls upon the President of the United States, the Secretary of State, and the Congress of the United States to take appropriate action, and urges private groups and individuals in Wisconsin to cooperate in achieving these objectives.

PHILLEO NASH,
Lieutenant Governor of Wisconsin and Chairman of the Committee.

APRIL 18, 1960.

DECLARATION

The Wisconsin Governor's Committee for World Refugee Year, meeting this day in Madison, supports the special message to Congress by the President of the United States, dated March 17, 1960, in which he calls upon the Congress for a complete review, reconsideration and revision of Federal immigration laws.

PHILLEO NASH,
Lieutenant Governor of Wisconsin and Chairman of the Committee.

The Staggering Problem of Foreign Carpet Imports on Our Domestic Economy

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. STRATTON. Mr. Speaker, to underline the staggering impact of foreign imports on our domestic economy, especially the carpet industry which is located in my district in Amsterdam, N.Y., I include herewith under permission to extend my remarks an article from the Amsterdam Evening Recorder of March 31, 1960:

JANUARY IMPORTS OF WILTON CARPETING ACCOUNT FOR 33 PERCENT OF SALES; MUCH FROM JAPAN

Manufacturing statistics showing that January imports of Wilton carpeting reached proportions wherein one out of every three yards of Wiltons being sold in this country is imported are being studied carefully in this city.

Not only is all Wilton production of Mohasco Industries being made in Amsterdam plants but upwards of 750 workers, about one out of every four engaged in carpet and rug making here, is employed on this type of floor covering.

The 538,000 square yards of January imports classified as Wiltons represent a gain of approximately two and one-half the imported yardage of January 1958. Washington reports show. All types of carpets imported in January totaled 790,000 square yards.

Accounting for a major part of the dismaying gain in imports is the 267,000 square yards brought into the country from Japan. A year ago the Japanese imports were only 71,000 square yards.

A former dangerous competitor of American companies, Belgium, enjoyed a relatively modest gain of 20 percent in January. Belgium's position among exporters to the U.S. slumped to 56 percent. A year ago it was 76 percent of the total yardage coming into this country.

Not only the 750 workers in the Amsterdam plant of Mohasco are affected by the tremendous growth of imports, it is realized. Supplying yarn for the Wilton manufacture here is the woolen mill with approximately 1,100 workers whose output is largely used by the Amsterdam weavers. The industrial tie-in is such that the continued increase in imports is certain to affect the entire local floor covering production.

Adding to concern being felt at local levels of the trade, is the fact that on April 25 the Government will publish a list of items that may come in for further tariff reductions under the Trade Agreements Extension Act. The present 21 percent might conceivably be reduced to a point as low as 16 percent ad valorem.

Back in the 1930's Amsterdam workers were protected from this type of foreign competition by a 60 percent import duty. This protection was gradually whittled away through the years, much of it being bartered in deals with foreign countries under the Reciprocal Trade Agreements.

One year ago when the carpet industry petitioned the U.S. Tariff Commission for a review of import competition, the Commission declared by a 3-2 vote that the imports were not of sufficient quantity to injure or even threaten with injury the domestic rug industry. Although it was said at the time that reapplication for further study by the Tariff Commission would be made, no step in that direction has been taken.

BILL INTRODUCED

Senator KENNETH B. KEATING has introduced legislation that would introduce a new tariff factor: The comparative labor costs in the United States and in countries from which imports are being received. Under the Keating bill, the Secretary of Commerce would have more authority than at present.

Congressman SAMUEL S. STRATTON of the 32d Congressional District has indicated that he will introduce somewhat similar legislation in the House.

The Wilton carpet and rug, presently more a symbol for Amsterdam economic health than ever before, is constantly assuming increased importance. The future of the community seems to be wrapped up in this particular product that must have Government protection if it is going to survive, area businessmen are discovering.

Statements by Presidents of Independent Petroleum Association of America and National Coal Association Demonstrate Importance of Mandatory Oil Import Control System and Need for a National Fuels Policy

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1960

Mr. RANDOLPH. Mr. President, I have read with interest two public statements which significantly point up the mutuality of interest of two segments of our great domestic fuels industry.

Both were comments on the weaknesses of the Government's oil import control program and its administration, and both pointed to damage which is being

done to critically essential domestic fuels as a result.

One of these was by Stephen Dunn, of Washington, president of the National Coal Association, and the other by Alvin C. Hope, of San Antonio, Tex., president of the Independent Petroleum Association of America.

Mr. Dunn declared that the recent hasty and ill-advised action of the Department of Interior in increasing residual fuel oil quotas for this period means that the equivalent of almost 3 million more tons of coal can now be imported, in addition to the original allocation. This, he declared, substantiates the coal industry's contention that there should be an immediate and impartial study of the Nation's total fuel requirements, and he remarked that such study is essential to the development of a long-range program for the most economical use of all of our available fuel supplies, including oil, coal and natural gas.

Mr. Hope pointed to the current depressed condition of the domestic petroleum industry, with rising costs and declining prices, and reported drilling activity so far this year is 13 percent below the levels of 1959.

These conditions reflect a continuation of the depressed position the domestic oil-producing industry has suffered the past several years, which the establishment of the mandatory oil import program was expected to alleviate—

Mr. Hope declared.

Without this program, it is obvious, current conditions in the industry would be chaotic. However, the objective of a strong, healthy oil-producing industry capable of meeting all national security needs is not being realized—

He warned.

Mr. President, these two statements remind us of the immediate necessity for giving our attention to the vital fossil fuels produced in this country and on which we would have to depend in time of national emergency. The time is now when we should have a thorough investigation of the whole question of fuels and energy and the establishment of a sound national fuels policy in the best interests of each producing industry and of the national welfare.

The statements issued by both Mr. Dunn and Mr. Hope serve to illustrate the common interest of all of our great domestic fuel industries and the vital importance of giving full consideration to each in the establishment of a national fuels policy.

Because of the importance of this unsolved question, I ask unanimous consent that these two statements be printed in the Appendix of the RECORD.

There being no objection, the statements were ordered to be printed in the Appendix of the RECORD, as follows:

STATEMENT BY ALVIN C. HOPE, SAN ANTONIO, TEX., PRESIDENT, INDEPENDENT PETROLEUM ASSOCIATION OF AMERICA, APRIL 4, 1960

Continued deterioration of crude oil prices as exemplified by the reductions made Wednesday in several oil producing areas by Sinclair Oil Co., are alarming and threaten the ability of independent oil producers to find and develop needed petroleum reserves.

The action by Sinclair, which follows on the heels of numerous other widespread reductions, further aggravates an already unstable price situation and is in direct contradiction to the existing trend of increasing finding and developing costs.

Unless this down trend in crude oil prices is reversed now, they soon will be at the same level they were in 1953.

In contrast, in the last 7 years the cost of finding and developing petroleum has steadily increased. The price of finished steel has gone up 37 percent since 1953. Wages have increased 30 percent; oil field machinery has increased 26 percent and oil well casing costs have risen 41 percent.

As a result of this cost-price squeeze primary oil finding activity has shown a marked decline. Total drilling activity so far this year is 13 percent below the low levels of 1959. The number of rotary rigs now in operation in the United States is down 14 percent.

These conditions reflect a continuation of the depressed position the domestic oil producing industry has suffered the past several years, which the establishment of the mandatory oil import program was expected to alleviate. Without this program, it is obvious, current conditions in the industry would be chaotic. However, the objective of a strong, healthy oil producing industry capable of meeting all national security needs is not being realized.

All factors which are contributing to the present weakened position of the domestic oil producer will be the subject of intense evaluation and action by the association's newly established Ways and Means Committee and the Import Policy Committee at our midyear meeting in Denver, April 25–26.

The industry must find a solution to these problems if it is to move forward with the general economy and provide the energy supplies vital to continued national growth.

STATEMENT BY STEPHEN F. DUNN, OF WASHINGTON, D.C., PRESIDENT OF THE NATIONAL COAL ASSOCIATION, APRIL 11, 1960

WASHINGTON, April 11.—Stephen F. Dunn, president of the National Coal Association, said today he was shocked and keenly disappointed by the sudden Interior Department action increasing the residual oil import quota 12 million barrels in the April 1–June 30 period.

"This hasty and ill-advised move substantiates the coal industry's contention that there should be an immediate and impartial study of the Nation's total fuel requirements," Mr. Dunn said. "Such a study is essential to the development of a long-range program for the most economical use of all of our available fuel supplies, including oil, coal, and natural gas.

"As far as this most recent action is concerned, we in the coal industry were shocked and keenly disappointed that the Government would act without holding hearings and without consulting those whose interests are so vitally affected."

The 12 million barrels of foreign-produced residual oil which can be imported under the revised formula is the equivalent of almost 3 million tons of coal, Mr. Dunn pointed out. He recalled that Under Secretary of Interior Elmer F. Bennett only recently had said the Interior Department had "no information which would appear to warrant an upward adjustment in the residual allocation for this 6-month period."

"Apparently a limited number of the large international oil companies persuaded officials of the Government to change their previously expressed position," Mr. Dunn said. "The issue of an increase was raised in the first instance only because a few of the major importers failed to make the most judicious use of the quotas available to them during the first 3 months of this year.

"In addition to pointing up the neeed for a comprehensive study of available fuel supplies, this action also makes it imperative that the Government conduct a most careful study before issuing oil import allocations for the 6-month period starting July 1. I trust due consideration will be given to the very serious unemployment in coal producing areas, and to the effect that oil imports have, not only on the coal industry, but on such closely allied industries as the railroads and the mine equipment manufacturers."

Mark Twain 1835–1910

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. PUCINSKI. Mr. Speaker, it gives me great pleasure today to include in the CONGRESSIONAL RECORD an editorial from the Chicago Tribune, calling attention to the fact that today marks the 50th anniversary of the death of the great literary genius from America's Midwest, Mark Twain.

This excellent editorial follows:

MARK TWAIN (1835–1910)

In 1835 and in 1910, Halley's Comet made two of its infrequent appearances in our sky. In the former year, in Florida, Mo., one of the few authentic geniuses of American literature was born. He superstitiously expected to die in the year of the comet's return, and so he did—just 50 years ago today, aged 74. No other midwestern writer has achieved so lasting an orbit in the literary heights as has Samuel L. Clemens, better known by his pseudonym of Mark Twain.

His birthplace is a State park. The nearby home town of his bodyhood, Hannibal, is chiefly notable for him and his creations, Tom Sawyer and Huckleberry Finn, whose likenesses cast in bronze stand at the foot of Cardiff Hill. A U.S. postage stamp (10 cents, brown, 1940) honors him. His books circulate by the million in the Soviet Union also. Biographical and critical writing about him is as lively as ever, a current instance being "Mark Twain and Huck Finn" by Walter Blair of the University of Chicago.

Chicago knew Mark Twain only as an occasional visitor. Once he left the Mississippi River, he went west to Nevada and California. Travel sketches about the Sandwich Islands (now called Hawaii) for a Sacramento newspaper led to further travel writing, issued as the book, "Innocents Abroad."

Established as a writer by this funny if philistine volume, and married to a woman from Elmira, N.Y., Clemens' homes henceforth were in upstate New York, Connecticut, and Europe.

But it was in Chicago that one of his most hopeful investments went sour—a typesetting machine of too great intricacy. The factory was here, and the newspaper plant (the Times-Herald) where it proved impractical. Delos Avery, in our pages a few years back, suggested that this unhappy association with Chicago may have caused the humorist to hang on Chicago a remark he attributed to Satan, speaking to some dissatisfied tenants of his realms: "The trouble with you Chicago people is that you think you are the best people down here, whereas you are merely the most numerous."

Mark Twain's principal public appearance in Chicago was a happy one. It was at the 1879 reunion and banquet of veterans of the Army of the Tennessee, on this occasion joined by their commanders, Gen. U. S. Grant and Gen. William T. Sherman. At the Palmer House, military heroes and business giants attacked a menu including roast prairie chicken, buffalo steaks, and wild turkey. The oratory began at 10. In the place of honor, last among 15 speakers, at 2 a.m.

Mark Twain responded to the toast: "The babies. As they comfort us in our sorrows, let us not forget them in our festivities."

The full text of: "The Babies" appeared in the Tribune the next morning—a scoop engineered by Editor Joseph Medill, who sat next to Mark Twain at dinner.

Mark twain swept to his climax with the suggestion that some 56 years earlier General Grant himself had been "giving his whole strategic mind to trying to find out some way to get his big toe into his mouth." As he expected, "the laughter ceased and a sort of shuddering silence took its place" at this undignified reference to General and ex-President Grant. But the last sentence scored: "And if the child is but the father of the man there are mighty few who will doubt that he succeeded."

Of all the successful men at the Palmer House that night, Mark Twain is the most affectionately remembered. Of them all, he alone had the power to speak to our generation—and to our posterity—as clearly and memorably as to his own.

Bridgewater

EXTENSION OF REMARKS
OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 21, 1960

Mr. ROBERTSON. Mr. President, the first settlers in the valley of Virginia, in which I live, came to Virginia primarily from Pennsylvania. Some were of Scotch-Irish stock and some of German stock, but all seeking a home where they could enjoy religious freedom. Among the valley towns established by descendants of the first settlers is the historic town of Bridgewater, which this year is celebrating its 125th anniversary.

A Virginia historian and newspaper publisher, Kenneth E. Crouch, of Bedford, Va., has compiled a list of places named Bridgewater in the United States, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the list of places were ordered to be printed in the RECORD, as follows:

PLACES NAMED BRIDGEWATER IN THE UNITED STATES

(By Kenneth E. Crouch)

Place names for communities have many sources of origin and include at least 15 in the United States whose name Bridgewater is closely associated with bridges over streams in or near the communities.

Of the 15 places in the United States named Bridgewater, 9 are located in the New England area and it is there that the first American community of that name, and most historic, is located.

The first of that name was the Old Bridgewater area in Massachusetts, associated with the Plymouth Rock settlers and appropriately enough situated in Plymouth County in southeastern Massachusetts. Old Bridgewater's history dates to March 23, 1649, when Capt. Myles Standish, Samuel Nash, and Constant Southworth, a step-son of Gov. William Bradford of Plymouth Colony, purchased from Ousamequin (formerly Massasoit) at Sachem Rock in what is now East Bridgewater lands for the "township of Duxbury" for 7 coats, 9 hatchets, 8 hoes, 20 knives, 4 moose skins, and 10½ yards of cotton. The first settlement in Old Bridgewater was on both sides of the Town River in what is now West Bridgewater in 1651 by some of the Duxbury people and it was then known as Duxburrow New Plantation. Originally there were 54 proprietors of the town.

Old Bridgewater was composed of what is known today as Bridgewater, East Bridgewater, South Bridgewater, West Bridgewater, and Brockton (formerly North Bridgewater). No proof is given to the name Bridgewater although some associate it with the town of Bridgwater in England—though the English town has no "e" in the "Bridge" part of its name.

By 1956 the population of Duxburrow New Plantation had grown until it was deemed best to incorporate and the name Bridgewater was selected. East Bridgewater was incorporated in 1823 and West Bridgewater in 1822. Brockton (originally North Bridgewater) was settled in 1697 and incorporated in 1881.

The historic Sachem Rock upon which the original land for Old Bridgewater was purchased is now the property of Clarence D. Hall and known as Sachem Rock Farm. Mr. Hall is an 11th generation descendant of Gov. William Bradford of Plymouth Colony and a signer of the Mayflower Compact.

Bridgewater, Mass., is one of two Bridgewaters that has a prominent college, Bridgewater State Teachers College which was founded in 1840.

In the northeastern part of Maine is the community of Bridgewater whose name originates from the Bridgewater Academy Grant. It is located on the Bangor and Aroostook Railroad and near the North Branch of the Meduxnekeag River on the Maine-New Brunswick, Canada, border. It was founded in 1858.

In northwestern Connecticut is the community of Bridgewater, located between the Housatonic and Shepaug Rivers, and its name is attributed to a bridge over the Housatonic River. Its founding dates to 1722.

In two counties of eastern Vermont are three communities with the name of Bridgewater. Deacon Asa Jones began the surveying for the Bridgewater area in 1779 and all three communities are located on the Ottauquechee River, which prior to 1927 had many covered bridges. Bridgewater and Bridgewater Corners are both located in Windsor County and across the line in Rutland County is West Bridgewater which is a part of Sherburne Center.

In central New York is Bridgewater which was settled in 1797 and named for Bridgewater, Mass. The first settlers were two cousins from Connecticut in 1789 and more came from that State and Massachusetts. In 1797 it was named when the township was formed. A small unnamed stream flows through the town, which is on the Cherry Valley Turnpike.

The only Bridgewater in the Southern States is located in northwestern Virginia in Rockingham County, the turkey capital of the world. The history of the community, in the historic Valley of Virginia, dates to about 1800. John Dinkle, between 1800 and 1810, built several mills on the north bank of the North River and around these mills was formed a village, first known as Dinkel Town, in honor of its founder. When iron mining developed in the area Dinkel Town became a river port and its name was changed to Bridgeport. When the town was incorporated in 1835 it was named Bridgewater. It is the site of Bridgewater College, founded in 1880 and operated by the Church of the Brethren.

West Bridgewater in western Pennsylvania, founded in 1834, is located at the mouth of Beaver River north of Pittsburgh. Aaron Burr lived here and built his barges for explorations down the Ohio and Mississippi Rivers.

In the township of Bridgewater in southeastern Michigan is the town of Bridgewater which was founded about 1860. In 1836 the township of Hickston was divided and George Howe appointed the first supervisor. It is believed he named the community for Bridgewater, N.Y., where he formerly lived.

The community of Bridgewater in southwestern Iowa was founded in 1884 and its name is accredited to a bridge over the Middle Nodoway River.

The Bridgewater farthest west is located in southeastern South Dakota. It was first called Nation, for the first settlers, R. Nation and J. B. Nation. The name was changed to Bridgewater in 1880 by the workers on the Chicago, Milwaukee, St. Paul, and Pacific Railroad who had to carry their drinking water across a bridge. The community was incorporated in 1889.

There is a Bridgewater on the southwestern part of Nova Scotia, where the LeHave River enters the Atlantic Ocean. No information is available as to when the town was founded as original settlers came in by ones and twos from the nearby settlements of LeHave and Riverport. The first footbridge on the river was constructed about 1840 with a barrel of rum to keep the builders happy. So it seems the first settlers came between the 1820's and 1830's. The LeHave River is often referred to as the Rhine of Nova Scotia.

Location	Founded	Population	Origin of name
BRIDGEWATER			
Connecticut	1722	800	Bridge over Housatonic River.
Iowa	1884	206	Bridge over Middle Nodoway River.
Maine	1858	1,200	Bridgewater Academy grant.
Massachusetts	1628	10,000	Probably Bridgwater, England.
Michigan	1800 [1]	120	Probably Bridgewater, N.Y.
New York	1797	850	Bridgewater, Mass.
South Dakota	1880	748	Bridge over a stream.
Vermont	1779	903	Bridge over Ottauquechee River.
Virginia	1800 [1]	1,537	Bridge over North River.
BRIDGEWATER CORNERS			
Vermont	1779	(3)	Bridge over Ottauquechee River.
EAST BRIDGEWATER			
Massachusetts	1660	6,500	Probably Bridgwater, England.
SOUTH BRIDGEWATER			
Massachusetts	1628	(3)	Do.
WEST BRIDGEWATER			
Massachusetts	1651	6,500	Do.
Pennsylvania	1834	1,326	Bridge over Beaver River.
Vermont	(4)	(4)	Bridge over Ottauquechee River.

[1] Founded or established about this date.
[2] Part of Bridgewater, Vt.
[3] Part of Bridgewater, Mass.
[4] Unknown.
[5] Part of Sherburne Center, Vt.

Unemployment Insurance for Nonprofit Organization Employees

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. FINO. Mr. Speaker, today we have many programs which are designed to protect the population of the Nation against risks over which they have no control. These programs included social security, the public assistance program, and the unemployment insurance program. We are constantly striving to make the benefits amounts under these programs commensurate with the requirements of the recipients and to design new types of benefits which will meet changing needs. Yet, much as such improvements are needed, we should also be alive to the act the great numbers of people are as yet denied even minimum protection under some programs. This is particularly true of the unemployment compensation program. After the terrible experiences of the early thirties it was realized that our citizens must be afforded protection against the miseries which follow unemployment. Hence, Congress designed the present unemployment law to give a measure of income security to those who are unable to obtain work through no fault of their own. It is a sobering thing to consider that when we suffer periods of economic structure such as the recent recession, unemployment insurance is the only thing standing between many families and the public dole. I was surprised and shocked to learn that approximately 1,300,000 persons are presently excluded from this vital protection by the operation of existing law. I refer to those persons who work for nonprofit organizations. I find it difficult to see why this large and valuable segment of our working population should be treated with less concern than other portions of the labor force. The character of the organization for which a man works has not the slightest effect on his ability to endure a period of unemployment for which the economy, and not the worker, is responsible. When income stops people are hungry. I cannot agree that eligibility should hinge upon the character of the organization by whom the worker is not being paid.

After all, nonprofit organizations hire people to do the same kind of work as is done by profitmaking organizations. This fact has been recognized by Congress in making it possible for the employees of nonprofit organizations to obtain social security coverage. But, social security coverage provides only a portion of the protection to which such people ought to be entitled. We have constantly worked to improve the coverage of social security and have done so. But, unemployment compensation has not kept pace. I think we must take steps to close the gap. For many years, all the laws of this Nation have recognized nonprofit organizations as a special type, and have accorded them many privileges and immunities. This is because such organizations are devoted to the general good rather than the enrichment of any private individual. It seems to me that such organizations cannot continue to be "friends to man" and at the same time cheerfully contemplate more than a million workers without the slightest protection against the risk of unemployment.

I have therefore introduced a bill, H.R. 11594, which would eliminate the provisions of present law which exclude employees of nonprofit organizations from the insurance they need and deserve. I am happy that a similar proposal is contained in H.R. 7177 which was introduced by the Honorable WILBUR MILLS, chairman of the Ways and Means Committee, jointly with the late Honorable Richard Simpson. I know that it will receive serious consideration by the Committee on Ways and Means, and look forward to its adoption by the Congress as an important forward step in strengthening our unemployment insurance plan. I hope that this body will join with me so that my bill, or one embodying the same principles, can become law as soon as possible.

Israel Independence Day — Proclamation by Governor Rockefeller, of New York

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1960

Mr. KEATING. Mr. President, the establishment of the Republic of Israel 12 years ago marked a significant milestone in the history of human freedom. No less significant is the remarkable spirit of progress that has lifted Israel in 12 short years from an infant community to a dynamic, highly developed, and prospering member of the family of nations. The stature she has achieved is the more admirable because of the difficulties and frustrations, manmade and nature imposed, that Israel has had to surmount in her courageous march to the fulfillment of her destiny.

In commemoration of the historic date of Israel's founding as a free nation, Gov. Nelson A. Rockefeller, of New York, proclaimed April 15 as Israel Independence Day in New York State. Mr. President, in view of the close, traditional ties that unite our Nation with Israel, I ask unanimous consent that this proclamation be printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION

Twelve years ago the United States acquired a new ally, the family of nations, a new member, when the Republic of Israel was established.

Since that day the people of Israel have stood forthright as an independent state, a full member of United Nations.

They won their freedom in the face of obstacles which most people believed to be insurmountable. They owe their freedom to their own massed and individual valor, and to the fiery heroism of their leaders. As Americans we are proud to think that our sympathy, encouragement, and support also contributed to this happy consummation.

The progress of Israel, in 12 years has been nothing short of miraculous. Large areas of land that were desert have been made fertile and productive. Hundreds of thousands of the homeless and oppressed were welcomed and absorbed into the new state. Its government is one after our own hearts, since it is pledged to freedom, to equality of opportunity for all, and to respect for the dignity of the individual.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim April 15, 1960, as Israel Independence Day in New York State and I invite widespread recognition of this event which marked an epoch in world history.

NELSON A. ROCKEFELLER.

By the Governor:

WILLIAM J. RONAN,
Secretary to the Governor.

Dr. R. L. Williams, Houtzdale, Pa., Prominent in Medical Circles in Central Pennsylvania, Celebrates the 80th Anniversary of His Birth and a Half Century of Dedicated Service in the Field of Medicine

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. VAN ZANDT. Mr. Speaker, the medical profession has many physicians who have served their fellowmen with outstanding ability and devotion for over a half century. Among them is Dr. R. L. Williams, prominent and highly respected resident of Houtzdale, Pa., who has enjoyed the honor of having been elected and having served three 4-year terms as coroner of Clearfield County, Pa. During his tenure of office as county coroner, Dr. Williams continued his private practice, maintaining daily office hours and making house calls that are among the many demands made of the family doctor.

During his 50 years of service to humanity and in particular to the residents of the Houtzdale area, Dr. Williams found time to fill a 20-year teaching assignment at the nurses school affiliated with the Philipsburg, Pa., State Hospital where for many years he served as chief of the medical staff.

The popular Houtzdale physician is among the many country doctors who in 50 years of practice have witnessed phenomenal changes in providing medical care and treatment. Through constant study and active membership in various medical societies physicians like the beloved Dr. Williams have been able to keep abreast of the breathtaking developments that have affected their profession in the transition from the so-called horse-and-buggy era to the wonders of the nuclear age. It is to their credit that they have availed themselves of the latest techniques in the treatment

of disease with the result that their patients have derived great and lasting benefits from their foresight and determination in continuing to seek knowledge and skill in treating the ills of mankind.

It is a great pleasure to salute Dr. R. L. Williams on the 80th anniversary of his birthday and to congratulate him on reaching his 50th year as a practicing physician. I join the many friends of the genial Houtzdale physician in wishing him many more happy birthdays and continued years of service in his chosen profession.

In conclusion, I should like to incorporate in my tribute to Dr. R. L. Williams the following article which appeared in the April 14, 1960, issue of the Osceola Leader, published at Osceola Mills, Pa.:

HOUTZDALE DOCTOR MARKS BIRTHDAY; STILL GOING STRONG

Dr. R. L. Williams, Houtzdale physician for 50 years and active in Clearfield and Centre County medical circles, celebrated his 80th birthday April 1.

A busy practitioner, Dr. Williams served as Clearfield County coroner for three terms and served as president of the Clearfield County cancer unit of the American Cancer Society from October 1948 to September 1954.

Dr. Williams became a member of the Philipsburg State Hospital staff on June 12, 1928. He served many years as medical chief of staff and taught pediatrics for 20 years in the nurses' school.

During his career he has been affiliated with the Clearfield County Medical Society, which he served as president for one term, a member of the Centre County Society, the Medical Society and the American Medical Association.

Born in Houtzdale April 1, 1880, he is the son of the late Rev. and Mrs. Robert G. Williams, the former a Presbyterian minister for 34 years.

His early education was acquired in the public schools of Clearfield County. As a young man he worked at various occupations to obtain money for higher education. Finally he found his way to the State Teacher's College at West Chester, graduating in 1903.

Upon graduating from the University of Maryland Medical College, Dr. Williams took examinations in both Maryland and Pennsylvania. He chose Houtzdale in which to practice, remaining there these 50 years.

Travel to patients in the early days was by horseback or horsedrawn buggies since there were no improved roads. Since 1913, however, Dr. Williams has traveled by automobile.

On June 3, 1908, the doctor married the late Lillian F. Bell of Kerrmoor.

He has two daughters and one son: Mrs. W. R. (Miriam) Fahringer of Mountain Lakes, N.J., a Penn State graduate who also holds her master's degree in education from Columbia University; Mrs. May Jo Love of Arlington, Va., wife of Lt. Col. D. S. Love; and Dr. Warren W. Williams. There are six grandchildren.

Export of Jobs

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein a very timely article entitled "Export of Jobs Blamed on High U.S. Wage Scales," by the able columnist, Mr. Elmer Roessner which recently appeared in the Worcester Daily Telegram.

As Mr. Roessner indicates, "exporting jobs" is a phrase that has given the American people and some of their leaders greatest concern of late. Inasmuch as exporting jobs takes away as well as threatens their employment, American workers have come to realize the danger this practice presents to their continued and future employment.

It is clear that many American workers have already lost their jobs by the location overseas of American factories taking advantage of lower wage and price scales and lower labor standards in various foreign nations. It is undeniable that if this practice continues many other workers will lose their jobs and foreign workers will replace them, doing the same type of work in their own countries.

There are variations of the job-export practice all of which effect the general prosperity of this Nation.

First, there is the manufacturing concern which sets up an outlet overseas to produce and distribute its products by utilizing cheap, substandard foreign labor and escape paying taxes in this country, at least for the time being.

Second, there is the American concern which has deliberately set up plants overseas to take advantage of the foreign aid program that assists in building new factories and furnishing know-how, thus greatly reducing its cost of production, getting closer to foreign markets which they are able to exploit because of low production costs, and, finally, in some instances, shipping their products to the United States under prevailing low tariff walls to compete with our domestic economy and cause the loss of even more jobs in the home employment markets.

I do not desire to discuss these important questions extensively at this time, but I do wish to point out the most deleterious effect of this practice upon American working men and women, upon the national economy, upon our competitive situation in the world and upon the general, overall prosperity of the Nation.

I am concerned, too, about the way the statistics of foreign trade; that is, imports and exports have been handled. It has been said that anything can be proved by statistics and the recent publication of figures relating to the activity of those engaged in exporting jobs, and promoting foreign trade in other nations, seem to indicate that the full story is not being told to the American people.

As Mr. Roessner points out, something more than export sales are needed to complete the picture because travel, tourism, subsidized agricultural exports, foreign aid bounties, and offshore procurement spending are all factors in the general import-export picture that are oftentimes not taken into account and certainly not given proper weight.

It is hardly necessary for me to assert and reiterate that I favor foreign trade and commercial intercourse with all nations of good faith and good will with whom it is mutually advantageous to trade and conduct economic relationships.

What I object to is subsidized trade, whether it is subsidized by foreign aid, low tariffs, or reciprocal trade policies. In the first instance, the money comes out of the pockets of the American taxpayers, and in the second, this trade is accomplished at the expense of the American workers who lose their jobs, and American families who are forced to undergo hardship and privation when the earnings of their breadwinners are cut.

I think it should be said, too, that many American companies located overseas are now bewailing the decisions that caused them to take this action. Many problems have developed that should have been, but were not, foreseen by so-called captains of industry.

Many obstacles have been set up against American companies operating overseas, high taxes and discriminatory controls have been imposed upon them, and to their deep chagrin, exchange restrictions have effectively prevented them from channeling funds back to the United States. Not even the intricacies of elaborately operated multination exchange and trade have helped in this situation, and if these companies had another chance to consider the problem, it is doubtful whether many of them, excluding certain great trusts and combines, would locate overseas again.

There is an element of punitiveness in the decision of an American manufacturing company to locate overseas, punitiveness against American workers. It is manifest in the attitude, "Well, if you don't work for less, we will move out to some place where workers will." This could mean Japan or other Oriental nations with a 10-cent scale, or continental nations with much lower scales than prevail here.

As is usually the case in human relations when persons act from motives of spite and greed, the laws of compensation and retribution operate and this pretty scheme backfires leaving its hapless authors holding the well-known sack. It has also developed considerable deep-rooted bitterness on the part of many workers and their families in this country who feel that industrial leaders who move their factories overseas and thus take away American jobs are not very much concerned about the welfare of the American workers.

Inevitably, this feeling is just the very thing that the Communists like to engender, because it develops arguments, resentments, and bitterness against our free enterprise system and its leaders which, in the long run, or in the short run, depending upon how fast certain trends move in this country, could bring incalculable damage and disaster to our free business institutions.

Moreover, the location of these factories overseas encroaching as they do upon businesses located in other parts of the world is also being deeply resented by foreign peoples and is the cause of additional anti-American sentiment added to that which has been generated so extensively in many countries since the end of the war when we started to

pour huge financial surfeits and grants into foreign countries.

American history will record that while America saved the world from fascism, from naziism and dictatorship and spent billions and billions and billions of dollars to rehabilitate, aid and relieve many nations and millions and millions of people from privation and hardship, we can measure the thanks we have received to date and are receiving daily from those we helped in small change.

What price glory? is a good way to put it, as we look upon the distorted world which is either leaning toward communism with accelerated pace, or putting a gun to its head so to speak, exclaiming "Give me more American aid, or I will go Communist."

There is too much of this palpable international blackmail, and we must not yield to it. Collaborate with and assist within reason nations of good will and good faith that are honestly standing with us for freedom against communism, but by all means, let us cut off aid to those who are openly or covertly playing the game of the great Soviet lie.

The article follows:

[From the Worcester Daily Telegram, Apr. 4, 1960]

SMALL BUSINESS—EXPORT OF JOBS BLAMED ON HIGH U.S. WAGE SCALES

(By Elmer Roessner)

"Exporting jobs" is a phrase you'll hear more often this election year. Here's an attempt to define and explain it.

A job is exported when a manufacturer takes a task away from one of his employees and pays someone in a foreign country to do the same work. That's the basic concept. By projection, a manufacturer exports jobs when he buys components in a foreign country instead of making them with his own force, or when an industry buys materials, components, or complete articles abroad which it might have made with jobholders in its own field.

The high wage scales in the United States are largely blamed for "job exports." A manufacturer may find it costs him $1 in American labor to make a component, but it may cost only 10 cents to have the same component made by labor in Japan. So he "exports" the jobs of making that component to Japan. American workers are laid off; Japanese craftsmen are hired.

DECLINE IN EXPORTS

Sometimes this job export consists of having articles crafted abroad and sent here. In other instances it may involve having an article made abroad for sale there, or in another foreign country. For example, the maker of a household appliance may find the cost of making the motor in America makes it impossible for him to compete with foreign manufacturers. So he may set up as assembly plant in France, shipping the stamped-out components from America and buying motors made abroad. While he may not have the assembled appliances shipped back to America for sale, he may find costs low enough to compete in the French market or in other European and perhaps African and Latin-American markets.

It is difficult to assess the amount of job exporting being done. American export sales are running $3 million to $4 million a year behind imports, but it's no true measure because figures include travel, tourism, subsidized agricultural exports, and other variables.

TARIFFS NO ANSWER

A solution frequently suggested for the imbalance of foreign trade and for the job-export problem is higher tariffs. While such levies could be effective in restricting imports of goods and components for the domestic market, they would not stop job exports when the end products were sold abroad.

A survey by Mill & Factory magazine provides some relevant facts. It polled 243 industrial firms and found that 6 percent bought foreign-made components for assembly in this country and that another 6 percent had entire products made abroad for sale here.

The figures are not definitive. The total amount, in either dollars or man-hours by these companies may be small or large. They could mean 100 jobs or 100,000 jobs. But other questions asked by the magazine may have more significance.

Of companies responding, 15 percent said they had plants abroad and 6 percent more said they had plans to build plants in foreign countries. While not definitive, those figures suggest a considerable export of American jobs.

And truly significant were the answers to the question: "If you said yes to the foregoing questions, what prompted your firm to seek foreign sources?" The answers:

	Percent
Low-cost labor	4
Better quality workmanship	4
Both of above	7
Access of markets	29
Tariff circumvention	20

Of those using foreign sources, 6 percent said they need more workers, 15 percent said they need fewer, and 79 percent said using foreign sources had no effect on the work force.

TAPE NOT A RECORD

In a characteristic demonstration of its unassailable logic, the Bureau of Internal Revenue has decided that a tape recording is not a phonograph record. There's an excise tax on records, but it does not apply to tapes, says Revenue Ruling 60–105.

Government Workers Need a Pay Raise

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. WOLF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION PASSED BY GOVERNMENT EMPLOYES' COUNCIL, AFL–CIO SALARY RALLY HELD AT THE NATIONAL GUARD ARMORY, WASHINGTON, D.C., APRIL 4, 1960

Whereas the 4,000 members of the Government Employes' Council (AFL–CIO) assembled here in the interest of their "crusade for economic equality" represent 2½ million Federal and postal employees who are vastly underpaid for the important and highly skilled work they perform; and

Whereas during the past 11 years Federal and postal employees have received only 4 small pay increases while workers in private industry have received an average of 10 pay increases during that same period; and

Whereas this discriminatory situation has resulted in appallingly low rates of pay for Federal and postal employees in relation to workers in similar positions in private industry: Therefore be it

Resolved, That this conference give its wholehearted and grateful endorsement to H.R. 9883, a Federal and postal employee pay bill, introduced by Representative JAMES MORRISON and more than 75 other Members of the U.S. House of Representatives, because this legislation, if passed, would put Federal and postal workers reasonably abreast of the national economic parade; and be it further

Resolved, That a copy of this resolution be sent to the Honorable Dwight D. Eisenhower, President of the United States; the Honorable RICHARD M. NIXON, Vice President of the United States; and to every Member of the U.S. Senate and the U.S. House of Representatives, with the hope that it will call their sympathetic attention to the desperate economic need of Federal and postal employees everywhere in the United States.

Ten Years of Progress by the Education Foundation, Inc., of West Virginia Celebrated at Anniversary Meeting

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 21, 1960

Mr. RANDOLPH. Mr. President, it was my privilege to have participated with approximately 150 educators, including President Elvis Stahr of West Virginia University and the presidents of other State supported and independent colleges, leaders of business, industry and the professions and governmental officials, at the observance of the 10th anniversary of the founding of the Education Foundation, Inc., of West Virginia, on April 19, 1960, in Charleston, W. Va.

Also present for the luncheon which followed the morning meeting was Gov. Cecil H. Underwood of West Virginia, who spoke briefly. The secretary of the Claude Worthington Benedum Foundation, David D. Johnson of Bridgeport and Pittsburgh, Pa., attended.

Officers and directors of the Education Foundation, Inc., all West Virginians, are Phil Conley, president; Charles C. Wise, Jr., first vice president; Dr. William R. Laird, second vice president; Sam T. Mallison, treasurer; Judge Elizabeth V. Hallanan, secretary; Boyd B. Stutler, managing editor; and directors, Marshall Buckalew, Cecil B. Highland, Jr., Charles Hodel, Kyle McCormick, R. Virgil Rohrbaugh, Raymond Salvati, Rupert A. Sinsel, Delbert S. Stout, and Earl H. Wilson.

PHIL CONLEY CALLED "MR. WEST VIRGINIA"

The Education Foundation is a nonprofit, nonshare West Virginia corporation which received its charter on May 31, 1950. Phil Conley, often referred to as "Mr. West Virginia," has given significant leadership and dedicated labor to the work. He has been one of the State's leading historians and publishers

for many years. I had the honor to have worked for him as a magazine writer 35 years ago when he was publisher of the West Virginia Review.

The foundation has made significant achievements in carrying out its purposes and objects, among which are the following:

To promote, assist, and encourage research and scholarship in literature, philosophy, and the history of West Virginia; to give financial aid to students, teachers, and other persons with interests and aptitudes in those fields of endeavor; to manufacture, bind, publish, and sell books and periodicals, and so forth.

In the past 10 years the Education Foundation, Inc., has owned and published 20 books on West Virginia subjects and by West Virginia authors. Among these is the textbook, "West Virginia Yesterday and Today," by Phil Conley and Boyd Stutler. This is the only official elementary history of West Virginia adopted by the State board of education. In the past few years, 41,000 copies have been published, most of which are in use in the schools. All of the money received from the sale of this book, as well as that received from other volumes, is used for the program of the foundation; no royalties are paid to authors.

At present five books are being written by West Virginia authors which will be owned by the foundation. Among these will be a definitive history of "West Virginia Oil and Gas Industry" by Dr. Eugene Thoenen. This will be a companion volume to the book recently published, "History of the West Virginia Coal Industry," by Mr. Conley.

COLLEGE SCHOLARSHIPS ARE PROVIDED

Also during the past 10 years the foundation has awarded scholarships and loans to college students in the amount of $9,181.

The Education Foundation has never asked for any contributions from the public or individuals and its officers say the foundation does not contemplate doing so. However, several members of the board and a few others have voluntarily made gifts of $27,760. The sale of books has been and continues to be the chief source of revenue for the program of the foundation. Total sales of books in the first 10 years of the organization's life amounted to $136,269.

Dr. William R. Laird gave to the foundation all of the income from the sale of his book, "The Philosophy of Medicine."

In the official report presented by the foundation's secretary, Judge Hallanan, plans for the future were discussed. It was pointed out that West Virginia, on the eve of its 100th anniversary as a State, is in a period of great economic and social upheaval. Perhaps never before have our citizens been so thoroughly alert to the problems facing them, the report noted, and continued:

To help solve these problems, we believe a careful and objective study of the past century is essential. Our State has a rich heritage in her history, but many of her citizens are not fully aware of it. The time is at hand for extensive research and creative writing about West Virginia and her great men and women. The Education Foundation has a unique opportunity to make worthwhile contributions in this field.

FUTURE PROGRAM IS NOTEWORTHY

Mr. President, I enthusiastically endorse the Education Foundation, Inc., of West Virginia in its five major recommendations, and I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the recommendations were ordered printed in the Appendix of the RECORD, as follows:

1. We hope graduate students in the 17 degree-granting institutions of higher learning in West Virginia will be encouraged to write theses and dissertations on West Virginia subjects when seeking advanced degrees.

2. The scholars serving on faculties in our institutions of higher learning are urged to write books on subjects pertaining to West Virginia and her people.

3. The newspapers of West Virginia, both daily and weekly, are invited to publish feature articles pertaining to their own communities, as well as those of statewide interest.

4. Teachers in high schools will be requested to assign subjects pertaining to the State for themes, orations, debates, and other curricular as well extracurricular studies.

5. We recommend a West Virginia library. Many citizens of this State have books in their private libraries pertaining to West Virginia and her people. It is hoped that many more will set aside a corner in their libraries for books on these subjects. If they do, we know they will receive much information and pleasure from their West Virginia library.

Cuban Slowdown

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. OSTERTAG. Mr. Speaker, all of us are disturbed by the developments in Cuba in recent months and by the attitude and actions of Cuban Premier Castro, in particular. He appears to be casting aside all principles of democracy and freedom and doing his best to shatter the traditional warm relations between our two countries.

The Buffalo Evening News recently reviewed the developments in this critical area and, under previous consent, I include the editorial "Cuban Slowdown," at this point in my remarks:

[From the Buffalo Evening News, Apr. 13, 1960]

CUBAN SLOWDOWN

The U.S. Government has long been patient in the face of Cuban provocation, not only the illegal seizure of U.S. property but the constant public insults of this country as economically imperialist, the capitalist enslaver of Latin America. That patience is now wearing thin.

The U.S. Government has just extended its arms embargo to the Caribbean to cover helicopters and light planes which the Cubans had requested, pointedly telling the present Cuban Government that their demands far exceed any normal need for self-defense. Simultaneously, the State Department has rejected the request for the rehiring of a labor leader at the Guantanamo naval base, fired for stirring up the workers against the United States.

Furthermore, President Eisenhower, writing to a Chilean student federation, has underlined the profits Cubans laborers and business derive from American investment and industry, decried the present trend toward anarchy, and publicly accused the Castro regime of betraying the ideals with which it came to power in January 1959: Democratic self-government, freedom of speech, and the press, equality before the law.

One Havana daily front-paged the Eisenhower letter and underscored its timeliness and truthfulness. It does not follow, of course, that all, or even a majority of Cubans would agree with the Eisenhower denunciation at this point. But the President's stand must surely give heart within Cuba to the anti-Castroists, and to some who though not anti-Castro fear his involvement with the Communists. But it is not likely to make their position vis-a-vis Castro's regime any the happier, for it is perfectly clear that it was not meant to soothe him or his friends. Nor is it now clear what form or what strength any active opposition to the present revolutionary government would develop.

But be it noted that the President's letter was not directd toward the Cubans themselves. It was addressed to university students in faraway Chile, one of the classes most constantly exposed to Communist and anti-American propaganda. In the past year the Castro government has been cultivating this element in every Latin American land, adding its share of U.S. slander to the general lot. Too often these voices have been left unanswered. Mr. Eisenhower's declaration is meant to fill a small part of this gap. It goes on record for reform, especially for agrarian reform. It supports, in short, evolutionary Latin American progress toward democratic process. But it warns against the destruction of the present order, against anarchy, against the uprooting of American financial involvement which pays so handsomely the peoples themselves. Economically it warns against killing the golden goose and politically against betrayal of the ideals that have sparked the flame of reform.

Arbor Day—A Memorial to Julius Sterling Morton of Nebraska

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. CUNNINGHAM. Mr. Speaker, tomorrow is the birthday of Julius Sterling Morton, a nationally famous Nebraskan.

J. Sterling Morton was one of a number of public-spirited citizens of the late 19th century who realized the importance of forestry and conservation and who were alarmed by the rapid deforestation of many sections of the United States.

Many notable people realized that the States might profitably plant trees every year at the proper time or supervise their planting; but it was Mr. Morton, then the Nebraska commissioner of agriculture, who was the first to propose the

setting apart of a day for that purpose. In 1872 he succeeded in inducing the State board of agriculture to adopt his resolution, which set April 10 as Arbor Day.

Great enthusiasm was aroused among Nebraska's citizens, and over a million trees were planted the first year. Three years later, in recognition of the important role he played in beautifying and reforesting an almost treeless Nebraska, Mr. Morton's birthday, April 22, was designated as "Arbor Day" in Nebraska.

At first the idea was slow in spreading, but after the program was so successful in Nebraska the movement began to catch on very rapidly. By 1890 over 26 of the States and Territories had adopted the observance as a legal holiday.

As a result of Arbor Day being created in Nebraska, the State was officially known as the Tree Planters State for 60 years.

Most of the trees in Nebraska stand as a living memorial to the contributions of Julius Sterling Morton, who served as this Nation's third Secretary of Agriculture from 1893 to 1897. He is especially credited today with tree-planting activities ranging from huge manmade national forests in the sandhills of our State to most farm shelter belts and tree-lined city and village streets.

Arbor Lodge is a State park in Nebraska City which stands as a constant reminder of the contributions that Morton made to the State and the Nation. Every year thousands of schoolchildren and tourists visit this beautiful park.

Over the years the nature of the Arbor Day celebration has changed slightly. At first the efforts to extend its celebration were made chiefly through agricultural associations and civic authorities, but in 1882, the plan of making it a school festival was inaugurated. It is this form of the celebration which is so popular throughout the United States and many other countries of the world. The scope and purpose of the program have been greatly broadened from the simple exercises and the planting of single trees. It has become the occasion for impressing on the minds of all schoolchildren the importance of forestry and the planting of thousands of seedlings to reforest what would otherwise be nothing but wasteland.

The people of Nebraska think so highly of J. Sterling Morton that he is one of only two Nebraskans honored by having their statues in the U.S. Capitol building. The statue of Morton is one floor below in the hall near the House restaurant.

Under leave to extend my remarks, I include an editorial from the Omaha Daily Journal-Stockman.

A BREATH OF COUNTRY AIR

That fresh country air that rural folks enjoy and city dudes dream about is all that you hear about it and more. Why? Well, for one thing, country air isn't always being polluted and loaded down with foreign matter as is city air. And, too, country air is always being cleaned and refreshed by nature.

Researchers tell us that trees, shrubs, and grass—all green vegetation—operate like a giant vacuum cleaner, taking in carbon dioxide and giving forth pure oxygen. At least a dozen good-sized trees, we understand are needed to clean up after a single automobile.

How many "air cleaners" will you plant in 1960 for future generations?

I would like to add that this material was prepared by a college student from Nebraska who is spending a few weeks in my office as part of a Colgate University government study program. Mr. Kenneth Ristau of Omaha is one of a dozen Colgate students who are spending 4 months in Washington, D.C., and learning firsthand how the Federal Government functions.

Adm. Arleigh Burke and the U.S.S. "Ausburne"

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an address by the distinguished Chief of Naval Operations on the occasion of the transfer of the U.S.S. *Charles Ausburne* to the Federal Republic of Germany under our ship-loan program at Charleston, S.C., on Tuesday, April 12, 1960.

Admiral Burke's speech is written both in English and in German. Both versions are included. I do this as a compliment to our distinguished ally, the great present West German Republic.

Admiral Burke's speech is written in the language of the sailorman. He speaks to the men who will run this ship. He speaks in a language that they will understand and he talks from a wealth of experience and with the gentle, kindly voice of a friendly advisor. He speaks in a firm tone, an unmistakable tone and to an ally who understand what it means to be free.

Mr. Speaker, Arleigh Burke is dedicated to peace and freedom. The free world knows this. His address follows:

ADDRESS BY ADM. ARLEIGH BURKE, U.S. NAVY, CHIEF OF NAVAL OPERATIONS, ON THE OCCASION OF TRANSFER OF U.S.S. "CHARLES AUSBURNE" TO THE FEDERAL REPUBLIC OF GERMANY, AT THE U.S. NAVAL STATION, CHARLESTON, S.C., APRIL 12, 1960

The navies of our great nations are joined today as the sixth American destroyer, the former U.S.S. *Charles Ausburne*, the Z–6, is transferred to the Federal Republic of Germany.

I have a particularly soft spot in my heart for this fine ship. She was my flagship in Destroyer Squadron 23 during operations in the South Pacific in 1943 and 1944.

Seeing her today, and walking her decks once again brings back many wonderful memories of events and experiences—memories dimmed by time but never forgotten. It is like meeting an old friend after a long separation.

During these years of separation, changes have been made. Her fighting capabilities have been improved. Better, more effective equipment has been added to her stout hull. But she is still the beautiful, fighting ship which led the Little Beaver Squadron through its toughest battles.

I would like to tell you, as one sailor to another, you are getting a good ship—a hard-fighting ship—a proven ship. She was a good ship because of the men who sailed her. They were here pulse; they gave her heart, breath, and life. They fought hard, and so did she. She was a lucky ship because the men in her helped make history and made her lucky.

We are proud of this ship, proud of her record and proud that she will again be at sea sailing under the flag of a strong ally and friend, under the service flag of the Federal German Navy.

It is appropriate and proper that this beautiful ship be given new life under men who love and understand the sea, who respect a fine ship, who will add new honors to her proud history.

Flying the colors of Germany, she will be taken to sea by a crew whose heritage as seafarers is known, and respected throughout the world.

In the past the Germany Navy was respected for its seamen and for its daring, respected by friend and foe alike. This respect was not given, it was earned; earned by hard work, by hard fighting, by smart shiphandling, by sticking to the guns, by bravery, by being sailormen. This respect the Germany Navy had, this respect the German destroyer forces had, and had in abundance.

Navy men everywhere remember this—they remember, too, that even as World War II ended the Germany Navy was still an intact military organization, still ready to carry out orders.

You who are members of that Navy can be proud of this tradition, proud to be challenged to live up to such a reputation. You can be proud too that you are part of a force which stands ready to defend man's freedom, to defend Germany's freedom.

This ship is an important addition to your Navy, to your destroyer force. It represents a powerful package of versatile combat power. There is no ship more versatile than the destroyer. It can be used against submarines, against ships, against aircraft, and against land targets.

That is why destroyers are so wonderful, why they have such a proud past, and such an assured, brilliant future. They will be needed at sea for a long, long time. The *Z–6* is a destroyer, and a fine one, but the measure in which she fulfills her promise is squarely up to you.

As the men who sail her, who fight her, you hold the key to her success. Your ship will be everything you make of her. She is in good hands. May she serve you, as she served us, with courage, strength, and with honor always.

This print which has long been in my home as a reminder of this fine ship, and this book recalling the proud past of the *Charles Ausburne*, are presented to remind all who sail in her that she is a proud ship, a reliable ship, a fighting ship. She is now your ship—you are her crew. Together you are a powerful arm for freedom.

Today our nations stand side-by-side ready to defend the rights of human liberty, freedom, and justice. We are proud of this common purpose, and proud of the understanding that exists between our navies, and between our great countries.

To the captain, to the officers, and crew of the *Z–6*, I wish you all good sailing and Godspeed.

ANSPRACHE DES ADM. ARLEIGH BURKE, U.S. NAVY, CHIEF OF NAVAL OPERATIONS, ANLAESSLICH DER UEBERGABE DER USS "CHARLES AUSBURNE" AN DIE BUNDESREPUBLIK DEUTSCHLAND, IN DER U.S. NAVAL STATION, CHARLESTON, S.C., DIENSTAG, DEN 12. APRIL 1960

Die Marinen unserer beiden grossen Nationen sind heute zur Uebergabe des 6. amerikanischen Zerstoerers, der frueheren USS *Charles Ausburne*, des Zerstoerers "Z 6", an die Bundesrepublik Deutschland, versammelt.

Dieses schoene Schiff nimmt in meinem Herzen einen besonderen Platz ein: Es war mein Flaggschiff im Zerstoerer-Geschwader 23 waehrend der Unternehmungen im Sued-Pazifik in den Jahren 1943 und 1944.

Wenn ich das Schiff heute sehe und wieder einmal seine Decks betrete, kommen mir Erinnerungen an Unternehmungen und Ereignisse, die zwar etwas verwischt, aber niemals vergessen sind. Es ist, als wenn man einen alten Freund nach langer Zeit der Trennung wieder sieht.

Waehrend dieser Trennungsjahre traten Veraenderungen ein. Bessere, wirksamere Waffen und Einrichtungen wurden in den festen Rumpf eingebaut. Aber es ist immer noch das schoene Kampfschiff geblieben, das die "little beaver squadron" in den haertesten Einsaetzen gefuehrt hat.

Ich moechte Ihnen, von Seemann zu Seemann, sagen, dass Sie ein gutes Schiff bekommen—ein kampfkraeftiges Schiff—ein erprobtes Schiff. Es war ein gutes Schiff, weil seine Besatzung gut war. Sie gab ihm den Pulsschlag, sie gab ihr das Herz, den Atem und das Leben. Besatzung und Schiff kaempften tapfer. Es war ein glueckhaftes Schiff, weil die Besatzung auf ihm Geschichte machte und ihm Glueck brachte. Wir sind stolz auf dieses Schiff, stolz auf seine (Geschichte) Vergangenheit und stolz darauf, dass es wieder in See gehen wird, unter der Flagge eines starken Alliierten und Freundes, under der Dienstflagge der deutschen Bundesmarine.

Es ist gut und richtig, dass dieses schoene Schiff neues Leben erhaelt durch Maenner, die die See lieben und verstehen, die ein schoenes Schiff achten und seiner stolzen Vergangenheit neue Ehren hinzufuegen wollen.

Unter der Flagge Deutschlands wird es von einer Besatzung gefahren, deren seefahrerisches Erbe bekannt ist und in aller Welt geachtet wird.

In der Vergangenheit war die deutsche Marine, ihrer Seeleute und ihres Wagemutes wegen, gleichviel von Freund und Feind geachtet. Diese Achtung wurde nicht geschenkt, sondern verdient, verdient in harter Arbeit, in harten Kaempfen, durch gute Seemannschaft, durch Aushalten an den Geschuetzen, durch Tapferkeit, durch "Seemann sein." Diese Achtung hatte die deutsche Marine, diese Achtung hatten die deutschen Zerstoerer-Streitkraefte, und sie hatten sie vollauf.

Seeleute ueberall wissen das, sie erinnern sich ebenfalls daran, dass auch, als der zweite Weltkrieg zu Ende ging, die Kriegsmarine eine intakte militaerische Organisation war, die immer noch im Stande war, Befehle auszufuehren. Sie, die Angehoerige dieser Marine sind, koennen stolz auf diese Tradition sein, stolz darauf, dass Sie auserwaehlt sind, solch einen Ruhm zu bewahren. Sie koennen dazu stolz darauf sein, dass Sie ein Teil der Streitmacht sind, die bereit ist, die Freiheit des Einzelnen, die Freiheit Deutschlands zu verteidigen.

Dieses Schiff ist eine wichtige Ergaenzung zu der Bundesmarine, zu der Zerstoerer-Streitkraft. Es stellt eine kraftvolle Zusammenballung von vielseitiger Einsatzmoeglichkeit dar. Kein Schiff is so vielseitig als ein Zerstoerer es ist, er kann gegen U–Boote, gegen Schiffe, gegen Flugzeuge und gegen Landziele eingesetzt werden.

Darum sind Zerstoerer so wundervoll, weil sie eine so stolze Vergangenheit haben und solch eine gewisse, glaenzende Zukunft. Sie werden auf See noch lange eingesetzt werden. Der "Z 6" ist ein Zerstoerer, ein guter Zerstoerer, jedoch das Mass, wie er seine in ihn gesetzten Erwartungen erfuellen wird, haengt ganz allein von Ihnen ab.

Sie haben als Maenner, die ihn fahren werden, ihn einsetzen werden, ganz allein den Schluessel zum Erfolg in Ihrer Hand, Ihr Schiff wird das sein, was Sie aus ihm machen. Es ist in guten Haenden. Moege es Ihnen dienen, wie es uns gedient hat, mit Mut, Kraft, und immer in Ehren.

Dieses Schriftstueck, das lange in meinem Heim als Erinnerungsstueck an das schoene Schiff gelegen hat und dieses Buch, das die stolze Vergangenheit der *Charles Ausburne* wiedergibt, werden uebergeben, um alle, die auf diesem Schiff fahren, daran zu erinnern, dass es ein stolzes, ein zuverlaessiges, ein Kriegsschiff ist. Es ist nun Ihr Schiff, Sie sind die Besatzung. Zusammen bilden sie eine starke Waffe fuer die Freiheit.

Heute stehen unsere Nationen Seite an Seite, einsatzbereit, die Rechte der persoenlichen Freiheit, die Freiheit und das Recht zu verteidigen. Wir sind stolz auf die gemeinsame Aufgabe und stolz auf das Verstehen zwischen unseren beiden Marinen und zwischen unseren grossen Laendern.

Dem Kommandanten, den Offizieren und der Mannschaft des "Z 6", wuensche ich allzeit gute Fahrt und Gottes Beistand.

Resolution by Junior Chamber of Commerce of Bloomsburg, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution which was adopted by the Junior Chamber of Commerce of Bloomsburg, Pa., on March 10, 1960. I am making this insertion at the request of the junior chamber officers who do not at the present time have congressional representation, Bloomsburg being located outside of my congressional district:

Whereas the greatness of the United States of America is a direct result of the free enterprise system and the basic American idea of freedom opportunity; and

Whereas the Jaycee creed contains the statement "that economic justice can best be won by freemen through free enterprise"; and

Whereas an integral part of the free enterprise system is the incentive provided by the opportunity afforded to every individual to make of himself what he will, and to prosper in proportion to his success in taking advantage of the economic opportunities which are available to everyone in our American way of life; and

Whereas the present income, gift and estate tax laws of the Federal Government tend to stifle economic progress under the free enterprise system, to discourage individuals from putting forth maximum effort, investors from continuing to provide capital necessary to the development and growth of private business and thereby stunt the economic growth of our country; and

Whereas legislation is now pending before the Congress of the United States which would alleviate this serious situation by accomplishing a planned gradual reform of the present tax rates and structure relating to income, gifts and inheritance and at the same time preserving the necessary tax revenue to maintain the Federal Government: Be it therefore

Resolved by the Bloomsburg Junior Chamber of Commerce at Bloomsburg, Pa., this 10th day of March 1960, That the said assembly go on record in favor of the endorsement of H.R. 3000 and 3001, commonly known as the Herlong-Baker bills, and that the said assembly urges the balancing of the Federal budget and the adoption of all possible practices which will tend to make the operation of government on every level more efficient and economical.

LEONARD R. SCHAFE,
President.
W. E. WEIHBRECHT,
Secretary.

Testimonial Banquet in Honor of National Junior Vice Commander of the Veterans of World War I of the U.S.A.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include part of my remarks at the testimonial banquet in honor of National Junior Vice Commander George M. Leary by the Veterans of World War I of the U.S.A., held in the Hotel Bradford at Boston, Mass., on Monday evening, April 18, 1960. The program was as follows: Clifford H. Harris, chairman of the committee on arrangements, of Quincy, Mass., who acted in the capacity of toastmaster, and who introduced the following:

Rt. Rev. Msgr. William J. Callahan, who gave the invocation; Lt. Gov. Robert F. Murphy, of Malden; State Senator Charles W. Hedges, of Quincy, Mrs. Olive Morton, national president of the National Ladies' Auxiliary, Veterans of World War I of the U.S.A., Indianapolis, Ind.; Massachusetts Department President of the Ladies Auxiliary Mrs. Edith Healey, of Charlestown; Massachusetts Department Commander Frank Farnham, of Springfield; Mrs. Catherine B. Byron, of Lawrence, regional president; Mrs. George M. Leary, wife of the honored guest; and George M. Leary, national junior vice commander, of Quincy.

Presentations were made to Mr. Leary and National Commander Charles A. McCarthy and several others wired messages of congratulations.

The remarks follow:

Ours is the only veterans' organization that is suffering from those pleasant symptoms that are diagnosed as growing pains.

Since the Veterans of World War I of the U.S.A. was born, I have noticed a bright look in the eyes, and more bounce in the steps of my comrades.

At last we have an outfit of our own to belong to, with a special program that is not to be confused with others.

When the younger generation returned from World War II, and joined the existing veterans' organizations, we found that we had lost our identity. They outnumbered us. They had a different experience and perspective, and we became the forgotten veterans—but not for long.

It was clear that we needed an organization to distinguish the veterans who had served in World War I from those who had served in other conflicts. A place where we could meet with those who talked our language; work with them toward a mutual objective; and rediscover the pride of comradeship that was ours over 40 years ago.

We established and developed the Veterans of World War I for that purpose.

The response to the new organization's call for volunteers was prompt and enthusiastic.

As if tens of thousands had been waiting over the years for leadership that would have the skill and the energy to create an organization exclusively reserved for the veterans of World War I.

An organization that would not only provide a measure of fulfillment for us, but would ever remind the Nation of the meaning of World War I, and of the service given by 4 million men in defense of American ideals.

Tonight we have assembled from barracks all over the State, to honor one of the charter members in the establishment of our national organization.

Genial George Leary was born with the talent for bringing people together.

His capacity for making friends is limitless.

It took a lot of confidence and hard work and traveling on his own time and at his own expense to help organize barracks in the various cities and towns. But George was more than equal to the task, for he put his whole heart into the movement.

No part-time buddy was he.

He was the go-through guy for the Veterans of World War I of the U.S.A. from the very beginning.

Sooner or later in this world, ability and devotion must bring recognition even to those who do not seek it.

So it was with our good friend and guest who was promoted to the position of national prominence among the older veterans of our Nation.

We who have had firsthand experience with his tireless efforts in behalf of our group, know that the spreading knowledge of his merits will raise him eventually to the position of national commander.

On the eve of Patriot's Day, we express our appreciation to a Massachusetts man whose leadership is one of the reasons for the growth and prestige of the Veterans of World War I of the U.S.A.

To say that we are proud of him is not enough.

The fact is we are very happy that this well-earned honor has been conferred upon the man who never spares himself in building up the Veterans of World War I—our popular comrade—National Junior Vice Commander George M. Leary.

The Nuclear Test Ban

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. STRATTON. Mr. Speaker, in our consideration of the complex and important question of ending the testing of nuclear weapons I include a thoughtful editorial from the Oneonta Daily Star:

[From the Oneonta Daily Star, Apr. 9, 1960]

UNITED STATES SHOULD TAKE A RISK IF NUCLEAR BAN WILL RESULT

The Geneva talks on a possible United States-British-Soviet nuclear weapons test ban have been in progress for 15 frustrating months. At times the Russian fog of "nyets" and unworkable proposals has obscured all hope that a treaty might eventually be signed. Behind the fog, nevertheless, advances have been made. There is a rising body of evidence which suggests that the Soviet Union really does want a test ban and is willing to make concessions to get it.

Certain notable concessions already have been made by Soviet negotiators. They have agreed—and considering that secrecy is a way of life for the Kremlin this is a very great concession—to permit establishment of detection and control posts across their territory. They have backed down on their earlier insistence that the experts mainning these posts on their territory must all be Russians. They have further agreed to an annual quota (though the number has not yet been decided) of veto-free inspections on Soviet territory by international teams. Western views have prevailed in some pertinent matters, also.

Tough negotiations lie ahead. The Russians are not going to soften up all at once. But it appears that the one big roadblock to a test ban treaty is the U.S. position with regard to small underground tests which present monitoring methods cannot surely detect. This country fears that, until such detection is possible, the Soviet might go ahead with underground tests even if it agreed to a ban.

That is a risk. But it is a small risk, ameliorated by Kremlin agreement that scientists of the three nations would work together to devise better detection methods. We think it is a risk the United States ought to take in hopes of securing a ban agreement which might well be a great turning point in the struggle against war.

Pennsylvania Mother of 1960

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the Wilkes-Barre Times Leader Evening News of Monday, April 18, 1960, reporting the selection of Mrs. Edna Phillips Rosenbaum, of Philadelphia, as Pennsylvania Mother of the Year for 1960:

PENNSYLVANIA MOTHER OF 1960—LAWYER'S WIFE SELECTED TODAY

HARRISBURG, April 18.—Mrs. Edna Phillips Rosenbaum, of Philadelphia, an internationally known musician who has provided free concerts for thousands of schoolchildren, today was named Pennsylvania Mother of the Year for 1960.

Governor Lawrence personally congratulated Mrs. Rosenbaum, a former harp soloist of the Philadelphia orchestra and an authority on the harp. Her selection was announced at a Pennsylvania Mothers Committee luncheon of which Mrs. Gustav Ketterer was chairman.

Mrs. Rosenbaum is chairman and originator of the Music Committee of the Philadelphia Chapter of Young Audiences, Inc. The nonprofit organization provides free concerts and musical education for schoolchildren.

HUSBAND IS LAWYER

She lives in the Germantown section of Philadelphia with her husband, Attorney Samuel R. Rosenbaum.

They have four children: Mrs. John Todd, assistant to the dean of foreign students at the University of Pennsylvania; David, a senior at Haverford College; Mrs. Georges Bernier, copublisher with her husband of an art magazine in Paris, France; and Mrs. Heather Jimenez, a writer, of London, England.

LANGUAGE OF MUSIC

Mrs. Rosenbaum, a native of Reading, believes that music is a language that children understand instinctively and that lifts them above meanness and vulgarity.

She was the first woman member of the Philadelphia orchestra and the first woman to hold a first chair in a major symphony orchestra.

In 1955 she was honored by the city of Philadelphia, when she received the mayor's award for artistic preeminence as a citizen.

HARPIST AT 17

Mrs. Rosenbaum became a harpist at the age of 17 after having studied and mastered the violin and piano. She studied the harp under the noted Carlos Salzedo and later at the Curtis Institute of Music, Philadelphia.

After 5 years of study, she was engaged by the Philadelphia orchestra, then conducted by Leopold Stokowski. She thus became the first woman member of this world famous group and the first woman to hold a first chair in a major symphony orchestra.

During her career as harp soloist with the Philadelphia orchestra (1930–46), Mrs. Rosenbaum performed under the batons of some of the world's greatest conductors. In addition to Stokowski, these included the late Arturo Toscanini, Sir Thomas Beecham, Fritz Reiner, and the current conductor, Eugene Ormandy.

TOURED WITH ORCHESTRA

She also toured South America with Stokowski's Youth Orchestra, appeared in countless symphonic, operatic, ballet, and chamber music engagements, as well as public and private recitals, radio, television, and film appearances.

The library of harp music has been enriched by the many compositions created for and dedicated to Mrs. Rosenbaum. She gave the premiere performances of many of these works throughout the country.

Completely devoted to her work with children, Mrs. Rosenbaum believes that "music is a language that children understand instinctively and that lifts them above meaness and vulgarity."

"In these times when so many juveniles must resist the temptations of delinquency," says Mr. Rosenbaum, "we feel that our efforts contribute to giving them an interest that keeps them out of trouble."

"This philosophy," continued Mrs. Rosenbaum, "is expressed in the motto: 'kids who carry fiddle cases don't become court cases'."

GETS AWARD

In 1955, Mrs. Rosenbaum was honored by the city of Philadelphia when she received the Mayor's Award for artistic preminence as a citizen.

Head of the harp department of the Philadelphia Conservatory of Music since 1932, Mrs. Rosenbaum is a member of the board of directors of the Settlement Music School, an inter-racial, nonsectarian organization which provides musical instruction for young and old.

She also is a member of the Germantown-Chestnut Hill Committee for the Philadelphia Orchestra, the advisory committee of

the Friends of Music of Bryn Mawr College, and the music advisory committee of Young Audiences, Inc., nationwide.

She also is a member of the Art Alliance, the Cosmopolitan Club of Philadelphia, and an honorary member of Sigma Alpha Iota.

The Rosenbaums are members of The Church of the Good Shepherd, Germantown.

Eighty-sixth Congress Must Meet Challenge of Hospital-Medical Insurance for America's Numerous Aging Citizens

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. BOLAND. Mr. Speaker, one of the great challenges that the Members of the 86th Congress must meet is that of adequate prepaid hospital and medical insurance for the growing number of elderly persons in this country who now cannot obtain coverage against that day when they might be stricken because of illness or accident.

This is an issue which has generated volumes of mail from the people back home, pleading with their Congressmen and Senators to do something to help resolve the prospects of burdensome hospital and medical costs on America's aging citizens.

Many of these citizens unfortunately become indigents at a time in their lives when their earning capacity is nil, and they are trying to eke out an existence in dignity principally on the benefits of private or social security pension plans. They do not ask anyone to pay their way in retirement. But hundreds of them in my congressional district have told me that they do worry about that day when they might require hospitalization because of an injury or serious operation, the cost of which would wipe out their savings of a lifetime, or place them deeply in debt.

This Congress is going to have to face up to the realities of this problem. I am asking permission to have printed with my remarks two excellent editorials dealing frankly with the issue of medical assistance for the aged. They are taken from the Holyoke Transcript-Telegram on April 8 and the Boston Globe on April 15:

[From the Holyoke Transcript-Telegram Apr. 8, 1960]

TOO LATE FOR COMPROMISE

Behind all the rough language used by Senator DIRKSEN and IUEW head Carey at a Senate hearing on health insurance for the aged lies the fact that the administration has come too late with a compromise on this issue. It may thus become a campaign issue to plague the 1960 GOP standard bearer.

Secretary of Health, Education, and Welfare Arthur S. Flemming reported at the same hearing that the administration is trying to hurry up a plan of voluntary health insurance for the aged using Federal-State subsidies. It is doubtful that it can be ready for congressional action this session.

Perhaps such a plan would be the best way to approach the growing problems of the health needs of the aged. Our current population situation suggests, however, that it is time for the Federal and State Governments to work out together an overall program covering all the basic needs of the aged, in health, housing, and financial assistance.

Whether reluctance to do this is due to indifference, pressure from such private interest groups as the huge insurance industry, or medical associations, or those who oppose further government action in social welfare, we don't know. But obviously the program which Mr. Flemming now describes should have come before, not after, the proposal of the Forand bill.

The question of direct Federal health insurance for the aged is one that deserves thorough discussion in a nonelection year. It is socialized medicine, but that is not necessarily a reason to condemn it. The question is whether our present medical services are capable of meeting the needs of the aged and whether they are, in fact, doing so.

We hope it may not be too late for sound exploration of a middle course such as the administration concedes. The issue is now a hot one, being argued in emotional terms and with little thought to cost, operation, or need. Senator DIRKSEN will need all his famous political skill to fight this one off, and Vice President NIXON is already heavily embarrassed by the whole situation.

[From the Boston Daily Globe, Apr. 15, 1960]

THE NEGLECT OF THE ELDERLY

The neglect of the sick aged of the country is close to a national scandal and various Members of Congress are moving to remedy the situation. The increased solicitude on the part of some is prompted by the impending national election. In the United States, there are 16 million persons 65 years of age or older which represents a considerable voting bloc. The health care issue has been so publicized that the great majority of our elderly citizens are determined to make their votes felt in the presidential election to show their approval or disapproval.

Recognition of this lifted the Forand bill overnight from semiobscurity to national discussion. The issue has brought all but open conflict between GOP presidential hopeful RICHARD M. NIXON and President Eisenhower. A counter plan for medical care for the aged was prepared by Secretary of Health Arthur S. Flemming with the enthusiastic support of NIXON, according to Washington reports, but was vetoed in the White House.

But the facts cannot be "burked." The report of the McNamara committee after 8 months of hearings painted a highly disturbing picture of the plight of the country's aged. Of the 16 million elderly about half are not covered by any kind of health insurance. Almost 50 percent have incomes of less than $1,000 a year; and another 20 percent have less than $2,000. They are poorly housed.

The committee found that the "large majority of nursing homes," for example, "provide no more than bare custodial care, generally directed by untrained personnel, thereby consigning hundreds of thousands of patients to pitiable vegetation." Housing for the Boston aged was neglected until the tragic shortage was pointed out by Frank P. Harris in his continuing articles in the Boston Globe on the problems of the Bay State elderly. As a result the legislature is speeding action.

The McNamara report made it clear what the Forand bill would mean to our worried senior citizens. The flood of mail to Congress showed their own determination not to be shunted aside. The Forand bill did not win committee approval after the American Medical Association and others protested that it was in effect "socialized medicine." The need for a substitute measure remained obvious.

The White House is having another bill prepared to provide a voluntary participation health insurance plan. The Democrats, their Forand bill turned back, are forging a new measure. This would increase compulsory social security payments to finance health insurance in old age. The Eisenhower administration is flatly opposed to compulsory plans.

More than likely Congress will pass some sort of bill this summer to provide some medical care for the aged. Both parties realize the scope of the problem, the needs of the old people, and also the power of their protest if they are left unsatisfied before November.

But the legislation should not become a patchwork affair, to save political face at the last minute, nor an attempt to placate the elderly without really providing a system that will adapt to the projected increase of aged persons in the country. Nor should the McNamara committee's suggestion for the establishment of a U.S. Office for the Aging be forgotten. Health insurance is only a beginning in the problem of bringing them necessary employment and dignified retirement.—Uncle Dudley.

Lanny E. Unruh, Prizewinner in American Legion Oratorical Contest

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, April 21, 1960

Mr. SCHOEPPEL. Mr. President, as many of my colleagues no doubt are aware, Kansas this year produced the young man who was first-place winner in the national finals of the 1960 American Legion high school oratorical contest. The high honor went to 17-year-old Lanny D. Unruh of Newton, Kans. His talk, "The Constitution—Ours To Defend," includes, among many other worthwhile observations, a challenge to citizens who fail to exercise their privilege to vote. I ask unanimous consent to have the oration printed in full in the RECORD.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

THE CONSTITUTION—OURS TO DEFEND

(By Lanny D. Unruh)

The place is Valley Forge; the time is the winter of 1777.

"What is this thing we are fighting for—this thing called liberty?" A battle-weary soldier addressed this question to George Washington one stormy night during the Revolutionary War.

The Father of our Country gazed at the soldier with steady eyes, crowned by unflickering eyelashes which frequently caught a speck of falling snow. The General answered, "It may be only a dream. It may be that it will never come to pass, but I believe that men can rule themselvs."

The dream to which Mr. Washington referred was the impelling force that had driven the colonists across the stormy Atlantic to an untamed wilderness that held the promise of freedom. It was the spark that kept alive hope in the breasts of the freezing, starving patriots at Valley Forge.

The dream was the silent specter that entered a red brick building known as In-

dependence Hall in Philadelphia, a May morning in 1787—a silent specter that hovered like a guardian angel over a hall half a hundred feet square, guiding the hands of a group of 55 distinguished statesmen as they carved out the destiny of a new nation.

What the framing fathers did that hot summer was known as the great American experiment. Could a new Nation, so small and so immature as this one, thrive in opposition to the towering monarchies with their trained diplomats, their power, and their wealth? The answer to this question came with the inauguration of Washington as President. He, with the help of two pioneer statesmen, Jefferson and Hamilton, safely piloted the Ship of State through the test of infancy.

Then came territorial expansion. New States were added to the Union, and the Constitution marched on.

But soon came the fear of defeat, as the storm clouds of civil strife enveloped the United States, and the Constitution was faced with the test of unity. Out of this mighty conflict came the immortal words of Daniel Webster, "Liberty and Union, now and forever, one and inseparable."

After the crucial test of disunion came the industrial revolution and the swift growth of power. Science and invention erased geographical boundaries, and international trade carried the Stars and Stripes to the uttermost parts of the world. Soon America was not only the land of the free and the home of the brave, but it afforded her people the highest standard of living in the world.

Yes, the words of Elizabeth Ellen Evans are true. We do have more roast beef and mashed potatoes, more automobiles and telephones, more public schools and life insurance policies, more laughter and song than any other people on earth. Even two world conflicts did not topple us from our supremacy.

As we assumed this new post of world leadership and dominance, we felt ourselves unchallenged. As a people, we considered ourselves the untouchables. Yet, during this phenomenal period of prosperity and growth, the deadly seeds of complacency and smugness found nourishment and began to take root.

Now, today, we are being challenged. Representing the last great fortress built on the principles of democracy, our Constitution is being threatened on every basic American issue—even self-government. At a time when democracy after democracy is being overthrown, our Constitution is far from secure.

As a nation, we are still united by words that were penned on parchment more than 170 years ago, "We, the people, in order to form a more perfect union * * *"—united by the belief of George Washington, that men can rule themselves—united because of the undying efforts of 55 statesmen, as they poured into the mold of the Constitution every ounce of their hopes, dreams, and ideals.

But, as a people, we are divided. Just as there was dissension among the colonies, there is lack of cooperation among people today. We have become a Nation of color against color, labor against management, rich against poor, religion against religion. We are undermining the democratic processes set forth in the Constitution. We are destroying that great charter of liberty through our greed, our neglect, our selfishness. Through our own actions, we are committing national suicide.

Friends, the vital question that must be answered by every American citizen is, "How can we save, how can we defend the United States?"

When we speak of defense, we are prone to think immediately of the weapons and guided missiles created by American ingenuity. For, at the touch of a button, we are able to annihilate any city on the battle-scarred face of the earth. At the shout of a command, we are able to employ weapons that are more destructive than anything ever imagined by our forefathers. Yes, we are making rapid strides in surpassing the military efforts of any would-be aggressive nation. But are we making the same strides in strengthening the real fortress of America—the Constitution?

It is with regret that we realize that our military defense is being offset by an indifferent electorate. The pioneers of our Government made Washington's belief of self-government a reality, when they placed into the hands of the people the sacred privilege and responsibility of electing the Nation's high officials. The suffrage was the insurance policy of the American people. Here was America's answer to tyranny, to monarchy, to oppression. Now this weapon, too, lies dormant at our feet. A wave of complacency, like a fog, enshrouds us. Surely, our forefathers never dreamed that by the year 1960, only one-half of all eligible Americans would bother to exercise that privilege. They would probably have stared in disbelief, if told that one-half would decide the destiny of the Nation.

I ask you, "Of what value are a thousand atomic bombs if we, as a people, do not attempt to defend our basic rights and privileges first?"

Make no mistake. No one would suggest that we be oblivious to the threat of missiles. Military strength there must be. Good judgment tells us we must defend ourselves with armed might. But good judgment also tells us that we must defend ourselves with a force far greater than armed might.

It is my generation that must defend the United States. It is in me, and thousands just like me, that is vested the immense responsibility of upholding, preserving, and defending our Constitution.

The only defense we hear about lies in the glories of war, in missiles, huge navies, and large armaments. But we must also be told of the other form of defense—the defense of the principles of the Constitution—the defense of the basic and inalienable rights of every American. These principles can be found in the Bill of Rights, which guarantees every American citizen—whether he be black or white; whether he be Protestant, Jew, or Catholic; whether he be of English descent, or of Russian descent—the same sacred freedoms.

If we lose sight of that vision that was made articulate by the father of our country at Valley Forge, we are a doomed Nation. How true, the words of James Curran, "The condition upon which God hath given liberty to man is eternal vigilance."

My generation has no misgivings. We know that if America is to survive, the task is ours to defend her. For some of us, we may be called out to fight a tangible enemy, with jets and missiles. But for all of us, there are more sinister enemies we must combat—apathy, divided loyalties, and half-hearted allegiance to our Government.

As for me, as for my generation—we accept our inheritance with gratitude. We dedicate ourselves to the perpetuation of that American heritage. We may not be tramping the snows at Valley Forge, but we are facing an enemy that is just as insidious and just as destructive as King George's men.

Let us lift the stifling cloak of apathy and indifference. Let us cast away prejudice. Let us carry out our duties as loyal citizens, and, in doing so, may we be willing to sacrifice as much; may we be willing to portray the same courage as that tattered and weary army at Valley Forge.

Would that it were possible that I could speak for my generation, and say to that weary soldier at Valley Forge, "This vague ideal that you fought for—this dream your general told you about, is still the guiding light of our lives. Men can rule themselves.

The Constitution—ours to defend.

Statements in Support of Mutual Security Program

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. McDOWELL. Mr. Speaker, because of the widespread criticism of this program during this annual debate, both in the Congress and in the public press, I believe that the American people have a right to hear both sides of the argument. And further because of my firm conviction that our foreign aid programs have been and continue to be successful in stopping the spread of communism throughout the world, I ask unanimous consent to have the article entitled "Committing the Uncommitted" by Richard Lowenthal, which recently appeared in the London Observer, a letter from the American Israel Public Affairs Committee and attached statement, which I received, and my own supplementary statement appearing in Union Calendar No. 594, as a part of the report of the special study mission to Asia, western Pacific, Middle East, southern Europe, and north Africa, to be printed in the Appendix of the RECORD to supplement the speech which I gave on the floor today:

COMMITTING THE UNCOMMITTED

(By Richard Lowenthal)

Watching President Eisenhower and Soviet Premier Nikita Khrushchev on their presummit travels, a newspaper reader might be forgiven for believing that, under this form of "competitive coexistince," the East-West struggle has been reduced to a combination of popularity contest and giveaway competition. The visitors speak their sermons and hand over their presents; the journalists count the crowds and the applause; the uncommitted countries pocket the cash—and stay as uncommitted as before.

It is an idyllic picture, but a misleading one. In fact, both sermons and presents have their place in a continuing struggle for power. The immediately obvious part of these worldwide hustings is concerned with winning the backing of "world opinion," and of votes in the United Nations Assembly, for some of the issues to be discussed at the summit, particularly in the field of disarmament. The more long-term, but probably more vital, part concerns the effect of different types of economic aid on the pattern of development of the receiving country.

Take the summit issue first. Any scheme for disarmament will be judged by its effect on the world balance of power. Khrushchev's plan for the eventual abolition of armed forces aims, above all, at creating obstacles to any increase of the North Atlantic Treaty Organization's conventional forces, which are still inferior to Soviet forces in Europe and hence in a poor position to withstand political blackmail.

During his journey through Asia, Khrushchev everywhere enlisted sympathy for his

plan, never failing to point out that, apart from its service to peace, it would free billions of dollars for help to underdeveloped countries. He thus hopes to make it difficult for his summit opponents to reject his plan without isolating themselves in the United Nations. He himself cheerfully ignored the U.N. Assembly's recommendation of the Western disarmament plan in 1957, and even refused further negotiation in the framework favored by the U.N. at that time, but he knows that at least American and British domestic opinion is highly sensitive to world opinion as expressed in the U.N.

Today, the West can no longer obtain the two-thirds majority required for an Assembly recommendation (or for the election of a nonpermament member to the Security Council) without the support of the hard core of uncommitted nations not predictably on one side on most issues. Hence, any diplomatic approach that enlists the sympathy of this hard core is likely to limit the freedom of maneuver of the Western negotiators.

Apart from this immediate issue, the Soviet Premier, while carefully respecting the military nonalinement of his Asian hosts (he went out of his way to express his approval for it in every communique), has sought to aline them politically with the Soviet bloc where possible. Failing that, he has attempted to aline the Soviet bloc with their interests wherever they happened to have national conflicts with any Western or pro-Western country—as Indonesia over its claim to Dutch New Guinea, and Afghanistan over its claim to Pushtunistan at Pakistan's expense.

But the most serious and substantial effort to "commit the uncommitted" is being currently made by the Soviets in the economic field, and on a more long-term basis. In the last few months, Soviet pledges of development aid to non-Communist countries in Asia, Africa, and Latin America have been more concentrated and massive than at any time since the policy was first introduced in 1954. They are now increasingly accompanied by Soviet warnings against the alleged harmful effects of Western aid. What emerges from these warnings—voiced by both Khrushchev and Deputy Premier Anastas I. Mikoyan on their recent travels and in Soviet books on the problems published in the last few years—is that the Kremlin regards its own aid not merely as a means to court popularity but as likely to commit the uncommitted countries to a specific path of development.

Briefly, the Communists charge that the imperialists wish to prevent the independent industrial development of young nations, in order to keep them in their traditional role as exploited suppliers of foodstuffs and raw materials. This purpose, once assured by keeping them as colonies under political tutelage, is now allegedly pursued by limiting economic aid to such fields as agricultural improvement or at best local consumer goods industries. Only the Soviets, it is claimed, are willing to help the underdeveloped nations in building up their own heavy industry, power resources, etc.—that is, in ceasing to be economic colonies.

This Communist argument obscures the most vital problems now facing many underdeveloped countries by mixing it up with an issue of the dead past. The traditional colonial pattern of private capital investment did indeed concentrate on extractive industries and export crops as the most immediately profitable fields, and thus tended to preserve a lopsided colonial economy in a lopsided international division of labor.

This could be overcome only by some form of publicity planned investment, and that is why all the newly sovereign nations have introduced such planning and talk of a Socialist economy.

But postwar development aid has from the start been agreed upon with these newly sovereign governments and has been channeled through their planning boards, with the express purpose of overcoming the traditional lopsided character of underdeveloped economies. It is at this stage that the planners, in allocating indigenous and foreign investment, have been faced with the choice whether to aim at a balanced, all-around development, raising the low agricultural productivity and living standards of their people parallel with the building up of industry, or whether to rush ahead with a one-sided concentration of heavy industry at the price of long-term severe sacrifices by the people. The last is, of course, the Communist pattern, as practiced in Russia and China, and made possible by totalitarian dictatorship.

The planners in the underdeveloped nations are, of course, conscious of this choice; and those who care to preserve free institutions do not wish to give too high a priority to long-term investments in heavy industries. But if massive foreign capital aid is accepted for these specific prospects, it may also tie down a large share of indigenous resources—labor, raw materials, transport—to enterprises which will not bear consumable fruit for a long time. Such aid has invisible strings—committing a country to a pattern of economic development which, as the Soviets know, has its own political logic.

Moreover, as Soviet aid is always given in the form of long-term loans and often specific export crops are earmarked in advance for repayment, the commitment to the steep Soviet road of development may be reinforced in such cases by a long-term dependence on the Soviet market. This is remarkably similar to the old type of colonial dependency, or to the type which Nazi Germany established before World War II by its barter contracts in the Balkans.

All these dangers are involved in the present rush to bring aid to the underdeveloped nations. It is in the interest of both the receiving countries and of the West that the total amount of aid from all sources should be as large as possible; and the fact that the Soviets are now contributing substantially along with the traditional exporters of capital is in itself a cause for satisfaction rather than concern. But it is also in the interest of both the receiving and the Western nations that such aid should not be given on terms which tend to "commit the uncommitted"—to distort their road of development into the Soviet pattern, making it needlessly hard and painful, or to create a one-sided long-term dependency on Soviet markets.

That Khrushchev is setting out to achieve just that is suggested by his angry rejections of the idea of pooling a major part of all foreign aid in the hands of some impartial United Nations agency. Perhaps the Western Powers, just setting out to coordinate their own aid programs, should have another look at that idea.

AMERICAN ISRAEL PUBLIC AFFAIRS COMMITTEE,
Washington, D.C., April 13, 1960.

HOUSE OFFICE BUILDING,
Washington, D.C.:

The House Committee on Foreign Affairs has recommended an amendment to the statement of policy of the Mutual Security Act, to express the opposition of Congress to economic warfare such as boycotts, blockades and the restriction of the use of international waterways. The committee has reported that the amendment is an outgrowth of navigation restrictions in the Suez Canal.

The proposed amendment is a timely and welcome reaffirmation of American policy. We hope you will support it when the MSA comes up in the House.

We believe that the intensification of the Suez Canal blockade during the last 12 months is a glaring example of the failure of the United Nations to enforce its charter and its decisions. It is a major factor in the aggravation of tensions in the Middle East.

The Danish freighter, the *Inge Toft*, was held up in Port Said for 8½ months and was finally forced to yield her cargo to the United Arab Republic on February 4. The UAR has just seized the cargo of a little Greek freighter, the *Astypalea*, which was carrying cement from Israel to Djibouti and which has been detained at Port Said since December 18. This drew public rebuke last Friday from Secretary General Dag Hammarskjold, who declared that such action "goes against" the principles of the United Nations.

We continue to support economic assistance to underdeveloped countries and we urge you to vote for the MSA authorizations for this purpose, including those for special assistance, technical cooperation, and our nation's contribution to the United Nations Relief and Works Agency.

We will be grateful for your sympathetic consideration of our views.

Sincerely,

I. L. KENEN.

P.S.—We enclose texts of the proposed amendment, the committee's comments and two relevant newspaper editorials.

EXCERPT FROM THE REPORT OF THE HOUSE COMMITTEE ON FOREIGN AFFAIRS ON H.R. 11510

STATEMENT OF POLICY

Section 2, amending section 2 of the Mutual Security Act: Statement of policy.

The Committee on Foreign Affairs has followed closely developments relating to the use of the Suez Canal and believes that the United States has not done as effective a job as it should have in urging the removal of the restrictions on the free movement of commerce through the canal. With this and other situations in various parts of the world in mind, the committee proposes an amendment to the Mutual Security Act, expressing the sense of the Congress that the United States favors freedom of navigation in international waterways and economic cooperation between nations, and that the purposes of the Mutual Security Act are negated and the peace of the world is endangered when nations which receive assistance under the act wage economic warfare against other nations receiving such assistance, including such procedures as boycotts, blockades, and the restriction of the use of international waterways. The amendment further states that it is the sense of the Congress that the Mutual Security Act and the Agricultural Trade Development and Assistance Act of 1954 shall be administered so as to give effect to these principles.

The amendment leaves to the President full responsibility for the determination of the application of the policy and of such action as is to be taken in these matters, but requires that the President report to the Congress on the implementation of this section.

TEXT OF THE AMENDMENT

(f) It is the sense of the Congress that inasmuch as—

(1) The United States favors freedom of navigation in international waterways and economic cooperation between nations; and

(2) The purposes of this Act are negated and the peace of the world is endangered when nations which receive assistance under this act wage economic warfare against other nations assisted under this Act, including such procedures as boycotts, blockades, and the restriction of the use of international waterways;

assistance under this Act and the Agricultural Trade Development and Assistance Act of 1954, as amended, shall be administered to give effect to these principles, and, in all

negotiations between the United States and any foreign state arising as a result of funds appropriated under this Act or arising under the Agricultural Trade Development and Assistance Act of 1954, as amended, these principles shall be applied, as the President may determine, and he shall report on measures taken by the administration to insure their application.

SUPPLEMENTARY STATEMENT BY HON. HARRIS B. MCDOWELL, JR.

While signing the study mission's report, and while approving it in general, I wish to add this additional statement of my own.

On February 16, 1960, President Eisenhower in his message to the House of Representatives relative to the mutual security program, had this to say:

"A year ago in my message to the Congress on the mutual security program, I described it as both essential to our security and important to our prosperity. Pointing out that our expenditures for mutual security are fully as important to our national defense as expenditures for our own forces, I stated that the mutual security program is not only grounded in our deepest self-interest but springs from the idealism of the American people which is the true foundation of our greatness."

Because I am fully in agreement with the statement of the President, and because of my on-the-spot observations of the operation of the mutual security program in the 20 countries which I visited as a member of the study mission; I am convinced that the mutual security program in most of these countries is succeeding in its overall objectives.

The responsibility for the administration of economic assistance under the mutual security program is vested in the International Cooperation Administration. This executive agency must accept full responsibility for the recurring charges of maladministration. In spite of repeated evidence of such maladministration over the last several years, there is no indication of administrative corrections. Because of this situation, the mutual security program is carrying an unnecessary burden of criticism which has affected its acceptance by the American people.

Without the foreign aid programs of the United States since World War II, the map of the world would be vastly different today. Greece, Turkey, Iran, Israel, Laos, Vietnam, Korea, and Taiwan, as well as many of the nations of Western Europe, are free today because of the aid which we have given.

While fully cognizant of the validity of the situation emphasized in this report of both the ability and the willingness of the American taxpayers to continue to carry the heavy burden of the mutual security program, and further recognize that our own economic growth is moving forward at a faltering pace as compared to the last several decades, it is still true that we, as a Nation, enjoy a standard of living far above that which has been achieved under any other form of government in any other part of the world.

Would it not, therefore, be a tragic mistake if we placed emphasis only upon a strong military shield both within and without our borders? Military assistance has and continues to require one-half of all of the expenditures under mutual security. The fast growing economic strength of Communist Russia and Communist China, with or without any directly implied threat to the free world, would denote the changing pace and direction of the cold war in the 1960's.

While agreeing with the conclusions of the study mission report that military assistance must be continued to our allies, it is my observation that both the executive department and the Congress should give careful attention and study to the future balance of military assistance and economic aid in the underdeveloped countries.

Finally, I would emphasize that from my experience in visiting the countries of Asia and the Middle East as a member of the study mission, I am convinced that because of the success of the mutual security program, the Marshall plan, the Truman doctrine, and the Eisenhower doctrine, we have built a great wealth of friendship and understanding on a people-to-people basis in these areas of the world. The recent visit of President Eisenhower has demonstrated that dynamic friendship.

TWUA Resolution on Area Redevelopment

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution dealing with the subject of area redevelopment which was adopted by the executive committee of the Textile Workers Union of America, AFL–CIO, on March 11, 1960.

TEXTILE WORKERS UNION
OF AMERICA, AFL–CIO,
Washington, D.C., April 20, 1960.

The Honorable THOMAS J. LANE,
House of Representatives,
Washington, D.C.

DEAR MR. CONGRESSMAN: Enclosed please find copy of a resolution dealing with the subject of area redevelopment legislation which was adopted by the executive committee of the Textile Workers Union of America, AFL–CIO, on March 11 of this year.

We request that you bend every effort to see to it that the House of Representatives brings S. 722 to a vote at the earliest opportunity.

Very truly yours,
JOHN W. EDELMAN,
Washington Representative.

RESOLUTION—AREA REDEVELOPMENT

While the American economy as a whole is enjoying high activity, the festering sore of chronic unemployment continues to blight hundreds of communities in all parts of the Nation.

The distress suffered by millions of people bypassed by the general rise in incomes can no longer be ignored. The specter of poverty in the midst of plenty should not be allowed to tarnish the record of American growth. We cannot permit complacency to blind us to the serious problems faced by the people in areas which are in urgent need of economic redevelopment.

Tolerance and indifference to the continuance of chronic unemployment in the depressed urban and rural communities of the United States is not the American way of life. We have helped foreign countries to redevelop their entire economies and have assisted underdeveloped sectors to initiate their growth. We have recognized that unemployment and underemployment are wasteful and feed unhealthy discontent.

There are more than 177 distressed labor markets in this country, representing some 15 percent of the Nation's work force, with 26 percent of the Nation's jobless. Among them we can count many textile communities which have lost their mills and have not yet been able to reestablish themselves. These are viable areas with vast resources of manpower and billions of dollars of investment in public and private facilities. They have suffered from the loss of an industry and the obsolescence of some of their facilities. They often lack the funds for modernizing their public facilities and the leadership and know-how with which to reconstruct their economies.

These areas are suffering from inadequate employment opportunities as a result of structural changes in their economies. Industries such as textiles have contracted their operations in many communities because of technological changes or stagnant markets. The aircraft industry is threatened by missiles. Other industries have been shut down by the depletion of natural resources and changes in consumer demand. The mechanization of farming has displaced hundreds of thousands of agricultural workers. The areas affected by these developments must be redeveloped in order to provide opportunities for gainful employment for their residents.

The Congress has been considering legislation to provide Federal assistance to distressed areas for several years. In July 1956 the Senate passed an area redevelopment bill but it was pigeonholed by the House Rules Committee until Congress adjourned. Again in 1958, an area redevelopment bill was passed by the Senate, and this time the House also adopted it. But the President vetoed it.

The Senate has again passed a bill (S. 722) which would enable distressed areas to rebuild their economies. The House Banking and Currency Committee recommended a bill last May. Again the Rules Committee has bottled the bill up, preventing it from going to the House for action.

America can no longer afford to permit millions of workers to be trapped in pockets of economic distress. Our posture as the leader of the free world in the competition with communism cannot tolerate the existence of 177 urban areas of persistently high unemployment and 690 counties of extreme rural poverty in the United States. The Federal Government must act now to erase the blight of economic stagnation which impairs the health and welfare of our distressed communities: Therefore be it

Resolved by the executive council of the Textile Workers Union of America, AFL–CIO, CLC, That we urge the Congress to force a vote on S. 722 in the House of Representatives by circumventing the House Rules Committee and to enact this bill, and that we urge the President to sign the bill.

Imprisonment of Bishop Walsh

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. ADDONIZIO. Mr. Speaker, all Americans are shocked and saddened at the cruel imprisonment of Bishop James Edward Walsh by the Red China Government. The vicar general of the Maryknoll Fathers has said of Bishop Walsh:

If love is a crime, then he is guilty; if opposition to a brutal and tyrannical regime is a crime, he is guilty; if allegiance to his church is a crime, then he is guilty.

It is imperative that our Government exert sustained pressure to obtain the

release of Bishop Walsh and other American victims of Communist persecution. I am pleased to call to the attention of the Congress the following communication received from the Essex County Board of the Ancient Order of Hibernians, protesting this outrage:

ESSEX COUNTY BOARD,
ANCIENT ORDER OF HIBERNIANS,
Newark, N.J., April 18, 1960.

Hon. HUGH ADDONIZIO,
House of Representatives,
Washington, D.C.

DEAR MR. ADDONIZIO: The members of the Ancient Order of Hibernians of Essex County wish to express their displeasure in having Bishop James E. Walsh of the Roman Catholic Church imprisoned by the Communist Reds in China and urge you to do your utmost as our Representative to see to it that this man of God who has given of himself for many, many years is given his freedom.

His Excellency Bishop Walsh is an American citizen and as such should be treated accordingly. This sentence which the Communists handed out reflects on the attitude they have toward all Americans and it's time we stood up and be counted.

Again many thanks for giving this matter your immediate attention.

Sincerely yours,

J. ROY FASTOW,
Recording Secretary, Essex County Board, Ancient Order of Hibernians.

Every American Should Have the Right To Vote

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. MULTER. Mr. Speaker, on April 6, 1960, it was my privilege to appear before the House Judiciary Committee in connection with House Joint Resolution 529.

My testimony before the committee was as follows:

STATEMENT OF THE HONORABLE ABRAHAM J. MULTER, REPRESENTATIVE IN THE CONGRESS OF THE UNITED STATES FROM THE 13TH DISTRICT OF THE STATE OF NEW YORK, APRIL 6, 1960

Mr. MULTER. It is always a pleasure to be here, Mr. Chairman, and I appreciate the invitation extended to me to give you my views on this important piece of legislation.

May I say at the outset that I appreciate the statement made by the chairman with reference to the home rule discharge petition, which, incidentally, happens to be my petition No. 2 at the desk, and at the same time take issue with the statement that has been made here that the two problems are different problems.

They are the identical problem, even though it is essential that they be treated differently, because of the legislative technicalities involved. The greater weight of legal opinion seems to be that the only way we can give to the residents of the District of Columbia the right to vote for President and Vice President, and the right to representation in the Congress, is by constitutional amendment. On the other hand, none seem to deny but that home rule can be granted to the District of Columbia by legislative enactment through the usual procedure of a bill being passed by both Houses and the President affixing his signature to it.

When it comes to the further technicality of whether or not we can muster two-thirds in support of the constitutional amendment, let me indicate to you that the platforms of 1956, of both parties, urge representation for the residents of the District of Columbia, both by home rule and by representation in the Congress, and by the right to vote for President and Vice President.

That points up the fact that I think all will agree that at least in the free countries of the world, those that believe in democracy with the small "d" and the republican form of government, with the small "r," as we subscribe to it and advance it, will agree that government is not set up to govern people, but is set up by people so that they can govern themselves. And if we start with that premise we necessarily subscribe to the principle that brought this country into being as a free country; that taxation without representation is tyranny.

May I most kindly call the attention of this committee to the political facts of life. And if they sound partisan, please understand they are not of my making, because I have done my best and will continue to do my best to see that both home rule for the District and representation in the Congress, and the right to vote for President and Vice President, will remain on a bipartisan basis with bipartisan support.

But when we hear the argument that you may not be able to muster a two-thirds vote of the Congress in support of this very fundamental principle, I am constrained to call your attention to the fact that although it is in both national political platforms alike, Republican and Democratic platforms of 1956, and I am sure if the legislation is not enacted at this Congress they will be in both in 1960—they will be in both 1960 platforms.

The CHAIRMAN. The trouble is that a platform is nothing to step on. It is something to get in on, as I understand it.

Mr. MULTER. I appreciate the humor with which the chairman makes that statement. From my long experience with him I know that he does not subscribe to that. I hope most of the members of this committee do not. And I know that the American public is very fast getting educated and getting to the time when they are going to point their finger, and do more than point a finger, at the politician or statesman or the man who runs for public office on a promise which he forgets the day he takes his oath of office.

I think this is the year when many people will be called to account for not having fulfilled their promises. And this is one of the platform pledges that I think people are going to call Members of the Congress to account for if they do not implement it.

In that connection, as I started to say, if we take the home rule petition on the House desk——

Mr. MILLER. Mr. Chairman, might I suggest that the Member restrict his remarks to this bill instead of the home rule bill, because we certainly have a lot of witnesses and it will only complicate the issues if we have too much testimony on home rule.

The CHAIRMAN. I am in favor of home rule, and a good many members of the committee are. I do hope that the gentleman will confine himself to the resolution before us.

Mr. MULTER. I intend to, and it will not complicate the issue to call the attention of this committee, and to all concerned, that of the 187 signatures on the petition for home rule, only 26 percent of the Republicans have signed it and 80 percent of the Democrats have signed it. Now that is the practical side of the situation.

Mr. MCCULLOCH. Mr. Chairman and members of the committee, of course there has been a great deal of talk down through the years about Members of Congress signing petitions to discharge committees of further consideration of bills that may be before them. I have had a long legislative service at both the State and national level. At the State level, in positions of leadership as the minority leader of my party, and as speaker of the House of Representatives of my home State of Ohio, longer than any man who ever served in that position.

By reason of that experience, and by reason of certain other fundamental convictions that I have, I do not sign petitions to discharge committees of further consideration of bills, whether they be bills which I have introduced and sponsored, or whether they be bills introduced and sponsored by others. I am sure the chairman and the members of this committee know that that was my position on the civil rights bill which I sponsored along with the chairman and which left this committee on August 20, 1959, but which did not have a rule until late February or early March of 1960.

I just want the record to show that there are many people with long legislative experience who do not follow the practice of signing petitions to discharge committees of further consideration of bills.

The CHAIRMAN. However, I don't want to let the impression to go forth that signing of a discharge petition is something unorthodox. It is prescribed in the rules. It is a deliberate method by which a bill can be pried loose from the Committee on Rules. Since it is in the rules, it was the result of great deliberations on the part of the House itself. There is no stigma attached to anybody signing a discharge petition because it is in the regular performance of his duties, and he has the right and sometimes he may have the duty, if his conscience so dictates, to sign that discharge petition.

Mr. MILLER. Mr. Chairman, I am very sorry that the gentleman from New York saw fit to inject this partisan politics into this issue as far as the District of Columbia is concerned. I, of course, support your resolution, Mr. Chairman, and in addition thereto I am in full accord with your statement. There is nothing unorthodox, nothing unusual, about signing a discharge petition. I just happen also to agree with my minority leader, Mr. MCCULLOCH, that as a matter of practice I don't sign it. That is not the important point. The important point is that the same argument, of course, could be made as to the signatures which were attached to the civil rights discharge petition. And yet, when the civil rights bill passed the House, it passed the House with a vote of over 90 percent of the Republicans, and you can't say the same about the Democrats.

The CHAIRMAN. Now the shoe is on the other foot.

Mr. MILLER. So I think that when this bill passes the House it will pass with a greater majority of Republican votes, percentagewise, than Democrats. So we won't talk about the discharge petition, I hope, from now on.

The CHAIRMAN. Let's forget about that and get down to business.

Mr. MILLER. Let's talk about the resolution. I agree.

Mr. MULTER. Mr. Chairman, I think I have touched upon a spot that is quite sore and vulnerable to some of our colleagues. Again I say it is not of my making. If the only way that we are going to get members of both parties on the record to show whether or not they are supporting that which they say they support, it will probably be necessary to have a discharge petition. And there is where the noses will be counted, because before they vote on the record, under a rollcall——

Mr. MILLER. Are you talking about this resolution that we are considering now.

Mr. MULTER. Yes. I am pointing up the facts of life with reference to this resolution.

Mr. MILLER. You don't think this committee is going to pass this resolution out?

Mr. MULTER. I didn't say that at all.

Mr. MILLER. What are you talking about when you talk about a discharge?

Mr. MULTER. If you will let me finish my statement you will probably grasp the point I am trying to make.

Mr. MILLER. Are you talking about home-rule again?

Mr. MULTER. I am talking about this resolution before this committee and the basic principle which is the same in both instances.

Mr. MILLER. Do you think we are holding these hearings for nothing, that we are going to have a discharge petition?

Mr. MULTER. I have been in Congress too long not to know why hearings are held and which hearings will be effective and which will not be effective.

The CHAIRMAN. Let the witness complete his statement.

Mr. MULTER. The fact of the mater is, whether we like it or not, a "voice" is not representation. And whether that voice is on the political platform or in Congress, it is not representation. A voice, as a voice, is guaranteed to the citizens of the United States, even to those in the District of Columbia, by the right given to them by the Constitution, to petition their Congress.

We know that the filing of a petition with the Congress does not redress any wrongs or correct any of the injustices or inequties that prevail, either in the District of Columbia or elsewhere. So that when you consider this resolution I beg of you, don't be concerned with whether or not you are going to get the two-thirds vote if and when the bill gets to the floor, or the resolution gets to the floor.

Let's address ourselves to these fundamental principles for which we declare we stand, and put them into a resolution that will do more than just give voice to the citizens of the District; let's give them the right that they should have, which is the right to govern themselves, the right to participate in the Government of their country.

They have a right to vote for President and Vice President. They have a right to vote for representatives in both Houses of Congress. And when electing those persons to represent them in the Congress, giving them the right to introduce a bill or to argue or to debate in committee or on the floor is not giving them their basic right of representation in Government unless those representatives elected to both Houses of Congress will also have the right to vote for them, for and against bills.

The CHAIRMAN. I take it you are for the principle of the right of franchise, the full right of ballots to the people of the District of Columbia. But you don't mean to imply thereby that you would not, as a first step, shall I say, adopt the resolution which we are now considering?

Mr. MULTER. Of course, I would not take the position that we shouldn't take this step by step. I have learned the hard way that good legislation is the result of compromise. And if you fight for every last thing you are entitled to, you may get none of it. So you take it step by step.

Mr. HOLTZMAN. Mr. Chairman, at that point, I wonder if our colleague from New York would not, in line with his most recent statement, join with Mr. ROGERS, Mr. RODINO, and the gentleman from New York in saying that it would be better to set up a broad platform that would be all embracing, and then have the situations meet each particular instance, rather than select the District of Columbia, omit Puerto Rico, omit Guam, omit any other of our possessions. Doesn't the gentleman think that would be a better way?

Mr. MULTER. That would be the ideal way. It would be the better way. Whether Senator KEATING, who preceded me as a witness, is right or not, I am not prepared to say as to whether or not you could get all of that at one time.

Certainly, however, in considering this bill now, which as it applies solely to the District, we ought to at least be sure that we are going to give the people of the District all of their rights, and not a little piece.

We gave them the right to nominate by electing delegates to the conventions. What good is the right to nominate if you don't also have the right to elect? We gave them that little piece. We held out some bait to them, and said, "Here, be satisfied, we will let you elect delegates," as we did in 1956 to the national conventions, "so they can nominate candidates for you." That is only giving them a little piece, but you don't follow through and say we will also give you the right to choose the President and Vice President on election day.

The CHAIRMAN. I want to say in comment to the question offered by my distinguished colleague from New York, for whom I have high regard, that if we attempt to make something in the nature of a general constitutional amendment here it is going to involve us in a great deal of controversy. Our objective is to grant some modicum of relief to the people of the District of Columbia; namely, grant them some form of ballot; in this instance, the right to vote in Federal elections. If we are going to be bogged down with all manner and kinds of controversies that would arise if we have some general proposition, I am going to repeat what I said in this committee not long ago, and those who heard me will forgive the repetition: Cervantes once said that by the street of Bye-and-Bye you get to the house of Never. And if we do anything of the type that is suggested by the gentleman from New York, we will never get anything done whatsoever.

We have an opportunity now, and we should get right down to work and seize time by the forelock. The session is getting short. If any action is to be accomplished it must be accomplished now. And if there is any postponement I fear that it will be postponed indefinitely and no relief will be granted.

In that connection I am going to ask all witnesses to be as brief and cogent as possible. We have a long line of witnesses. I am going to ask the members of the committee to be brief in their questioning, and, if possible, I am going to ask the witnesses to submit their statements. The remaining session is very short. I hope to get action before we conclude this Congress.

But if this matter is going to be drawn out, if these hearings are going to be drawn out, I am afraid we are going to meet with all kinds of obstacles.

I would ask that the witnesses, in self-interest, in favor of this legislation, be brief, and that applies to every witness, whether they are Members of Congress or non-Members of Congress.

Mr. MULTER. Mr. Chairman, I will conclude with the recital of some facts which I think you should have in the record, and with which facts no one, I am sure, can find fault.

In the District of Columbia today we have in excess of 850,000 residents. That is more than the population of 12 States: New Hampshire, Vermont, North Dakota, South Dakota, Delaware, Montana, Idaho, Wyoming, Nevada, New Mexico, Alaska, and Hawaii.

That 850,000 population in the District of Columbia is more than the combined total of Alaska, Nevada, and Wyoming. Those three States have nine representatives in the Congress. By that I mean one each in the House of Representatives and two each in the U.S. Senate with the full right to not only voice their opinions and introduce bills, but to vote.

In World War II the District of Columbia sent more persons into the armed services, voluntarily as well as by virtue of the draft, than many of the States whose citizens have full right to vote and full representation in the Congress.

In 1924 the United States appropriated to the District of Columbia, to the operation of the District of Columbia, more than 40 percent of its budget, at a time when the total budget for the United States was in excess of, or just about, $3 billion. Today, with our U.S. national budget approximately $75 billion, the Congress is appropriating only 11 percent of the governmental budget for the District of Columbia. With proper representation in the Congress I think a better job would be done for our National Capital.

That National Capital, incidentally, has been the model, to some degree at least, for every major republic of the free world, with this distinction: In every one of those capitals their citizens have the full right to vote for all officials of their government, with full right of representation in their congress or their parliament.

I think that we can do no less, Mr. Chairman.

Mr. TOLL. May I make an inquiry of that figure of 850,000?

Doesn't that include one-third of the people who vote in their hometowns?

Mr. MULTER. I think that is correct.

Mr. TOLL. You want to eliminate them from this picture, do you not, so that you won't lose the constituents who help you get into Congress?

Mr. MULTER. Those people who are voting back home, if given the right to vote, I think they cherish that privilege and that right and will not give it up simply because they live in the District, where they are earning their livelihood and actually living day in and day out; they would vote here rather than at home.

Mr. TOLL. And they would lose their sponsorship.

Mr. MULTER. Isn't that what we mean by self-government?

Mr. HOLTZMAN. If they lost their sponsorship from the respective States, certainly they would have new sponsorship from the District of Columbia; isn't that so?

Mr. MULTER. We do hope so.

The CHAIRMAN. The 850,000 are residents of the District of Columbia they can vote outside the District of Columbia, either in Virginia or Maryland?

Mr. MULTER. I think the census figure includes those who reside within the District but maintain their original residences in their original domicile for voting purposes.

Mr. Chairman, if I have hurt anybody's feelings, I am sorry.

That is my statement, sir.

The CHAIRMAN. Are there any questions?

Mr. MILLER. I have one question.

You talked about this resolution and home rule. Of course, you understand that home rule is not before this committee, don't you?

Mr. MULTER. No, it is not.

Mr. MILLER. That is before the District Committee.

Mr. MULTER. That is correct.

Mr. MILLER. You have a discharge petition on that issue?

Mr. MULTER. That is correct.

Mr. MILLER. A discharge petition would be unnecessary if the committee reported the bill out, would it not?

Mr. MULTER. If this committee reports this resolution?

Mr. MILLER. If the District Committee reported the bill out on home rule you wouldn't need discharge.

Mr. MULTER. No, we would not need a discharge petition.

Mr. MILLER. All you need is a majority vote on the District Committee to report it out?

Mr. MULTER. Yes.

Mr. MILLER. What is the complexion of the District Committee, Democrats and Republicans?

Mr. MULTER. If you eliminate the southern Democrats——

Mr. MILLER. No, no; Democrat and Republican?

Mr. MULTER. Don't try to put words in my mouth.

The CHAIRMAN. I thought we would have a cessation of politics.

Mr. MULTER. May I answer the question? I think the question carries a connotation which requires an answer, otherwise we will get a record that is not fair.

The complexion of the District Committee is such that the southern Democrats, who traditionally have made pledges during the course of their campaigns, against home rule for the District, will not vote for it, and will not sign a discharge petition; but if the northern Democrats and northern Republicans on that committee join together, we can vote it out. And if they sign the petition we can get it before the House. That is the situation there.

And on the other hand you will have the same situation in the Rules Committee with reference to this very resolution as you had with reference to civil rights. You will probably have to pry this loose from the Rules Committee by getting almost enough signatures on a discharge petition before you will get it out of rules.

Israel: Laboratory in Asia

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an excellent and constructive article written by Rev. Father Vincent S. Kearney, S.J., entitled "Israel: Laboratory in Asia." The problems of the Middle East are vital ones and they deeply affect the foreign policy of the countries of the free world. Father Kearney's article is one which is devoid of partisanship. His thoughts are constructive and enlightening:

ISRAEL: LABORATORY IN ASIA

(By Vincent S. Kearney)

All eyes were upon them as the contingent of a dozen or so young Africans strode into the dining room of Haifa's Hotel Dvir. In late February the tourist season in Israel begins to gather momentum. It was quite obvious that the presence of the Africans was, for curious Western visitors, an unexpected aspect of life in Israel.

For Israelis, however, the sight of black-, brown-, and yellow-skinned individuals has become a familiar one. In late 1958 representatives from 17 Afro-Asian countries assembled in Israel to participate in a seminar conducted by Histadrut, Israel's unique labor organization. Delegates from Burma, Ceylon, Dahomey, Ethiopia, Ghana, India, the Ivory Coast, Japan, Kenya, Liberia, Nigeria, northern and southern Rhodesia, Senegal, French Sudan, Chad, and Thailand met to exchange ideas on cooperative economic development. For Israel the venture was a chance to break out of the isolation forced upon the new nation by 10 years of hostile Arab encirclement. For the Afro-Asians the meetings provided an opportunity to learn how Israel had met and overcome economic problems similar to their own and finally, after 10 years of struggle, had set itself well on the way toward economic self-sufficiency.

For Israel the seminar fulfilled the country's fondest hopes and expectations. Israeli trade is slowly expanding along both coasts of the African continent and into South Asia. The steady stream of Afro-Asians who come to Israel to learn continues. They have discovered that Israel is a sort of economic pilot project whose methods of development are, in many ways, easily adaptable in their own countries. True, the Israeli economic achievement has depended on generous outpourings of financial help from the outside. But, is not this one of the pressing problems confronting the newly independent nations of Africa and Asia—how to make the best use of the assistance they so sorely need?

A NEW LAND

The visitor who returns to Palestine after a long absence should be prepared for a surprise. This writer was last in the Holy Land during the war years. Then it differed little from the surrounding countries of the Middle East, except perhaps busy little Lebanon to the north. The Judean hills, for example, were worn away by erosion and neglect. Today, as one drives from Tel Aviv to Jerusalem, he weaves through terraced agricultural plots. Galilee to the north is one vast and lush farmland. The Negev, whose sterility is rather a freak of nature than the result of human indifference, remains the only barren area in Israel. Though it comprises 55 percent of the country's land area, the confidence with which Israelis speak of development to the south is but another indication of their determination to make of Israel a going concern.

When the new state was proclaimed in 1948, there were 800,000 people within Israel's borders. Within the short space of 3 years 685,000 immigrants poured in. The population today is 2 million. Such an unprecedented 100-percent growth in a decade would have created difficulties for any well-established country. In Israel the shortage of skilled workers and the lack of raw materials even to construct adequate housing compounded the problem. Until 1951 less than two-thirds of the immigrants were able to find permanent lodging. A quarter of a million people were housed in work camps, immigrant housing and maabarot (transit camps).

The next year, however, the housing picture began to change for the better. Immigration slackened off. Some 20,000 skilled workers were slowly being added to the work force. The building industry boomed. Israel began turning out cement, glass, ceramics, structural iron, pipe, asbestos and other products. In the ensuing 6 years no less than 396,000 new dwelling rooms were completed—only slightly less than the per capita increase in population.

Today Israel's housing problem is largely licked. The maabarot no longer exist. Yet the building goes on. Everywhere one looks, housing developments are in the process of construction. The new city of Jerusalem is fanning out westward into the Judean hills and is encroaching on Ain Karin. Soon the traditional site of the birth of John the Baptist and scene of the Visitation will be a suburb of the Israeli capital. Tel Aviv is expanding to the north, east and south. Haifa, Israel's Mediterranean port, is spreading out along the slopes of Mount Carmel. During the next decade Israel expects another 50 percent increase in population. The country will be ready with permanent housing for the new immigrants.

Food production has kept pace with housing construction. Israel's agricultural output is growing at the average rate of 16 percent a year—almost twice as fast as the number of farmworkers and crop areas. The country has almost reached the point of self-sufficiency in food. Local agriculture supplies all vegetables, potatoes, eggs, fruits, poultry, mutton and milk. Moreover, a growing surplus has enabled the country to increase significantly its agricultural exports. Their value has risen from $17 million in 1950 to $57.3 million at the turn of the new decade.

What Israeli has achieved in the way of food production is of worldwide significance. To us here in the United States, food surpluses—and what to do with them—are an annual headache. The world at large, however, particularly because of the more than 1 billion people who live in the underdeveloped areas, falls far short of meeting its food requirements. Israel has demonstrated that a phenomenally expanding population can be an incentive to greater food production. Though its population has increased at a greater rate than anywhere else, though its soil is not particularly advantageous by normal standards and though its people have come to Israel with little or no previous agricultural experience, Israel not only has been able to supply its own needs but has enough left over for substantial export.

COOPERATIVE EFFORT

Israel's agricultural productivity thus compares favorably with typical Western achievement. New farming skills, improved methods of irrigation (the lack of water is the Israeli farmer's chief preoccupation) and a more intensive use of machinery and fertilizer are no doubt responsible. But there is an intangible factor—the emphasis on cooperative effort characteristic of the free Israeli society. The kibbutz and the moshav are two forms of cooperative agricultural settlement which, perhaps more than anything else, have contributed to Israel's economic self-sufficiency.

The writer has long tended to regard the kibbutz with suspicion. Its distinguishing feature is the abandonment of the institution of private property. All assets of the group are collectively owned. Members work without pay. They are dependent on the cooperative for food, clothing and lodging. Children become the collective responsibility of the group and are looked after by members chosen by the kibbutz. This leaves the women free to work in the fields beside the men or in the communal laundries or kitchens.

Despite the similarity, it would be inaccurate to compare the kibbutz to the commune system of forced labor which has set the pattern for Chinese society in recent years. Membership in a kibbutz is voluntary. Just as the new immigrant is free to join or not to join, he is free to leave any time he chooses. Moreover, the kibbutzim represent all shades of ideology, political and otherwise. Some find their inspirational forces in orthodox Judaism. Others profess allegiance to one or another of Israel's various political parties. None are connected in any way with the Communist Party which, though it still possesses legal status, has gone into a sharp decline in recent years.

True, as a movement the kibbutz has today begun to lose some of its original impetus. Membership requires a rare dedication. The individual must learn to subordinate his interests to those of the movement and ultimately to those of the state, for which the kibbutz produces. In recent years immigrants to Israel who decide to become farmers seem to prefer a more individualistic way of life. In consequence, and because

of the continually growing need for increased agricultural output, the kibbutzim very often find themselves in the paradoxical position of being forced to resort to hired help. The practice is a source of worry to the leaders of the movement since it is contrary to the fundamental principle of cooperative labor.

As Israel prospers, so have the kibbutzim. Some have the air of country clubs rather than farm cooperatives. One can detect the same lapses from the communal ideal that one often finds in the religious community—the neglect of common property and the trend toward individualism in defiance of the demands of common life.

Nevertheless, as a unique sociological experiment, the kibbutz merits study. At first view the kibbutz nursery, for example, appears repellant to anyone who considers the strongly knit family as the nucleus of society. But would not the phenomenon, or some variation of it, provide the answer to a genuine difficulty in our occidental, contraceptive-minded society, which considers it has fulfilled its housing obligations with the construction of two- and three-room apartments? One priest who has worked exclusively among Arabs for many years, expressed to this writer the desire to visit Israel for one reason alone—because it is a sociological laboratory where one might find the answer to many of the problems that beset modern society, particularly in the Middle East.

In contrast to the kibbutzim, the moshavim are cooperative villages, each comprising a system of independently managed farms. The theory behind this system is simple enough. The farmer's job is farming. He should not, therefore, be bothered with the business details that go with purchasing seed, fertilizer, etc., nor even with selling his own produce. The cooperative is on hand to do both for him. The only conditions under which he operates are that he purchase his supplies at the settlement's cooperative store and that he use his land for agriculture. Success or failure in his operation depends on his own initiative. But the individual moshav can count on the movement to help plan its farming operations and to obtain credit. The level of mechanization on these settlements is high. The moshavim own hundreds of tractors, combines, bailers, and trucks.

Most of these cooperative settlements have been founded by immigrants who have sought a more individualistic way of life than that afforded by the kibbutz. The family is the social and economic unit of the village. Like the kibbutz, the moshav works on the basis of self-labor and cooperation. But, while each family starts on an equal footing, income varies with the amount of produce supplied by the family to the moshav's cooperative marketing agency.

ISRAEL'S LABOR MOVEMENT

The emphasis on collective agriculture in Israel is no accident. Nor is it due solely to Socialist idealism. It is the product of the harsh reality of history. In the early 20th century the need for agriculture and industrial development in Palestine was crucial. Without it the already settled Jewish community would never have survived. It would have been impossible to continue the flow of immigrants essential to the fulfillment of the Zionist dream. But the immigrant youth of the time had no previous agricultural experience. They were ignorant of what were then modern industrial processes. In the circumstances these pioneers had but one simple choice—cooperate in developing the land or go under. Out of the need for cooperative agricultural effort grew the organization of the labor movement in Israel.

No discussion of Israel's economy would be complete without reference to the Histadrut, the country's unique labor organization. Nowhere else in the world is there a trade-union movement similar in its organization. It cannot be compared to the AFL–CIO, since the Israeli worker is first a member of Histadrut, through which he becomes a member o. the particular trade union appropriate to his occupation. Histadrut is not, in other words, a loose voluntary association of independent unions. It is, moreover, more than a mere trade union movement. It is at the same time entrepreneur, social scervice organization and cultural movement. Here again history has been at work determining the precise direction Histadrut has taken.

Histadrut did not come into being by organizing exploited workers who were at the mercy of fluctuations in the labor market. There were very few wage earners in the country when the movement was first organized in 1920. Its first objective, therefore, was to create a class of workers. Before it could talk of bargaining and improving working conditions, it had first to establish the very sources of employment that were nonexistent in the undeveloped country of the time. As Histadrut pointed out in its first policy statement:

"The Histadrut considers it its duty to create a new type of Jewish worker, and to see to it that, while settlement is being fostered, the Jewish worker who comes into being as a result of this very process shall be assured the place he deserves. The Histadrut includes all workers who live by their own labor without exploiting the labor of others; it regulates all matters concerning the working class in the field of trade union activities, settlement and education, with the aim of building a workers' community."

The "Israel" of the twenties was perforce a labor economy. It remains so today. The country still must cope with a continuous flow of immigrants to its shores, most of whom are untrained candidates for the labor market. Over the years, therefore, Histadrut's objectives have remained basically unchanged. From the huge (by Israeli standards) modern building which houses Histadrut's central offices in Tel Aviv, there radiates a network of economic enterprises. Their purpose: to open up new sectors of the economy in order to provide employment opportunities. At the same time Histadrut trains workers for the jobs it creates. If the country has indeed been transformed in the past decade, the labor sector of the Israeli economy has been in large part responsible.

Though the labor movement has concentrated chiefly on the fields of agriculture and building, of late it has begun to branch out into industry. Histadrut affiliates are now responsible for more than 20 percent of Israel's total industrial output. Koor, a Histadrut holding company, engages in heavy industry. It has built up an extensive chain of quarries and factories, is erecting a complex of iron and steel plants and is active in the exploration and development of the mineral resources of the Negev.

In addition, some 250 producers' cooperatives, also affiliated with Histadrut, are engaged in light industry. Nearly everything needed to equip a house, from furniture to light bulbs, from bathtubs to telephones, from washing machines to refrigerators, is produced is Israel. Such items have also found their way into the world market. The Scandinavian countries, West Africa, and Holland are among the most satisfied customers of Israel.

Israel has not yet attained economic self-sufficiency. Nevertheless, one cannot be in the country long without succumbing to the realization that a great economic and sociological experiment is there taking place. Given a chance, it could have a profound effect on the world of the so-called underdeveloped nations. It is this which has attracted hundreds of Afro-Asians in the last 2 years. They see there what may be a shortcut to the collective system of society they seem to favor and one which will not sacrifice democratic ideals. In January, 51 Burmese returned to their homes after a year's stay in Israel. Retired servicemen with a desire to settle on the land, they had come to study village development and the various types of agricultural coperative to be found in Israel. As a result, two villages of the moshav type, together with a training farm for future settlement, will be established in Burma during the coming year. The Burmese, who have a common frontier with Red China, recognized the advantages of an agricultural settlement which also serves as a defense outpost.

ISRAEL AND THE ARABS

It is perhaps impossible to write in a vein favorable to Israel without drawing fire. The writer expects to be condemned as a Zionist propagandist or, what is worse, as being insensitive to the plight of the million Arab refugees who once made their homes in what is now Israel. This must therefore be said. What is written here does not imply a judgment one way or another on Arab grievances against Israel. Those grievances do indeed exist. But Israel also exists. It is the writer's conviction that the new State can be appraised objectively without prejudice to Arab claims.

What the eventual outcome of the Arab-Israeli quarrel will be no one can know for sure. This much is certain: the solution must not lie in another war of destruction in the Holy Land. Nor is it reasonable to expect Israel to commit national suicide by opening her borders to a million potential enemies—the displaced Palestine refugees. Israel still protests it is ready to negotiate a settlement. We cannot know what Israel will propose, unless the opportunity is given it to meet Arab leaders face to face.

Not all Jews in Israel dismiss the Arab problem in cavalier fashion. To paraphrase one Israeli: it is a tragedy that "our redemption" should have been accomplished at the cost of so much suffering to so many of the Arab people. Once that spirit permeates the country, we may yet see the day when Israel will be in a position to communicate some of her vigor and vitality to her more immediate neighbors.

India Today

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. FULTON. Mr. Speaker, it is a pleasure to insert in the RECORD, a letter which my good longtime friend Sirdar J. J. Singh, the former president of the India League in the United States, now of New Delhi, has sent to a number of his friends in America.

Jag Jit Singh, an outstanding Indian and American civic leader, was educated both in India and in Great Britain. He lived for 33 years in the United States, was the founding president of the Indian Chamber of Commerce of America, and for many years was president of the India League until he returned to India in March 1959.

The article is entitled "India Today," which Singh states "deals with some

basic issues," and I believe the Congress and the American people should have the opportunity to know of the current opinions of this good Indian friend of America as he has always spoken clearly and plainly to us.

I believe that this article and letter will contribute to the continuation of good Indian-United States relations and for better understanding between our two great people. It should be read by every intelligent citizen in order to improve our ties with this giant nation and the friendly people of India:

FRIENDS COLONY,
New Delhi, April 20, 1960.

HON. JAMES G. FULTON,
Congressman From Pennsylvania,
Washington, D.C.

DEAR FRIEND: The enclosed article was written before the Chinese invasion of Tibet and of Indian territory. Thus it does not cover that aspect of political developments in India.

However, as in parts, it deals with some basic issues, I am taking the liberty of having it sent to you.

I hope you will have a chance of glancing through it and sending your comments if you care to.

With kind regards.

Sincerely yours,

J. J. SINGH.

INDIA TODAY

(By J. J. Singh)

"What is the state of our nation?" I asked Prime Minister Jawaharlal Nehru, when I called upon him in his Parliament House office.

The Prime Minister receives visitors at three different places. When appointments are given for the day time, while Parliament is in session, he receives them in his Parliament House office. Otherwise, being Foreign Minister, besides being Prime Minister, he meets visitors in the Foreign Office. And whenever he has to combine entertainment and interview, then the guest comes to his house.

Soon after our arrival in New Delhi, Prime Minister Nehru asked my wife and I to have lunch with him at his house. Lady Mountbatten, who was a house guest, was also present. And so was his daughter, Indira Gandhi, who has recently achieved a great deal of importance and prominence as the new President of the Indian National Congress Party. Indira, who is called Indu by her father and other intimate friends, is married to Feroze Gandhi, the crusading member of the Indian Parliament. Feroze has the same last name as did Mahatma Gandhi. But Feroze, who is a Parsi, is no relation of Mahatma Gandhi, who was a Hindu. However, both Parsis and Gujerati Hindus have this surname, "Gandhi."

At this luncheon, I did not have an opportunity to ask many political questions from the Prime Minister. So, I sought another interview. And it was at this interview, which lasted 40 minutes and at which tea was served, that I asked the question, "What is the state of our nation?"

Nehru replied in a very forthright and definite manner. "The state of our nation is good. I should say very good," he said. Nehru then covered various facets of Indian life—economic, political, civic, and the problems of the 14 states, which comprise India. The impression I got was that, by and large, there was nothing that bothered Nehru and that he was fairly satisfied with the progress that India was making. He said, "I am aware that there are many reasons to be dissatisfied with one aspect or the other, but these dissatisfactions are not the result of stagnation. These dissatisfactions are a sign of an alive and active society." However, he said, there was one thing that bothered him a great deal and that is when Hindu-Moslem animosities manifest themselves. He said this communal (Hindu-Moslem relations are called communal) hatred, "with deep, dark passions" is one of the greatest dangers facing India.

Most Americans generally see only the facade of India. They are worried whether or not India will be able to maintain its economic progress under democratic institutions vis-a-vis the economic progress of Communist China under a ruthless dictatorship. They are interested in whether or not India is pro-Western or she is "soft" toward world communism. Americans' preoccupation with world communism leaves them little time or, for that matter, inclination to probe into another, and, perhaps, worse problems a country may face. I am afraid very few Americans know that India's greatest problem is not world communism or even the slow and tardy economic progress. India's main problems are casteism, communalism and provincialism, which is tied up with lingualism.

It is hardly 3 years ago, that in the premier city of India—Bombay—I witnessed passions aroused to the extent that hundreds were killed and thousands were wounded. This was not due to communal friction, but it was a lingual problem. This clash between the Maharastrians and Gujeratis, each of whom wanted the premier city of Bombay to be part of their state, resulted in leaving deep resentments and animosities between neighbors. Right now, Master Tara Singh, leader of the Sikhs, in East Punjab, is again threatening to launch a "morcha" (nonviolent defiance of law) for creating a Punjabi Suba. (A Punjabi speaking state.) A very powerful movement is going on in Madras between non-Brahmins and Brahmins. There is also a movement to create a Dravistan—a land of Dravidians. It will be recalled that the Dravidians were the original inhabitants of India as were the American (Red) Indians, the original inhabitants of America. In India, the conquering hordes, called the Aryans, came from the Caucusus regions and drove the Dravidians to the southernmost parts of India. The Dravidians have felt that the conquering Aryans and the generations that have followed, have denied them the opportunity to live on equal terms with others. And so it goes. These are the fissiparous tendencies and movements which if allowed to flourish could break up India into pieces.

How do these problems of caste, religion, provincialism and lingualism have any bearing on world communism or America's interests in this part of the world? The answer to that question is that a "Balkanised" India split into small areas and at loggerheads with each other, will offer the greatest possible opportunity to world communism to flourish.

Quick economic progress which may reduce unemployment amongst the educated and raise the general standard of living may help in fighting these three evils, but they are so deeply ingrained in our society that active and persistent educational work will have to be done for a long, long period, before these three curses disappear from this land.

Thus, the time has come that Americans who are getting increasingly interested in India should be made aware of the dangers that face this country, beyond the dangers of world communism.

Nehru said to me that it is Hindu-Moslem antagonisms more than anything else, which actually frighten him. It must not be forgotten that the creation of Pakistan did not remove all the Moslems from India. There are 40 million Moslems in India today. By and large, they live in amity with the Hindus. But then something happens—something trivial—and lo and behold, the brute in man comes to the forefront and Hindus and Moslems are at each other's throats.

In Nehru's mind was fresh the recent communal outbreak in the State of Orissa. Nehru's fears about these communal happenings and what they may do to India brought back to my mind that the same kind of fears were felt by Mahatma Gandhi, who all through his life worked for Hindu-Moslem unity. It was in 1947 (Mahatma Gandhi was assassinated in January 1948) that I went to see him when he was traveling in the interior of the State of Bihar. In this State, it was the Hindus who had perpetrated heinous crimes against the Moslems, just as in some other parts of India. Moslems had perpetrated similar crimes against the Hindus. Gandhi traveled into the interior of the State, trying to assuage the feeling of the Moslems, just as he had traveled in Bengal solacing the Hindu victims of Moslem cruelty. As I, too, had recently seen these inhuman acts committed both by Hindus and Moslems in Lahore and Amritsar (in the then undivided State of Punjab) I asked Mahatma Gandhi, "Sir, is there something wrong with us as a nation, which makes us perpetrate such inhuman acts?" Mahatma Gandhi answered, "No, there is nothing wrong with us as a nation because if you read history, you will find that many nations on many an occasion and in many different parts of the world, have shown the same kind of ruthlessness and brutality. Man will never become civilized and this ruthlessness will not disappear unless he believes in nonviolence and adopts it as a basic principle of his life." How true Mahatma Gandhi's philosophy of nonviolence is. And how true it is that until man will have eschewed violence, he will not be civilized in the true sense of the word.

But, as I said above, Nehru feels very hopeful about the general conditions as they obtain in India today. I talked to nine other Cabinet Ministers. And I asked the same question from them: "What is the state of our nation?" Invariably, the replies of the Ministers indicated a sense of achievement and good hope for the future.

Undoubtedly, as Nehru said, there is a great deal of dissatisfaction, especially amongst the well-to-do people. They complain of high taxation, redtape, government interference, bureaucracy, nepotism and corruption. These people remind me so much of my Republican friends during the Roosevelt-Truman era.

What has impressed me, however, is the stupendous activity which is so evident. Be it in roadbuilding, manufacturing of freight and passenger cars and locomotives, or the building of schools and hospitals in the urban areas and improving the status of farmers and peasants in the rural areas, the country is humming. One young American educated and trained Indian industrialist told me, "In India today, you can start anything and it will flourish."

It would be safe to assert that India today is on the march and that India today is offering virtually the same challenge and opportunity to the people of India as did America offer to her pioneers.

India is both young and old. Our known history dates back to more than 5,000 years, (in some parts of northern India, relics of more than 10,000-year old civilization have been discovered) but as an independent, modern nation we are hardly 12 years old. And that is why the job of the present generation is similar to that of the American pioneers who made sacrifices to build up their country so that their childrens' children are now reaping the benefits.

Something else that strikes one is the preservation of law and order whereby life,

property, and honor are safe. Neither my wife nor I will hesitate to go out any time of the day or night in New Delhi. And yet, if one were to look around at the other newly freed countries whether in the Middle East or in southeast Asia, one does not find the same assurance of protection by the law.

Today's India is wedded to the principles of democracy and freedom under law. India's judiciary is above reproach. Freedom of expression is complete. Whenever we are amongst the well-to-do and the so-called upper strata of society, we hear criticism of the Government and of Nehru. But what is heartening to me is that no one looks over the shoulder to be sure whether he or she should be openly critical of the Government or not.

Parenthetically, I may mention that my old belief has been strengthened by my study on the spot that world communism has little or no chance to get a toehold in a united and progressive India. There is a personality of India which rebels against regimentation of thought and action. There is also religion which plays an important role in the average Indian's life. Even a small village has a gurdwara (Sikh temple), a mandir (Hindu temple), a masiid (place for Moslems to pray). Most Indians, be they Hindus, Moslems, Christians, Sikhs, Parsis, Jains, or those belonging to any other small cult are God-fearing and God-believing people. A society like that cannot easily fall for the atheist dogmas of world communism.

Sometimes, I wonder whether it is "empty stomachs" that make Communists or whether it is empty minds that make Communists. Because in India and elsewhere, one finds communist cells amongst educated and well-to-do people, but hardly any amongst the peasants and farmers. Furthermore, if it were correct that empty stomachs or substandard of living is fertile ground for communism, then why would Russians give billions of dollars worth of economic aid to backward and underdeveloped areas of the world? By giving such aid, they will undoubtedly be raising the standard of living of the people. And, if substandard living is the proper breeding ground for world communism, then their economic aid to change that status would obviously defeat this purpose. I am beginning to think that it is not the poverty-stricken people of India who can and will fall victims to world communism. I know this is a debatable subject and space will not permit me to delve into it more deeply, but I unhesitatingly repeat that the makeup of India which is 85 percent villages, is not fertile ground for world communism.

To a very great extent, credit for what India is today, must go to Prime Minister Nehru. But, what or who after Nehru? This is the perennial question. It is on the minds of many, both in America and in India, and for that matter, in other parts of the world, too.

Nehru, who will be 70 this November, enjoys excellent health. His alertness of mind and excellent grasp of domestic and foreign affairs is the envy of many a younger man. What makes this man so vibrant and active when the woes and perplexities of the problems of 400 million people fall upon his somewhat slender shoulders? It would seem that one of the major sustaining elements in his life and something that gives him great inner strength, is the love and devotion the people of India shower upon him. He has no fear of opposition. He has no fear of rivals for the Prime Ministership of India. He has no fear of the victory or failure of his party. He has no fear of losing his prestige or position. And all this because he is the most beloved political leader that any country, at any time, has had. This is a challenging statement, but let us ponder and think which political leader (I am not including Mahatma Gandhi because he was more a spiritual and religious leader than a political leader) has had such devotion of almost 100 percent of his people, as Nehru has. Once, recently, addressing a mammoth gathering of a million people, Nehru said, "I have loved you a lot. But I have great satisfaction in knowing that you have loved me in return." And who can deny that one of the greatest things in any human being's life is to "love and be loved in return."

I feel that we do not have to worry about, "What or who after Nehru?" One Cabinet Minister told me Nehru is good for "2 plus 5." He meant the balance of the 2 years of the present life of the Government and 5 years after the new elections in 1961. (Under the Constitution of India, general elections are held every 5 years. The coming elections will be the third since freedom.)

It is quite clear that Nehru has given up the idea of retiring. He once threatened to do so. The day we lunched with Nehru, I had received a cutting of former Gov. W. Averell Harriman's article from New York. In this article, Mr. Harriman had said that Nehru had told him that he had no intention of retiring from office. I looked at Nehru and said, "Bhai; (brother) I was delighted to read in Harriman's article that you have no intention of retiring." Nehru looked at me and with a boyish smile said, "I can change my mind."

Practically everyone in India, even those who are critical of Nehru, hopes that he will not change his mind and that he will remain healthy and strong so that he may continue to be at the helm of India's destiny for at least "2 plus 5."

Those Old Folks Back Home

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the New Republic of April 18, 1960, entitled "Those Old Folks Back Home," which describes well the shilly-shallying, do-nothing approach of the administration to the gravest problem faced by the 15-million-plus Americans of 65 years of age or more:

[From the New Republic, Apr. 18, 1960]

(By Gilbert A. Harrison)

Once it was commonplace to say that American partisan politics was a tweedledee-tweedledum affair. But the maneuvering of Republicans and Democrats these past weeks on proposals to provide better medical care for the elderly knocks that cliché in the head. Who is on which side of this welfare debate can be seen by observing the controversy over the Forand bill.

Nearly 2 years ago, Representative AIME J. FORAND, Democrat, of Rhode Island, introduced his modest and at that time relatively obscure proposal to amend the Social Security Act to provide medical care for about 11 million people who are receiving or who are eligible for old-age and survivors insurance benefits. All hospitalization costs for no more than 60 days (in hospitals that have entered the program) would be covered—except for the attending doctor's fee (and this too would be included if it is for surgery). Under FORAND's insurance scheme all surgery done in the hospital or, in an emergency, in the doctor's office would be covered; likewise convalescence in a nurings home up to 120 days a year. And the benefits would be financed not out of general revenues but by an additional one-quarter of 1 percent on the social security tax levied on both employers and employees.

Letters from the folks back home for some program are becoming irresistible. The Department of Health, Education, and Welfare itself has pointed out that, "older persons have larger than average medical care needs. As a group they use about 2½ times as much hospital care as the average for persons under 65." To this, add that there are now about 15½ million Americans who are 65 or older, and that three-fifths of them last year had less than $1,000 on which to live. By using the present structure of social security to finance medical services, as Mr. FORAND suggests, benefits would not be handouts but would be paid by the beneficiaries; the cost would be spread over virtually the whole working population and their employers; it would immediately cover a very large majority of those who are in greatest need; and it would not impose on voluntary insurance rates the added costs attributable to the aged whose medical demands are the heaviest.

Suddenly, like an oily rag stuffed in the corner of a closet and forgotten, the Forand bill has caught fire, thanks in part to the nearness of November, but in greater part to massive opposition by the Doctors Doolittle of the American Medical Association. Since there are about 80 older folks for every one member of the AMA, some kind of legislation is going to be passed. But when, in what form and under whose auspices?

It was the President who made the widely reported decision to block Welfare Secretary Flemming's "positive" program of aid to the aged. But it was the Vice President who got credit for wanting to do something. Not at all against NIXON'S wishes, reporters implied (not for attribution) that he had put pressure on conservative Republicans to support a liberal alternative to the Forand bill. A spokesman for the Vice President and a GOP member of the House Ways and Means Committee both, however, privately denied that this ever happened. In several meetings with Secretary Flemming, Mr. NIXON had urged that some kind of "acceptable" solution be found (acceptable first to the AMA and the insurance companies, then, hopefully, to the aged). But there is no evidence that he at any time discussed the details of the many proposals drafted by Health, Education, and Welfare; nor did he endorse any of them. On the contrary, from the beginning, NIXON has insisted he would not support any "compulsory" scheme, thus ruling out four HEW draft formulas which called for an enforced hike in social security taxes.

During the first 2 weeks in March, debate within the administration reached a critical stage. House Ways and Means hearings were scheduled to begin on March 14, with Mr. Flemming as the first witness. He had argued with the Bureau of the Budget, with White House officials and even before the Cabinet, but the tide was against him. Plans requiring a boost in social-security taxes were rejected because of their "socialistic" flavor; the formula of increasing Federal-State subsidies to public assistance programs was then turned down because of its cost. Thus, at the opening of the committee hearings, Flemming had to confess he had nothing to recommend. He pleaded for, and got, a 9-day reprieve, which he wanted because he had started work on a new watered-down plan he hoped might win over the administration, calling for Federal-State grants to help the aged purchase catastrophic illness coverage from voluntary health groups and

private insurance companies, with premiums pegged to individual incomes and the Government picking up some of the tab.

Struggling to muster support for this compromise, the Secretary called in leaders of the AMA, the American Hospital Association and the insurance companies and bluntly warned them that if the administration did nothing, some conservative Congressmen would be driven to back the Forand bill because of massive constituent demand. He made no converts.

The showdown came at a secret White House meeting, which Mr. NIXON did not attend, on the Friday before the Secretary was supposed to make his second appearance before Ways and Means. The conference adjourned without Flemming's receiving the go-ahead he wanted. And so, on the following Wednesday, March 23, the Secretary repeated to the House Committee that "we have not reached a conclusion. * * *" He was, however, beginning "immediately to consult further with experts in Government, with outside experts and groups, and with State officials." But, "it is of course not possible to predict the length of time it will take for these consultations. Moreover, I am not now in a position to predict just how long it will take to resolve the basic issues I have just identified and any others that may arise."

Representative HALE BOGGS, Democrat, of Louisiana, asked whether the Vice President had exerted any pressure at the White House. "You had better ask the Vice President," said Mr. Flemming. Mr. BOGGS noted that NIXON was being credited with breaking the logjam within the administration on this matter: "Now, Mr. Secretary, has this logjam been broken?" In the outburst of laughter, the Secretary never got to answer.

Representative FORAND (who will retire from the Congress this year) thereupon announced he would file a discharge petition for his bill, which had been turned down by Ways and Means—all eight Republicans voting against. A second White House meeting was hastily called. This one NIXON did attend, and when it was over the press was advised that the administration, though it did not yet have a "plan," had some "guidelines." What were they? Well, the program would have to be "voluntary," a euphemism for nongovernmental. It would have to be administered by the States, which is to say administered by State welfare and health departments, totally unequipped for this complicated task and which would require complete restaffing; its coverage would be "somewhat limited," which is self-explanatory; insurance would be provided by private companies and based on the income of the insured, which is to say by applying a means test; and the program would be financed out of general tax revenues, which is to say by increasing Federal spending—to which the administration generally and strenuously objects.

The Senate Subcommittee on Problems of the Aged and the Aging which met the next day, April 6, was not satisfied. The more liberal and politically sagacious Republicans were feeling poorly. Mr. DIRKSEN shouted "stinking" and "insane" at witnesses testifying in favor of the Forand bill and seemed to be running a high fever. Secretary Flemming had no more to say than he had said previously. Asked why, after 7 years, a proposal was not yet ready he replied: "It probably reflects the complexity of the problem."

All this was too much for Senator JAVITS, who 2 days earlier had called and then abruptly called off a press conference to put forward "an affirmative alternative" to FORAND. On April 7, JAVITS and seven Republicans in the Senate introduced their "entirely independent venture," that is to say one that did not have administration backing. Senator JAVITS, realistically anticipating Treasury opposition, predicted the administration "would bridle at the amounts involved." It was a gesture, no more. Mr. NIXON was noncommittal.

Upon examination, the Javits proposal appears to have most of the weaknesses of the guidelines hinted earlier by the administration. The extent of the benefits would be determined by the States, since the States would be required to match Federal subsidies. The history of matching programs illustrates how few States are able and willing to appropriate maximum amounts for social services. In this case, the cost to the States is estimated at $640 million a year. Some of the richer States might do their share, but these are the States where the needs of the aged are usually the best met: one of the problems all along has been the inequality of services, State by State.

Moreover, even if the States were to subscribe their full amounts, benefits would be inadequate. For example, the bill would allow a maximum of $250 a year for hospitalization, and according to an HEW survey submitted 12 months ago by Mr. Flemming to the House Ways and Means Committee, "The median costs (in 1958) for those couples (65 or over) reporting at least one episode of hospitalization for either member (excluding those receiving a free service or with unknown costs) was about $700."

There will be more than a few bloody noses by the time this fight has gone another round. The AMA has just released a letter dated April 1, 1960, which was sent to thousands of doctors throughout the country by the Vice President's administrative assistant, Robert Fitch, one paragraph of which says: "He (the Vice President) believes that the best way to handle the problem of people over 65 who do not have and cannot afford health insurance is through a program which will enable those who desire to do so to purchase health insurance covering catastrophic illnesses from private group carriers on a voluntary basis." That shows where Mr. NIXON stands. Meanwhile, Mr. FORAND's discharge petition is being circulated; it is rumored that Representative WILBUR MILLS, Democrat, of Arkansas, is preparing another proposal; the White House is still murmuring about a plan it will unwrap in a week or so, perhaps while the President is in Augusta for spring training; and by late summer the medical gap may have shoved the missile gap way to the rear as a campaign issue.

The Fight Against Offensive and Obscene Material

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. STRATTON. Mr. Speaker, in view of the great importance of putting an end to the flow of offensive and obscene material to our young people, I am happy to bring to the attention of my colleagues a fine editorial from the Amsterdam Evening Recorder, of April 8, 1960, on the work of the joint legislative committee of the New York State Legislature to study the publication and dissemination of offensive and obscene material:

TIME TO TAKE STEPS

Findings of the Joint Legislative Committee To Study the Publication and Dissemination of Offensive and Obscene Material were recently submitted to the legislature.

Among the revelation and recommendations was the startling fact that youth in New York State are being bombarded by literature dealing with crime, illicit sex, immorality, perversion, brutality, and violence.

Included in the list of offenders are magazines of a highly questionable nature, along with foreign and even domestic films, produced solely for the sake of their money-making shock value.

The committee recommended that the State education department be authorized to issue an advisory opinion as to suitable motion pictures for youngsters. It also recommends an intensification of law enforcement and the establishment of a permanent decency commission.

But perhaps the most significant recommendation was that a constant effort be made to alert and educate the public to the dangers of obscenity and pornography. After all, that is the crux of the problem. With proper education, adults would be more effective guardians of the minds and hearts of their own youngsters.

This might require a little added effort, but it is not too much to ask. Certainly we owe it to our youngsters to do everything in our power to combat the menace of the merchants of smut who would poison young minds.

The Typewriter Case

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. HOSMER. Mr. Speaker, two domestic typewriter manufacturers, representing only a fraction of the total U.S. industry, have recently petitioned the U.S. Tariff Commission for a 30% percent import duty on typewriters—an article which, even under the Smoot-Hawley tariff, was not subject to any import duty.

This petition has resulted justifiably in a storm of protest from consumers and typewriter distributors across the country. A duty on imported typewriters would mean retirement from business for many office machine dealers who, like Mr. Lloyd O. Linabury, Business Machines Co., Long Beach, Calif., felt the squeeze of a large domestic typewriter manufacturer, for whom he was local representative for 7 years. The squeeze came when the company took over Mr. Linabury's business and opened a factory branch. He, like several thousand independent typewriter dealers, found the only way to stay in business was to handle a line of imported typewriters which he could sell with confidence to his customers.

The pattern here is a rather typical one applicable in a number of fields. The large companies figure it is all right to squeeze out their small dealers, but when the dealers fight back, the companies run to the Tariff Commission and try to cut off the livelihood of the independent dealers.

Office machine dealers' associations in northern and southern California, and

the State's East Bay Association have passed resolutions opposing the tariff proposal. I understand that more than 30 dealers' organizations throughout the country have recorded vigorous objections to the imposition of artificial trade barriers against foreign typewriters. The National Office Machine Dealers Association, headquarters in Los Angeles, Calif., in its resolution adopted recently in opposition to this petition, included the following statement:

Now, therefore, be it resolved, that the National Office Machine Dealers Association is strongly opposed to any increase in the pricing of typewriters to the dealers therein and in turn to the general purchasing public without benefit of better profit or product resulting therefrom.

The request for a 30-percent import duty should be rejected. This should be done as a lesson to manufacturers of any other products who might be contemplating the same unfair practices toward their dealers as these typewriter companies engaged upon. Let them know that if they attempt to gobble up the retail business, and force the retailers thereby to foreign markets for a product to sell, that they are going to have to suffer the delayed consequence of the foreign competition that results thereby.

This is not to say that where legitimate national interests indicate some protection is needed from extremely low wage scales in some foreign countries that it should not be given. There are always many factors which must be resolved in deciding whether any protection is needed in specific instances and if so, how much. The typewriter case does not fall into this catagory, however. It is a special case, deserves to be treated as such, and deserves to serve as an example of what practices American firms should not engage in as to their retailers.

An editorial on this subject from a somewhat different standpoint appeared in the Journal of Commerce on April 8, 1960. It is as follows:

THE TYPEWRITER CASE

Typewriters constitute a rather modest ($700 million) proportion of the $7 billion annual business in office equipment in this country; but not so small that manufacturers of these items have not appealed to the Tariff Commission for protection against imported competition.

On the surface there appears some reason for this. In 1949, this country exported 224,200 typewriters, only to see its exports decline to 50,600 units last year. Sales of U.S.-produced typewriters in roughly the same period mounted from about 490,000 to 740,000 units, but imports have expanded at a much faster rate—from 33,000 units less than a decade ago to 454,000 last year.

Last year, slightly more than one in every three portable typewriters sold in this country were of foreign make. Slightly more than one in five office manual machines were likewise imported. Hence some domestic manufacturers are seeking a tariff increase to prevent the deterioration of U.S. production into the role of what Fortune P. Ryan, executive vice president of the Royal McBee Corp. fears may be a "fringe industry."

Graphically as this picture has been presented in Washington, there is an important element missing from it. It is this: About a third of the "imported competition" about which U.S. producers are complaining is provided by American firms which have set up facilities abroad to manufacture, among other things, typewriters.

To put it more specifically, of the 381,000 portables (an average figure) imported annually between 1957 and 1959, about one-third were produced by American-owned factories abroad, and were brought here for the account and under the label of U.S. typewriter companies. Since portables account for the bulk of all typewriters imported, it is around them, rather than around other types, that the issue has developed.

It is true that the machines were not produced here and did not require American labor (though the money paid for them would inevitably return in the form of oversea demands for some other U.S. goods or services). Yet the sales, cash earnings, and dividends of the U.S. producers involved were sustained by the opportunity to sell cheaper machines in this market through their own strong distributive systems and under their own labels.

In view of the fact that, to some extent at least, the American producers were providing their own imported competition, it is necessary to take another look at the figures some of them have presented to the Tariff Commission.

If the total import figure of 381,000 units is reduced by one-third (as in all fairness, it ought to be) and the resultant 127,000 units are added to domestic production, which averaged 740,000 portables in the same period, the actual relation of bona fide imports to U.S.-controlled production becomes 254,000 as against 867,000 units, or nearer one out of four than to one out of three typewriters sold in this country over the past few years.

Actually, of course, there is nothing reprehensible about the establishment of American production subsidiaries overseas, or about the sale of their products in this country. It is all part of the complex fabric of foreign trade and generally mutually rewarding to all sides.

But when an industry engaging in this practice points to the imported competition it has played a considerable part in generating as a reason for raising tariffs or imposing quotas, the whole question becomes a horse of another color. In such circumstances the American manufacturers involved are not, naturally enough, trying to create difficulties for their own foreign-made goods in their own market. We can assume they are motivated by the discovery that their foreign competitors are doing better here than they had expected them to, and would like to shift the main area of competition between foreign-made products elsewhere, giving the products of their domestic manufacturing plants greater play in the home market.

To raise the tariff on typewriters under circumstances such as this would set a most unhappy precedent for this Nation's foreign trade policy.

Such an action could be construed as an invitation to almost any domestic producers of manufactured goods to set up production facilities abroad, import part of their output, and then point to their own imports as a reason why higher tariffs, quotas, or other restrictions are essential to the protection of domestic production.

There are a number of other industries where the establishment of such a precedent could create trouble, one of them being in automobiles. We hope such troubles will not develop, and the Tariff Commission can do much to assure that they won't by keeping this whole issue in perspective as it weighs the typewriter case.

Medical and Hospital Care for the Aged

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I want to address myself to the matter of health care for our aged citizens. Frankly, there has been too much sound-and-fury on this subject, too little emphasis upon the basic facts. Too little discussion has been devoted to the fundamental, important question: What will help the elderly?

Let me set forth some questions and answers which people are entitled to know. I am convinced that too many aspects of this have been neglected.

Question. Is there presently a program designed to meet the health requirements of the aged?

Answer. Yes.

Question. Is this a local, State, or Federal program?

Answer. All three levels of government are active in this program. Also active in the program are the churches, health agencies, fraternal and benevolent organizations, and private groups.

Question. Is this program producing results?

Answer. Yes, very marked results.

Question. Is sufficient progress being made?

Answer. In my opinion, emphatically yes. Yet I recognize this is the issue for public debate, as it applies to the number of persons receiving health care, the adequacy of the health care received and the effect of the cost of health care on the financial position of the aged.

Question. Is the availability of health care for the indigent aged sufficiently broad?

Answer. The statement has been made publicly many times that today there are no indigent persons in the United States who do not receive health care or could not receive health care upon application. These statements remain unchallenged.

Question. Speaking broadly, who is presently financing the health care for the indigent aged?

Answer. Many groups in our society presently share in these efforts. These include the Federal Government, through old age assistance grants; the programs of the States and the counties; private charities and churches; private training hospitals, and persons in the medical profession who donate their services.

Question. Is financing health care of the indigent a problem?

Answer. Only to the extent that financing anything is often a problem. The money to pay for this health care must be raised by the public. That means it must come either from taxes or community giving. But this is the same sort of problem we have been solv-

ing since the 18th century—not only in the provision of health care for the indigent, but in such programs as aid for dependent children, assistance to the blind, and so on.

Question. Where else has great progress been made?

Answer. In the quality of health care facilities and skills. In fact, the very rapid improvement in drugs, hospitals, doctors' skills, and so forth, has helped to bring about the situation I am discussing today. Largely due to advances in the health care field, people are living 10 years longer. These 10 years of being alive represent a wonderful advancement.

Question. Are present medical costs justified?

Answer. Yes. Progress by its very nature costs money. However, technological advances and new skills in treatment have brought about a longer, healthier lifespan. We are paying for these advances through higher priced equipment and an improved salary level for the more intensely trained and skilled medical technician. But we should never forget that these advances have alleviated suffering and reduced the term and intensity of illnesses. These are values which must be measured in terms of human life. They cannot be reckoned on the basis of dollars and cents alone.

Question. Is there a doctor shortage in the United States?

Answer. Our doctor-patient ratio has remained nearly constant for the past 10 years. In 1950, there were 133 physicians for each 100,000 of our population. However, productivity has increased greatly through the wider use of telephones, improved transportation and better equipment and skills. But because our population is growing so rapidly and the continuing discoveries of modern medicine already take the physician into every area of life and environment, America in a few years will need many, many more young doctors to maintain and protect the health of the Nation's citizens. Doctors will be needed in family practice, specialization, research, teaching, public health, the Armed Forces, industrial health, administration, school health, and in government. The Nation's medical schools are now expanding at an unprecedented pace to provide additional facilities for their growing enrollments. Medical faculties and the medical profession are engaged in an aggressive, nationwide recruitment program in every community to assure a continuing and increasing supply of well-trained physicians for the future. All of this costs money. However, even more serious than costs would be legislative restrictions on their freedom to practice medicine under a private system. This would discourage young men and women from choosing medicine as a career.

Question. How about facilities?

Answer. There still is need in some areas for more hospital facilities. Considerable study also is being devoted to more efficient use of the hospital facilities we now have; for example, in the care of the chronically ill.

Question. How do private nursing homes fit into this picture?

Answer. Many older people and convalescents do not need full hospital care. If private nursing homes were available, these persons could be cared for in private nursing home facilities at about one-third the cost of hospitals. Crowding of our hospitals would also be relieved. There is need for more good nursing homes, the cost of buildings designed for private nursing homes is only approximately one-third that of hospitals. The daily charge to patients can be reduced accordingly—an important factor in long-term care. The FHA guarantee to encourage construction of private nursing homes which meet high standards of health and safety is the most recent Federal program and one that will meet one of the greatest needs today. This law was passed just last August, and the regulations to handle applications were announced February 25. Already 1,500 applications or inquiries have been received.

Question. Are there other areas where skills and new facilities are being developed?

Answer. Yes, of course. One of the greatest needs today is to extend the organized home care plan. The hospital is needed for the most serious cases, the nursing home is the next step, but there is a third step, namely organized home care, which is less costly, than the nursing home. This third category permits the older person needing just a limited amount of health care to remain in his home. Organized home care is a team approach normally including at least a physician, a nurse, and a social worker. The visiting nurse in many cases teaches the family how to care for the older person, and the nurse comes periodically to the home when needed.

Question. How about health insurance coverage for those over 65?

Answer. Within the last 3 years tremendous progress also has been made in health insurance coverage for people over 65.

Question. Why do you say 3 years? Isn't this a fairly short period?

Answer. It points up the rapid progress. Just a few years ago, for example, Blue Shield and Blue Cross dropped from coverage in group plans persons reaching 65 and retirement status, and the plans had no health care coverage to offer persons over a certain age. Today, this is all changed. There are 39 Blue Shield plans in 36 States offering coverage for elderly persons, and there are 14 additional plans in 8 States which have proposed programs for this coverage underway. With rare exceptions, the Blue Cross plans have taken similar actions. Furthermore, private insurance companies have been moving into the field of health insurance for the aged. The figures are dramatic. According to a Social Security Administration report in 1952 some 26 percent of all persons over age 65 had health insurance coverage. That represented an estimated 34 percent of persons in that age group who needed and wanted such protection. The 1956 Social Security Administration report showed that the 1952 figure of 26 percent had increased to 37 percent of the total represented some 48 percent of those who needed and wanted the coverage. Some well-documented analyses (assuming a continuation of recent trends) predict that during 1960 some 65 percent of persons 65 and over who want and need insurance will have it and that the figure will increase to 80 percent by 1965.

Question. But are these policies adequate and are the premiums within the means of older persons?

Answer. My answer to both those questions would essentially be "Yes." Much is being accomplished, particularly in extending catastrophic-type insurance.

Question. What is catastrophic-type insurance?

Answer. It is insurance to protect against the catastrophe of a prolonged and costly illness. The premiums for this kind of insurance are relatively low, based upon the deductible amount assumed by the insured.

Question. What is the Forand bill supposed to do?

Answer. The Forand bill is supposed to set up a form of Federal compulsory health insurance which everyone will purchase by paying additional social security taxes. Under this scheme, only those eligible for social security would receive a limited amount of hospital, surgical and nursing home benefits.

Question. How many persons 65 and over would be omitted from coverage under the Forand bill?

Answer. There are about 4½ million older persons who would receive no consideration under the Forand bill.

Question. Will the Federal Government then go into the health insurance field?

Answer. Yes, but with a program just the reverse of the catastrophic-type policy most needed. In other words, the Federal insurance would take care of the first 60 days of hospital care—from then on the older person requiring hospital care is on his own or on relief. Catastrophic insurance has the patient assume the cost of the first few days, but then bears the cost burden throughout his illness.

Question. What could this mean to you as an individual?

Answer. As a patient, you would have to choose a hospital, nursing home or physician under contract with the Federal Government if you were eligible for treatment under the Forand bill. Of course, the Federal Government would have to regulate provisions for treatment and charges. Doctors would have to conform to regulations which hamper them from prescribing treatment that they, as professional men, believed patients needed. That's why doctors and others in the health field say such action is the beginning of socialized medicine.

Question. What is socialized medicine? Is that just a scare word, or does it mean something specific?

Answer. Yes, it means something specific. Socialized medicine is one form or another of compulsory national health insurance—medicine controlled and administered by the Federal Government, in other words the State rather than the patient selects the doctor and medical facility.

Question. But does not the Forand bill permit the choosing of ones own doctor?

Answer. On the surface, yes—but only on the surface. Suppose the doctor or hospital the patient wants does not reach an agreement with the Federal Government on fees and charges. Then the patient would have to go to a doctor and a hospital which has reached such an agreement. It takes little insight to see what power the Federal Government would have over doctors and hospitals, because the Federal Government would decide which doctors and which hospitals qualify or are disqualified according to the Federal regulations.

Question. Does the Forand bill apply to all old persons?

Answer. It does not. It applies only to those eligible for social security retirement and survivorship payments. The millions of persons over 65 who never were covered by OASI because of the program's limited coverage in its beginning will not receive benefits. These include, of course, such persons as retired police officers and firemen, retired railroad workers, teachers, self-employed professional people, and so forth.

Question. Does the Forand bill cover the indigent aged?

Answer. It does not.

Question. Are there other things in the social security program that could affect the aged in the matter of health costs with which the Forand bill provisions are not concerned?

Answer. Yes. I feel the most important area in which to help the older people in their financial problems is to liberalize the $1,200 work clause. Furthermore, liberalization of this clause conforms to the social policy that all of us should favor—namely, to utilize the talents of our older citizens who can work longer because of the advances in the field of health. There is also the great psychological factor of helping the older person to be actively useful, as well as helping his economic status.

Question. Why is not the work clause liberalized?

Answer. Primarily because of opposition of the leaders of the AFL–CIO.

Question. Why are they against it?

Answer. They say it will cost money.

Question. But would not the Forand bill cost money?

Answer. Certainly. I believe the fundamental reason for their opposition to liberalizing the work clause is that they want to keep older people out of the labor market. This, to me, is an anti-social policy. For reasons stated previously, it is in this area we can help our older citizens the most.

Question. How about the program which Senator JAVITS and some others have advanced to have the Federal Government finance a voluntary health insurance program along with the States?

Answer. I would have to be convinced that the present program is not showing the remarkable progress which is clearly evident before I would abandon it in favor of something that is untried. We know what progress we are making, and this has not required Federal Government intervention.

Question. Is it true that 60 percent of the people over 65 have a per capita income of $1,000 a year or less?

Answer. It is a juggled figure. It is a very misleading statistic taken out of the context of the entire picture. It would be just as accurate and just as misleading to state that in 1957—the most recent year to which the misleading figure applies—63.7 percent of all Americans had incomes of $1,000 or less per year. In 1957 almost half of those persons over 14 years of age also had incomes of $1,000 or less per year. And 47 percent of those between the ages of 14 and 65 had incomes below $1,000 a year. Actually most people over 65 own their own homes and their own furniture. Except for medical costs every item in their budget is less than that of persons under 65.

Question. What about the future as far as health care for those over 65 is concerned?

Answer. I think the situation is good, and it is getting better. I suggest that we use the approaches we have on hand, if evidence indicates that action must be taken. We have the device of public assistance—locally administered and locally disbursed, on the basis of known need. We have already hard at work the voluntary efforts of civic, religious, and health leaders at the community level. We have operating effectively the machinery of health insurance. There is still evidence to be gathered, and President Eisenhower has called the White House Conference on Aging for January 1961, to get more complete facts to see where, if anywhere, we can help. Congress has appropriated $2 million for use in preparing for this conference. We in the United States have the healthiest nation in history. Our prospects for the future to better this record are excellent.

Just what are the motives of those who ignore the facts, falsify the records, and try to propagandize the people about this system of private medicine, which has brought this about? Should we tamper with this system because some demagogues think it will get votes in the 1960 election? I hardly think so, and when the people find out that that is what has been attempted, I have no doubt what their judgment will be.

Where Do We Go From Here?

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. ROBISON. Mr. Speaker, the following editorial from the Wall Street Journal of Monday, April 11, seems to ask the age-old question posed by the confused: "Where do we go from here?" I wonder, too. The editorial follows:

[From the Wall Street Journal, Apr. 11, 1960]

SHIFTLESS SAM

Then there's the story about the shiftless fellow who had a leaky roof. He couldn't fix it when it was raining; and when it wasn't raining, why bother?

This has been pretty much the attitude of the Democrats in Congress toward the Government's leaky fiscal structure.

When interest rates were high and rising the Treasury found it impossible to borrow any money at all on bonds at 4¼ percent, the maximum the law permits it to pay. But, said the Democrats, the law shouldn't be fixed then because it wouldn't do to let Uncle Sam pay more when money was already tight. Then when interest rates dropped somewhat, and it looked as though the Treasury might float a 4¼ percent bond issue, the Democrats said, "Why bother about changing the law?"

Now it's turned out, of course, that the Treasury can't borrow money that way in any appreciable amount. Secretary Anderson offered the public a 25-year 4¼ percent bond issue, expecting to sell a minimum of $500 million and hoping for $1.5 billion to bail him out. Mr. Anderson got offers of barely $370 million. So there you are.

Naturally, this altered the Democrat's views not a whit. With much grave shaking of heads they decided the failure of the Treasury's bond issue meant this was not the time to fix the law. In one of the most magnificent nonsequiturs of the season, Senator DOUGLAS said this was just "proof that the Treasury should develop better methods for marketing bond issues"—without the slightest intimation that meeting the market price for bonds is one of the best methods ever devised.

Oh, well. We suppose nobody should be surprised. After all, it's the same attitude that says Uncle Sam can't afford to cut his budget in hard times and in good times it ain't necessary. Shiftless Sam is just goin' to set 'till the roof falls in.

Letters in Birmingham News Decry Salisbury Articles

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I insert in the RECORD herewith, several letters which appeared in the Birmingham News on Tuesday, April 19, 1960, in which the people deplore the two articles written by Harrison E. Salisbury, of the New York Times, dealing with race conditions in Birmingham, Ala., my district. Mr. Salisbury's articles were gross distortions of the truth and I urge that all Members of Congress read the following comments by constituents of my district. These letters will give a far more accurate and truthful picture of Birmingham.

[From the Birmingham News, Apr. 19, 1960]

POINT AT SOMEONE, THREE POINT BACK

I have written the following letter to the New York Times:

"Do you have proof of the slanderous accusations made about Birmingham by Mr. Harrison Salisbury and published by you in the New York Times? Or do you accept as

the whole truth the biased account of a prejudiced reporter whose words prove that he has only a smattering of the truth?

"Of course I do not expect you to answer those questions. If you were the kind of man who would answer them, you would be the kind who would not have published such a diatribe in the first place.

"Your Mr. Salisbury quotes a Negro pastor: 'If you sow hate, you reap hate.' He might have added: 'And if you sow love, you reap love.' Do you think, Mr. Sulzberger, that in publishing such a distorted report you have sowed seeds of love? Apparently you are as lacking in conscience as you are in courtesy, else you would have bothered to substantiate accusations before you published them as fact. If in answer to my ring of your doorbell you had slapped my face a resounding blow that sent me sprawling on the floor, I could not feel any more outraged than I do feel over what you published—you who are supposed to stand for truth, integrity, and understanding. When I was a child, an evangelist in our church absconded with church funds. The shock I felt then is repeated and intensified in what I feel now. I am disillusioned; I had thought I could depend on you and your paper for honest reporting. What you have done is unforgivable and unforgettable. If you have a conscience, may it wake up and be a better guide in the future.

"Who am I to tell you these things? Just an average Birmingham woman, a teacher, a widow, a grandmother, and a loyal citizen who cannot find it in her heart to hate even you, though I do hate the evil seeds you, your reporter, and your paper have sowed.

"I believe that forcing integration on the South is as wrong both to Negroes and whites as you seem to think it is right. It is no more natural for whites and Negroes to integrate than it is natural for wrens and sparrows to integrate. Neither the wrens nor the sparrows would be happy if you tried to force them to integrate. This is a simple law of nature that defies the laws of man. As a justice-loving American I say may both the wrens and the sparrows have the right to flock with their kind and to nest with their kind.

"I believe I am more sickened than you are with crimes, whether they be in my city or yours. There are too many in both. But don't you think it would be more becoming to you as a publisher to concentrate your clean-up campaigns on New York's backyard rather than Birmingham's? A Negro woman once said: 'When you point your finger at others, remember you have three fingers pointing back at yourself.'"

Mrs. Lillou B. McCain.

[From the Birmingham News, Apr. 19, 1960]

"Southern Yankee" Says South Best for Family

Below is a copy of a letter to the editor of the New York Times:

"I am a 'southern Yankee,' born and raised 'back of the yards' in one of the toughest sections of Chicago. I lived 12 years in Birmingham, Ala., and have been in the South for more than 15 years. Having lived a long time in both sections of the country, I can honestly say the South is the best place to raise a family.

"I feel that the Negro in the South is a lot better off than he is in the North. I can remember some of the race riots, the crime, the squalor of the Negro sections in the great 'melting pot' of the Midwest. Sit-in demonstrations are nothing new. Check Chicago newspaper records and you will find that the same thing was pulled in the restaurants in Marshall Field's shortly after World War II. It took Field's 3 or 4 months to break this practice up but they succeeded. As far as I can see, the North tends to like the Negro as a race and despise him as an individual. The reverse is true in the South.

"Harrison E. Salisbury fails to mention some of the good things done for the Negro in Birmingham. A Protestant, a Catholic, and a Jew, all outstanding men in their churches and in the civic life of Birmingham, were cochairmen of the fund-raising drive to build a Negro hospital to be operated by Catholic nuns. The drive was a success. In this small city of Andalusia, we're building a new Negro grammar school and a new Negro high school. Race relations in Andalusia are excellent.

"I commend Police Commissioners L. B. Sullivan, of Montgomery, and Eugene 'Bull' Connor, of Birmingham, for taking strong steps to prevent race riots and possible bloodshed in these two cities. Riots and bloodshed in the South are just what the leaders of CORE and NAACP want to stimulate the flow of white sucker greenbacks into their personal coffers.

"Whites and blacks alike tend to mix with people in their own economic and social position. Integration cannot be legislated. Integration in schools inevitably will lead to intermarriage. I certainly don't want my four little 'rebels' to mix socially with Negroes.

"So, let's quit painting such distorted pictures of the Negro in the South. Of course, we have our 'knuckleheads' just as you have. Let the South work out its problems peacefully.

"You sure don't see these vote-hungry politicians, who are trying to shove integration down the throat of the South, sending their kids to integrated schools, or permitting their children to mix socially with Negroes."

C. T. Kelly.

[From the Birmingham News, Apr. 19, 1960]

Some Questions for Salisbury

I have sent the following to Harrison E. Salisbury, of the New York Times:

"Birmingham, Ala., has been my home for the past 12 years and although I am 'white' I have never worn a hood, carried a weapon, nor attacked any member of any race. I have resided on both sides of the Mason-Dixon line and it has been my experience that there is, if anything, less race hate in Alabama than in many other of our illustrious States in which it has been my privilege to reside.

"From your article, I assume that you spent only a few hours in our city. Had you looked beyond the nose on your face you could not have written such a gross untruth. You came here with one thought in mind: To look up all the dirt you could find to print to promote sales. You have not only insulted the citizens of Birmingham, you have insulted the intelligence of your own readers by expecting them to be so gullible as to believe such misquoted and misguided information as you have printed.

"I feel sure that any out-of-town reporter could go into New York City and walk down one street, 'the Bowery,' and review your own newspaper for the past 18 months and write several pages of dirt without using half your imagination.

"One of the direct misquotes of your article was, 'A drive is on to forbid Negro music on "white" radio stations.' Several days ago a reporter for the Birmingham News, Roger Thames, made the comment in his daily article that in his opinion there were many people in Birmingham who preferred popular, swing-type music as opposed to rock and roll and rhythm and blues. He specifically stated that he was not making reference to music presented by Negroes but to a general type of music which he referred to as 'hollering.' He further commented that he personally was all for good Negro performers such as, and he named Nat King Cole, Marian Anderson, Mahalia Jackson, and Harry Belafonte. His article could not even be broadly construed as a drive to forbid anything. He merely stated his musical preference and invited his readers to state theirs.

"We here in Birmingham have been and are proud of the fact that we have not had the racial problems that other cities in the South have experienced. Although you imply that this is due to suppression, I know that this is due to the fact that our Negro as well as our white citizens are trying to use a sensible approach to this problem rather than be influenced by radical, communistic thinking organizations.

"True, we have 'Bull' (Connor) and, although his words were reported out of context, he has made many statements that you take for fact that we here in Birmingham find to be the amusing ramplings of a little man trying to carry a big stick. You and your readers may be assured that this little man does not run in Birmingham. Your city has had its share of politicians and can, therefore, understand our feelings regarding them.

"You have taken one small minority group and exploited their actions as the actions and feelings over 600,000 people. To use the words of one of the Negroes that you interviewed, 'Don't they know there is a limit to what people will stand?' You say and I quote, 'No New Yorker can readily measure the climate of Birmingham today.' Undoubtedly this includes yourself. There are two sides to every issue and your one-sided report of Birmingham brings to mind the fairy tale entitled 'Chicken Little.' An acorn fell on someone's head and you cry the sky is falling.

"People who live in glass houses • • •

"Let he who is without sin • • •

"I ask you these questions in rebuttal: Are there any tapped phones in New York? Are there people there who prefer good music as opposed to rock and roll? Were there any swastikas painted on Jewish buildings in New York?. Are there any slums? Any radicals? Are there immigrants such as the Puerto Ricans who live in segregated sections of your city? Could any citizen of the United States walk into the Stork Club and demand service? Do you have any vagrancy laws? Any crooked politicians? Has anyone ever been beaten or raped in New York? Do you condone the action just because it happened there? Can you show me one Negro's picture in the society section of the New York Times? Could this be segregation on their part?

"Congratulations, I know you are proud of yourself and of the 'good' that you have done."

Paul Williams.

Employment Trends

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. BLATNIK. Mr. Speaker, the administration's concern for underdeveloped areas in Africa, Asia, Europe, and the Middle East is commendable. Its lack of concern for our own domestic needs here at home is lamentable.

Just recently the Secretary of State rebuked the President of South Korea and urged its President to end repressive measures unsuited to a democracy.

Think of the hundreds of millions of dollars that up to now have been poured into that country in foreign aid. The South Korean situation is just another dismal example of the wasteful failure of our foreign aid program to win friends and bolster democracy throughout the world.

Such waste, however, seems perfectly acceptable to the President. He goes so far as to urge the Nation in prepared television talks to support his foreign aid requests. But when it comes to programs designed to fill our own needs here at home he remains distantly silent at his farm, golf course, or hunting lodge. And when he does speak or act it is to thwart congressional action designed to solve our domestic problems.

One of our most serious problems is that of persistent, chronic unemployment. A measure designed to alleviate this problem—the Area Redevelopment Act—was vetoed by the President in 1958. A similar measure now pending in the Rules Committee is under threat of another veto once it passes the House. Another measure which would do much to provide employment and bolster our economy is the community facilities loan bill which would assist municipalities in the construction of needed public works. Because of administration opposition, action on this measure has been postponed.

The economic danger signals on the horizon, however, make it imperative that Congress act in these two fields. An area redevelopment program would bolster the economies of our distressed areas. The community facilities loan program would provide both employment and needed facilities to financially hard-pressed communities. Taken together they would shore up our economic base and head off the economic hard times that loom ahead according to practically every economic indicator.

Under leave to extend my remarks in the Appendix of the RECORD I include the following editorial from the New York Times for April 13 entitled "Employment Trends":

EMPLOYMENT TRENDS

Yesterday's Government report on labor market trends last month is less than pleasant reading. Contrary to normal seasonal fluctuations for March, the number employed fell by a quarter of a million persons, while the number of unemployed rose by 275,000. Moreover, the average work week declined somewhat to 39.6 hours, while the number of persons unemployed 15 weeks or longer rose by 250,000 to 1,217,000. But if the marginal changes last month were in the wrong direction, there is the more important basic fact that even last month well over 64 million Americans had jobs.

The Labor Department's comments on its report properly called attention to the impact of the unusually bad weather which had much of the Nation in bondage during the survey period. Farm employment, in particular, fell to a record low of 4,565,000. Fortunately, the weather this month has been and is likely to continue to be better, and the April statistics will feel the positive influence of the improvement. The fact must be faced, however, that even improved weather is no necessary guarantee that a sharply improved labor market situation will be shown in the next batch of data. The most unhappy augury now has come from the steel industry, whose output has dropped below 80 percent.

Our economy is so large and diversified that even temporary weaknesses in the automobile and steel industries is no necessary harbinger of general difficulty. But certainly the latest data on employment and unemployment, as well as on production trends, suggest that this is a time for increased alertness among economic observers in business and Government. The balance of probability is still in favor of this year being one of the most prosperous in our history. But it would not be inappropriate for those in responsible positions to start thinking about what might be done should the present spotty weaknesses in the economy show signs of becoming cumulative and more general.

Smog To Be Fought Statewide and Nationwide

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of what appears to me to be a very pertinent and timely editorial treatment of the smog situation in my native State of California—and elsewhere too. The following article appeared on the editorial page of the Los Angeles Examiner on Thursday, April 7, 1960:

HEAVIEST BLOW AGAINST SMOG

Smog will be fought now on a statewide front and soon will be attacked nationally by the automobile manufacturers.

This dramatic breakthrough in the long war against air pollution was made by the California Legislature when the senate passed the Cameron-Richards bill previously adopted by the assembly.

Approval by Governor Brown is assured.

In simplest terms, the law will require new motor vehicles to be equipped with adequate controls over smog-making vapors and exhausts 1 year after the devices have been certified.

In the second year all cars resold must have these devices. After the third year all motor vehicles must meet the requirement. Counties proving they have no smog problem can exempt themselves from the last two provisions.

Authorities in the smog war have been convinced the greatest remaining cause of this menace are the millions of motor vehicles which produce fumes from exhaust and other vapors adding to the pollution that bears the odious name of smog.

The State first must certify the devices to be efficient and economical. Machinery for this will be set up by the law's provisions.

Reports of the automobile engineering staffs have been heartening. Now that a great market like California demands anti-smog action by the manufacturers it is reasonable to assume a giant step has been taken toward national progress.

Smog is by no means a Los Angeles area problem alone. It is a curse of all metropolitan centers in greater or lesser degree. Already it has been recognized as a national menace by the Congress. Countrywide research on a Federal basis in under way.

Action by the California Legislature is a major victory, even though the effect will not be appreciated for a few years.

We are rapidly running out of time in our struggle to keep the air fit for living.

Thousands of tons of pollutants are removed daily from the atmosphere by laws now in force. Without these we would have chaos on heat inversion periods when the air long remains stagnant.

Many persons joined in giving us new legal weapons in this fight.

Supervisor Dorn and his fellow board members spearheaded the plea from Los Angeles County. State Senator Richard Richards, Assemblymen Cameron and Rees were backed by the Los Angeles contingent in the legislature. All these knew our problem at first hand.

But many parts of the State couldn't have cared less.

That is why we give a cordial bow of appreciation to those northern senators who looked beyond the parochial limits of their own districts and perceived the statewide need.

For instance Senator Collier was chairman of the committee which reported out the bill without a dissenting vote. He is from Yreka in the northern mountainous part of the State, far removed from befouled air.

Most credit, however, must go to Governor Brown. He personally backed the bill with all his strength, knowing smog really is a State problem that cannot be solved on a local basis.

Our Way of Saying Thank You to a Man Whose Presence Has Meant Much to City

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. SIKES. Mr. Speaker, I want to call the attention of my colleagues to an editorial appearing in the Thursday, March 31, issue of the Washington County News in which tribute is paid Albert Deermont, a transplanted New Yorker whose time, talents, training, and leadership abilities have been given freely to the Chipley, Fla., community and surrounding areas since 1933. That community will honor Albert Deermont at a dinner on April 29 at which time he will receive recognition for his more than a quarter of a century service as an outstanding civic leader.

The editorial follows:

[From the Washington County News, Mar. 31, 1960]

OUR WAY OF SAYING THANK YOU TO A MAN WHOSE PRESENCE HAS MEANT MUCH TO CITY

The Chipley Kiwanis Club a few years ago adopted a custom of honoring some citizen each year for his or her contributions to this community. Receiving the Kiwanis recognition thus far have been L. E. Sellers on the observance of his 30th year as publisher of the Washington County News, the Reverend Lacey McDuffie upon his retirement after 15 years as pastor of the Presbyterian Church, and Lee Wells, who was and remains Chipley's senior merchant and one of the city's senior civic leaders.

This year, the Kiwanians selected Albert Deermont as the recipient for the honor. That was a happy choice—and, we might add, a unanimous one. Few people in Chipley today have made a greater contribution to this community. In the first place, the honoree has been blessed with some outstanding talents and qualities of leadership. But, more important, he never permitted his talents and leadership qualities to become paralyzed by prejudice. Thus, he has "got on" with the job of doing things—in spite of the rest of us sometimes—for Chipley.

A New Yorker by birth, Albert Deermont is a graduate of Cornell University's College of Engineering, class of 1909. He later worked in Cuba and several Latin American countries as an engineer. He came to Chipley in 1933 as manager of the Birmingham, Columubs, & St. Andrew's Bay Railroad. He has made his home here since that time.

Actively interested in the community's progress and welfare, he could always be depended on to furnish help and guidance in community betterment projects.

He has given freely of his time, taken away from an otherwise busy schedule. He was a charter member and later became president of the Kiwanis Club, for example. He served as mayor of Chipley and was instrumental in obtaining and later expanding a hospital for this county. He has helped—and is still helping—to operate that facility by serving on its board of trustees. That board's plans call for still another addition to the hospital. Albert Deermont, within the past few years, has been instrumental in building Falling Waters County Club house and reactivating the golf course.

Extending recognition to such citizens is a worthy custom—and one on which the Kiwanis Club deserves commendation. The 1960 event, like those before it, will include a dinner. It will be held Friday night, April 29. Scores of Chipley area residents will want to join the Kiwanians and their wives in paying tribute to the community's 1960 honoree. It will provide us all an eloquent means of expressing our esteem and saying thank you to a man whose presence has meant much to our community and to most of us as individuals.

Religious Freedom

SPEECH
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. QUIGLEY. Mr. Speaker, I regret that I was unable to be present to participate in the excellent discussion of religious freedom in our country which took place on the floor of the House earlier this week. For this reason, I would like at this time to associate myself with them on a subject about which I feel very strongly. To begin with, I would like to introduce into the RECORD a recent letter from one of my constituents along the same lines as Tuesday's debate:

I have personally been very much concerned in recent weeks in regard to the recent publication of the Air Force manual and the incident which received much public attention in regard to the innuendos and implications involved in the use of the various materials which have yet to be proven valid.

Such accusations of the church without absolute proof are indeed a negative contribution to our society and way of life, let alone to speak of the stabilizing force that the church has been from the outset of our country even to the present day.

I am concerned that there will be more investigation and information and consideration of these matters following the Easter holiday of our legislative group and I seek your integrity and moral fortitude in these matters, for this is indeed serious business in which we are engaged.

JOSEPH H. YEAKEL,
Pastor, Fifth Evangelical United Brethren Church.
YORK, PA.

I thank the Reverend Yeakel for his letter and I would like to observe that in my judgment he was being most moderate in his tone. For I might have called the now withdrawn Air Force manual a sordid, shameful and inexcusable abuse of Government power in the wrong direction at the wrong time and against the wrong enemy.

It is my prayer, Mr. Speaker, that the unhappy affair of the Air Force manual is now happily in the past. I suppose the best that one can really hope about going through an experience like this is that we will be a sadder but wiser Nation.

It is, I trust, no longer necessary to din into the Air Force the error of its manuals at this point; but it is perhaps necessary to speak to the men and women who have the same frame of mind as the author in the infamous paragraphs in the manual which labeled the National Council of Churches as "Communist associated."

That sort of thinking seems to me to show contempt for the institution of democracy itself. The target of such a mind is not just the National Council of Churches but thinking people of any sort. For the Christian, if he be a true Christian, must be free to question his government or anyone or anything that does not measure up to the standards of Christianity. If to question government or government action is communistic, then all of us in this Chamber must plead guilty to the charge. If deploring Pearl Harbor, which the Russian Government deplored, or deploring race riots which the Communists have deplored, or holding the same idea as a Communist on a particular subject is to be associated with Communists, then most of us, possibly all of us, might have to wear the label.

Events of the last few months have demonstrated that much as good Americans wish it were otherwise there are still juvenile delinquents among us capable of smearing swastikas on churches and synagogues, and that there are still adult delinquents among us capable of smearing the patriotism and loyalty of good churchmen and honest Americans. It does not cheer one to recognize these ugly facts but, I submit, it does no good to deny their existence or to refuse to admit that they do exist.

I particularly want to pay tribute to my colleague, the gentlewoman from Oregon [Mrs. GREEN] and the other Members who arranged and participated in the discussion of this important matter. It is my judgment that in the doing they have rendered a great public service. By what they said they have given public demonstration that there are Americans of every creed who clearly recognize and abhor the un-American smear technique inherent in the every word of Air Force Training Manual 45-0050. What is more, the words uttered in the well of the House of Representatives this week demonstrate that such Americans can and are elected to the Congress of the United States and that they come from the four corners of our country and wear the label of both major political parties. As long as this is so we have every reason to hope that America will not be destroyed in the name of Americanism.

Americanism is many things but certainly at its very core it is and always must be freedom. No American can sacrifice any of his freedom without America being less of what it should be. Certainly members of the clergy are no less free Americans than, say, Members of Congress. They have the right, in fact, they have the duty, to speak out on the economic, social, and political issues of our country when those issues involve moral questions. If they fail to do so, they would be something less than good clergymen and, at the same time, something less than the best Americans.

These are days when in another connection there has been much debate about the separation of church and state. This, of course, is the sound fundamental constitutional doctrine upon which this Nation was built and, I pray, it shall always rest. But just as we, as Americans, have a strong belief in the necessity of a separation of the church from the state we, as people, have had an equally strong belief in the importance of the church, the necessity of religion and the essential need for sound moral training in our children and ethical conduct on the part of all citizens in and out of Government. It would be a sad day indeed if America ever reached the point where the church and the state were not in fact separated. It would be an even sadder one should we ever reach the point where the actions of the state were completely divorced from moral and religious considerations.

Whether they realize it or not, those people in and out of the Air Force, in or out of the Congress, who would say or write or do anything which would have the effect of intimidating members of the clergy of any church expressing their views on what they believe to be the true application of the moral law to the social issues of our age are indeed hurting and harming America as much or more than any dedicated Communist could ever hope to do.

Mr. Speaker, I suggest that in the true spirit of the Easter season we can and should forgive them because surely they know not what they do.

Depressed Areas and Foreign Aid

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. SAYLOR. Mr. Speaker, the semiannual report of the National Advisory Council on International Monetary and

Financial Problems reached my desk just 10 days after the U.S. Department of Labor's periodic statistics on the unemployment situation. I am not going to refer to statistics presented in the latter publication because by now every Member of Congress should be familiar with the labor surplus problem.

Committees of both the House and Senate have in recent years conducted studies into the matter of chronic unemployment. The persistence of economic stagnation in numerous areas of this Nation has been a matter of public record. Hardship and privation in surplus labor areas have been recognized by both the legislative and executive branches of the Federal Government, and an urgent need for remedial action has been admitted by spokesmen of both political parties. Yet week after week, month after month, year after year there has been a sabotaging of every honest effort to enact necessary legislation.

Today it is the House Rules Committee that refuses to release the brakes on the rescue train whose cargo is economic assistance assigned to depressed areas. While I am hopeful that this opposition will be dissipated shortly under the continued barrage of criticism from an angry public that has become impatient of the delaying tactics of those responsible Democratic Party leaders, Congress must remain on guard against attempts to encumber this relief mission with the kind of legislative gallimaufry that was used to derail the area development program at a previous session.

Now let us take a look at the goings-on in the Development Loan Fund, as reported by the National Advisory Council. Since its establishment in 1957, Development Loan Fund has made loan commitments amounting to more than three-quarters of a billion dollars for—to quote the report—"economic development in the less-developed areas of the free world."

During the first half of 1959, the most recent period covered in the report, Development Loan Fund has authorized new loans for such projects as: power transmission lines, a gas treating plant, and equipment for charting inland waterways in Pakistan; roads and bridges in Malaya; and what are described as "economic overhead projects" in Uruguay, Haiti, Bolivia, Nicaragua, and Chile. For Red Yugoslavia, a total of $14 million was earmarked to assist in financing the purchase of diesel locomotives and the construction of a thermal powerplant.

I ask my colleagues to keep this imponderable situation in mind, whereby vast sums of American funds are made available to friends and foes alike in far-off reaches around the world while U.S. communities are denied a small percentage of such expenditures for the express purpose of getting our own people back to work. If this discrepancy is considered when our area development bill comes to the floor, I cannot understand how a single Member of the House could fail to object to the continued neglect of our own citizens in favor of more favors for those abroad.

A West Virginian Proves American Ingenuity Is Not Dead

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. HECHLER. Mr. Speaker, today we hear many stories about the lassitude and softness in American life, the loss of our drive and incentive, the decline of rugged individualism.

Particularly singled out for criticism are our younger people, who are said to be without ambition or sense of purpose.

I do not believe this is true—and I would like to call the attention of the House to a shining example that refutes the claims that young Americans no longer can control—or want to control—their own destinies and to make a name for themselves on their own.

A young man from my district, in less than 10 years, starting with a minimum education and absolutely no venture capital, has parlayed his talents and energy into the presidency of a growing electronics and telemetry firm.

And while doing this, he has contributed several valuable developments to our Nation's defense efforts in one of its most critical areas—the science of missilry and missile communications. I believe his success story is worthy of attention.

His name is Wheeler McKendree "Mack" Turner, and he is now only 32 years old. Many of my senior colleagues may remember his father, the late Maj. Francis Turner, who served as assistant to my able predecessor in this seat, the Honorable M. G. Burnside.

Mack, like the young Edison, found academic studies too regimented and confining for his imaginative mind. He did well in school, but preferred to think, tinker, and experiment in his own way. He completed less than 2 years at Marshall College in Huntington, W. Va., before his first invention—a small and highly efficient television antenna—was placed on the market.

Mack left school to work on the promotion and manufacture of the antenna. The small antenna did not prove a commercial success, however—because, as Mack tells it, people regarded a big, unwieldly television antenna on their roofs as a status symbol in those early days of TV—and the business failed, leaving Mack without an income and in debt.

Mack, then living in Milton, W. Va., in my district, decided at that time to move into the mushrooming aircraft and missile industry.

With his wife and child, he loaded all his belongings into an old car and headed west to an uncertain future, not really much unlike the pioneers who trekked westward in frontier days, determined to carve a better life for themselves.

In Texas, he applied for a job at an aircraft plant, and despite the lack of an engineering degree, insisted he be allowed to take engineers' qualification and aptitude tests. He scored so high that he was hired as an engineer.

He stayed on here for a time, learning and absorbing all he could about the intricate communications and electronic systems then being built for supersonic aircraft. But the rigidity of corporation life did not appeal to him, so he transferred to California at a time when the field of missilery was just opening up in earnest.

At a California aircraft plant, Mack began studying the science of telemetry, and recognized the vast benefit to our Nation's strength which could be reaped if accurate, swift systems of communication between earth and a missile in flight could be developed.

After a few years of study, theorizing, testing, and plenty of good hard work in his own garage, Mack unveiled a telemetry system which cut to a tenth the former time required to receive, decode, and assess the signals emitted by a missile.

This was a great contribution to the development of communications in the infant missile industry, and Mack won high praise and reward for his invention.

His profit from this "decommutator" system enabled him at last to throw himself headlong into his favorite subject—full-time research in communications.

With the support and encouragement of a small electronics firm in Santa Barbara, Mack began a program of research which already has meant a great deal to our country's defense effort.

Just recently, he contracted to furnish some of his devices for the most thrilling and promising American space experiment in process today—Project Mercury, which one day will put the first American into space.

In addition, he is near to perfecting a modulating system which will clear away static and any form of interference in radio communications and bring in a human voice loud and clear. This device holds tremendous potential for our air age, for it has widespread application for both civilian and military aircraft. He also is hard at work on further telemetry refinements.

Mack in the meantime has organized and become president of his own firm, Astrometrics, Inc., of Santa Barbara. I expect one day we shall hear even more from this small firm, for its founder is determined to bring about more advancements to make our country more prosperous and strong.

As a member of the House Science and Astronautics Committee, Mr. Speaker, I can attest that America needs all the Mack Turners it can find. In the deadly serious race for missile supremacy and the conquest of space, young men with his devotion and energy are at a premium, and they ought to be encouraged wherever possible to experiment and dream in an atmosphere of freedom and lack of pressure.

As a West Virginian, I am proud of this man's success and achievements—

although I am sorry that since West Virginia is ignored and bypassed by the Defense Department in the allocation of contracts and installations, he could not make his mark in his home State. But I am glad to see this young man doing so much to prove the West Virginians still are characterized by perserverance, independence of action and high ingenuity.

Young men like Mack Turner prove the American dream, the American spirit of adventure are not dead.

Carl Dittmar Still Active at 82 Years of Age

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, the wisdom of Carl Dittmar is that of an old man with a young mind whose life has been rich in varied activities. Much of these activities stem from his lifelong admiration for the teachings of William Jennings Bryan and Henry "Single Tax" George.

After graduating from Stanford University in the 1890's, Dittmar became a correspondent in Sacramento for the San Francisco Chronicle and also reported for the Sacramento Bee. In his late twenties, he became publisher of two legal newspapers, now defunct, in Shasta County, Calif.

Now 82, Dittmar is still active in politics and vigorously defends his position with respect to social credit on any and all occasions.

Following is an article by Carl Dittmar that appeared in the Californian for April 1960:

SOCIAL CREDIT OR CHAOS
(By Carl F. Dittmar)

A knowledge of social credit presupposes some knowledge of bank credit, yet bank credit itself is so new a subject as to have been designated as "Banking Power" in the annual report of the Controller of the Currency as late as 1926. Bankers themselves had not begun to recognize its significance until about the turn of the century.

However, the subject had been boldly set forth at the founding session of the California Bankers' Association in 1890 in Los Angeles when J. P. Widney, president of the University Bank of Los Angeles, warned that the time had come for bankers to give serious consideration to an ominous trend in banking: the substitution of bank credit for money.

What was greatly disturbing to Widney was the fact that whereas the deposit liability of the banks of the Nation had reached the staggering sum of $5 billion, this bookkeeping balance owed to the depositors by the banks was offset by a gold coverage of a scant $100 million, or about 2 percent. (Under the gold standard the depositors could demand payment in gold.) To the assembled bankers he merely pointed out their joint banking insolvency, but his pleas went unheeded. The bankers chose to ignore the warning and they took pains to prevent Widney's scholarly presentation from appearing in the official record of their proceedings.

Widney retired from the banking business. He voluntarily liquidated his bank, thereby escaping the terrific mortality toll that overtook the banks in the depression of the nineties.

It was during those depression years that a young lawyer in Lincoln, Nebr., came up with a solution—Government guarantee of bank deposits. His argument was presented in a thought-provoking little booklet published in 1895 under the title of "Check-Book Money." This pamphlet came to the attention of President McKinley, who appointed the young lawyer controller of the Treasury. In 1924 this man was elected vice president of the United States on the Coolidge ticket, for he was no other than Charles G. (Hell 'n Maria) Dawes.

Another young banker of that period who faced up to the subject of bank credit was Frank A. Vanderlip, who in time was to become president of the powerful National City (Standard Oil) Bank of New York City. Coming up from the ranks of newspaper reporting in Chicago, he went on to author the classic observation that "the American people are a Nation of economic illiterates." Addressing Harvard University students in 1911, he declared that bankers no longer fit the definition of money lenders, but that they had become the suppliers of credit and the creators of the very credit that they supply. A banker accepts the collateral brought to him by a borrower; and the borrower merely exchanges his personal (and less readily negotiable) credit for the banker's highly negotiable bank credit.

It is by this simple process that the banks of today have provided themselves with the grand total of $200 billion in deposits. These so-called deposits are our primary medium of exchange, for bank credit is our only lawful money. It is so noted on the face of every Federal Reserve note. Thus, even a Federal Reserve note itself becomes a mere deposit slip of token currency, although full legal tender.

The critical world situation of the moment makes it imperative that the people of our democracy come to a greater understanding of the subject of money and banking. The times are too perilous for anything less than brutal frankness.

Social credit has made more progress in Canada than in any other country. The Canadian Social Credit Party's platform calls for a Federal old age pension of $100 per month per person. Why is social credit such a lively issue in Canada and yet so dead in the United States?

The answer goes back to the depression of the 1930's. At that time the United States took two steps to rehabilitate and stabilize banking: The abolition of the gold standard and the guarantee of bank deposits. Canada went much further. The country's central banking system was nationalized, which would be analogous to our Government's taking over the Federal Reserve System.

The nationalization of the Bank of Canada provided the threshold for social credit, which made its first appearance in 1943 in the form of the family allowance program. Under this program Canada's children, from birth to the compulsory education age ceiling of 16, are endowed with a Federal monthly income of $5 to $8 per month, according to age. There is no means test. All children are included. The program is a virtual school subsidy.

The second Canada-wide application of social credit came in 1951 in the form of a Federal old age pension of $40 per month for everyone reaching 70—again, free from any means test. All citizens with 20 years' residence are eligible. Later, parliament upped the amount to $55 plus an additional amount to be matched dollar for dollar with the individual provinces. There is no property qualification. There is no income restriction. The beneficiary may continue to work, earn money and still receive the pension.

Six nations are now declaring dividends to their citizens. The two nations that have ventured the farthest and are making the largest distribution per capita are Canada and Germany. And their currencies are the ones that are most sought in the money exchanges of the free world.

It is in the field of social credit that communism has thus far been winning the battles of the cold war. For it lies in the power the Communists exert by the ownership of their central banks. A Russian soldier, like an American soldier, is paid in a government bank check cashable at any bank. But the Russian bank check is written against a reservoir of social credit, whereas the American bank check is written against bank credit created and controlled by a privately owned central banking system. This war of bank credit can never be won until the U.S. Government takes over ownership and operation of the central banking system, or the 12 Federal Reserve banks.

The economies of the free world are geared to the American dollar, and it would be a sad day for freedom if the neutral nations should turn toward the ruble as a more stable measure of value. What the situation demands is a stable dollar. Admittedly, a stable dollar does require a balanced budget, but a balanced budget does not require a policy of tight money. To the contrary, the real requirement is easy money.

Better drench the economy with purchasing power (social credit), at the same time establishing a balanced budget by taxing out of circulation exactly the amount that has been poured in. For human beings, too, must have money to balance their budgets.

Puerto Rican Democrats Move Ahead

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. ANFUSO. Mr. Speaker, in the RECORD of April 6, page A3065, under the title "Democrats or Campocrats in Puerto Rico?" I discussed the current struggle between two factions in Democratic ranks in Puerto Rico and the real cause behind that rift. I stated that certain powerful elements are evidently not anxious to have a growing and active Democratic Party on the island which advocates strong ties with the Democratic Party on the mainland.

I regret that Governor Muñoz-Marín and the leaders of his Popular Democratic Party are not aware of the mood of the rank and file of the Puerto Rican people who desire to associate themselves with the Democratic Party of the mainland and with the idea of statehood. The fact of the matter is that when the Democratic Party of Puerto Rico, headed by my good friend Jose A. Benitez, met in a convention on April 11 at San Juan, no less than 1,125 delegates attended and endorsed a statehood plank in their platform.

Perhaps the most interesting development was that the day after the convention, Mr. Enrique Campos del Toro, president of the dissident group known

as Campocrats, resigned as leader of the group with the statement that he desires to "thus put an end to a disagreeable incident in my life." In this way, he refused to work with this dummy group which claims to be the Democratic Party of Puerto Rico.

In my statement of April 6, I predicted that the Democratic Party of Puerto Rico, under the able leadership of Mr. Benitez, will grow up as a strong and influential party in the interests of the people. I now wish to add to that conviction:

I strongly believe that the Popular Democratic Party, which is not the party of the people, will decline in influence and ultimately also in power. The people are tired of the men associated with this group.

Likewise, the Independence Party, which is advocating independence for Puerto Rico and a complete breakaway from the United States, is losing support rapidly and will eventually disappear from the scene or become a most ineffective group.

There will then remain two major groups in Puerto Rico, the Democratic Party and the Republican Party, both advocating statehood and both maintaining ties with the two major political parties on the mainland. Such must be the logical sequence of events, and it will only emphasize Puerto Rican ripeness for statehood.

Mr. Speaker, at this point I wish to insert into the RECORD two news items from the San Juan Star of April 11 and 12, entitled "Benicrats Endorse Plank on Statehood" and "Campos Quits as President of Campocrat Dem Faction," which describe some of the events mentioned above.

[From the San Juan Star, Apr. 11, 1960]

BENICRATS ENDORSE PLANK ON STATEHOOD

(By A. W. Maldonado)

By official count, 1,125 delegates to a Democratic (Benicratic) convention yesterday endorsed a resolution to enter the local elections on a statehood plank.

Benicrat leader Jose A. Benitez also told the assemblage—which met under a bright and burning morning sun at Cobian's Drive-In Theater on the Rio Piedras-Caguas Highway—that the National Democratic Party will be the only party in the United States with statehood for Puerto Rico in its platform.

He predicted only the National Democratic could bring Puerto Rico statehood.

"If NIXON becomes President," Benitez said, "forget about statehood." He characterized NIXON as being great friends with Governor Muñoz, who is, Benitez said, the greatest enemy of statehood.

The Benicrats also expelled from their ranks the already dissident members who joined in the formation of another Democratic Party faction, the "Campocrats," under the leadership of banker Enrique Campos del Toro. The assemblage yesterday described the meeting in which the Campocrats were formed as clandestine, unauthorized, null and void. The Campocrats faction is composed largely of members of Governor Munoz' Popular Democratic Party.

The Benicrats said yesterday that the Benicrats who became Campocrats were betraying their ideals.

Dr. Carlos E. Chardon, Benicrat candidate for Governor, delivered a speech attacking Governor Muñoz and his party for attempting to stay perpetually in power.

"Nothing is more dangerous than allowing an individual to stay in power for a long time," Chardon said.

"It can be said that there have been many hoaxes—but the greatest of these is the so-called commonwealth status which has been an instrument to perpetuate a government much longer than should be allowed in a democracy."

Another resolution was passed repudiating the censure or protest of President Eisenhower by Governor Muñoz and the legislature for alleged interference in local politics.

A discussion arose when a resolution calling for statehood as the principle objective of the Democratic Party was presented. The resolution originally read statehood "when justified by the economic conditions," but that phrase was eliminated when a delegate protested that "statehood when economic conditions permit" is the policy stated by Governor Muñoz which is interpreted by many as meaning "statehood never." At the beginning of the convention cables were read from former President Harry S Truman, Senator John Kennedy, Senator Lyndon B. Johnson, Senator George Smathers, and Senator Stuart Symington, sending regrets that they could not attend the convention.

[From the San Juan Star, Apr. 12, 1960]

CAMPOS QUITS AS PRESIDENT OF CAMPOCRAT DEMOCRATIC FACTION

Enrique Campos del Toro resigned yesterday as president of the Campocrats, the local Democratic Party faction formed recently to combat the Benicrats, led by statehood advocate Jose A. Benitez.

"I believe I should resign and thus put an end to a disagreeable incident in my life," Campos del Toro said in a statement.

Campos del Toro, president of the First Federal Savings and Loan Association, reaffirmed his support of Commonwealth status, the main flank of the offshoot Democratic committee, but repeated that he thinks there should be room for discussion of statehood within the Popular Democratic Party.

It was members of that party who were behind the formation of the new group at an assembly March 27.

MANY BELIEVE IN STATEHOOD

"Following the assembly, a friend of mine, Harold Lidin, a reporter for the San Juan Star, visited me and I told him, and I now repeat it, that there are many Popularies who believe in Statehood and [they] have a legitimate right to discuss and advocate their ideas within the Popular Party," Campos del Toro said.

It was this stand that led to Campos del Toro's being criticized on the floor of the House of Representatives by Representative Jorge Font Saldaña, a Popular, as "irresponsible, imprudent, and inconsistent."

In announcing his resignation, Campos del Toro, said "My criteria on the right of free discussion of ideas is invariable and this, having been the motive for expressions of sour and vexatious controversies which have reached the floor of the house of representatives, where I was made the object of a personal attack, I believe I should resign."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Senate committee reported Treasury-Post Office appropriations.
House cleared civil rights bill for the President and passed the Mutual Security Program authorization bill.
See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 7855–7874

Bills Introduced: Six bills were introduced, as follows: S. 3400–3405. Pages 7858–7859

Bills Reported: Reports were made as follows:

H.R. 10569, fiscal 1961 appropriations for the Treasury and Post Office Departments, and the U.S. Tax Court, with amendments (S. Rept. 1282);

H. Con. Res. 582, expressing congressional approval of disposal of 470,000 long tons of natural rubber from the national stockpile (S. Rept. 1283);

S. 3019, providing for certain pilotage requirements in the navigation of U.S. waters of the Great Lakes, with amendments (S. Rept. 1284); and

S. 1781, to establish cooperative research and training programs for fish and wildlife resources, with amendments (S. Rept. 1285). Page 7858

Bills Referred: Two House-passed bills were referred to appropriate committees. Page 7855

D.C. Motor Safety: Senate continued on S. 2131, to amend in several respects the D.C. Motor Vehicle Safety Responsibility Act. Page 7874

Nepalese King: Acting majority leader announced that on Thursday, April 28, there will be a joint meeting of Congress in the Hall of the House to hear an address by the King of Nepal. Page 7855

Confirmations: The following nominations were confirmed: Courtland D. Perkins, of New Jersey, to be an Assistant Secretary of the Air Force; Maj. Gen. William A. Carter to be Governor of the Canal Zone; and numerous nominations in the Army, Navy, and Marine Corps. Pages 7889–7890

Program for Monday: Senate met at noon and adjourned at 3:23 p.m. until noon Monday, April 25, when its unfinished business will be S. 2131, D.C. Motor Safety Act amendments. Senate will attend a joint meeting with House in the Hall of the House to hear an address by President De Gaulle, of France. Page 7889

Committee Meetings

(*Committees not listed did not meet*)

WHEAT PROGRAMS

Committee on Agriculture and Forestry: Committee concluded its hearings on proposed wheat programs after hearing testimony from Herschel D. Newsom, master, and Joseph Parker, both of the National Grange; John A. Baker, National Farmers Union; Anthony C. Owens, of Minneapolis, and Charles B. Knappen, Jr., of Augusta, Mich., both of the National Soft Wheat Millers Association; Claude Bell, Rawlins County Wheat Producers, McDonald, Kans.; John G. Kite, Cheyenne County Wheat Producers, St. Francis, Kans.; and Russell Duncan, of Fargo, N. Dak.

Committee will begin executive consideration of this matter on Tuesday, April 26.

APPROPRIATIONS—AGRICULTURE

Committee on Appropriations: Continuing its hearings on fiscal 1961 budget estimates for the Department of Agriculture, subcommittee received testimony from Senators Allott and Carroll; and the following Agriculture Department officials in behalf of funds for their respective departments: Assistant Secretary Clarence L. Miller, and Max Myers, Administrator, Foreign Agriculture Service; Alex C. Caldwell, Deputy Administrator, Commodity Exchange Authority; and Assistant Secretary Marvin L. McLain, and Clarence D. Palmby, Acting Administrator, Commodity Stabilization Service, and Vice President, Commodity Credit Corporation, who was accompanied by his associates.

In addition to those listed as having testified on this matter on Wednesday, April 20, was Senator O'Mahoney.

Hearings continue tomorrow.

APPROPRIATIONS—TREASURY-POST OFFICE

Committee on Appropriations: Committee, in executive session, ordered favorably reported with amendments H.R. 10569, fiscal 1961 appropriations for the Treasury and Post Office Departments, and the U.S. Tax Court. As approved, the bill would provide $4,877,014,000, an increase of $81,600,000 over the House-passed total of $4,795,414,000.

COMMITTEE BUSINESS

Committee on Armed Services: Committee, in executive session, ordered favorably reported H. Con. Res. 582, expressing congressional approval of disposal of 470,000 long tons of natural rubber from the national stockpile; and the nominations of Courtland D. Perkins,

Appendix

Movement of Household Goods Owned by Military Personnel

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1960

Mr. BARTLETT. Mr. President, at meetings sponsored by the Department of Defense on April 4 and April 5, issues relating to the distribution of business to movers of household goods were discussed and debated. The focal point of the discussions was a new proposed directive, prepared through the cooperative efforts of the moving industry and the Department of Defense.

One of the statements made during the meetings was prepared and delivered by Mr. Russell E. Garrett, chairman of the Movers Committee for Equitable Distribution of Government Traffic. In the course of the statement to which I refer, Mr. Garrett refers to the democratic process "as a technique for exchanging views in the market-place of ideas," and to education as "a continuing dialog." His remarks were made in this spirit.

I ask unanimous consent that the statement, dated April 4, by Mr. Russell E. Garrett, chairman of the Movers Committee for Equitable Distribution of Government Traffic, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY RUSSELL E. GARRETT, CHAIRMAN OF THE MOVERS COMMITTEE FOR EQUITABLE DISTRIBUTION OF GOVERNMENT TRAFFIC

My name is Russell E. Garrett. I am an officer of the John F. Ivory Storage Co. of Detroit, Mich., and I presently act as chairman of the Movers Committee for Equitable Distribution of Government Traffic.

Of all of the industry activities in which I have been engaged, I regard my participation, as a member of the Ad Hoc Industry Advisory Committee of the DOD at the most important. I must acknowledge that this has been a fruitful as well as stimulating experience. I would be remiss if I did not express my appreciation to Dr. Gayton E. Germane, Director for Transportation Policy, Department of Defense, General Morris, Executive Director of the Military Traffic Management Agency, and to their colleagues who have guided our deliberations.

I should like to discuss the proposed directive briefly and to state first, the areas of agreement; second, to describe the matters on which we tentatively reserve judgment; and third, to point up issues which are still to be resolved.

It is no secret that a vast, if not preponderant, segment of the household goods industry, opposed Directive 4500.26. It is equally obvious that an overwhelming majority of the industry supported and urged retention of DOD 4500.13.

But we are realists. We recognize that in a government of laws, regulations, like people, are not perfect. A progressive governmental policy is viable; it must and does respond to the lessons of experience and to the needs of the people whom the Government must protect and serve.

Someone has said that education is a continuing dialogue and I like to think of the democratic process as a technique for exchanging views in the marketplace of ideas.

There is, as you know, a Gresham's law in economics which says, in substance, that bad currency drives good currency out of the market. In a democracy, fortunately, the movement is reversed. If Gresham's law is applied to political science, one must say that good ideas drive poor ideas out of the marketplace. And this is what has happened in our discussions about the business of transporting household goods for military and civilian personnel of the Department of Defense.

I must admit that we did not attain all we hope for. I concede that we have reconciled opinions and views which we once believed were incapable of compromise. Nevertheless, guided by a sense of responsibility to the Government, a conviction about the impartiality of the Government officers and a recognition that we must live and work together, we were determined to reach a point of mutual adjustment.

I hasten to add that we were not in conflict on all points. Our committee, representatives of the Big Four, the forwarders, the Movers Conference of America, and the Government were equally dedicated to the view that movers must provide high quality of service for defense personnel and their dependents. We were as one in our belief that the Government is entitled to full value for the dollars it pays for the services we provide. No one argued, nor could it be argued that irresponsible movers were entitled to share the benefits of Government business without assuming the grave responsibilities which are inherent in every relationship between the Government and private business.

We had our sharp differences, of course, btu these reflected merely disagreement over the method of achieving a commonly approved goal.

For reasons which we expounded at length at other times, we opposed any attempt to subvert the principle of equitable rotation of Government traffic. We believed that Directive 4500.26 was fraught with grave danger, not alone to the small independent movers, but to the Government itself. It was on this basis that we attempted to persuade representatives of the Government as well as that limited number of movers who held a contrary view that any program which looked toward the elimination of the rotation system would be unrealistic and inequitable. On this basic concept, I think good sense prevailed.

A directive has now been formulated which in its basic philosophy preserves the principle of equitable rotation without sacrificing the primary objective of high quality of service. To be sure, it does not give us exactly what we wanted. But we are convinced that our industry can live with the provisions of the directive provided the directive is carefully implemented. There are, however, some qualifications and reservations and I shall try to outline the reasons which prompt them.

Let me indicate first what we feel are unimpeachable provisions of the directive. First, we approve the stated objective of the directive, namely, to assure high quality of service to military and civilian personnel of the Department of Defense. We agree that they are entitled to transportation of their household goods at the lowest overall cost to the Government.

Second, we approve so much of the directive which limits consideration of comparative costs to a comparison between different modes of transportation.

Third, we approve the specification of criteria for quality of service, even though we should like to know more about what the term "other relevant information" means. But we assume that this phrase will be construed reasonably so as to be related to the specific standards set forth in the directive.

Fourth, we approve the nonuse of carriers who have failed to meet reasonable standards of performance or who have committed acts commonly regarded as unethical, provided that they be given a reasonably opportunity to meet and refute the charges or correct any deficiencies.

Fifth, we approve the basis on which storage in transit will be used.

Sixth, we approve so much of the provisions relating to implementation as sets forth the method of assuring compliance with the regulation, the negotiation for services, the use of service tenders and the processing thereof, and the appointment of a single manager for traffic management on the basis outlined in the directive.

This brings me to the second category: provisions to which we do not accord absolute and unqualified approval. I refer first to the provision which empowers the single manager for traffic management to implement the directive by prescribing various standards or procedures. Of course, the directive prescribes that the manager will consult with industry representatives, among others: we would suggest, however, that as a matter of good administrative practice, all standards or procedures should be formualted in writing, circulated among interested parties and that the latter be given a reasonable opportunity to submit their views in writing. Ex parte representations, private conferences, and meetings should be absolutely banned. Recent publicity concerning ex parte negotiations and alleged efforts to influence governmental action should be sufficient to alert every agency and private business to the dangers which informal procedures create. Honest men should have no objection to a public statement of their views and an opportunity on the part of others to critically evaluate, and comment upon them.

I do not suggest a debating society or resort to judicial procedures. The manager for traffic management should be free to act on the basis of the information supplied to him. Once a regulation or rule is adopted, efforts to secure a change should be restricted to open and public persuasion rather than pressure tactics, either official or unofficial.

Small business is best protected when ideas are freely exchanged and the opportunities for pressure are minimized if not wholly eliminated.

Second. Another matter on which we do not announce unqualified approval is the provision relating to evidence of satisfactory transportation equipment and financial responsibility and reliability. We think that this should be spelled out more fully in the directive or, at the very least, by an implementing regulation circulated in the manner to which I have previously referred. In no event should these standards be violative of the spirit and basic purpose of the directive.

Third. The reference in the directive to "lowest overall cost" should be clarified so as to make certain that carriers will not be faced with the prospect of unlimited common law liability as a condition for qualifying. It is a matter of which one must take judicial notice that household goods transportation produces claims almost as inevitably as the rise and setting of the sun A marred and scratched table which has been a hidden eyesore in the dark corner of one's home somehow becomes an heirloom and the occasion for strident complaint by the householder when the table is exposed to the light of sun in the new home.

In the civilian field, many movers will tell you that customers sometimes seek to recover the cost of transportation through reimbursement for claims. In some cases, this art has been refined so that the householder recovers a profit—or at least tries to. A few military and civilian personnel of the DOD sometimes lose their special and unique character when the transportation of household goods is involved and act like certain other householders mentioned above. Claims as factor of cost should be defined by implementing regulations carefully planned by the Government with the aid of industry and providing a reasonable opportunity to movers who are charged with claims to adjust and review them. All claims would be filed with the mover and the Government concurrently. No claim for loss and damage should be settled until investigation has been completed.

Finally, we do not unqualifiedly approve the provision which authorized the veto of a carrier or the sanction or preference. Of course, if the prior unsatisfactory service is specified in writing such carrier should not be considered for that particular service only—and I add this proviso—only when an impartial review of the complaint satisfies the transportation officer that the complaint was justified and that the service was in fact unsatisfactory, measured against commonly accepted standards of satisfactory service in the household goods transportation field. Frankly, we do not want to see military personnel, influenced by aggressive advertising and snide reference to fly-by-night carriers so that an inconsequential complaint is magnified into a Federal case and is employed as a basis for rejecting a carrier.

In this connection, we do not oppose the principle of preference so long as it does not violate the basic policy of rotation. With these comments I am authorized to say that our committee accepts the provisions of the proposed directive which I have just discussed.

Now, this leads me to the last category, namely, the provisions of the directive with respect to which our approval is studiously qualified. I refer specifically to the bonus provision in the new directive. In essence, the directive provides for the offer of additional nonrotation shipments to lowest cost carriers who have given exceptionally high quality service. This provision is a highly complex one. For one thing, it could, in practical effect, defeat the whole concept of rotation. If a large volume of additional shipments are offered to lowest cost carriers who allegedly provide outstanding service, what may be left may not be worth handling. There is a theory that when there is one loaf of bread it must be divided among all persons at the table. But if a large part of the loaf has been devoured, the number of persons at the table is exceedingly large, everyone receives a slice but the slice is so thin that everyone starves to death. This could conceivably happen in this field. We suggest, therefore, a fixed maximum bonus percentage be established in the directive itself and that additional nonrotation business, if any, be offered only on a fixed periodic basis, and shall be noncumulative. In other words, if under the directive, additional nonrotation business is limited to a maximum of 10 percent of the traffic awarded to a carrier during the specified period and the favored carrier, in any one month, actually receives 7 percent, he would not carry over a credit of 3 percent in the succeeding month. I urge that this principle be written into the directive.

The standards for determining "exceptionally high quality of service," should be the subject matter of implementing regulations which are specific, concrete, and easily understood. Like other implementing regulations, they should be circulated and the views of the industry considered before they become effective.

Let me suggest, finally, in this connection, the standards for eligibility should not be fixed on such a basis that only a limited number of movers can qualify, nor should the standards be so unrealistic that only a handful can meet them. In short, the standard for service should comport with the experience of the industry. Little movers operating in elegant vans driven by chauffeurs in casual outfits rather than attractive uniforms and who do not provide brochures, pamphlets, written instructions, and glamour provide, in many instances, the best service that householders can receive anywhere. Each of us in the industry have received accolades and brickbats. A poor job can be performed by a large company just as easily as it is by a small company. Hence, whatever standards are employed to measure "outstanding quality of service" should be attainable by all movers. This is only another way of saying that it must be practical and realistic. The standards must be clearly designed so that the subjective reactions of transportation officers will be minimized if not entirely eliminated.

I have tried to summarize briefly the views of all of the people whom we represent. I cannot say to you that there is unanimity of approval. I cannot say that there is unanimity of disapproval. We are a democratic group and we encourage divergent views and differences of opinions. What I tried to do is reconcile these views and to say to you, in a word, that we believe you have made a genuine contribution to stability and practical understanding in this field and that your directive reflects a sincere and devoted effort to meet the requirements of the members of our industry without sacrificing the rights of the personnel of the Department of Defense. If some of the suggestions we make are accepted, we should be very pleased. If you reject them, we will proceed with the directive as formulated, give you our fullest cooperation and hope that you will constantly review the operations of the directive and that you will have an open mind and an open heart concerning changes and that we can persuade you that the changes we propose from time to time will serve the best interests of all persons who are concerned with this problem.

On one ground we are all agreed: we all agree that you have done an earnest and selfless job and that you have tried mightily to accommodate all points of view, that you have sympathetically considered our opinions; that your directive is the product of careful thought and analysis. Thank you.

U.S.S. "Patrick Henry" Adds Teeth to Atomic Navy

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. BOWLES. Mr. Speaker, on Saturday, April 9, David J. Davin covered the commissioning ceremonies of the U.S.S. *Patrick Henry*, our newest Polaris submarine, for his paper, the Willimantic (Conn.) Daily Chronicle.

Mr. Davin's story includes a wealth of interesting detail about the operation of a Polaris submarine. I call the article to the attention of my colleagues with the thought that we should all become familiar with this single most effective deterrent instrument available to the free world.

Mr. Davin's story, which appeared in the Chronicle of April 11, follows:

[From the Willimantic (Conn.) Daily Chronicle, Apr. 11, 1960

U.S.S. "PATRICK HENRY" ADDS TEETH TO ATOMIC NAVY

(By David J. Davin)

With the words, "Mr. Grojean, set the watch," Saturday at 1:20 p.m., the U.S. Navy received the Nation's second nuclear-powered fleet ballistic missile submarine, the U.S.S. *Patrick Henry*, SSB (N) 599.

Cmdr. Harold E. Shear, the *Patrick Henry's* new commanding officer, spoke these words to Lt. Cmdr. Charles D. Grojean, executive officer of the "blue" crew of the new submarine, during commissioning ceremonies at General Dynamics Corp.'s electric boat division, Groton. The words meant for Lieutenant Commander Grojean to station the sailors on duty. And from crew right through to the high stabilizing fin at the after tip, the sleek, new ship is one of the U.S. best answers to some of the questions why we are not in a third world war.

The *Patrick Henry*, named after the colonial man who helped draft the Declaration of Independence, is a unique, awesome, deadly, and strange ship. First, she has two crews—the "blue" and the "gold." Each crew serves under the same skipper Commander Shear, but each has its own 10 officers and 90 enlisted men.

NINE POLARIS SUBS

And the name is somewhat unique. The Navy used to name its submarines after some form of marine life, usually fish, like the dolphin, bluefin, shark. Now the new Navy has names like the *Patrick Henry*, the *George Washington* (first nuclear sub capable of firing the Polaris), the *Theodore Roosevelt*, and the *Thomas A. Edison*, to name but a few. In all, the Navy has authorized nine nuclear Polaris-firing submarines. To date, she has two in commission—the *George Washington* and the *Patrick Henry*.

But the name and dual crew characteristics are the least things that make the *Patrick Henry* unique.

She has three ships inertial navigation systems (SINS).

An early form of the SINS took the U.S.S. *Nautilus* under the North Pole, enabling the world's first nuclear sub to know her position, within very short distances at all times. The SINS aboard the *Patrick Henry* are even more accurate, so that she will always know her exact location.

And the fire control system, the underwater stabilization system, air manufacturing facilities, ship control systems, and the systems maintaining the Polaris itself, plus the ship's conventional torpedo facilities make it unbelievable to the point of awesomeness.

The fire control system, containing over 15,000 transistors, will provide continuous, accurate information to the missile guidance system, despite sea conditions and ship motions.

One huge machine makes oxygen by the electrolysis of water. Another "scrubs" carbon dioxide from the air inside the ship and yet another burns off harmful carbon monoxide to make air reusable. The *Patrick Henry* also makes its own water, which one officer said was always more than enough.

Unlike the first submarine, the U.S.S. *Holland*, delivered by the Electric Boat Co. to the Navy exactly 60 years ago today, the *Patrick Henry* has a control room equipped with two "joy sticks," almost like an airplane. And a gyrostabilizer will hold the ship level in rough seas, virtually eliminating the need for a *Patrick Henry* crew member to hold his plate with one hand to just keep it on the table.

ONCE CALLED BOAT

These are just four of the luxuries the crew of the *Holland* went without. In the old days of submarining, as when the *Holland* was commissioned, the ship (called a boat then) was limited as to the time it could stay submerged. *Holland* had a 10-hour limit, using air trapped in the hull. The *Patrick Henry* can stay under almost indefinitely.

Besides its business systems, the *Patrick Henry* has some pleasure systems aboard. There is a television set in the crew's compartment, along with a nickel jukebox system and stereo tape hi-fi player piped throughout the ship. And there is another hi-fi system located in the officers' wardroom in a rich, soft brown wood cabinet. This, too, plays throughout the ship.

The galley, all stainless steel and electric would make any woman drool. Although designed only to serve the crew of 100, during the final stage of fitting out it was feeding over 200 officers and men. And not a sailor in sight on Saturday looked like he had been away from "mom's" cooking for even a minute.

The old *Holland* carried a crew of seven. The *Patrick Henry* with 100, is not only much bigger but the dual crew arrangement will enable her to stay at sea almost constantly. One crew will always be on the beach, training, or on leave.

And the *Patrick Henry* is considerably larger than the old *Holland*. She is 380 feet long and displaces 5,600 tons. The old *Holland* was only 54 feet long.

All persons who serve or operate around the *Patrick Henry*, or any nuclear submarine, wear film badges while on board. These badges detect any radiation and technicians develop these plates each week. Saturday, prior to commissioning and the beginning of shakedown, ship's officers conducted the press through the sub. All who boarded wore one of these little film badges.

While going aboard, the absence of electric lines, fresh water lines, steam lines, and all the rest of the paraphernalia usually seen running from the dock to a tied-up ship, were noticeably absent. This was because the nuclear reactor was manufacturing the sub's electricity, water, a possible 10,000 gallons per day, heat and air. However, upon departing the ship, Lt. John C. Young, electrical division officer of the "blue" crew and guide for the press group checked the amount of radiation assimilated during our 45-minute tour. He used a small, pencil-like tube he had in his shirt pocket. He reported no one had received radiation while on board.

He took the group as close to the reactor compartment as security regulations permit and said the whole reactor is shielded in lead, making danger almost nil. And should any emergency arise, the whole reactor can be secured and operated from a special manual control compartment.

The *Patrick Henry* is the 11th nuclear sub to go into commission for the United States. However, only it and the *George Washington* are equipped to fire the Polaris. Another sub under construction at Electric Boat, the *Thomas A. Edison* (its keel was laid February 15, 1960), will be the first submarine to be outfitted right from the keel up to fire Polaris. Both the *George Washington* and the *Patrick Henry* were redesigned while under construction to fire the missile.

"TRITON" BIGGEST

To date, the Government has authorized 37 nuclear submarines; 11 have been delivered. Only one, the U.S.S. *Halibut*, is designed to fire guided missiles. (The Polaris is a ballistic missile, controlled from within) The U.S.S. *Triton*, to date, is the biggest. She is 447 feet long, 37 feet in draft, and displaces 5,900 tons. However, *Triton* is a radar picket submarine. The *Thomas A. Edison*, and her sister ships, when completed, displace more than *Triton*—6,900 tons each.

During Saturday's commissioning ceremonies, Rear Adm. L. R. Daspit, commander of the Atlantic Submarine Force, summed up the importance of the nuclear submarine. Paraphrasing Oliver Cromwell, he said, "In today's world, it is necessary to trust in God but keep your deterrent mobile." And mobile is what the atomic-powered sub is.

Main speaker of the ceremonies, Senator CLINTON P. ANDERSON, Democrat, of New Mexico, chairman of the Joint Committee on Atomic Energy, said "A Polaris fleet will be almost immune to surprise attack. Its units will be dispersed, submerged, and moving, over millions of square miles of the Atlantic, Pacific, and Arctic Oceans. Imagine the difficulty of trying to find and destroy such a deterrent. No wonder it has ben compared in difficulty with trying to find a black cat somewhere on a vast and empty plain on a moonless night."

The words "mobility" and "self-sustaining" are almost synonymous with the *Patrick Henry*.

SHERWOOD FOREST

Patrick Henry's real teeth are her 16 Polaris, sold fuel, intermediate range ballistic missiles. The missile, named after the North Star, has a range of 1,200 miles. Each missile, when abroad the ship, will rest in its own "launching pad," a tube about 7 feet in diameter, vertically mounted aft of the sub's sail (once called "conning tower") and extending from the weather deck all the way to the bottom level, 32 feet down. Inside, these tubes are painted light green, and referred to as "Sherwood Forest."

The Polaris tubes on the ship are in two rows of eight each. Each tube has access doors to permit manual servicing of the "bird." However, an electronic brain will automatically maintain the missiles in operational readiness. Each missile and its various subsystems will receive regular checks by a diagnostic computer. If the computer finds a trouble spot, it will trigger an alarm alerting the Navy missile specialists on board.

Each separate ship system such as the SINS, feeds information to the fire-control system. And this system keeps the missile aimed on target. At the end of a countdown, a charge of compressed air will propel the missile out of the tube (if the sub is submerged) through the water, into the atmosphere. Once in the air, the rocket engines take over to drive it and its nuclear warhead to the target. In all, if all 16 missiles were launched, their combined firepower would be more than all the bombs dropped in the Second World War.

This is the newest in America's arsenal of defense, part of her nuclear-powered Navy, the Navy Chief of Naval Operations Adm. Arleigh Burke calls "This wonderful Navy of ours."

Interest Rate Ceiling

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1960

Mr. BUSH. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article by Harold B. Dorsey, which was published in this morning's Washington Post, entitled "Liberals' Stand Fattens Banks, Hurts Housing Credit."

The article has to do with the interest rate ceiling issue. Mr. Dorsey makes some very pointed remarks in support of the Treasury's position that the ceiling should be lifted.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Apr. 25, 1960]

ECONOMIC VIEW—LIBERALS' STAND FATTENS BANKS, HURTS HOUSING CREDIT

(By Harold B. Dorsey)

This article has been inspired by a statement of Seymour E. Harris published last Wednesday on the editorial page of this newspaper. The opinions expressed by Professor Harris were intended to support the "Congressmen who are not disposed to yield to the President's request for a removal of the interest rate ceiling on long-term Government securities."

Professor Harris is littauer professor of political economy at Harvard University. His comments last week serve a useful purpose insofar as they demonstrate how badly the discussion about the interest rate ceiling has become distorted by political considerations.

Harris chooses to relate the economic growth rate of the 5 years preceding the Eisenhower administration (1947–52)—when, as all economists know, business activity was deriving the maximum stimulation from the pentup demands of the war—with the 7 years during which the present administration has been in office (1952–59)—when, as all economists know, the pent-up demands were losing their stimulating effects. He implies that the slower rate of growth in the latter period was due to tight credit, which in turn implies that credit policies retarded borrowing and spending.

In fact, however, the annual rate of expansion of total public and private debt in the latest 7 years averaged $38.9 billion, which is 41 percent greater than the $27.6 billion annual rate of debt expansion in the preceding 5 years. His implications, therefore, are completely without factual support. And since he has selected politically significant periods for this particular comment, one must conclude that he is putting more weight on political consideration than upon the readily available facts of the matter.

The debt expansion of almost incomprehensible proportions throughout the postwar period—and particularly in the past 7 years—must necessarily have been a factor in any explanation of rising interest rates. Just

like any other commodity, a sharp increase in demand tends to increase the price of that commodity, in this instance the interest rate.

Professor Harris asks: "Why not exploit the 4–5 year market * * * [for the Treasury's credit needs]?

It so happens that the Treasury Department has issued nearly $14.5 billion of new securities in the 4–5-year market since last June. In fact, it was forced by the 4¼-percent ceiling to impose its demand on the short-term and intermediate-term credit markets to such an extent that thousands of small borrowers have had to pay the highest interest rate for their credit needs in over a quarter of a century. This penalty imposed on legitimate private borrowers presented a beautiful melon to the commercial banks which recorded the highest earnings on record in the final quarter of last year and the first quarter of this year.

As might have been expected, the high short-term and intermediate-term interest rates, that were caused in large part by the impingement of the Treasury on these credit markets, attracted savers and encouraged them to pull their funds out of institutions that usually provide credit for the mortgage market. Associations representing the residential construction industry have publicly recognized the resulting reduction in the availability of mortgage credit and the consequent damage that has been imposed on building activity. They are recommending that the 4¼-percent ceiling should be removed.

The Harris article also makes it quite clear that those who are opposing a simple piece of legislation to remove the 4¼-percent ceiling on Government bonds look upon this occasion as an opportunity to impose their own ideas about credit policy on the Federal Reserve. Unless one is uncharitable enough to think that they are trying to take advantage of the situation to impose a minority view upon the majority, then it is difficult to see why they are trying to tie in credit controls with Treasury financing techniques. In the highly respected Douglas report of 1950, Senator DOUGLAS did a magnificent job of proving that Treasury financing must be divorced from national credit policymaking.

Even from a political viewpoint, it is difficult to see what Professor Harris and the liberal group in Congress hope to accomplish for themselves in opposing the legislation that would remove the 4¼-percent ceiling. The experience of the past 9 months has demonstrated very clearly that their attitude has been responsible, to a considerable degree, for the fact that thousands of small borrowers have had to pay unnecessarily high interest rates for their normal credit needs to the benefit of the commercial banks which have been recording the highest earnings on record, and that the residential construction industry and its thousands of workers have been hurt.

It would be my observation that all of these people who are getting hurt are becoming increasingly aware of the group in Congress that is responsible for the unnecessary pain. And it is quite possible that tight credit will once again be imposing the pain in its most acute form next November.

New Pentagon Secrecy

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. MOSS. Mr. Speaker, there is underway at the Pentagon an attempt to give the Defense Department's publicity expert, Assistant Secretary of Defense Murray Snyder, the powers of an advertising czar. I believe the Congress and the public should be aware of the plan. If put into effect, I fear it would do a great deal to prevent intelligent discussion of defense policies which may mean life or death to the United States.

Assistant Secretary Snyder has asked the Army, Navy, and Air Force to comment on a new Defense Department information directive which would give Mr. Snyder the power to censor "controversial' advertising, speeches, or press releases by manufacturers. After the services comment, Secretary of Defense Gates will be asked to put the new order into effect.

Mr. Snyder's new directive consolidates two 1952 directives which set up rules manufacturers must follow to get Defense Department approval for the release of information. No one objects to rules prohibiting the release of military secrets by companies which manufacture defense products. The new directive contains the same rules on military security as did the old directives, but Mr. Snyder's plan goes much further.

The directive which Mr. Snyder is asking the Army, Navy, and Air Force to approve states that defense contractors, in their advertising, speeches, or press releases, cannot make inappropriate claims for the qualities of their products. The Snyder directive states, in section VIII, that manufacturers who make defense material cannot release inaccurate, incomplete, or misleading material. And would the Federal Trade Commission determine whether an advertisement was incomplete? No, this power would be given to Mr. Snyder, who would also decide whether any claims made in advertisements by defense manufacturers were inappropriate.

Mr. Snyder's new directive gives him even more power as an advertising czar. It would prevent a defense contractor from releasing information which could reasonably be interpreted as intended to influence the adoption, revision, or cancellation of plans, programs, or policies of the Government, including legislation. Mr. Snyder, under his new directive, would be the one to decide whether a manufacturer's advertisement could be interpreted to influence legislation.

The Defense Department is spending billions of dollars on the Nation's defense program, but those officials who are spending the tax funds do not want to take into their confidence the American public which must pay the taxes. This plan to censor advertisements by defense manufacturers—a valuable source of information for the public—is another attempt to hide controversy behind a mask of conformity. Following is Mr. Snyder's proposed directive:

DEPARTMENT OF DEFENSE DIRECTIVE

I. PURPOSE

The purpose of this directive is to set forth guidelines and procedures for the security review and clearance for public release by defense contractors (including subcontractors) of advertising material and other public information concerning products and services purchased by the Department of Defense.

II. CANCELLATIONS

DOD Directive 5230.3, dated January 18, 1952, and DOD Directive 5230.5, dated September 24, 1953, are hereby canceled.

III. POLICY

Persons and firms furnishing products and services to the Department of Defense (including nonprofit organizations and educational institutions), and officers, employees, representatives, and agents of such persons and firms, shall not release, for public dissemination, information regarding products or services except as authorized in this directive or approved in advance by the Secretary of Defense or his designee.

IV. DELEGATION OF APPROVAL AUTHORITY

The Assistant Secretary of Defense (Public Affairs) is hereby named as designee of the Secretary of Defense for the purpose of approving or disapproving requests for clearance of information coming within the scope of this directive, this clearance to be exercised through the Office of Security Review. In appropriate cases decisions shall be made in coordination with the General Counsel and the Assistant Secretary of Defense (Supply and Logistics).

V. AUTHORIZED ISSUANCES

A. Contractors shall be authorized to release to the public, without advance approval, the following information pertaining to unclassified or classified contracts for products and services purchased by or furnished to the Department of Defense:

1. Statements that a contract has been awarded.

2. The type of product or services involved, in general terms (such as aircraft of standard types, tanks, trucks, ammunition, clothing, construction; or study of a new electronics system or a high altitude research study, etc.), provided the designation of the product or services is not itself classified.

3. With respect to unclassified contracts only, releases may include the name of the Department of Defense contracting office, a brief description of the product or service involved, the quantity of products to be furnished, and the dollar amount.

4. Help-wanted and recruiting information, which does not divulge classified material.

5. A general statement of the kinds and numbers of additional employees which will be required by the facility involved.

6. Announcement of subcontracting opportunities for unclassified subcontracts, providing no classified material is made public concerning the prime contract or higher tier subcontracts.

7. With respect to research and development work performed by nonprofit organizations and educational institutions, unclassified information of public or professional interest pertinent to accomplishments under a contract, provided the release of such information is not limited by terms of the contract. The release of unclassified information derived from research and development contracts is encouraged, as the dissemination of such information will accrue to the general benefit of the United States.

8. The specific information, in the specific format previously approved pursuant to VII below.

B. In order that manufacturers holding classified Department of Defense contracts may make state of business reports to stockholders, stock exchanges, etc., the total companywide dollar value of backlog may be released provided:

1. That only the Department of Defense total is used and not broken down by individual military service or item.

2. That the release does not reveal the quantity or volume of individual orders.

3. That the report is not made for period of less than 3 months.

C. In case of doubt as to the releasibility of information pursuant to this paragraph, contractors should follow the procedures of VII below.

VI. ISSUANCES REQUIRING PRIOR APPROVAL

Contractors shall not be authorized to release information other than that set forth in V above without prior approval of the Office of Security Review, Office of the Assistant Secretary of Defense (Public Affairs). Paragraph VIII below sets forth those types of releases which will not be approved, and therefore should neither be released nor submitted for approval. Examples of information which may not be released without such approval are:

1. Production schedules, future planning on production schedules, or rates of delivery.
2. Information on sources of supply, quantities and qualities of strategic or critical supplies and movements, assembly or storage of supplies or material.
3. Information on sabotage attempts or plant security measures.
4. Information and research and/or development projects, except as provided in V, A. 7, above.
5. Information on any missiles, nuclear devices or weapons; "BW–CW" agents, materials or weapons; and other new weapons or weapon systems.
6. Information, including any photograph, sketch or plan concerning first models of weapons or equipment, outstanding production achievements, or performance of weapons or equipment.
7. Information on material for shipment to allied governments under MDAP, NATO, etc.
8. Movement of military aircraft or naval vessels. (This restriction is applicable to all cases, including those where actual movement order is unclassified.)

VII. APPROVAL PROCEDURES

A. Persons and firms (including nonprofit organizations and educational institutions) desiring approval to release information other than of the type set forth in V above, shall forward requests for approval in writing to Office of Security Review, the Assistant Secretary of Defense (Public Affairs), Washington, D.C.

The military departments are authorized to provide in contracts that requests for approval shall be submitted through designated departmental officials or offices. Subcontractors shall forward requests through prime contractors, who shall be responsible for initial screening of submitted material.

B. The information proposed for release shall be attached to the request, precisely in the format and substance desired to be released, including any photographs, sketches, plans, blueprints, models (if practicable), charts, etc., or other art work which are proposed for release.

C. Approvals are restricted to the specific release submitted for approval. Any change whatsoever in format, art work, or substance requires a new approval.

VIII. ISSUANCES WHICH SHALL NOT BE APPROVED

Proposed releases containing the following types of information shall not be approved.

1. Inaccurate, incomplete, or misleading material (e.g., inappropriate claims of operational availability or operational capability of products under research or development or furnished to the Department of Defense).

2. Appraisal of the military effectiveness or ineffectiveness of weapons and weapon systems of the United States or other countries, or discussion of the economic impact of award or cancellation of specific defense contracts, or continuance or discontinuance of specific procurement programs or the military strategy and tactics upon which such programs are based, where, in either case because of timing, content, magnitude, or a combination of any of these elements, release of information could reasonably be interpreted as intended to influence the adoption, revision or cancellation of plans, programs or policies of the Government, including legislation.

3. Discussion of the relative merits of conflicting military strategies and tactics, which may affect the purchase or development of products or services by or for the Defense Department.

4. Classified information, or information pertaining to research, methods, or end products that develop a security classification in an otherwise unclassified contract.

5. Statements concerning movements of military aircraft and naval vessels, unless screened by the responsible commander.

6. Statements concerning qualification, acceptance or approval of products or services furnished to the Department of Defense; that a contractor is the sole supplier of a product or services, or, the percentage of prime contractor's requirements provided by a subcontractor, in terms of quantity or dollar value.

IX. IMPLEMENTATION

A. The following contract clause shall be inserted in all contracts involving research, development, and experimental work, classified contracts, and all other contracts for more than $100,000:

"The contractor shall not release for public dissemination information regarding products or services purchased by the Department of Defense except as authorized or approved in advance by the Secretary of Defense, or his designee. Procedures for securing approval shall be as set forth in appendix F, Armed Services Procurement Regulation, entitled "Manual for Release of Information by Contractors," issued [date], as said manual may from time to time be amended, which is hereby incorporated by reference with the same force and effect as though fully set forth. The substance of this clause shall be inserted in all subcontracts involving research, development, and experimental work, classified subcontracts, and all other subcontracts for more than $100,000. Authorization or approval for release under this clause shall not be construed to authorize or approve payment for the cost of releasing information."

B. The substance of this directive shall be published in a "Manual for Release of Information by Contractors," and inserted as an appendix to the Armed Services Procurement Regulation.

C. Violations of this directive shall be brought to the immediate attention of the Office of Security Review and, as required, the Assistant Secretary of Defense (Public Affairs) will consult with the General Counsel and the Assistant Secretary of Defense (Supply and Logistics) concerning appropriate action.

X. EFFECTIVE DATE

This directive is effective upon receipt.

Yarborough Urges Padre Island Seashore Park Approval by Congress This Session

---

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1960

Mr. YARBOROUGH. Mr. President, all of us who have been working to establish a national seashore recreation area on Padre Island—America's longest and southernmost natural beach—were encouraged with Secretary of the Interior Fred Seaton's recent endorsement of the project, with an 88-mile-long park recreation area.

Secretary Seaton has urged the appropriation of $25 million for acquisition of land for three great seashore recreation parks—Padre Island, Cape Cod, and the Oregon Dunes.

The sands of time and space are running out for America—so far as preserving our national heritage of open beaches is concerned. From the rock-ribbed coast of Maine to the sun-drenched sands of the south tip of Padre Island is a distance of 3,700 miles but only 265 miles of that vast coastline is being permanently preserved for public use in State or national park areas.

A quarter of a century ago, the National Park Service surveyed America's shorelines and at that time recommended that Padre Island be acquired as a national park site. It that recommendation had been carried out, the people would have secured possession of this matchless beach for less than half the price it will cost today. If the Congress fails to act this year, the price on this land will climb higher and much of the choice beach will be permanently lost to public use through private development. I urge action this session, having introduced S. 4 last year to create Padre Island as a national recreation area. Since Secretary Seaton's endorsement of Padre Island two of Texas' finest and most influential daily newspapers—the Houston Post and the Corpus Christi Caller—have published editorials commending his action. I ask unanimous consent that the following editorials be printed in the Appendix of the RECORD: From the Houston Post of April 19, 1960, the editorial "Request by Interior Secretary Boosts Padre Island Park Hopes"; and, from the Corpus Christi Caller, of April 20, 1960, "One More Hurdle Cleared by Padre Park Proposal."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Houston Post, Apr. 19, 1960]

REQUESTS BY INTERIOR SECRETARY BOOSTS PADRE ISLAND PARK HOPES

Padre Island is a step nearer preservation for public recreation as a result of a request by the Interior Department that Congress include it, along with Cape Cod in Massachusetts and the Oregon Dunes, in the national park system.

A year ago the Department recommended general legislation on seashore areas, but named no specific areas. It suggested a $15 million limit on the amount to be spent for acquisition and other items.

In the new request, Secretary of the Interior Fred A. Seaton increased the limit to $25 million. In a letter to the Senate Interior Committee, Seaton said the Department feels that investigations and hearings with respect to Padre Island, Cape Cod, and the Oregon Dunes "have proceeded to the point where arrangements reasonably satisfactory to most of the interested persons can be agreed upon."

He added that the congressional hearings on the three projects "have clearly demonstrated their national significance and the

feasibility of acquiring and protecting them for public inspiration and enjoyment."

It is to be hoped that Congress will act favorably and promptly on the request. In rapidly growing America the need for outdoor public recreational space is becoming serious. At this time only 240 miles of seashore of the Nation's 3,700-mile shoreline is publicly owned. Padre Island, which stretches along the Texas coast from Corpus Christi to Brownsville, would add 90-odd miles to the total.

There has been some development at the southern and northern ends of the island, but most of it is still an area of sand and sparse vegetation which impresses with its beauty virtually all who visit it.

Padre Island can be bought now at a relatively low cost. The cost is not going to decline. It probably will increase if there is much delay in acquiring it. The sooner Congress acts to preserve this natural wonderland for all of the people, the better it will be for ourselves and for posterity.

[From Corpus Christi Caller, Apr. 20, 1960]

ONE MORE HURDLE CLEARED BY PADRE PARK PROPOSAL

Another welcome step forward in the move to create a national seashore area on Padre Island came last week when Secretary of the Interior Fred A. Seaton specifically endorsed the island plan. He recommended to the Senate Interior and Insular Affairs Committee that a maximum of $25 million be set aside to acquire seashore areas at Cape Cod, Padre Island and Oregon Dunes.

Just 1 year ago Seaton recommended to Congress that not more than $15 million be appropriated to acquire seashore areas, without specifically mentioning the areas recommended. At the time the Indiana The new recommendation from Seaton fol- Dune was one of the sites being considered. lowed a letter sent him last September, signed by Senators LYNDON B. JOHNSON and RALPH YARBOROUGH and Representatives JOHN YOUNG and JOE KILGORE, asking for a specific recommendation for Padre Island.

Secretary Seaton did not, of course, undertake to determine what part of Padre Island should be dedicated as a national seashore area. It is a question that should be referred, when enabling legislation is approved, to the National Parks Service and its advisory committees. The question of area and of location is scarcely one that can be settled satisfactorily in a legislative forum. An enabling act sketched in broad outlines is sufficient.

Milwaukee Brewery Workers Union Supports Reduction of Certain Excise Tax Rates

---

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution submitted by Brewery Workers Local Union No. 9 of Milwaukee, Wis., in favor of the automatic reduction of excise taxes on alcoholic beverages, gasoline, diesel fuel, cigarettes, and motor-vehicle chassis first imposed during the wartime emergencies of recent memory.

RESOLUTION REQUESTING THE U.S. CONGRESS TO ALLOW THE AUTOMATIC RATE REDUCTION ON CERTAIN EXCISE TAX RATES

Whereas Federal excise taxes were substantially increased to the war tax rate on many manufactured items by the Revenue Act of 1943, 1945, and 1947; and

Whereas these rates were even further increased by the Revenue Act of 1951 for the purpose of a temporary Korean wartime emergency; and

Whereas all excise rates were reduced to prewar tax rates by the Excise Reduction Act of 1954, with the exception of alcoholic beverages, gasoline, diesel fuel, cigarettes, and motor-vehicle chassis, which products continued to be taxed at the highest rate, but were scheduled for automatic reduction on March 31, 1955; and

Whereas the Revenue Acts of 1955, 1956, 1957, and 1958 continued to postpone the automatic reduction on these items; and

Whereas the Revenue Act of 1959 once more postponed the rate reduction date on these selected items from July 1, 1959, through June 30, 1960; and

Whereas the wartime emergency which occasioned the imposition of the additional excise on these selected items now no longer exists; and

Whereas war tax rates are so high as to substantially reduce sales in a peacetime market; and

Whereas the excessive taxation of these selected products has restricted wages and job opportunities for organized labor in the particular industries manufacturing these goods and has prevented business expansion in these businesses because they could not keep pace with less highly taxed items: Now, therefore, be it

Resolved, That Brewery Workers Local Union No. 9, 2189 North 48th Street, Milwauke, Wis., representing 6,000 workers and members, hereby goes on record as favoring the reduction of these oppressive excises and respectfully petitions the Congress of the United States to permit these war tax rates to expire on the scheduled date of June 30, 1960.

Adopted at meeting on April 17, 1960.

JOHN W. SCHMITT,
Recording Secretary, Brewery Workers Local Union No. 9.

"The Shield of Freedom," Is Theme of an Address at the Veterans of Foreign Wars Post Home Dedication, Hinton, W. Va.

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1960

Mr. RANDOLPH. Mr. President, Summers County Post No. 4500 of the Veterans of Foreign Wars of the United States dedicated its new post home at Hinton, W. Va., in ceremonies held April 23 to 24, 1960. It was my privilege to have been the speaker at the dedication service on this past Sunday.

This post was chartered on October 20, 1945, with 108 charter members. It has grown to over 335 members. The home is a beautiful building with the most modern facilities.

A reception at the home of my friend, Van A. Trail, was held Saturday afternoon for a distinguished American, who is well known to Members of the Congress, Omar B. Ketchum, director of national legislative and rehabilitation services for veterans of the United States. Mr. Ketchum later delivered the address for the dedication banquet in ceremonies for which Past West Virginia Department Commander Richard G. Homan was the toastmaster.

Also present and participating in the program for the significant dedication banquet and services were David J. Lowery, of Weirton, present West Virginia department commander of the V.F.W. of the United States; Mayor Harold B. Eagle, of Hinton; Post Commander John W. Gilbert; Quartermaster Ovid L. Graham, Jr.; Ladies Auxiliary President Betty Graham; Post Building Committee Chairman Jack E. Lawrence, and the Hinton municipal band. The Reverend S. M. McMurray, pastor of the First Presbyterian Church in Hinton, gave the invocation.

For the dedication service address, I chose to speak on the subject, "The Shield of Freedom," and of our responsibilities as free citizens to maintain it.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of my speech on April 24, 1960, at the dedication of the Veterans of Foreign Wars Post No. 4500 home at Hinton, W. Va.

There being no objection, the speech was ordered printed in the Appendix of the RECORD, as follows:

THE SHIELD OF FREEDOM

(By Senator JENNINGS RANDOLPH, Democrat, of West Virginia, to the Veterans of Foreign Wars, Post No. 4500, in dedication of their building, Hinton, W. Va., April 24, 1960)

Commander Gilbert, Mrs. Graham, of the ladies auxiliary, and officers and members of Summers County Post No. 4500 of the Veterans of Foreign Wars, it is a privilege to address the membership of such a distinguished post as yours, and the citizens of this community.

Your dedication as individuals and as a group to the ideals of our society is attested to by your record of three consecutive awards as post of the year by your outstanding service in the sponsorship of Boy Scout Troop 115 and Explorer Post 115, in the sponsoring of the Red Cross bloodmobile program, and by your participation in many other charitable and civic efforts.

Your actions have testified to your commitments as men. We now gather for the purpose of dedicating your post home, and for this also we must ask the question as to what larger purpose this structure is dedicated, even as our lives are dedicated.

As a veteran of one or more of our Nation's wars, each of you has given some portion of his life—and some of you have given of your blood and flesh as well—in defense of freedom. Therefore, this afternoon I wish to speak of "the shield of freedom" and of our responsibilities as freemen to maintain it.

As Dr. Karl Menninger said of the virtue of humility which disappears when one lays claim to it, freedom tends to disappear when it is confused with license.

The absolute and unabridged right to do as one pleases and to pursue personal pleasure and profit do not in themselves repre-

sent the liberty of men and women in a free society. For freedom imposes its own obligations upon the citizen. The first of these is to understand the nature of freedom itself, the second to understand the nature of its opponent and the requirements of its defense. It is to the second question that I will direct my remarks.

However, let us first define the face of the evil which currently poses a serious threat to our freedom.

One hundred years ago communism was a theory of history and economics coveted by a handful of men in Europe and England. Some 40 years ago, at the time of the Bolshevik revolution, communism commanded a small but militant force of some 80,000 followers. Today, it claims a total world membership of more than 33 million, with active party units located in 83 nations, according to FBI Director J. Edgar Hoover.

In addition, while the Soviet Union holds forth the olive branch of peaceful coexistence, international communism, aided by followers working within, has subjugated 17 countries with a population of over 900 million people, or about one-third of those on the planet. While Khrushchev extends the hope of lessening world tensions, his Chinese partners are engaged in shipping contraband arms to north Africa, fomenting disturbances among their neighbors, and threatening the peace of southeast Asia.

Against this malevolent force stand the United States and a coalition of those nations which would preserve and extend the ideals of human freedom and dignity. And since the forces that oppose us respect only power—and the show of power—America must maintain her strength, militarily, economically, politically and morally. This means we can no longer afford the luxury of giving only part-time attention to full-time problems, for the problem of combating Soviet and Chinese imperialism is indeed a full-time assignment which deserves the full application of all our resources. Today, however, let us devote attention largely to the question of our military resources.

Within the present century we have been involved in two major wars and one localized but extremely costly conflict. In each instance our military policy was one of "punishing" an aggressor nation which had disturbed the peace. And in each instance we acted as though all we needed to do was punish the aggressor and peace would be restored, leaving us free to follow our own carefree pursuits. But we have learned through harsh and bitter experience that the uneasy condition of peace is not so easily restored.

It would seem, therefore, that we must reexamine the military policies that have guided our conduct in the wars of this century. We must recognize that the United States has interests that endure beyond the mere punishment of the aggressor nations—interests that involve the basic values and assumptions of Western civilization itself. And these interests—these values—can be maintained only so long as the United States is capable, in alliance with the other free nations of the world, of bringing a countervailing power to bear on the Soviet Union and Communist China, whenever and wherever their imperialistic designs lead them to encroach upon free nations. Such power cannot be provided by an unwise and unrealistic attitude toward our national budget.

Though we all devoutly pray that the proposed series of summit conferences will eventually lead to a world in which all men may live in honor and peace with one another, that time does not seem near at hand.

And until that new day does arrive the United States must maintain sufficient strength—now and in the foreseeable future—to deter the hunger for conquest among the Soviet and Chinese leaders. This cannot be done if we are to be preoccupied solely with a balanced budget. For—as I have said elsewhere—a balanced budget in financial terms may well bring about a deficit budget in larger and more human terms.

For example, a year ago last March, in a memorandum setting forth their views on the budget, the Chiefs of each of the armed services expressed doubt about its adequacy. Typical of their comments was the statement of the then Chief of Staff of the Army, Gen. Maxwell D. Taylor, when he reported, "The reservations which I had in mind pertain specifically to four major Army programs. These are (1) Army modernization, (2) the antimissile missile program, (3) the personnel strength of the Active Army and Reserve forces, and (4) the Army surface-to-air missile program." The Chiefs of each of the other services expressed similar concern about the adequacy of the allotment for his own branch.

There is a growing criticism from experts in the field of science, from our military authorities, from economists and leading business executives, and from leaders in Congress, of our inadequate defense level. While it is true, as the President avers, that the present deterrence of mutual terror prevails, what of 3 or 4 years from today? There are those who maintain that Russia—at the present rate of development—will have a 3-to-1 superiority over us in intercontinental ballistic missiles. By thus deliberately conceding a missile superiority to the Kremlin, we are gambling with the future and gravely limiting the range of our present diplomacy.

There are those in authority who proclaim that we have sufficient strength to devastate the country of any aggressor. That may well be true. But our primary strategy must be the deterring of a strategic attack, not the "winning" of a strategic war.

While it is undeniable that for security reasons many policy and strategic decisions must remain secret, there are certain areas of determination that bear upon the question of national survival and which are rightly matters for public scrutiny. Among the vital matters concerning which policy and strategic decisions must be made, and about which the American citizens are entitled to adequate information and assurances, are these:

The question of relying almost exclusively on nuclear deterrent forces, the matter of a balanced defensive arsenal, the almost complete neglect of realistic civil defense measures which would make our deterrent intent more believable, and, finally, the power of the Bureau of the Budget over defense decisions.

These questions are not answered merely by imputing a partisan and political bias to all who question the wisdom of our current defense policies.

Military history is studded with instances of professional military men having failed to grasp the significance of new elements of strategic or tactical value. There have been, for example, such occasions as the rejection of the tank by French Army generals before World War I, the rejection by our own Army of the thesis of airpower propounded by Gen. Billy Mitchell in the 1920's, and the resistance of our battleship admirals to the development of aircraft carriers before World War II. These are but a few of the incidents which provide illustrations that a lifetime in the military service is no guarantee of infallibility.

One might further add that some of the most penetrating criticisms of present defense policies have originated from men who have also devoted their lives to our national defense and who have been much more closely associated and intimately involved with it during the past 10 years than has the President. One of the most notable is retired Army Chief of Staff, Gen. Maxwell D. Taylor, who recently stated before a joint hearing of the Senate Armed Services Committee and the Senate Aeronautical and Space Science Committee that, "The trend of relative military strength is against us. Our manned bomber force is a dwindling military asset. Our long-range missile force is limited in size, uncertain in reliability, and immobile upon exposed bases. We have no antimissile defense in being or in sight. There is no effective fallout protection for our civil population."

Another authoritative critic within his own field is Thomas G. Lanphier, Jr., former vice president of Convair, the major manufacturer of the Atlas intercontinental missile, who resigned his $60,000 a year job with Convair in order, as he stated, "to unclutter my opinions with charges of bias."

Among other statements Mr. Lanphier made before the House Committee on Science and Astronautics was his declaration that the United States is now "engaged, in fact, in the only military phase of World War III we have a chance to win—the deterrent phase—and we are losing it." He then added, "We are losing, for, among other reasons: lack of a sufficient and timely intercontinental ballistic missile program; lack of defense against a submarine attack; lack of a weapons program and policy to deter limited aggression; lack of a sufficient and timely space program, and, above all, lack of recognition that we are and have been for a long time actually engaged in World War III."

Our position in certain vital areas of tactical strength appears no stronger than in those strategic matters I have just cited. For example, as recently as this week—on April 20—Army and Air Force chiefs reported to Congress that the recent war games in the Caribbean revealed that the Nation's military airlift is inadequate and outmoded.

Gen. Bruce C. Clarke, chief of the Continental Army Command, and Lt. Gen. William H. Tunner, head of the Military Air Transport Service, jointly submitted a formal critique of last month's exercise Big Slam-Puerto Pine—the first major test of the Air Force's ability to rush Army combat forces to an oversea trouble spot. Their report to the House Armed Services Subcommittee included the following statement:

"The limitations of the majority of the present MATS aircraft seriously limit the size of U.S. Forces which can be deployed to distant oversea destinations in acceptable periods of time."

General Tunner further declared that 90 percent of the Military Air Transport Service is obsolescent and "the need for modernization is immediate and critical." Despite such testimony from the men who are best qualified to know, the administration has requested only $50 million in the current budget for the development of new military transport aircraft which might be ready in 3 to 5 years.

One is thus impelled to question what the United States would or could do in the event of another Korea, or even a Lebanon, in which we would be confronted by enemy combat forces.

Finally, almost 2½ years ago, the Preparedness Subcommittee of the Senate Committee on Armed Services issued its report after taking 7,000 pages of testimony. In this report the subcommittee made 17 specific recommendations covering the entire range of our defense system. These recommendations were unanimously approved, not only by the subcommittee, but by every member of the committee itself and endorsed on the basis of testimony from the leading experts throughout the country.

Yet, even at this late date, not enough has been done to implement these recommendations. The excuse has been that we cannot afford them. I say—the leaders of Congress say—and I believe the American people will say that we cannot afford not to have them.

If we cannot afford them under our present system of priorities, then we had better reappraise our standards of priority.

Currently, we are spending 10 percent of our national income on national security. In a recent book by Bernard Brodie, a military historian with the Rand Corp., entitled "Strategy in the Missile Age," it is persuasively argued that we can readily afford to spend 15 percent, and that this sum would perform miracles for the forces, and would also provide a minimum program of fallout shelters surrounding our cities.

As the richest nation in the world, we can afford and we must provide the preservation of those values which alone make our material wealth meaningful. But, in order to achieve such a defensive system, we must have some guiding principles of action other than mere budgetary ones. In closing, I suggest these basic principles:

1. Since we have determined against our fighting a preventive war, we must devote a greater military effort into cutting down drastically the advantage an enemy might derive from a surprise attack. This will call for (a) the reduction of the vulnerability of our own retaliation system; (b) the improvement of our detections systems to reduce the possibility of false alarm; and (c) the reduction of the vulnerability of our present and future defensive systems.

2. Secondly we must provide more substantial conventionally armed forces and the necessary transport for limited war. As Historian Brodie remarked, "There will be time enough to readjust to what is permissible in limited war when incentives to strategic attack have been markedly reduced."

3. Finally, we must begin to take seriously the proposition that the danger of total war is a real and finite one, and that provision must, therefore, be made for the saving of life on a vast scale.

While present world tensions exist, we may not flee, no matter how appalling the vision of nuclear war, from facing the realities of our times. To do less is to lose faith with and to violate the trust of those of your comrades who gave their lives for human dignity and individual freedom.

The Groton Boys in Washington

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. AUCHINCLOSS. Mr. Speaker, since the insertion of my remarks in the CONGRESSIONAL RECORD on April 7, 1960, about the visit of the boys from Groton School to the Capital in which I included various letters I had received from these young men, I have now received additional letters and I am happy to have them printed in the RECORD to complete the story.

One of these letters is from the headmaster of Groton School, Rev. John Crocker; another is from the master who teachers American Government and was with the boys in Washington, Richard Congleton, Jr., telling of the boys' reactions to the trip. I have also included a letter from one of the parents of the boys, Mrs. Charles Devens, expressing her appreciation. The response to the efforts that everyone made to make this trip a success is most gratifying and it is apparent that good has been accomplished.

The letters follow:

APRIL 8, 1960.

DEAR MR. AUCHINCLOSS: A trip such as you gave the Groton boys during their vacation in March deserves recognition by and thanks from the parents also and this is to tell you what fun Bobby Devens, David's classmate and good friend, had as your guest. We were most interested in the itinerary and various booklets he brought back and the two pictures are on display in the Devens' living room. This family is particularly fortunate; for Charlie, who was in Kenny's class at Groton, had the same fine trip in June of his sixth form year—1955.

David and Bobby are a formidable doubles team in fives and have won the tournament together in the past—I don't know about this year's results.

I hope we will have an opportunity to see you soon; perhaps at the reunion; anyway at the prize day exercises in June of 1961.

Charlie joins me in sending you our thanks.

Sincerely,

EDITH W. DEVENS
Mrs. Charles Devens.

P.S.—Please don't think of acknowledging this, as you are much too busy and we are off this afternoon to meet our daughter in Lisbon for a trip to Spain.

APRIL 13, 1960.

DEAR JIM: I must apologize for my delay in writing to thank you for the wonderful time that you gave that big crowd of Groton boys and two masters who went to Washington under your auspices, during the Easter vacation. They all came back full of enthusiasm and I do want you to know that I think all your labors have obviously borne fruit in terms of stimulating both their knowledge about our Government and interest in its problems and, I hope, in the desire to serve it if the chance comes to them.

You were wonderfully generous in giving them two big banquets and enabling them to hear JOE MARTIN, two members of the Cabinet, and a number of others.

The news that you are running again is simply grand. You really are wonderful and we take our hats off to you.

Mary joins me in sending you our affectionate regards and believe me, we are grateful for all you have done and are doing for G.S.

Sincerely yours,

JACK
Rev. John Crocker.

P.S.—Since dictating this, yours of April 11 has arrived with the copies of the CONGRESSIONAL RECORD. The boys are thrilled to be in print in such a place.

DEAR MR. AUCHINCLOSS: I would like to report to you the boys' reaction to the trip. As a Government teacher, my most difficult task is to try and help the student visualize the Government in operation, and the trip certainly accomplished this. I have had boys in class quote yourself, Secretary Anderson, Secretary Flemming, Mr. Judd, Speaker Rayburn, and others. Many of the boys have developed real interest for the first time, mainly because they had an opoprtunity to see things firsthand.

Other boys have begun reading about politics and policies for the first time, not as an assignment but because they have found new interests. Therefore, you are to be complimented and thanked for making this opportunity possible. I believe such a trip should be part of every Groton boy's education.

The pictures arrived and the boys asked me to thank you again for them.

My wife and I were glad we had an opportunity to see you before we left Washington.

Thanks again from myself, Mr. Rimmer, and especially 40 boys who learned so much in so short a time.

My personal regards,

RICHARD CONGLETON, Jr.

APRIL 12, 1960.

DEAR MR. AUCHINCLOSS: It is with my tail between my legs that I write this letter—a perfect example of schoolboy thoughtlessness and lateness—but it is also written with a lingering sense of gratitude and warmth for you and your compatriots in Washington.

Never did I expect so much attention would be paid by so many important men—and so many great ones—to a mere group of students. However, the fact that we did receive so much of your time and the time of others has killed a very bad, former impression I once had of politicians: that they are interested only in vote getting.

Politicians are humans, thank God, and wisely chosen ones if they are all like the ones we met (and that includes Republicans, too—I am a Democrat).

I appreciated the National Gallery (and your "nudes") and Mr. Flemming, Mr. Judd, and Mr. Rayburn greatly, but I shan't say anything was better than anything else; it was all an education, and all a lifetime experience.

Thnk you, sir, for your warmth and generosity, your spirit and love for our great country, your time and your interest, and I beg your forgiveness for the lateness of this letter. It is not due to a lack of appreciation.

Affectionately yours,

PAYSON RAND.

APRIL 7, 1960.

DEAR MR. AUCHINCLOSS: Please forgive me sir for not having written you sooner. Immediately after leaving Washington, I went to Chapel Hill, N.C., to see the university, and to stay with a friend. I just recently returned home, only to find difficulties which prevented my writing.

I have been very anxious to write and tell you how much I enjoyed the trip, and to thank you for the trouble which you went to in order that the trip be so successful. Although I enjoyed the whole trip immensely, I think it might interest you to know what I particularly enjoyed, and that was the lunch you treated us to at the House Dining Room. Aside from the food which was also very good, I enjoyed the speech by Mr. RAYBURN and especially the talk Mr. JUDD gave us on our foreign policy. It was very enlightening and I only wish that time had permitted him to speak the additional 2 hours you said he could do with ease.

I arrived home just the other day to find the prints you so kindly had made up of our lunch and dinner and I wish to thank you for them, also.

Thanks again for making my trip to Washington a memorable one.

Sincerely,

THOS. HAMILTON, Jr.

THURSDAY.

DEAR MR. AUCHINCLOSS: Thank you so much for the very enjoyable and extremely informative trip around Washington. It was wonderful to be able to actually meet and talk to the men who are helping to run things down there. I also thought the National Gallery of Art and the Smithsonian Institution were especially interesting. All in all the trip was the highpoint of my vacation. Thanks again and thank you for the pictures.

Sincerely,

JAMES L. RICHARDS.

DEAR CONGRESSMAN AUCHINCLOSS: I really apologize for not writing sooner, but I really want to express my gratitude for the wonderful trip you gave me as a member of the Groton group this spring. It was an experience I shall never forget and also a most entertaining and fascinating one. To see the Government from the inside so to speak is indeed a rare treat and one which very few are lucky enough to experience.

I especially enjoyed meeting you, JOE MARTIN, Speaker RAYBURN, and the vast number of wonderful men working for our Government.

Again I cannot express my thanks enough for a marvelous trip.

Sincerely yours,

HENRY C. BLACKISTON.

International Center for Cultural and Technical Interchange in Hawaii

EXTENSION OF REMARKS
OF
HON. HIRAM L. FONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1960

Mr. FONG. Mr. President, as a sponsor of S. 3385 which would promote the foreign relations of the United States by providing for the establishment in Hawaii of a center for cultural and technical interchange between East and West, I would like to bring to the attention of the Senate an article in the Christian Science Monitor.

Thomas Nickerson, the writer, is director of the office of publications and information at the University of Hawaii. He writes authoritatively on plans to establish the proposed center in Hawaii and discusses undertakings of the university which make the 50th State the logical locality for the international center.

I ask unanimous consent that this article from the Christian Science Monitor of March 12, 1960, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTERNATIONAL COLLEGE AND STUDY CENTER MAKING HEADWAY IN HAWAII—FOR RACIAL AND EAST-WEST ACCORD

(By Thomas Nickerson)

HONOLULU.—Few newly admitted States have offered the Union so timely a national asset as Hawaii now does in the proposed International Center.

Although having no physical resource—neither oil nor gold nor uranium—Hawaii possesses a rich human resource: The multiracial composition of the State and the consequent potential to perform a sorely needed service to the Nation and mankind—bringing closer relationship between the countries that border the Pacific.

President Eisenhower has stated, "Because of its geographical location and the national origins of many of its people, Hawaii can make a unique contribution to the cause of better understanding between East and West."

ATMOSPHERE OF COOPERATION

The nations of the Far East that are strongly represented in Hawaii's population are Japan, China, Korea, and the Philippines. But it is not ethnic derivation alone that constitutes Hawaii's unique contribution. It is the climate in which her people live—not the physical climate but, far more important yet, the intellectual climate—the atmosphere of cooperation and mutual respect in which Hawaii's people work and play constructively together.

Dr. Andrew W. Lind, dean of the University's socioloists, attributes this climate not so much to relaxed physical surroundings as to relaxed personal relationships—to the relative absence of serious racial antagonisms, of economic and political exploitation of the native and immigrant population, of personal frustration. As a result, Hawaii's immigrant peoples have been able to mount steadily what Dr. Lind calls "the occupational ladder."

It is these elements—Hawaii's multiracial composition, her equable racial climate her thorough Americanism, her location midway between East and West—that back such statements as that made by her Governor, William F. Quinn, in a letter to Secretary of State Christian A. Herter. He wrote: "Hawaii is unquestionably the ideal place to locate the International Center. As an educational and training center, the project would show the far-reaching influence we can have in the Asian and Pacific world."

ON BEHALF OF U.S. DEPARTMENT OF STATE

The Center is conceived as two entities, each with its supporting services, administered by the University of Hawaii on behalf of the Department of State. An International College would offer academic training to Asian and American students. An International Agency would coordinate the technical training facilities of the State—in agriculture, business, community services, and public administration, education, health, welfare, and safety.

Supporting services would include counseling, translating, tutoring, the administration of conferences, short-term programs, and study groups, and the establishment of an Advanced Studies Institute and an American Studies Institute, and expansion of the present English Language Institute.

The program includes scholarships for selected students from Asia and America, fellowships for distinguished resident and visiting scholars, and facilities for housing, teaching, and feeding students and instructors.

HOUSING FACILITIES

Plans include housing facilities that will provide bedrooms for groups of foreign students centered around common living rooms, faculty apartments, accommodations for transients attending conferences and short courses, classrooms, conference halls, an auditorium seating 700, food services, offices, and recreational facilities. All this is geared to 500 permanent students, 40 visiting scholars, and 60 transients.

An interesting manifestation of the university's preparations for the center was the Afro-Asian student leader seminar, financed by State Department funds, held recently on its campus. Three dozen talented young college men and women from nearly as many countries on three continents assembled to confer for 4 weeks on the place of higher education in society today. The seminar was followed by a 2-week study tour of the mainland.

NOT NEW TO UNIVERSITY

Such conferences are nothing new to the university. It conducted an international conference on race relations in 1954. Over the years it has sponsored three decennial East-West philosophers' conferences—in 1939, in 1949, and 1959. Among those who attended the latest of these were Japan's Suzuki, China's Hu Shih, and India's Radhakrishnan. An Asian conferee remarked that this was the only meeting he had attended in America where Asians had felt free to express themselves frankly and did so. Such has been the success of this series that a fourth conference has been advanced from 1969 to 1964.

For the last 6 years the university has conducted an Asian orientation center for Mundt-Smith and Fulbright grantees headed for graduate study at mainland universities. Hawaii provides an ideal transition from East to West. Asians feel at home here.

The 1959 legislature—the territory's last—demonstrated its deep interest in the center concept by appropriating $534,000 for the first increment of an international house. Moreover, it passed a bill making $95,000 available for an undergraduate Asian studies program and a postgraduate oversea operations program, both of which are now activated. Among other things, they prepare representatives of government and industry for service in the Orient.

These programs will go forward irrespective of the fortunes of the center. They constitute a projection and consolidation of activities on which the university has long concentrated its attention. (Its catalog lists more than 100 courses associated with Asia.) These programs form the sturdy roots on which the brilliantly conceived international center may be grafted.

Representative Clement J. Zablocki Writes With Insight About the United Nations

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. REUSS. Mr. Speaker, the dean of the Wisconsin Democratic delegation in the Congress, the Honorable CLEMENT J. ZABLOCKI, of Milwaukee, served with distinction in 1959 as U.S. representative to the 14th General Assembly of the United Nations.

The people of his Fourth Congressional District, the people of Wisconsin, and his colleagues in the Congress have long recognized CLEM ZABLOCKI as one of our outstanding, hard-working legislators. As the third-ranking majority member of the Committee on Foreign Affairs, chairman of the Subcommittee on the Far East and the Pacific, and as a member with broad legislative interests and experience, CLEM ZABLOCKI is always on the job and always does a commendable job. His work at the United Nations was no exception.

CLEM ZABLOCKI has written an article, "The U.N. and Us," which appears in the May 1960 issue of Eagle magazine. In it he gives us a penetrating inside view of the U.N.—its organization, its inner conflicts, its accomplishments, its goals.

The concluding sentences of CLEM ZABLOCKI's article are, I believe, worth special emphasis because they truly assess this still-youthful international organization upon which the hopes of so many of the world's people depend. Mr. ZABLOCKI writes:

The United Nations is far from perfect—but, by the same token, it has done a better job with the tools at its disposal than most critics will admit. In a world divided by

communism, and experiencing the resurgence of nationalism and an unparalleled drive for independence, the United Nations has tried to transcend political boundaries and to promote the attainment of objectives dear to all men of good will: peace with justice and a better life for those masses who exist in the midst of poverty, disease, and ignorance. Its record needs no apology.

Mr. Speaker, I submit for the RECORD the entire article referred to:

THE U.N. AND US

(By CLEMENT J. ZABLOCKI, U.S. Representative, Fourth Congressional District, Wisconsin)

When Acting Secretary of State Douglas Dillon called to ask me to serve as U.S. representative to the 14th session of the United Nations General Assembly, I must admit I greeted the invitation with mixed emotions.

I was looking forward to enjoying the fall with my family in Wisconsin and did not relish spending 3 months in New York after Congress adjourned. At the same time I was honored to have been selected for this special assignment. It would give me an opportunity to learn more about the operations of the United Nations. For this reason I accepted.

On September 15, the day on which the 1st session of the 86th Congress ended after an all-night meeting, I headed for New York and the United Nations, a controversial organization to say the least.

Over the years, I came in contact with some people who looked upon the U.N. with grave suspicion—even with disdain. Others, however, spoke highly about the constructive work of the U.N. and of its specialized agencies.

Between these conflicting opinions some facts spoke for themselves. U.N. membership has continued to grow and the area of its activities has expanded. The aspirations of the newly independent and the underdeveloped nations have centered upon it. In an uncertain and strife-torn world, the U.N. has enjoyed growing prestige and has gained many supporters who see in it the hope of mankind.

Upon arrival in New York I was briefed on the nature of my duties, assigned an office and issued a stack of "position papers," outlining our Government's stand on issues before the United Nations.

My work day started early each morning. I answered mail, studied position papers, reviewed instructions from the State Department and dispatches from U.S. diplomatic posts abroad, worked on drafts of speeches, and conferred with my advisers. Two or three times a week, the entire delegation would meet with Ambassador Lodge to discuss issues being debated in the General Assembly, to review U.S. policy, and to recommend changes.

Meetings of my committee and the plenary session of the General Assembly began at 10:30 a.m. and generally continued until 6 p.m. Occasionally, evening and Saturday sessions were thrown in for good measure.

Organizationwise, the United Nations is composed of six principal organs: the Security Council, the Economic and Social Council, the Trusteeship Council, the General Assembly, the Secretariat, and the International Court of Justice.

The three councils have limited membership (11, 18, and 14, respectively), meet throughout the year, and have primary jurisdiction over their fields. The United States has a permanent representative serving in each council.

The United Nations Secretariat occupies the largest of the three major buildings at U.N. headquarters in New York. Its personnel has been recruited from among the nations of 63 member states. This permanent staff of the United Nations organization works under the direction of the Secretary General, elected by the General Assembly upon the recommendations of the Security Council. The current Secretary General is Dag Hammarskjold of Sweden.

The General Assembly is the only organ in which all 82 member states of the U.N. are represented. Every member state is allowed to have up to five representatives in the General Assembly and as many alternates as desired, but casts only one vote. The U.S. delegation is composed of five delegates and five alternates. Each member acts as an instructed delegate, carrying out policies of the President of the United States without reference to personal convictions.

The General Assembly usually meets once a year, from mid-September to mid-December. It reviews the operations of the three councils, the work of the Secretariat and the International Court, and the activities of the specialized agencies of the U.N. Further, it approves the U.N. budget and allocates its cost among member states. However the General Assembly lacks one important power possessed by other legislatures: it cannot compel compliance with its resolutions. It can only suggest, advise, urge, and call for.

At the beginning of each session, the General Assembly adopts its agenda and assigns the various items to the six regular committees and one special political committee. Each committee deals with a specific field as follows: the first committee, political and security matters; second, economic and financial matters; third, social, humanitarian, and cultural matters; fourth, trusteeship matters; fifth, administrative and budgetary matters; and sixth, legal matters. All 82 member states of the United Nations are represented in each of the seven committees.

After an issue has been decided by a committee, the committee's recommendations, embodied in a draft resolution, are voted upon by the General Assembly convened in a plenary session. Since every member state is represented in each committee, as well as in the plenary, the votes in the plenary tend to follow the vote pattern established in the committee.

I was assigned to represent the United States in the fourth committee, which handled trusteeship matters. I soon discovered the committee was divided into two camps—the so-called colonial powers on the one hand, and the anticolonial forces on the other. In the emotionally charged atmosphere which accompanied the discussion of virtually every issue considered by the committee, there was often complete absence of any middle ground—at least in the eyes of representatives of many of the newly independent nations who fought actively for their point of view and seemed to live by the rule: "If you're not with us, you're agin' us."

The work of the fourth committee sharply affects approximately 100 million people who live in 9 trust territories and 48 non-self-governing territories—most of them in Africa. The committee's agenda and discussions revolve around one of the most distinctive trends of our age: the explosive drive toward independence and economic development in the underdeveloped countries of the world. The protagonists are the impassioned spokesmen for the dependent peoples and for the newly independent nations, craftily supported, for selfish ends, by the Communist bloc. The frequently unwilling antagonists are former colonial powers and their allies.

For its first order of business, the committee faced the complicated task of working out the arrangements and conditions for a plebiscite in the Cameroons under British administration. In effect, the committee's decision would determine the future of the people of the Cameroons—when, and how, and under what conditions they would attain full self-government. For its second item, the committee took up the question of South-West Africa—with its attendant issues of apartheid, repression of the natives by the Government of the Union of South Africa, and the continuing refusal of the Union to acknowledge United Nations supervision and responsibility for the welfare of the people of the territory of South-West Africa. A review of social, education, economic, and even political developments in all the trust territories, and in the non-self-governing territories followed. For its last item, the committee turned to the troublesome, long-standing frontier dispute between Somaliland and Ethiopia.

Most of the work of the fourth committee centered on developments and conditions of Africa. To many of us in the United States, Africa is a distant land of deserts and tropical forests, of big-game hunters, primitive native tribes, violence and terrorism, strange cults, and mystery.

All of these things do exist in Africa—but there is far more to Africa than this. Africa today is experiencing a tremendous transformation—what some observers have called the "freedom explosion." From the coast of Tripoli to Capetown, from the Atlantic to the Indian Ocean, a single drive seems to permeate the thoughts and actions of the African peoples: the drive for national identity and independence. In this drive, the nationalist forces are rapidly ridding the continent of the trappings of the old colonial systems.

Today Africa is represented in the United Nations by nine independent states. Within the next decade, 25 more may join the ranks of sovereign African nations. This trend, under the "one nation, one vote" rule, promises to give Africa an important voice in the affairs of the United Nations.

Further, it is in Africa that the contest between communism and democracy has reached a decisive stage. Communist effort to fill the vacuum created by the withdrawal of the Western European powers poses one of the grave threats to future peace and security. These are the reasons why, to many observers, Africa has become the emerging continent which may play a determining role in the outcome of the struggle between communism and freedom.

It is interesting to note some of the characteristics of the men and women who represent the free nations of Africa and many other newly independent states in the United Nations. A large number have been educated in the colleges and universities of Europe and of America. Most are dedicated, articulate leaders of the nationalistic independence movements in their homelands. They are, by and large, sensitive and proud people, extremely anticolonial. Many can cite the writings of our own Founding Fathers, the philosophy of Lincoln, Woodrow Wilson's principle of self-determination, and Roosevelt's Atlantic Charter in support of their convictions. Some show strong dedication to the forms of Western democracy—without possibly fully understanding their inner meaning, evolution, and shortcomings. In matters of national independence and economic development, they often tend to rush headlong, without having made sure that the people they represent can walk.

What is of concern to all of us is that, in their compulsion to drive out the influence of Western colonial powers, some of these men and women appear oblivious to the dangers inherent in the new colonialism and imperialism of the Communist system. On the negative side, I must also mention some other contradictions. Struggling in the name of democracy, some adopt methods devised by totalitarian systems. Bitterly resenting what they condemn as the "white man's discrimination," they are not above discriminating

themselves—not only against whites, but also against other indigenous groups. Bristling against intolerance, they are often impatient—even intolerant—of policies and considerations which do not conform to their plans and expectations.

In short, they are neither angels nor demons—but humans, with many of the virtues, and some of the shortcomings, of the average human being.

This fact was pointed up in an amusing incident that occurred in the fourth committee.

Returning to the conference room for an afternoon session, members of the fourth committee were taken aback by an outburst from the delegate from one of the newly independent nations. His chair was missing, and the delegate was outraged. He had been insulted and discriminated against. He and his country had been humiliated, he asserted, and he insisted on a public apology.

It turned out that, while holding a lunch-hour conference in the committee room, a few of the delegates moved some of the chairs around—and failed to return the chair of the complaining delegate to its proper place. Most people would have made no fuss about it. Yet this particular delegate stopped the meeting and insisted on a public apology, feeling that his pride and his country's honor were at stake.

I could not attempt to summarize the multitude of problems considered by the 14th General Assembly. They ranged from the preparation of a declaration on the rights of the child, to the condemnation of Communist violation of human rights in Hungary and Tibet, and the refusal to admit Red China to the U.N.; from the adoption of principles regarding primary education in the wild reaches of Africa, to proposals regarding the establishment of a common market for Latin America, agrarian reform, and far-reaching programs of technical assistance to the underdeveloped countries; from discussions about the improvement of the International School at the U.N. headquarters to the investigation of border violations in Laos, continuation of the U.N. Emergency Force in the Near East, and provision of relief and rehabilitation of refugees.

Unfortunately, many newspapers, in reporting U.N. affairs, tend, to turn a phrase, "to accentuate the negative, and eliminate the positive." Certainly much has been written about the failure of the U.N. to cope with Communist subjugation of the peoples of Eastern Europe, and to establish the reign of peace and justice in the world. By the same token, I wonder to what extent the average newspaper reader is acquainted with the constructive work being done by the U.N.

All too often, the United Nations is blamed for the shortcomings of its individual members. The one-sided critics of the U.N. should realize that any organization is only as good as its members—and that this principle applies especially to such a voluntary organization as the United Nations, composed of sovereign nations, each extremely jealous of its rights and privileges. In essence, these critics expect the impossible. They blame the United Nations for not doing its job—while they insist that the United Nations cannot be given the tools with which to do it. It is like expecting to mow an acre of lawn—after you have locked up the power mower.

The United Nations is far from perfect—but, by the same token, it has done a better job with the tools at its disposal than most critics will admit. In a world divided by communism, and experiencing the resurgence of nationalism and an unparalleled drive for independence, the United Nations has tried to transcend political boundaries and to promote the attainment of objectives dear to all men of good will: peace with justice, and a better life for those masses who exist in the midst of poverty, disease, and ignorance. Its record needs no apology.

Six Mile Creek Watershed Project, Arkansas

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1960

Mr. FULBRIGHT. Mr. President, the Seventh National Watershed Congress which met here in Washington earlier this week selected the Six Mile Creek watershed project in Arkansas as the 1960 watershed project of the year.

This project which is located in Logan and Franklin Counties, Ark., was one of the pilot watershed projects. The project has been an outstanding success and has demonstrated the wisdom of this concept of soil and water conservation. It has served as a model and an inspiration to soil conservation groups throughout the Nation.

The Six Mile Creek watershed project was sponsored by the Logan and Franklin County Soil Conservation Districts. The officers and members of those districts, as well as the leaders in many other community organizations in the area, worked long and hard in contributing to the success of this project which culminated in the recent award. I am pleased that the work of these dedicated citizens has been rewarded in this national recognition of their efforts. Time has demonstrated the value of the watershed program. Unfortunately, the program is not receiving the support from the present administration which should be given to it. I hope that the Congress will increase substantially the budget request for the watershed program. For those who may doubt the merits of watershed development I urge that they study the record which has been compiled by this one project in my State.

I ask unanimous consent that a press release issued by the Seventh National Watershed Congress be printed in the Appendix of the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

SEVENTH NATIONAL
WATERSHED CONGRESS,
Washington, D.C., April 18–20, 1960.

ARKANSAS WATERSHED PROJECT WINS NATIONAL AWARD

The "1960 Watershed Project of the Year" award was conferred tonight on the Six-Mile Creek Watershed project in Arkansas' Logan and Franklin Counties at the annual banquet of the Seventh National Watershed Congress.

The award was given to representatives of the magazine and Franklin County Soil Conservation Districts for their "high degree of initiative and decision in advancing the project over a period of 8 years."

Other factors which were cited as influencing the award committee's decision were the "interest and participation of the community's agencies and organizations, both public and private—because the project has demonstrably inspired the imagination and confidence of the people of the watershed and as a result its purposes have progressively expanded to include municipal, industrial, recreational, and agricultural water supplies as well as flood prevention and watershed conservation—because the land treatment throughout the 164,000 acres of the watershed together with 24 reservoirs of the project, have, with eminent success, met the test of torrential rainstorms and either eliminated or minimized flooding because the additional supplies of water and the major reduction in flood hazards throughout the watershed have been directly and substantially responsible for improving the economy and living standards of the entire area; and finally, because the accomplishments in Six-Mile Creek watershed are of such quality and effectiveness that the watershed has become a demonstration and an inspiration to the people of other watersheds in other parts of the Nation."

The "Watershed Project of the Year" award is conferred by the more than 25 national agricultural, business, industrial, conservation and civic organizations (see below) that join in staging the annual National Watershed Congress. The purpose of the public meeting is to provide a forum for the exchange of ideas and information on ways of advancing the small watershed development program.

That program relies on local, State and Federal participation to control waterflow and halt soil erosion in upstream tributary areas where more than one-half the annual flood damage occurs. It is administered nationally by the U.S. Soil Conservation Service.

NATIONAL WATERSHED CONGRESS

The National Watershed Congress, which was conceived and fostered by more than 20 of the Nation's leading industrial, agricultural, and conservation organizations, is dedicated to improved natural resources management and use on a watershed basis. The yearly meetings afford an overall review and discussion of watershed programs, problems, and progress. The Congress is not a membership organization; the participating organizations select and direct a steering committee that plans and conducts the annual meetings, which are financed by a nominal registration fee and voluntary contributions. The Congress does not propagandize, adopt resolutions, promote projects, or take any action—it is a forum for the discussion of ways and means of expediting and broadening local watershed programs.

PARTICIPATING ORGANIZATIONS

American Farm Bureau Federation; American Fisheries Society; American Forestry Association; American Nature Association; American Planning and Civic Association; American Pulpwood Association; American Watershed Council; Chamber of Commerce of the United States; Friends of the Land; International Association of Game, Fish, and Conservation Commissioners; Izaak Walton League of America; National Association of County Officials; National Association of Manufacturers; National Association of Soil Conservation Districts; National Audubon Society; National Farmers Union; National Grange; National Parks Association; National Reclamation Association; National Wildlife Federation; Nature Conservancy; Outdoor Writers Association of America; Soil Conservation Society of America; Sport Fishing Institute; Wilderness Society; Wildlife Management Institute; Wildlife Society.

A Medical Plan for the Elderly

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. PUCINSKI. Mr. Speaker, I should like to call attention today to an article which appeared in this morning's Chicago Sun-Times and which so very concisely spells out the problems involved in dealing with the increasing need for legislation to provide hospitalization and surgical care for the aged.

Mr. Milburn P. Akers, editor of the Chicago Sun-Times and author of this article, is one of the most highly respected journalists in this country. It is my belief that he has placed this entire problem in its proper perspective and has made an impressive contribution toward a better understanding of this entire matter.

Mr. Akers' article follows:

A MEDICAL PLAN FOR THE ELDERLY

(By Milburn P. Akers)

WASHINGTON.—The steadily increasing number of persons past 65 has made congressional passage of some plan to help them finance the costs of sickness almost inevitable. In fact, key leaders expect the passage of some such bill at the current session.

The American Medical Association, long the foe of all it construes as socialized medicine has, in this instance, probably brought about its own defeat. For many of the scientific advances which have so dramatically increased man's life span were made by members of the medical profession. As a consequence the number of aged persons now constitute a voting bloc of more than ordinary potential. Additionally there is considerable understanding of the financial problems many of them face, sooner or later, at times of catastrophic illnesses.

The bill which Congress is expected to pass before adjournment (and which President Eisenhower may veto) is looked upon here as merely the first hole in the dike. It will probably be relatively mild; perhaps only a partial contribution in one form or another to the costs of hospitalization. But once such a measure is enacted into law succeeding Congresses will be under pressure, as past ones have been since the first social security measure was adopted, to extend both coverage and benefits.

It will not be the controversial Forand bill that is passed at this time. That measure, in its present form, at least, goes too far for most congressional leaders who, apparently, are not yet willing to cover costs of medical or surgical care.

Most likely, the measure passed at this session will cover only hospitalization and, perhaps, that only in part. Costs for such a program are expected to be met by an increase in the present social security payroll deductions from employees and a matching amount from employers.

There isn't any certainty that President Eisenhower will accept even a mild version of the Forand plan. His administration has had the medical needs of the aged under study but to date hasn't produced a bill or a plan. Even if it does it is unlikely the Democratic majority will look upon it with favor.

Some of the Democratic leaders are not averse to a presidential veto in this instance. In their opinion it is of such stuff that good campaign issues are made.

Few dispute the need for some plan, Government or private, to meet the medical, surgical and hospital needs of the increasing number of senior citizens. Increasing numbers of persons have such insurance protection during their productive years. But most of them are shorn of it upon retirement and remain unprotected during the years when the maladies of old age make it most necessary.

It is this group and its needs which has built up the pressures on Congress; pressures which have finally forced the leak in the dike.

Unless an acceptable, workable, nongovernmental plan is forthcoming shortly—and none is presently on the horizon—the pressures are such that some form of Government insurance is inevitable.

Once the principle is established its extension follows.

Actually, Government is already in the field of medical welfare in a big way. Tax-supported Federal, State and local hospitals already provide total care for many. Free medicines are available to the indigent from many State health departments. Relief funds are used to provide similar care for many of the needy. In one form or the other, these practices have been widespread for years.

Additionally, privately supported hospitals and clinics provide much free service for those unable to pay.

Why then the great demand for the Forand bill or some modification of that proposal?

Vast as is the amount of free medicine and hospitalization available, only special cases or indigents qualify for much of it. The greater bulk of the aged do not come in either category; they merely lack sufficient funds for such extraordinary expenses. These are the persons who want an insurance plan as a matter of right instead of as a matter of charity.

These are the persons whose pressures are putting the Government into the hospitalization insurance business over the opposition of the AMA, which regards such insurance, when governmentally sponsored, as but the first step in ultimate socialized medicine.

That first step is about to be taken.

Problems of the Domestic Fuels Industry

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1960

Mr. YOUNG of North Dakota. Mr. President, as all of my distinguished colleagues who are concerned with a sound domestic fuels industry well know, we face a serious problem brought about by the heavy importation of foreign residual oil in recent years, to the serious impairment of American coal markets and posing a threat to the national security.

Only last week the Department of the Interior was forced to increase quotas for the second quarter of this year, although they were already higher than the original base period of 1957, and this action was largely caused by a few large importers failing to meet their responsibilities under the program.

I am glad to say there has been a change in allocation procedures, and quotas will henceforth be granted on a 3-month, instead of a 6-month basis. This, the Department of Interior feels, will make it possible to keep a closer tab on demand and imports, and will help to prevent overselling and the exhaustion of imports early in the quota period, such as has just happened. However, there may be other administrative improvements which can be made in this program, and all of us who are so vitally concerned with the domestic coal economy strongly feel that consideration should be given to them.

There has come to my attention a letter from Mr. Joseph E. Moody, president of the National Coal Policy Conference, addressed to the Honorable Fred A. Seaton, Secretary of the Interior, discussing some of the problems of administration of this program and making several suggestions which I feel are worth serious study. I believe that all of us interested in the domestic fuels of the United States, and in the national security which they guard, will find these comments of interest, and I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL COAL POLICY
CONFERENCE, INC.,
Washington, D.C., April 8, 1960.

Hon. FRED A. SEATON,
Secretary, Department of the Interior, Washington, D.C.

DEAR MR. SECRETARY: We would like to offer a few additional comments on the subject of residual oil imports, with particular reference to the recent exchange of letters between Standard Oil Co. (New Jersey) and the Department of the Interior.

Because the issues involved are important to our national security, these issues should be well understood by the public as well as the parties involved. Also, it seems to us that good public administration, the exercise of good citizenship by several of the large importors of residual oil, including Standard Oil Co. of New Jersey, and fair play to the small customers, such as hospitals, schools, and sizable apartment houses which depend upon residual oil for their heat, are at stake. The National Coal Policy Conference, as a spokesman for coal producers, the men who mine coal, the railroads who carry it, and others equally interested, would like to be heard via this letter on these issues.

First, all thoughful citizens in Government and out should applaud the statement in the Department's letter of March 29, 1960, where, commenting on the residual oil import control program and the President's proclamation establishing it for national security reasons, stated as follows:

"The major importing companies have a responsibility equal to that of the Government in connection with this as with other national security programs."

Second, what the Department's letter was too polite to say but which an impartial investigation by the Department or appropriate committees of Congress will disclose, is that two or three of the largest residual oil importers, including the Standard Oil Co. of New Jersey, have faltered in the discharge of their responsibility for maintaining this national security program and are engaged in a deliberate attempt to sabotage it to the point that it either becomes ineffective or is rescinded.

Let me back up this harsh, but accurate, statement with certain of the known facts.

(1) The President of the United States, acting pursuant to section 8 of the Trade

Agreements Extension Act of 1958, issued the proclamation on March 10, 1959, establishing a program for adjusting imports of petroleum and petroleum products, including residual oil. He acted because of the conclusion of the Director of the Office of Civil and Defense Mobilization, with which the President agreed, "that crude oil and principal crude oil derivatives and products are being imported in such quantities and under such circumstances as to threaten the national security." It was provided in section 2(a)(2) that in the area east of the Rocky Mountains:

"The imports of residual fuel oil to be used as fuel shall not exceed the level of imports of that product into those districts during the calendar year 1957."

Subsequently, on December 10, 1959, the order was amended to authorize the Secretary of Interior to make "such adjustments in the maximum levels of such imports as he may determine to be consonant with the objectives of this proclamation."

This basic determination, interweaving, and interconnecting the importation of residual fuel oils with crude oil in the national fuel and energy supply, as it relates to national defense, is the only logical one that can be taken. Imported residual oil increases the dependence of our basic economy on fuel and energy resources outside the United States, unreliable in time of war, in exactly the same fashion that imports of crude oil increase this dependence. Imports of residual oil displace domestic sources of fuel and energy and retard growth and the rate of investment, exploration, and development of those sources in the same manner as do imports of crude oil. Hence, efforts to drive up and force substantial increases in the rates of importation of residual fuel oil so long as the President's proclamation stands as the law of the land can only be viewed as contrary to this national security program.

(2) Despite that fact and the clear indication of the level of imports of residual oil in 1957 as the desirable basis for quotas for import controls of residual oil, several large importers have set about methodically to torpedo this system and make it impossible for it to work. They have done so by following marketing methods and pricing tactics that have resulted and will continue to result in substantially increased sales of residual oil for use in large steam electric generating plants on the eastern seaboard, such as those operated by utility companies, as compared to the level of this use in the year 1957. This practice of increasing sales to these users has been assiduously followed, even though the utility companies are equipped to burn coal or natural gas or both interchangeably with residual oil, thereby exhausting quotas which would otherwise be available to those equipped only to burn residual oil.

The eventual results of this marketing policy and practice being followed by a few of the largest importers, such as Standard Oil of New Jersey, will be either the unlimited or greatly increased importation of residual oil, thereby defeating the national security objective, or shortages for small fuel users, such as hospitals, schools and apartment houses, which, unlike the large steam generating plants in utility service, are not equipped to use any fuel but heavy residual fuel oil.

The plan to sabotage the national security program of residual oil import control is a simple one. A few large importers use up their quotas to sell to the large steam generating plants which can just as easily use coal or gas, without any hardship. If caught short, some may even purchase imported residual oil from other quota users at premium prices to fulfill their commitments to the large utilities. These practices divert additional quantities of the imported oil from the small users who are dependent upon it or may result in general price rises of residual oil for others than the large favored customers. By these practices these few large international oil companies hope to create a crisis or a series of crises which will force the Department of the Interior to repeatedly provide additional allotments in a given allocation period or substantially increase levels of imports for each allocation period.

(3) Thus far this tactic has worked. Applying the standard prescribed in the President's proclamation in the first quarter of controls (April, May, and June 1959), the daily allowables for residual oil imports for fuel use were set at 343,445 barrels per day. By using under-the-table price concessions substantially below list or spot public prices available to all customers, a few of the large importers and marketers of residual oil were able to increase the number of large utility users of residual oil and the quantities used by those who had previously consumed oil in part. This led to increased estimates of demand for imported residual oil for the second half of 1959 and the establishment of an increased quota of 365,000 barrels per day. Apparently the Department hoped that this substantial increase in level would allow for a normal adjusting and seasoning of the controls, permit the building of stocks and provide adequately for the new users of residual oil who choose that fuel and were dependent solely upon it because they could not afford the expense of multiple burning equipment. Any hope that the large importers would allow the situation to become normal and stable was in vain. Even this increased level was dashed by estimates of greatly increased utility utilization during the winter which forced the Department to establish a quota for the first 6 months of 1960 at a maximum of 425,000 barrels per day.

Now it would appear from information available to the public (see Journal of Commerce, Tuesday, March 29, 1960), that the three largest importers (Standard Oil Co. of New Jersey, Texaco Inc., and Hess, Inc.), have used up in the first 2 months of the 6-month period the preponderant fraction of their quota. Jersey Standard had imported all but 30 percent of its allocation with 4 months yet to go in the period; Texaco, Inc., owner of Paragon Oil Co., the second largest importer, had 42.2 percent left and Hess, Inc., the third largest, 38.4 percent yet to bring in, according to the Journal of Commerce article.

We charge that the Standard Oil Co., whose president, M. J. Rathbone, wrote the letter of March 16 crying about an impending supply shortage has deliberately created this shortage by taking the quotas of residual oil that should have gone to the small users who depend upon it solely as their fuel, and sold it in increasing quantities to large steam generating plants on the eastern seaboard which are equipped at a moment's notice to use coal or gas.

If the Government can be "blackjacked" into abandoning or weakening the national security program it has undertaken at the highest level by these kind of tactics, then there can be little hope for public administration of this program in the public interest rather than the interest of a few large international oil companies, who, confronted by a glut of oil in the world market, wish to capitalize and cash in on their somewhat dubious concessions from foreign powers by flooding the American market and destroying or weakening the fiber of the domestic fuel and energy industries.

We recognize, as does the Department's letter of March 29, 1960, that a great many importers other than Standard Oil of New Jersey and the other mentioned, have tried to discharge their responsibilities by continuing to utilize their allotments to service their regular customers and take care of new demands from those who chose to equip themselves to burn oil and oil alone. It is significant that those who import from 100,000 to 500,000 barrels have 73.9 percent of their 6-month allotment available as of March 1; those whose quotas are from 500,000 to 1 million barrels have 57.5 percent of their quotas left as of the same date; those whose quotas are from 1 million to 5 million barrels have 65 percent of their quotas left; while those whose quotas are in excess of 5 million barrels have only 32.5 left. There is no greatly increased or abnormal demand for residual oil except on the part of the few large companies who have created artificially that demand by choosing to dump residual oil into the large steam boiler plants at cut rate prices in order to provide additional outlets, despite the fact, known to them, that the end result would be to sabotage the Government's national security program for residual oil import control.

Actually, all the facts point to the desirability of reducing quotas for the next allotment period to the 1957 level, as originally contemplated in the President's proclamation. Again we urge that the next quota be set for a 3-month period, and be based on the 1957 daily level, seasonally adjusted to allow for the lessened demand during the light burn period of the summer months.

Along with all other citizens inside the Government and out, we are reassured by the statement in your letter of March 29 that you do not intend to avoid your "responsibility under the proclamation, and create a set of conditions under which virtually unlimited quantities of residual can be imported and sold at distress prices."

We know that there are available to you tools and methods of administration that will assure those who are not equipped to utilize other alternative fuels that they will have 100 percent of their requirements for residual oil met from imported supplies whether they are existing users or newcomers to the residual oil market, leaving the impact of any shortage artificially induced by the large international oil companies' use of the tactics described to be borne by the large steam generating plants who are able to utilize coal or natural gas without any hardship.

We direct your Department's attention to the reports of the Federal Power Commission which disclose on a monthly basis the type of fuels burned by the large utility plants, including those on the eastern seaboard which have either recently switched to residual oil or have increased their use of that fuel since either the base year 1957 or, even since the controls have been in effect. An analysis of those figures available at the FPC and the disclosure by the utility plants in question of the sources from whom they purchased the residual oil during the period the oil import control system has been in effect will enable you or an appropriate committee of Congress to identify those sellers of residual oil who have sought to make this program unworkable and induce a series of increases in levels of importation which will undermine or nullify the national program for which you have the important responsibility of administration.

We challenge the Standard Oil Co. of New Jersey and the few large importers who are crying shortage to a full accounting of their stewardship in connection with this oil import program. We submit the facts, when ascertained, will supoprt the charges we have made.

Respectfully submitted.

——— ———, *President.*

University of Illinois Professor Says Price-Cost Pressure Is Changing Farm Practices

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. MICHEL. Mr. Speaker, all of us are aware that the farmer is in a serious price-cost squeeze and has been for a considerable time. It is further influencing the tremendous revolution going on in the field of agriculture.

Just the other day Professor of Farm Management W. N. Thompson of the University of Illinois dealt with this problem and I should like to include in the RECORD at this point a newspaper account of his remarks appearing in the Peoria Journal Star under date of April 21.

UNIVERSITY OF ILLINOIS PROFESSOR SAYS PRICE-COST PRESSURE IS CHANGING FARM PRACTICES

URBANA.—Pressures from lower prices and rising costs are forcing Illinois farmers to adjust their farming operations, according to W. N. Thompson, University of Illinois professor of farm management, who cites these major shifts in Illinois agriculture during recent years:

Farms are getting larger and the number of farms dropped. In 1950 Illinois had 195,000 farms, in 1954 there were 175,000. Now there are fewer than 165,000. Larger farms can operate with low costs per acre. Studies by agricultural economists show that labor, machinery, and building costs average about $10 an acre less on 300-acre than on 150-acre grain farms.

Farmers are specializing their livestock production and expanding the size of each enterprise. Larger operations often have cost advantages. For example, farm records show that farmers averaging 43 litters of hogs a year produced pork for about $2 a hundred pounds less than farmers raising only 11 litters.

Farmers have shifted to grain crops that produce the most feed and highest income per acre. They have boosted corn output through higher yields. Southern Illinois farmers are growing more corn and soybeans. They also have stepped up wheat planting in east-central and southeastern Illinois. Many farmers have dropped low-profit oats from their programs.

Corn has maintained its importance in Corn Belt agriculture. Illinois farmers, planting 10 to 12 percent of the total U.S. crop in recent years, have set new records in the proportion of U.S. corn acreage grown in the State.

Fertilizer use has been the biggest change in farming. Farmers applied eight times as much nitrogen in 1958–59 as they did 10 years ago. Soluble phosphate use is about 2½ times greater. Potash application has tripled.

Beef cattle production has increased, while dairy cow numbers have dropped. Some of this change is due to mechanization of the feeding operation and lower labor required for beef cattle.

Farmers are using more machinery in the field and on the farmstead. They are giving more and more attention to mechanizing livestock chores. Chemicals to control weeds and insects are being used more widely.

Government programs, he says, have not been a major influence in farming adjustments. However, as a result of allotments and price support programs, farmers have stepped up practices that increase yields.

He concludes that farmers also have planted more wheat than they would have if the price support program had not allowed a 15-acre planting for every farmer, corn allotments may have resulted in more soybeans and oat acreage in some years, and that the soil bank conservation reserve program has been significant in a few southern Illinois counties but has had little effect in the State's total farm output.

Looking to the 1960's, Thompson expects farmers to continue to produce large acreages of feed grains and soybeans on the grounds that research and experience have shown them that with a balanced fertility program they can maintain high yields with continuous grain cropping on the better soils. Nitrogen fertilizer use will expand.

Livestock production will move toward more confinement and control of environment. In this way farmers will seek more economical use of their labor, buildings, and equipment and thus free land for grain production.

Farm size will continue to increase along with business volume per farm and per man. Interest in farm corporations will increase as farmers seek to obtain needed capital and make farm ownership transfers easier.

Thompson expects that Government agricultural programs will continue, but the nature of the programs is uncertain. If these programs are to be in the best interests of Illinois farmers, they should encourage adjustments that will permit farm families to use their capital, labor, and management ability more fully, he concludes.

Arbor Day

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, April 25, 1960

Mr. HRUSKA. Mr. President, the first Arbor Day was proclaimed on April 10, 1872. However, since then it has been observed in Nebraska on April 22 of each year. April 22 is the birthday of the man who conceived the idea of having such a holiday; namely, J. Sterling Morton, at one time U.S. Secretary of Agriculture, and one of Nebraska's outstanding pioneer citizens.

Arbor Day is based on the idea that it is well to set aside one day, each year, for the planting of trees and to focus attention on the realization of what deforestation means to the future development of the United States.

Since the origin of Arbor Day in 1872, the idea of celebrating such a day, each year, has spread to the other States.

A very well written historical account of this holiday appears in the April 1960 issue of the Fraternal Herald. The article was written by Mrs. Heddy Piskac Kohl, a member of the editorial staff of that publication. I ask unanimous consent that the article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARBOR DAY
(By Heddy Piskac Kohl)

Arbor Day is observed in all States either by legislation or by proclamation of State officials. The date varies, depending on the climate, for example, in Alabama Arbor Day is usually proclaimed on the first or second Friday in December. In California it is observed on March 7, which is Luther Burbank's birthday. In Nebraska, Arbor Day is observed on April 22, the birthday of J. Sterling Morton, who persuaded the authorities of his State to proclaim the first Arbor Day on April 10, 1872.

The idea of setting apart one day each year for planting trees came from a man who lived on the treeless plains of Nebraska. J. Sterling Morton, who later became U.S. Secretary of Agriculture, realized what value, beauty, and comfort trees would add to the barren spaces of his State. On that first Arbor Day more than a million trees were planted in Nebraska. Today, Nebraska is often called the Tree Planters' State.

The day has been made into a school festival in many parts of the country, with children planting the trees. Arbor Day serves to develop an appreciation of natural beauty. Often a part of the school program is to assign the care of young trees to individuals, or to organizations like the Boy or Girl Scouts.

Today, Arbor Day is an occasion for impressing upon all people their responsibility to make their yards, neighborhoods, parks, and public grounds more attractive.

In the State of Washington in about 1940, two other educational movements were started which have also spread over most of the country. To educate the public in forest fire prevention, the lumber industries work with local organizations on campaigns called Keep American Green. The second movement, also in keeping with Arbor Day, is the Tree Farm plan to interest farmers and 4-H Club members in planting wood lots.

A national tree-planting program arose from the alarm felt by farsighted public men over the rapid and reckless deforestation of many parts of the country, and a realization of what that deforestation meant to the future welfare and development of the United States. Most civilized governments of the world at different times have looked after their forests to assure a supply of timber.

J. Sterling Morton was an agriculturist and statesman, who came to Nebraska City, Nebr., in 1855. He was editor of the Nebraska City News, was a member of the Territorial legislature, and served as secretary of the Territory of Nebraska. For a time he was the Acting Governor of Nebraska, later served as Secretary of Agriculture under President Cleveland. Morton's home near Nebraska City, Arbor Lodge, is now a State park. The lodge has been preserved as a museum and the grounds, planted with trees from all parts of the world, are visited by thousands of people each year. Arbor Lodge State Park is situated in a fruit-growing region, to visit it during apple blossom time is a memorable experience.

Originally, only about 3 percent of the area of Nebraska was forested. Such trees as did exist were along the streams, where cottonwood, willow, elm, ash, and box elders were common. Pines were found in the northwestern part of the State. Arbor Day, the establishment of the Nebraska National Forest, the planting of shelter belts, and the development of farm woodlots have all served to give impetus to the forestation of Nebraska's plains. The tree-planting program extends to lakes and recreation grounds which are maintained for the use of the public, and to game refuges and fish hatcheries located in various sections of the State. Game preseravtion and tree planting make a natural partnership.

Foreign Trade and the American Economy

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. SMITH of Kansas. Mr. Speaker, recently the Honorable NOAH MASON, for 24 years a Member of Congress from Illinois, introduced a bill that should be given top priority by the Congress but it should be noted that this bill will have the opposition of all the "powers that be" including men in high Republican positions. Basically, this bill simply is trying to restore the constitutional authority to the Congress, the people's representatives, instead of giving the authority over tariffs to subservient internationally minded bureaucrats appointed by the President.

When we talk and write of foreign imports we are simply talking about American job loss—every American job in a factory making goods for sale is supposed to support at least three persons' livelihood. The administrators of these export programs like to claim that our American exports support at least 5 million Americans.

But as has often been pointed out by me—I have never been able to find anyone in Government who will tell you how many jobs we lose by reason of our imports. If our imports exceed our exports, it would seem logical to assume there is a job loss to the United States. Recently, a well-informed statistical organization said:

We have already taken a long step toward national suicide through failure to maintain tariff schedules adequate to equalize production costs in the low-wage countries with unavoidable high cost—wages, taxes, and living standards—in effect here. Our industries and the jobs of our people are moving overseas at a constantly accelerating rate.

During the first 9 months of 1959 our imports from Europe increased 43 percent compared with the same period on 1958. Imports from Japan increased still more steeply, or 54 percent. Needless to say, most of these imports compete sharply with our own production.

Another major factor influencing our foreign trade, and one that gives great concern, is found in the President's recently proposed "hard sell" trade program, which, in effect, concedes the perils that confront us, and seeks to give relief through a Federal help in selling program.

The Old World, after World War II, in its recovery not only got our U.S. tax dollars but they also copied our know-how. Europe now has modern plants and equipment, mass production facilities, technological skill, research projects, installment credit and the management methods—all obtained by our foreign aid policies over the past 12 years.

It has been all too apparent that most of the men who have been in a position to formulate foreign as well as domestic policies—all seem to have to have superheated passion for the uplift of foreign peoples and nations. These men seem to have more concern for the welfare of the people and industry of Europe and Asia, including Communist-dominated countries, than for those of the United States. The wants and ambitions of people in foreign lands receive more attention than the great middle class Americans who are struggling with high taxes and trying to live on an inflationed dollar worth 47 cents.

Anytime a Member of Congress speaks out against this prevailing tendency of always putting America last he is immediately stamped as a modern-day illiterate and is a moron from out of the wide open spaces without the benefit of reading the New York Times or Washington Post—or as one intellectual dogooder expressed it—"out in that area of America where they still believe in the doctrine of America first, where Douglas MacArthur is looked upon as a great American, where the people listen to Fulton Lewis, Jr., and where many of these stay-at-home Republican conservatives would like to vote for BARRY GOLDWATER for President.

During the past 7 or 8 years I am sure many persons who have read my newsletters will remember my position and attitude toward our so-called foreign aid and related farm programs. I have been against these programs because as I have tried to point out all we have done is to build up future competition for America—particularly in our own farm areas. Many people have been violently opposed to my position because they always said, "any program is good—that gets rid of our surpluses and helps the needy countries because this builds up friendship for us throughout the world."

That sort of reasoning is deadly unrealistic for the simple reason this policy would not work now—nor at anytime in the future—because you do not buy friendship and you do not buy allies—foreign nations think of their own welfare—just as the United States did up until 12 years ago when we started out to be Santa Claus for all the world. During these years the big manufacturers, big international groups—particularly the international labor bosses—big auto manufacturers and other world-saving groups with American tax dollars all have pointed their fingers of scorn and contempt at any Member of Congress who voted against foreign aid.

But let us make a little closer reappraisal of these world-saving programs with U.S. tax dollars and see what has happened.

Our exports last year, for the first time, were $3 billion less than our imports—the net result—lost $3 billion worth of gold out of Fort Knox to pay foreigners for their goods. We have to pay them in gold; you can't lawfully own gold. You get 47-cent paper dollars.

We have lost our world trade auto market—more automobiles were imported into the United States than sold. World steel markets are being taken away from us throughout the world—our own markets are buying more and more imported steel products. You can go to any hardware or lumber yard in Kansas and buy a roll of barbed wire made in Europe at $2 a roll cheaper than a roll of wire made in Gary, Ind., and the wire is just as good.

The $90 billion we have given away in foreign aid programs brought us stiff competition. We gave them our money, built up their factories, and now they dump their products back in our laps—because of their cheap labor and freight rates. They are taking our markets here in the United States—not with cheap, shoddy goods but with quality products—and throughout the world they continue to absorb our markets of manufactured goods.

Let us now take a look at the foreign agriculture markets that we long thought belong to us—because of our superior know-how and the great progress we have made in agriculture production methods. We are now losing our agriculture world markets in wheat, corn, rice, cotton, and feed grains because of two factors—we taught them modern agriculture methods with U.S. tax dollars and now many of these countries are self-sufficient and as a result we not only lost these markets but in many cases they took away our markets in other countries because of cheaper prices. Since World War II we taught the Japanese how to eat bread. Last year we sold Japan some 60 million bushels of wheat. This year Japan is buying wheat from Canada and Australia. Why? Because they can buy their wheat 15 cents a bushel cheaper.

Now to be specific let us look at this statement copied from the Wall Street Journal:

WASHINGTON.—Grave fears about the direction in which Europe's young but potentially might Common Market is headed are now being voiced within the U.S. Government.

A secret paper, drafted in the Department of Agriculture and now being circulated "for discussion purposes," contends that commodity control schemes of the six-nation European Economic Community could go far toward wiping out an export market for U.S. crops which currently approaches $1 billion a year.

For a Government document, this one contains some pretty rough language.

It charges that the Common Market lands—Germany, France, Italy, Holland, Belgium, and Luxembourg—are headed straight for "excessive (and abritrary) bureaucratic regulation of markets."

It accuses the Common Market of "aiming at self-sufficiency" in agriculture not at freer trade.

It states this may well reduce Common Market imports of major commodities from America and other suppliers to nothing more than a residual item.

So our international trade experts expect those who seem to want to help foreign nations instead of America—probably do not see any danger in this Common Market or that it will affect the American farmer. It would seem however that even our own Agriculture Department now sees clearly what effect this Common Market will have on selling our excess farm products.

The U.S. diplomats have hailed and supported this Common Market idea as a brilliant conception by the international do-gooders—but just how this Common Market will help the American laboring man or the farmer is just a bit hard to understand.

Certainly one of the major issues that should be decided in this coming election

campaign is that this American-last attitude should be brought to an end. There never was more a time when the ordinary citizen should rise up and elect a conservative, aggressively pro-American Congress.

Immediately after World War II this same group of "international do-gooders with U.S. tax dollars" promoted the idea that Russia should take back to Russia all the fine machinery of prewar Germany in payment of war claims Communist Russia claimed was due her as a result of German aggression in World War II. Millions of fine machinery was taken to Russia—then Uncle Sam with usual shortsightedness—gave Germany U.S. dollars to re-equip her factories with new and modern machinery. As a result, the Germans with their usual efficiency, with this new and modern machinery, and with no 40-hour week for the hard working efficient German workmen—have gone ahead and grabbed off many of the U.S. markets throughout the world. This is a good example of the United States rebuilding the economy of our future competitors.

As a result of this policy of building up our competitors both in Europe and Japan—unemployment in the United States will soon become a major problem in this country. Every Member of Congress who wants to stay in Congress must face these increased foreign imports which cause American unemployment. Already, there are areas in the United States where this unemployment is due solely to foreign imports. When these factories shut down there is always an epidemic of panaceas suggested, such as depressed area appropriation, bigger Government unemployment benefits, artificial work programs to sustain purchasing power in a declining domestic economy, and, of course, all the old WPA projects will be dusted off and a lot of new ones discussed—in most cases for the sole purpose of getting votes and not as a permanent solution.

Competition within the American industrial markets by American companies for the home market is a good thing but when the competitors from abroad come into the American market where they pay just one-fourth of our wage rate and with no penalties for overtime nor 40-hour week—that is a big advantage but here is another big advantage: the competing foreign companies rarely pay more than 9 percent of a profits tax, while in the United States it is 42 percent and these foreign countries give much more realistic writeoff replacement costs than the United States, all of which permits our foreign competitors to be constantly getting better and more modern machines.

Just a few years ago the boss-ridden international unions were all promoting these foreign aid programs—but what do we find today—they are crying for tariff protection.

At least three American unions are now demanding that Congress put up tariff bars on imports, and they want to negotiate labor contracts prohibiting American employers from handling foreign goods. However, these labor bosses never suggest that they or their members try out such realistic actions as reducing inflationary pressures by holding the line on labor costs or by reducing unit costs through higher efficiency and productivity.

The remedy for this taking of American markets is probably not to erect a wall of high protective tariffs in order to keep these products out of America, but rather a combination of a few simple laws applied with just plain commonsense; quit granting economic aid all over the world to our competitors and when we make a reciprocal trade deal make it a two-way street instead of a one-way street, as at present. Get Government out of business; give business a better writeoff policy; quit passing Federal laws and regulations which increase the cost of production, and reduce personal and corporate taxes which restrict the building up resources of capital to carry on experimentation in products on a competitive market, and above all else see that business and the man who labors is protected from the bossism-for-me type union leaders, such as Hoffa, Walter Reuther, and Hutchinson, of the carpenters.

Congress should do these things now and not wait until the breadlines form and emotion fills the air, then we will get only some quack, panacea remedies designed basically for votes and all at the cost of the taxpayers.

The Congress, from heavy pressure from two administrations, has tried to buy the love, respect, and support of the people of the world with your tax dollars. As a result, we have a tax load that has taken much of the incentive out of industrial advancement. Our Government, whether it has been the New Deal, Fair Deal, or present deal—has simply preached security instead of opportunity—neither political party seems to be aware that no one pays taxes but the consumer of goods and services.

Under these doctrines people have been brainwashed and conditioned for the coming of more socialism and the welfare state and, of course, there are many who believe the ultimate objective to all this is a one-world government, one parliament for all mankind, one church, one language, one color, and one policeman.

We as a nation, as led by our present administration and the Congress, not only seem committed to a welfare state here at home but to promote a planned economy of benevolent socialism throughout the world.

Recently the Wall Street Journal published an editorial which contains ideas that should be fully understood by those who advocate bigger and better gifts, even though called loans. I highly recommend the contents of this editorial entitled "Blank Checks."

BLANK CHECKS

Congress, one of its committees unanimously recommends, should consider abolishing the Development Loan Fund if it doesn't straighten itself out.

The DLF is one of the proliferating bureaucracies spawned by Government foreign aid, and the House Government Operations Committee says it isn't operating the way Congress intended. Instead of approving loans only for specific projects in underdeveloped areas, it has been approving blanket credits to governments, with little or no check on what is done with the money.

As the committee report puts it, "Once the recipient governments have been promised aid in a certain amount, they have been known to take the view that DLF is merely being bureaucratic if it scrutinizes too closely the use to which that aid is to be put."

This melancholy history is in no way surprising when the agency's basic setup is recalled. The DLF was devised to provide "soft" loans, repayable in local currencies, to finance industrial projects in economically backward nations. So right off the bat it was on unsound financial ground.

An agency so conceived, moreover, is in poor shape to resist foreign political pressures. If the Government on the receiving end wants to take the money and build steel mills in deserts or other latter-day pyramids—well, so what? Only the unsophisticated would imagine that the money is actually supposed to improve the economic lot of the people concerned.

What is wrong with the DLF is symptomatic of the troubles of the foreign aid program as a whole. It is not merely the carelessness, the waste, the blunders, the blank checks. These but reflect the fundamental defect—the absence of sound principles and clear objectives.

We hope Congress will pay attention to the committee's recommendation concerning the DLF. But before a sensible foreign aid program can be built, more than this one annex will have to be torn down.

Report Against Best Interests of Government

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1960

Mr. BARTLETT. Mr. President, on February 9, 1960, I introduced, for myself and the junior Senator from Alaska [Mr. GRUENING] a bill amending the act of March 3, 1933, the Intercoastal Shipping Act. Our bill, S. 3005, has been passed by the Senate. It would allow the Federal Maritime Board to suspend proposed increased tariffs for 7 months. The 7-month period corresponds to the period of suspension which the Interstate Commerce Commission may enforce under paragraph 7, section 15, of title 49, United States Code. Under existing law the Federal Maritime Board can suspend proposed increased freight tariffs for 4 months only.

In a letter dated April 13, 1960, to the chairman of the Interstate and Foreign Commerce Committee, the General Services Administrator said this about S. 3005:

As you know, it is the statutory duty of the General Services Administrator to represent executive agencies as users of transportation services in negotiations and in regulatory proceedings.

We are advised that this legislation is opposed by the Department of Commerce and other agencies which are concerned with the broad aspects of national transportation policy. We defer to their views in those areas in which GSA is not directly involved, although the additional 3 months' suspension authorized by the bill would be beneficial to the Government as a shipper.

It does not surprise me, Mr. President, that passage of S. 3005 by Congress will benefit the Government as a shipper. It does surprise me, however, that S. 3005 would be opposed by the Department of Commerce, of which the Federal Maritime Board is a part. In its recent action allowing higher freight rates in the Alaska trade before hearings and refusing to suspend new tariffs in the Alaska trade, the Board stated that the period of 4 months—the length of time by which tariffs may be suspended by the Board—was too brief to allow adequate consideration of the tariff schedules. S. 3005 was introduced to remedy the situation of which the Federal Maritime Board complained. The authority to suspend rates for 7 months would be permissive and not compulsory.

The suggestion in the General Services Administrator's letter of April 13 is the first inkling that the Department of Commerce does not favor enactment of S. 3005. The Committee on Interstate and Foreign Commerce has received reports from the Department of Defense, the General Accounting Office, the Department of Agriculture, and the General Services Administration regarding the bill. The Department of Commerce, however, has not voiced the opposition attributed to it by the General Services Administrator.

I recently addressed the Senate regarding the action of the Federal Maritime Board in suspending the proposed rate increase in the Guam trade. I applauded the suspension order delaying the imposition of proposed rate increases until hearings were held. This is the kind of procedure which we Alaskans would have appreciated when the carriers in the Alaska trade proposed the rate increases which became effective in January of this year. I noted today, Mr. President, that the Federal Maritime Board has suspended proposed rate increases in the Pacific coast-Puerto Rico trade, pending investigation. I wish to take this opportunity to praise procedures under which the Board holds hearings before allowing rate increases to be imposed. Although these procedures were not followed in the Alaska case, it is gratifying to note their acceptance by the Board in the Guam case and in the Pacific coast-Puerto Rico case.

Anticrime Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. CRAMER. Mr. Speaker, with reference to the anticrime bill I have just introduced, my proposal would level a two-pronged attack on national gambling operations.

Phase one would require professional gamblers, applying for wire or radio communication facilities, to file affidavits that they had not transmitted or received in the 12-month period preceding such application, nor would not transmit or receive, gambling information, as defined in my bill, in interstate or foreign commerce, during the period such communication facilities are furnished. Severe penalties are provided for failure to file or for filing false or misleading information on such affidavits.

Phase two would require common carriers by wire or radio to exercise due diligence to insure that all gamblers registered or who should be registered under the occupational tax provision of the Internal Revenue Code of 1954 (26 USC 4412(a) or (b)) file such affidavits with them before communication facilities are furnished. Penalties are provided for failure to require the filing of such affidavits and for failure to keep Federal, State, and local law enforcement officials informed of the identity of persons filing under the provisions of this proposal.

Additionally, common carriers by wire or radio who furnish, or their employees who assist in furnishing or installing, communication services would be required to inform the Department of Justice where they have reason to believe that such facilities are or will be used by professional gamblers.

The term "gambling information" is defined to mean "the process of making, settling, paying, registering, evidencing, or recording any wager."

The term "wager" is limited to sports events, contests, wagering pools and lotteries conducted by those in the business of wager for profit.

Laments for a Dying Language

EXTENSION OF REMARKS

OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1960

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting poem entitled "Laments for a Dying Language," written by Ogden Nash.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

LAMENTS FOR A DYING LANGUAGE

(By Ogden Nash)

What's the monster of this week?
"Mystique"—
A noun that in its current arcane use leaves me frigid,
Since it is not to be found in either the O.E.D. or Webster's Unabridged.
It is primarily the invention of the mystagogues of esoteric criticism, so it means whatever they choose.
But I will give you an example of what I think they think it means, only from the domain of a different muse.
I recently heard on the air a song in which the lover states that the loved one is his idea
Of a band of angels singing "Ave Maria."
This is not only a metaphor unique,
It is also an example of the songwriter's mystique at its peak.

II

Someone comes up with a linguistic gimmick,
And thousands flock to mimic.
This noisy age, when big loud bangs give way to bangs louder and bigger still,
And admirals, Congressmen, and minor Government officials pop off at will,
Gives us two gimmicks that reflect our minds' corrosion:
"Crash program" and "explosion."
See here the population explosion, the freedom explosion, the Broadway and off-Broadway incest-theme explosion, the explosion of British secretaries in offices of grandiose pretensions,
And there the crash program for defense, for space exploration, for a third major league, for nominating the candidates previous to the conventions.
With each successive bang my hopes grow limper
That the world's end will be a simple whimper.

III

In the nice-minded Department of Prunes and Prisms,
It's I for you
And euphemisms.
Hence the phrase I would eagerly jettison:
"Senior citizen."
Let us, then, retranslate
Joel, 2, 28.
To the sociologist squeamish
The words "Your old men shall dream dreams" are less than beamish,
So "Your senior citizens shall dream dreams" it shall henceforth be,
Along with Hemingway's "The Senior Citizen and the Sea."
I, though no Joel, prophesy that someday while the senior citizens are projecting the image of an aged-adjusted social group,
The old men will rise up and knock them for a loop.

IV

Those authors I can never love
Who write, "It fit him like a glove."
Though baseballs may be hit, not "hitted,"
The past of "fit" is always "fitted."
The sole exception worth a haricot
Is "Joshua fit de battle ob Jericho."

V

Coin brassy words at will, debase the coinage;
We're in an if-you-cannot-lick-them-join age,
A slovenliness-provides-its-own-excuse age,
Where usage overnight condones misusage.
Farewell, farewell to my beloved language,
Hence English, now a vile orangutanguage.

The Role of the Modern Seaport in Industrial Development

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. McCORMACK. Mr. Speaker, In my extension of remarks, I include an informative speech by one who knows the subject on the importance to our gross national economy, as well as our export and import trade, of the existence of a well-planned and modern port entitled "The Role of the Modern Seaport in Industrial Development," delivered by Ralph E. Casey, president of the American Merchant Marine Institute, Inc., and delivered by Mr. Casey before the World

Trade Week Conference on April 21, 1960, at Boston, Mass.

The views of Mr. Casey, by reason of his knowledge and experience, should be widely considered particularly by those interested in the various ports of our country.

THE ROLE OF THE MODERN SEAPORT IN INDUSTRIAL DEVELOPMENT

(Address by Ralph E. Casey before the World Trade Week Conference, Boston, Mass., April 21, 1960)

It is indeed a pleasure for me to participate in your panel discussion on "The Role of the Modern Airport and Seaport in Industrial Development." As spokesman for the shipping industry, I feel that I have a distinct advantage over my counterpart from the airlines as I can refer to thousands of years of recorded history to show the reliance of the world's great powers on international waterborne trade. This has been true from time the time of the Phoenicians (over 3,000 year ago), the first great power to develop colonies and engage in foreign trade, on to the time of the Roman Empire, the Venetian merchants, the Spanish and Dutch colonization of the New World, the emergence of England (after the defeat of the Spanish armada in 1588) as the world's then leading power, down to today when we find our country, the United States, the most powerful and important military and trading Nation in the world. Our foreign trade, the largest of any nation (exports and imports), currently accounts for 30 percent of total world trade.

The roles of port and industrial development to serve our expanding trade are so interdependent that it is difficult, if not impossible, to determine which is the more important. This would be like trying to determine which is the more important—the product to be sold or the market in which it is to be sold. If there is a lag in port development, there will be a corresponding lag in industrial development and vice versa.

The shipping industry is not only all-important to a port area but it is vitally concerned with the growth and activity of the port. Our industry realizes that constant improvement of the port and port facilities is a must if our industry is to grow and keep pace with the national economy. The one thing certain, however, is the apathy of most national, State, and local officials to problems facing the maritime industry. And, when I say maritime industry, I include ports and port facilities.

The shipping industry, on a national basis as well as on an individual company basis, has spent much time and effort in taking its case to the people. This, however, is a most difficult task and one that never ends. Just when you feel you have a particular Government or industry group aware of the nature of the problem, a change of administration or management, or some other outside influence sets the effort back months or years. The modern port first must convince each individual industry in the immediate area of the importance of the port to its overall success. If State and local government and industry fail to recognize the importance of the port to continued growth, it is up to the local port officials to sell that idea.

It is a temptation when there is general prosperity to sit back and relax and neglect the day-to-day job of keeping up with the times. In this regard, it is a fact that our net waterborne trade (foreign and domestic) increased by 27.7 percent, or over 203 million tons, in the last decade and totaled 935,114,400 long tons in 1959. Some of the more progressive ports were able to exceed the national average increase by a wide margin, while others stood still or even lost ground during this period.

The prosperity of a port is determined by the same yardstick used by a steamship company—namely "cargo." Any sharp increase or decease in the movement of cargo over the dock means much more than is indicated on the surface.

For example, each long ton of cargo loaded or unloaded through a port area produces a direct dollar expenditure in the port area as follows:

General cargo	$15.51
Crude oil, including refining	10.50
Tanker cargo, other than crude oil	3.60
Coal	2.48
Grain	5.80
Ore	2.88
Raw sugar, including refining	44.91

These expenditures represent direct revenue. It is money that would not circulate if it were not for the port. It is easy to see from these figures that an increase in general cargo of even 100,000 long tons annually means a direct expenditure in the port of over $1.5 million annually. One vessel calling continuously at a port during the year could move more than this amount of cargo.

Preliminary figures for 1959 indicate that U.S. production of movable goods totaled $225.6 billion as compared to $144.8 billion in 1950, representing an increase of 55.8 percent. United States exports in this 10-year period (1950-59) averaged 8.6 percent of all our production of movable goods.

This means that the American business community depends on our export market to sell a percentage of their production which, in most cases, determines whether or not a corporation ends up in the black at the end of the year. Many companies, of course, do not deal directly in the foreign market, but their production and the jobs they create permit other firms to participate in foreign trade. In 1959, we exported $17.4 billion worth of perchandise or 7.7 percent of production. If American industry had been unable to sell this portion of their production overseas, it would have meant that we would have been unable to earn foreign exchange for the purchase of vital imports. Imports moving through our ports in 1959 totaled over $15.2 billion and represented 3.2 percent of our gross national product. The existence of a well-planned and modern port may determine where a new business requiring a large volume of imported raw materials decides to locate and in some cases may determine whether an existing firm will remain in the area. The dependence of many of our basic industries on raw material imported from overseas destinations makes it imperative that we have modern port facilities to cut handling costs.

For many decades the United States produced more raw materials than it consumed. This is no longer true. Our country has changed from a raw material surplus nation to a raw material deficit nation. If we should become isolated from the rest of the world and our stockpile of raw materials depleted, the operation of our basic industries would be sharply curtailed for lack of certain imported materials. In fact, our capacity to manufacture items needed in national defense such as ships, aircraft, and electronic equipment would be greatly curtailed and in some cases, completely halted. It is easy to understand our dependence on waterborne imports when one realizes that 90 percent of our asbestos—86 percent of our bauxite—90 percent of our chromite—100 percent of our hard fibers—89 percent of our manganese ore—98 percent of our mica—100 percent of our natural rubber, and 68 percent of our sugar come from foreign sources. This represents only a partial list of commodities that this country must import if we are to continue as the world leader in production and trade.

As we begin the decade of the sixties, the American-flag steamship industry is faced with one of the most crucial problems of its history, that is, the financing of replacement and modernization of its aging fleet. Plans are underway by many operators to build new and modern vessels. The use of mechanization and automation may be the key to our future. The port that keeps pace will undoubtedly be the one that will benefit by modern vessels employing modern techniques. New industry will locate in the areas where service and adequate facilities prove most economical. Now is the time for port authority officials to begin working with industry to determine what will be needed. All segments of the port community must work together to secure the financial backing needed for modern port improvements. Close liaison with local, State and National Government agencies concerned with foreign trade and port improvements is also a prerequisite in attaining these goals.

The modernization and development of gulf ports have been credited with having changed the South from its dependence on an agricultural economy and opened the way for its industrial development. This fact is seen readily when one looks at the increase in port traffic in many of the gulf ports. While this Nation as a whole shows a tonnage increase in cargo shipments of about 28 percent during the last 10 years, some of the gulf ports have recorded tonnage increases of two and three fold in the same period.

In a recent study by the Delaware River ports on the economic impact of the port area, it is stated that "'More than 1 job in every 10 in manufacturing industry and in wholesale and retail trade in the 11-county Deleware River port area depends upon the availability of materials and merchandise received through Delaware River ports. This statement is based on the fact, uncovered by the survey, that 11 percent of the total cost of materials for 'manufacturing and commerce in the port area are received through the port."

The study also indicates that one job in five in manufacturing depends on material received through the port. Port-created payrolls result in consumer expenditures of many millions of dollars in retail trade and service establishments. This money is spent in the food markets, drugstores, barbershops, service stations, etc. It is spent for housing, transportation, furniture, automobiles, clothing, and every item a citizen might need or buy. In this respect, every business or industry is the region served by the port is aided by, or dependent on, cargo shipped through the port. It is up to the port authority and directly related industries to sell the importance of the port and trade to our local, State and National economy, and often the toughest hurdle is the man on the street. At least, that is where the job must begin.

In my brief discourse, I have attempted to point out the importance of the port to industrial development and the importance of industrial development to trade. A look at the St. Lawrence Seaway, our fourth seacoast, after its first year of operation tells a great deal about the importance of adequate facilities. Original tonnage forecasts for the seaway were off considerably and much of the blame has been placed on inadequate berthing facilities, shortage of skilled labor, shallow channels, etc. The new seaway has a depth of 27 feet; however, not one port on the Lakes had a channel depth of 27 feet when the seaway opened for business last year. Port, industry, and Government officials in the Great Lakes area had 5 years in which to be ready for the seaway and failed to have the foresight to modernize their port and harbor facilities. A 27-foot seaway is limited to its use without a corresponding depth for the ports it is called

on to serve. Of the two major U.S. flag companies operating into the Lakes last year, one recorded a loss of $500,000 and the other lost over a million. The latter has indicated that they are through for the time being, at least, and there is no question but that the other will not continue indefinitely if port conditions and other facilities do not improve so that unnecessary delays can be avoided.

The shipping industry is very fluid and can be moved more easily than shore-based industry. This means that a vessel will go where there is cargo and where it can be loaded most economically.

The saying "you should learn from the mistakes of others—you haven't time to make them all yourself" still holds true. We should examine the performance of our competitors, along with our own past activity, in order to keep pace today and forge ahead tomorrow.

I have no crystal ball and have not attempted to tell you what specific facilities are needed for the future. One thing is certain, however, that if this country is to remain the bulwark of the free world, we will have to continue to ship an increasing amount of cargo in both our domestic and foreign trade. This cargo will have to move over the docks of this Nation's seaports. The U.S.-flag steamship industry intends to gain its fair share of this trade and undoubtedly will patronize the port facility which permits the most economic use of their vessels.

Mr. G. Keith Funston, president of the New York Stock Exchange, predicts that by 1970 there is a good chance that the gross national product will reach $700 billion. This represents an increase of 46.9 percent over 1959 gross national product. If the transportation of goods maintains the same relationship to gross national product as it does today, this means that shipments by water should show approximately the same gain. Nineteen hundred and seventy is only 10 years away and on the decisions made now will depend whether or not the port of Boston and the State of Massachusetts gain their fair share of the predicted increase.

I wish you every success.

College Loyalty Oaths

EXTENSION OF REMARKS

OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1960

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "College Loyalty Oaths," written by the distinguished Senator from Massachusetts [Mr. KENNEDY] and published in the April 1960 issue of Coronet magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLLEGE LOYALTY OATHS—LOYALTY OATHS, ESPECIALLY IN EDUCATION, HAVE NEVER CONTRIBUTED TO OUR SECURITY—TRAITORS AND LIARS WILL EASILY TAKE THEM—BUT FREQUENTLY, PRINCIPLED PEOPLE WILL REFUSE—LOYALTY, INSISTS THE SENATOR, CANNOT BE COERCED OR COMPELLED—IT MUST BE INSPIRED

(By Senator JOHN F. KENNEDY)

In 1776, Benjamin Franklin—fully aware of the risk—decided to entrust secret plans of the American Revolution to a French agent. He believed the man's word of honor that even British torture would never wring these facts from him. What more could he ask? "He would have given me his oath for it," Franklin reported to the Continental Congress, "if I laid stress upon oaths. But I have never regarded them otherwise than as the last recourse of liars."

Franklin knew that many an American agent had hypocritically taken the new British oath of allegiance. On the other hand, he knew that little could be expected from those colonists with Tory sympathies who had been compelled by their crusading neighbors to take oaths supporting the revolution.

Unfortunately the American Nation, born in that year of divided loyalties, has rarely heeded Ben Franklin's sage advice. In times of crisis to the state—times of war insurrection or suspected subversion—both Federal and State Governments have repeatedly sought some swift, convenient, and reassuring means of publicly identifying and compelling citizen loyalty. Elaborate loyalty oaths and affidavits—going far beyond the simple pledge of allegiance or the oath to uphold and defend the Constitution—have inevitably been the answer.

But there is no evidence that they have ever contributed substantially to the security of the Nation.

Yet overzealous patriots keep trying to legislate loyalty. The latest example of this is the case of the National Defense Education Act of 1958, which contains a welcome program for student loans.

Many bright students, whose talents this Nation needs to develop in competing with the Soviets, require financial assistance to continue their studies. But today, if those needy students attend Harvard, Yale, Mills, Grinnell, Sarah Lawrence, Oberlin, Swarthmore, and a dozen or so other schools—including some of our best science laboratories—they cannot obtain a Federal loan.

These colleges and universities are refusing to participate in the loan program. They need the money—they know their students need the money—but they refuse to administer one of the bill's strangest provisions: a section which requires every student, teacher, scientist or other scholar applying for a loan to not only sign the customary oath of allegiance, but also to sign a vague, sweeping affidavit declaring that he does not believe in or support any organization which believes in or teaches the overthrow of the Government by illegal methods.

How can our universities police this affidavit they find so distasteful and humiliating? How can they investigate what organizations their students might believe in, and what those organizations believe? If a student does not belong to a subversive organization, might not his beliefs still be contrary to the affidavit? Which methods of overthrowing the Government are illegal and which are not?

No one can quarrel with the principle that all Americans should be loyal citizens and should be willing to swear allegiance to our country. But this is quite different from a doctrine which singles out students—and only those students who need to borrow money to continue their education—as a group which must sign a rather vague affidavit as to their beliefs as well as their acts.

Congress appeared, on the one hand, in this act to recognize that our students and teachers were one of our greatest assets in the cold war, our hope for the future—but then, in the same act, to single them out for scorn and suspicion in a demonstration of no confidence. An affirmative oath of allegiance may be understandable—but the negative disclaimer is at variance with the declared purposes of the act. It adds a needless barrier to many prospective students. More and more of our leading colleges and universities are refusing to participate in the loan program because of it.

The president of Wisconsin State College calls it unnecessary and distasteful. Father Michael J. Walsh, the president of Boston College, says it "represents a lack of confidence in the youth of the country." Mills College in California would not accept these funds because this section "invades the privacy and questions the integrity of individual belief." President Nathan M. Pusey of Harvard called it vague in intent, useless in effect, inappropriate in context and insulting to the very group the Congress seeks to encourage. Oberlin College in Ohio declined all loans under the program because, its president stated, "it cannot compromise its historical devotion to freedom of expression and belief."

In introducing a bill to repeal this provision last year, I called it a futile gesture to the memory of an earlier age. Between the end of World War II and the end of the Korean war, a rising tide of fear and suspicion engulfed many Americans. The detection of Communist agents and the erection of new standards of loyalty and security were no longer left to responsible authorities. Neighbors, fellow workers, faculty members, Federal employees, friends—anyone might turn out to be "Red" (or said to be by someone). Easy answers and convenient scapegoats were sought, and provided, in a troubled time when the answers—How did the Russians get the bomb? Why did we lose China?—were not easy.

But one easy answer was the oath. Those who took it were loyal; those who refused were not. What could be simpler? And so countless hundreds of new oaths sprang up, administered by Federal, State and local bodies: oaths for schoolteachers, oaths for notary publics, oaths for professors, students and scientists and, in one State, a loyalty oath for professional wrestlers.

Finally, the furor died down—the atmosphere changed. Senator Joseph R. McCarthy of Wisconsin departed from the scene and the American people turned their attention from oaths of loyalty to the more positive tasks necessary for strengthening our national security. But in the summer of 1958, one relic of this earlier era crept into the National Defense Education Act.

The historical background of this kind of special oath is not confined to the recent era of hate and suspicion.

The first soldier in Washington's army to hang for treason—in a plot to capture the Continental Congress—had sworn to two special oaths of loyalty.

During the Civil War when Congress extended special oath-taking to itself, the only result was the resignation of a loyal but indignant Senator from Delaware, James A. Bayard. Another reluctant oathtaker, a civil servant in the Census Bureau whom a congressional committee had cited for disloyal feelings, enlisted in the Union Army and lost his sight at Gettysburg; while another Federal employee, when apprehended for disloyal conduct and asked about his oath, replied: "I could take 500,000 such oaths, as they amount to nothing."

In the post-World War I era, New York's famous Lusk laws included oaths among other special tests of teacher loyalty. But after only 2 years they were repealed, dismissed teachers were reinstated and Gov. Al Smith called the laws repugnant to the fundamentals of American democracy.

Nearly 2 million WPA workers were required to swear their loyalty in the unsettled days prior to World War II, before they could pick up their tools and rakes. After the war, when the Taft-Hartley Act required special non-Communist affidavits from union leaders, Harry Bridges took the oath—but John L. Lewis, a fighting anti-Communist, would not. Among the federally employed scientists working on secret weapons projects who

took a special oath was David Greenglass, convicted atomic spy.

This is hardly historical justification for the imposition of a special oath on student loan applicants today. And the history of special oaths in other lands should also have taught us a lesson. The student affidavit of disbelief is directly descended from the hated test oaths imposed centuries ago by successive contenders for the British crown. Under Charles II, for example, no one could teach at a university or school without taking an Anglican oath—and also an oath that the earlier oath imposed by Oliver Cromwell was unlawful. Article VI of our own Constitution reflected the fear of religious test oaths which had driven many to these shores.

In the 1930's our universities benefited from Italian professors fleeing Mussolini's requirement that all faculty members take a special oath stating that their teaching would be aimed at instilling devotion "to the Fascist regime."

The tragic fact is—as the history of loyalty oaths demonstrates—that the affidavit will not keep Communists or other subversives out of the student loan program. Card-carrying members of the Communist Party will have no hesitancy about perjuring themselves in the affidavit. I am proud as a U.S. Senator to reaffirm my own pledge to uphold the Constitution and flag. But I regard a special affidavit as to a person's beliefs—imposed on average citizens who have no special position of trust—as a wholly meaningless, impractical weapon against real subversives. This is particularly so when they are singled out, because they cannot afford the tuition their classmates can afford.

The only students who are adversely affected by this discriminatory provision are honest, non-Communist students—including:

(a) Students who attend universities that refuse to participate in this program.

(b) Students who feel they cannot execute the oath and affidavit for reasons of religion or conscience.

(c) Students who resent the requirement or consider it an unnecessary limitation on their academic freedom.

(d) Students who are overapprehensive in their interpretation of the affidavit or unnecessarily fearful of some official's interpretation.

It is all very well to ask: "Why not sign, if you're not guilty?" Most students will sign. Most universities will participate. Those who reject loans may be dismissed by some as overconscientious or as eccentrics, nonconformists, and chronic dissenters. But I thought the purpose of this act was to attract into scientific and other vital pursuits the best talents of the country, the most inquiring minds, the most thoughtful students. How can we if we exclude the overconscientious, the eccentrics, the nonconformists, and the chronic dissenters? What is the purpose of a provision that in operation could result in some Communists getting loans and some non-Communists dropping out of school—in some talented, needy students being included but some equally talented, equally needy, and equally loyal, students being left out?

There is a very real danger that this unnecessary, futile gesture toward the memory of an earlier age will defeat the purposes of the National Defense Education Act. Unlike the Soviets, we cannot take steps to keep our brightest minds in scientfic careers, but we might take steps that keep them out.

Early in the last session of Congress, I introduced and conducted hearings upon a bill to repeal this provision. But after 2 days of Senate debate—sometimes bitter, often confused—the bill was recommitted, dead for the session.

Another attempt to eliminate the affidavit will be made this year—this time emphasizing that it is the vague, sweeping, negative affidavit that is most objectionable and discriminatory. That may satisfy those who opposed us last year, who could not understand why the customary affirmative pledge of allegiance should not be taken by all students as a positive act of rededication.

But it will not satisfy those who want the negative affidavit retained, who insist that only subversives would oppose signing it, who criticize institutions refusing to participate, on the grounds they are denying aid to needy students merely to demonstrate abstract theories of academic freedom—and those who shrug off nonparticipants with the reply that there are other colleges and students eager to get the money. This is a minor issue, they say, raised by a few eggheads and unrealistic professors.

But if this affidavit remains on the statute books, we will have cause for concern. First, I will be concerned about the chances for success of the entire National Defense Education program, with some of our leading science-trained institutions and best-known colleges refusing to participate. These colleges need the additional source of scholarship moneys—all colleges do, as enrollments and costs increase faster than available funds. But they also know that once they accept this precedent of Federal dictation as to the beliefs of their scholarship or loan applicants, a tradition of American education will have been shattered.

These colleges, training future atomic scientists in their laboratories, do not want to protect Communists—but they know that any Communist will gladly take any number of oaths. They cannot understand why a prosperous freshmen is assumed to be loyal, but—if his financial needs become more pressing so that a Federal loan is required—he suddenly becomes suspect in his sophomore year. And why is a less talented studen, ineligible for a Federal loan, permitted in the laboratory without question—while a more talented student is denied entry unless he executes a vague affidavit which he may not accept or even understand.

To waste desperately needed educational funds trying to administer this kind of provision is the height of folly.

Secondly, I would be concerned about those students who did sign the affidavit. We want their minds to be free and flexible, searching out new ideas and trying out new principles. But a young student who has sworn—under penalty of a Federal indictment for perjury—as to what he privately believes (and what he thinks some organization he believes in believes) is likely to be rather cautious about changing his beliefs or joining new organizations. Other students may feel that Federal inquiry into their beliefs is so unrealistic as to be meaningless—and, in their minds, oaths of allegiance as well as sworn affidavits will be dangerously cheapened.

Perhaps a few perjurers will be caught under this requirement. But we already have enough anti-Communist, antisedition, and antiespionage statutes to catch these few students, if any, without damaging—in the minds of millions of other students—their respect for free inquiry and free government.

If William Penn or Benjamin Franklin or Henry Thoreau attended college in America today, I doubt that they would sign the affidavit, despite their great loyalty to this country. And our effort to develop the best minds of the country needs all the Penns and Franklins and Thoreaus we can attract.

Finally, I would be concerned, if we cannot eliminate this provision, about the United States of America. Never before have we tried to legislate orthodoxy in our colleges, sought to put students in jeopardy for their private beliefs or assumed a scholar is disloyal until he swears to the contrary.

Surely this is not the way to "catch up" with the new Russian excellence in education, science, and research—by imitating their objective of teaching students what to think instead of how to think. What kind of security is it that assumes all is well because thousands of affidavits are signed: do we really believe that loyalty can be reduced to an automatic formula, coerced and compelled instead of inspired?

I think it high time that we recalled the words of Mr. Justice Hugo L. Black: "Loyalty to the United States can never be secured by the endless proliferation of loyalty oaths. Loyalty must arise spontaneously from the hearts of people who love their country and respect their government."

Local Versus Federal Aid

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. MICHEL. Mr. Speaker, I have always been opposed to the principle of Federal aid to education in any form, for I feel that, regardless of whether there is a need for better facilities or better salaries for teachers, this is primarily a local responsibility, and I believe in my congressional district the majority of the people feel this way and have, as a matter of fact, faced up to their responsibility.

I should like to include in the RECORD at this point a timely editorial from the April 21 morning edition of the Peoria Journal Star entitled "Local Versus Federal Aid."

LOCAL VERSUS FEDERAL AID

(By C. L. Dancey)

One of the ruling emotions of the age is the impression that only the Federal Government can accomplish big things, and we on the local scene can only do little things.

This is because Uncle Sam talks in big totals, and we forget that these big things are merely a whole lot of little things put together.

What happens if we do some totaling of the little things we've been doing right at home in all our communities?

Schools, for example?

We have built 680,000 new classrooms since World War II. If the Federal Government had done this, what a mammoth project it would have been. What overwhelming proof of the ability of Federal power to get things done.

This fall we have 1,330,000 classrooms in use and half of them have been built since the war all without so much as a Federal subsidy, and certainly for a great deal less money than the same buildings would have cost under U.S. administration.

What's more, this building is a major victory and the crisis is past. The next 5 years present needs which can be met with only half as much performance per year as has been our pace up to now. This can certainly be done, as it has been, at the local level, and the job will be much easier now.

And, even after these great demands have been met, less than a single percent of the country's school districts has reached the limit of its bonding power—and there are strict legal limits.

Our Federal Government has never successfully carried on any program to compare with this local accomplishment—and it has been done with due consideration to all the diversity of geography, climate, economic

differences, and the unusual characteristics of local populations.

Parent teachers groups throughout America have played an important role in these accomplishments—and have won their major fight. The little things they have done total a great result.

This building program (that was not a national program as such) is even less important than the individual PTA's influence on what is actually happening to their own children in their own schools in their own home towns.

We suggest that this is much more than can possibly be accomplished by the State or national PTA as a standardized voice.

The PTA's great strength is its diversity, just as diversity is the great strength of America.

We sincerely hope that the PTA will not surrender now that victory is in sight, and the hardest battle won. We hope this great organization will not abdicate its responsibilities in every city and town and country district in favor of passing the buck of its problems on to planners in Washington, D.C., who can never do the job half so well.

What Else Can Kennedy Do?

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. BOWLES. Mr. Speaker, among the extensive recent press comments on the so-called religious issue, I have been especially impressed with two. I submit for the attention of my colleagues the following editorials from the Charlotte (N.C.) Observer, and the St. Louis Post-Dispatch as examples of thoughtful and responsible journalism.

[From the Charlotte (N.C.) Observer, Apr. 9, 1960]

WHAT ELSE CAN KENNEDY DO?

That issue of religion trailed Senator JOHN KENNEDY through Wisconsin, and it will follow him now into West Virginia.

It must be deeply disturbing to the man, for he has done everything but deny his own church in trying to get out from under the cloud.

He has said that he does not favor public aid to church schools, and here he is opposing the position of most of the leaders of his own denomination.

He has said that he would not, as President, appoint a diplomatic representative to the Vatican. Even Baptist Harry Truman once tried to name such a representative.

He has said that his highest allegiance as President would be to his oath to support the U.S. Constitution. One of the basic tenets of that Constitution is the separation of church and state.

He has expressed, repeatedly and patiently, his deep belief in the liberal democratic principles upon which American Government rests. No one has pointed to anything in his record as Congressman and Senator which does violence to these principles. We know no reason to doubt that *he would not uphold them as President in* any conceivable conflict with chuch authority.

If KENNEDY *should be nominated and* elected, he would be watched carefully on this score *by Congress and by the country* at large. No one would know better than he that the first Catholic President is in the White House. Public vigilance would be an important factor, and we believe that KENNEDY would bend over backward to avoid even the slightest appearance that his religion affects his political action.

It should be remembered, too, that Catholics come in all shapes and sizes, just as do Baptists and Lutherans. Some are orthodox and devout; some are neither. Some are much more subject to rigorous discipline than others.

There are some Catholics, we admit, who would give us pause on these grounds if they sought the country's highest political office. But there are book burning, antievolution Protestants who would inspire the same fears that they might carry their religion too far.

It is perhaps an individual matter. And as an individual, JOHN KENNEDY has satisfied us that America has nothing to fear from him because he was born of Catholic parents.

[From the St. Louis Post-Dispatch, Apr. 14, 1960]

NO RELIGIOUS TEST

Senator KENNEDY has already begun to encounter anti-Catholic sentiment in West Virginia, and even some of his supporters believe the religious issue may be the decisive factor in the presidential primary.

Since a large part of the Senator's 105,000 plurality in Wisconsin was supplied by voters of Catholic faith, some persons will regard it as no more than rough justice that a certain number of West Virginia votes should be likewise cast on religious grounds, but cast the other way. The truth is that the religious issue has and had no place in either election, and we deplore its being raised on any pretext.

Senator KENNEDY has fully and frankly answered all the questions that can justly be asked him because of his religion. He has expressed himself on such issues as separation of church and state, and tax support for parochial schools, far more frankly—than many Protestants would—especially Protestants running for office in heavily Catholic districts. He has made it very clear that he believes strongly in our constitutional principle of church-state separation, and strongly opposes public support for religious schools. For taking this stand he has undergone severe criticism from Catholic sources, but has stood his ground.

So it is not for any views on questions of special interest to the Roman Catholic Church that Senator KENNEDY can be rejected. Those who oppose him on religious grounds, if they are not victims of bald bigotry, must believe that because of some special characteristic of the Roman Catholic Church, Senator KENNEDY if elected President would not in fact be a free man; that he would be subject to a special and unique discipline from Rome; that he could not be trusted to live up to his oath of office, or to keep faith with millions of Protestants and nonchurch members; that he would subordinate the interests of his country and the obligations of the Presidency to the will of the Vatican.

Merely to state these propositions is to suggest how preposterous they are. Those who, preoccupied with church history or ecclesiastical disputation, frighten themselves with the vision of a Vatican running the White House by remote control overlook entirely the political realities of modern-day America. *Whatever his faith, no President* could permit Vatican interference in American civil affairs without sacrificing his leadership of the whole people. *We firmly believe* that a Catholic of the measure of Senator *KENNEDY would be considerably more inde*pendent of Rome than the average Protestant politician with one eye on the Catholic vote.

It is too often forgotten that in addition to the great principle of separation of church and state, our Constitution lays down the principle that "no religious test shall ever be required as a qualification to any office or public trust under the United States." There is only one way to hold true to that principle. That is by not applying, directly or indirectly, a religious test to candidates for office.

Vermont Has Stake in Immigration Bill

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the North Adams Transcript, from an American citizen who intelligently appraises the problem of immigration.

[From the North Adams Transcript, Mar. 31, 1960]

VERMONT HAS STAKE IN IMMIGRATION BILL

EDITOR OF THE TRANSCRIPT: Six or seven times in the past President Eisenhower has tried to get a law passed that would increase the quota for immigrants into this country. Labor, of course, opposes it. Another element in the Nation opposes it, a sort of "let well enough alone policy." Maybe the President is so right this time that the opposition will sink party politics and get into line for a little real service to the Nation. Here in Vermont we have a vital stake in this business, maybe more urgent than in any other State.

Back in the days when men worked and were proud of their ability to lift the other end of anything that was loose, Vermont hills were cleared and prosperous little farms, hundreds of them, sustained large families of sturdy citizens. Then came the free lands of the West, wider opportunity, and the exodus from Vermont began. Same old economic problem that has followed civilization for 10,000 years. The covered wagon has always treked toward the main chance. Most of the big jolts to civilization have come from the mass shifting of populations for economic betterment.

Now we are an inch or two further along in intelligence and well-being than in the days when the city States colonized the provinces for the handy collection of food and taxes. Today we have science which questions everything and proves its contentions with actual accomplishment. With us the food supply is no longer a problem. The surplus has become the problem. Any increase in population founded upon increased food supply, at first glance seems crazy. Let us look into it a little.

Authorities who know about these things tell us that the lot of millions of people in central Europe could be bettered by small holdings of land ownership and freedom to work out their own status in life. This is based upon the idea that self-sufficiency through personal effort has not become obsolete.

Through industrial activity and wealth we have grown into the habit of "needing" everything we see or hear about. We feel *abused and downtrodden if we do not get* it. That state of mind, apparently, always *has come about in the course of increasing* plenty and the mass movement of people from a lower to a higher standard of living.

We need some new frontiers. Educationally, politically, economically, religiously, and morally we are threshing too much old straw. Unpopular as it always is, it becomes necessary to reexamine our sense of values. This Nation is leveling off from the land of opportunity for quick and great wealth. It is becoming a land where the real human values count. We are again learning that our real niche in the march of time is summed up in the philosophy of the four freedoms.

In Vermont nature has put back the fertility into our hills. The grub hoe, the hook, and the sidehill plow can be resurrected overnight. The manpower exists in these men the President would welcome to our soil and our economy. For the gift of freedom and equality these men and women will come here and build up again the character and the stamina for our way of life.

If those birds who perch on park benches and dolefully chirp about opportunity and the raw deal would get out into the hills at 4 o'clock in the morning, lay up a couple of rods of stonewall, and burn half an acre of brush, and grub hoe in three or four rows of corn and potatoes before breakfast, their outlook upon life would change. It was that kind of life that cleared up the Grants and made Vermont the Sparta of this continent. It can be done again by men and women to whom freedom and independence mean more than the night spots and keeping up with the Joneses.

And finally, I hope no half-baked nincompoop arises to say that this kind of immigration brings in undesirable citizens. For more than 60 years I have worked side by side with these men from all over Europe. I never shall forget the day when the news of the armistice following the First World War came into our shop. Next to me, on a 5-ton hammer, was a Polander. Proud, rugged and clean. Said he—"Thank God, Poland will again be a nation." I wish some of our white birch Yankees, blear-eyed with laziness and drooling desire for the shiftless life, could have looked into this man's eyes.

President Eisenhower knows that citizenship is a matter of mind and heart and soul. He knows along with everybody else who has had firsthand contact with these people, that the brawn and brains and the longed-for ideals of hard-pressed Europe constitute the motivating influence in our real allied core of friendship and aid. These men may become the salvation of liberty itself.

Tourists, summer residents, industry, racetracks, yes, yes, of course; but let us never forget for a minute that it was the little hill farm that sustained us for so long and sent so many he-men out into the world to build up the most enduring and satisfying way of life yet devised. It can be done again. Let us ease off a little on this parasitic pandering to outside resources and build up our human element. After all, government is for men and women. Let us forget the half-baked and stinking politics and go to work. Let us make our own little old State of Vermont again the frontier of liberty and independence.

FAXON BOWEN.

ARKMONT, POWNAL, VT.

Water Not Unlimited

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very cogent editorial which was printed in the North Adams Transcript, concerning a problem which is of utmost concern in my district and in the entire New England area:

WATER NOT UNLIMITED

Water is one of the great natural resources of New England and the Northeastern States. Its place is the economy of the region is incalculable, in terms of dollars and cents. Without it, any steps toward industrial development or expansion would be futile, agriculture and lumbering would be fruitless enterprises, and recreational and resort centers could not exist.

But this natural blessing should not be considered as a permanent asset, existing by itself, and as something that can be squandered recklessly. It must be conserved, controlled, and cultivated, and that is a function of which only government is capable.

That's why more than passing attention should be given to legislation under consideration in Washington that would establish, with Federal support, a water and resources compact among the Northeastern States.

Such a program, of course, would have primary benefit for the States immediately involved. But since a question of economic growth and insurance also is concerned, the entire Nation would benefit ultimately. By the same token, if the regional economy were to suffer through the blind waste of such a resource, the national economy, too, eventually would be damaged.

There is opposition to the proposal, chiefly from midwestern legislators, who should be the last to decry any Federal support for a natural resource. They never have been averse to accepting Government assistance for less worthy projects in their own States.

The progress of this legislation in Congress should be watched closely. It is vital to the future welfare of this entire region.

Age, Health, and Politics

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. FORAND. Mr. Speaker, the more the Forand bill, H.R. 4700, is understood and discussed the more it is being favored.

Conservative organizations, newspapers, and magazines are seeing the problem of health needs of the aged and recognize the need of Congress taking action to meet this problem now.

As a part of my remarks, I include an editorial on the subject which appeared in the April 25 issue of Life magazine.

The editorial follows:

AGE, HEALTH, AND POLITICS

The hottest political potato so far in this election year is the question: Are Americans over 65 entitled to Federal help to meet their hospital and doctor bills?

The Forand bill, which would raise $1 billion for such care by a one-half percent boost in the social security tax, has produced floods of favorable mail and given the Democrats an unexpected issue. Republicans, while granting the need for aid, are trying to find a more private, voluntary alternative. Since the issue is important, let's try to separate its social realities from its politics and facts from principles.

Unquestionably, many older Americans (15.8 million are over 65) are in real need. The average $72 a month they draw from social security scarcely provides food and shelter, much less for the medical expenses which increase with age. Few are in a position to meet the cost of chronic illness from which many suffer. Yet even to get "charity" care—itself inadequate in quantity and often inferior in quality—they must suffer the indignity of a pauper's oath.

Can their need for medical aid be provided by private, voluntary Blue Cross-type plans? These are expanding, but can never meet the whole need. Premiums for the aged as a separate group are prohibitively high. The least burdensome method of insurance is for the whole society to spread the costs over the whole working life cycle. The cheapest and most logical way of doing this, whether by the Forand bill or a better one, is by extending the existing system of social security.

To provide this aid need not be "socialized medicine," as opponents claim, since payments could be made through private channels and patients select their own doctors and hospitals as before.

The first question of principle is whether this form of aid will undermine the private duty of providing for one's own old age through old-fashioned virtues like foresight and thrift. Being a floor, not a ceiling, it need not do so. Individuals will still have plenty of incentive to save for the future, though less fear of it.

Another question of principle is whether it is the proper function of a free government to offer special help to its older citizens. That principle was accepted when social security itself became effective in 1937. The presumption against any extension of Federal activity and expenditure, though Jeffersonian in origin, is now championed, though weakly, by the Republicans, who don't want to be tagged as enemies of the aged. But an extension of an established system like social security is not a violation of principle. But there is also an issue of cost.

Not even the Democrats can extend the welfare state without reference to the price tag. Enough spending bills were introduced in Congress last year to add $50 to $60 billion to our existing $78.4 billion budget if passed. Priorities, therefore, have to be determined. Health aid to the aged can be provided, but it may mean fewer schools, highways, or other needs which may also be urgent. A related question is whether aid to the aged can be done without renewed inflation. The aged, on small and fixed incomes, have been the chief sufferers from inflation, and this is a good reason for giving social security a high priority. By the same token, any aid program that feeds inflation would defeat its own purposes and fool its beneficiaries. So the costs of any plan adopted must be carefully limited and controlled.

Doubtless the Forand bill can be improved. Some $200 million could be saved simply by raising the eligible age from 65 to 68. Moreover, many oldsters able and eager to work could better provide for their own security if the $1,200 limitation were raised on the income they may earn without forfeiting social security pensions.

But in principle, such aid is proper public business. The issue is therefore inevitably and properly a political one. It should be decided according to the Nation's sense of justice, urgency, and choice of priorities in the use of scarce resources—as interpreted by the Nation's elected Representatives in Congress.

Proclamation Condemning the Recent Massacre in the Union of South Africa

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following material:

CONSULATE GENERAL
OF THE REPUBLIC OF LIBERIA,
New York, N.Y., April 14, 1960.

The Honorable Dr. ADAM CLAYTON POWELL,
Pastor, Abyssinian Baptist Church,
New York City

DEAR DR. POWELL: I am forwarding herewith a joint resolution passed by the Senate and House of Representatives of the National Legislature of Liberia and a proclamation issued by the President of Liberia condemning the recent massacre of defenseless Africans in the Union of South Africa. I thought that these might be of interest to you as you plan to observe Africa Freedom Day.

With warm personal regards,

Sincerely yours,

DAVID M. THOMAS,
Consul General.

JOINT RESOLUTION EXPRESSING CONDEMNATION OF AND GRAVE CONCERN OVER THE RECENT MASSACRE OF DEFENSELESS AFRICANS IN THE UNION OF SOUTH AFRICA AND AUTHORIZING THE PRESIDENT OF LIBERIA TO PROCLAIM SUNDAY, APRIL 3, A.D. 1960, A DAY OF MOURNING AND INTERCESSION

Whereas the Government of Liberia in support of its constitution, the Charter of the United Nations and the Declaration of Human Rights which are definitely opposed to racial segregation as especially practiced within the Union of South Africa; and

Where the United Nations, since its organization, has continuously called upon the Union of South Africa to abandon its inhuman apartheid policy and racial segregation to no avail; and

Whereas the African peoples within the Union of South Africa, quite recently, in a peaceful manner demonstrated against the infringement of their natural and inherent rights; and,

Whereas because of this demonstration, armed police of the Union of South Africa, in the pursuit of their ungodly desire to perpetuate their inhuman apartheid policy of racial discrimination, did deliberately, viciously and without any regard for the lives of Africans, fire upon, kill and wound a great number of innocent, unarmed and defenseless Africans; and,

Whereas the Legislature of Liberia, representing the sovereign people of the Republic, having considered with grave abhorrence this violent outrage on part of the Union of South Africa, which act, the said representatives of the people of this Republic do vehemently condemn, deprecate and denounce; Now therefore,

It is enacted by the Senate and House of Representatives of the Republic of Liberia in Legislature assembled:

SECTION 1. That the Legislature of Liberia sitting in the 1st session of the 44th legislature expresses profound regrets for and condemnation of the vile and wicked massacre of innocent as well as unarmed and defenseless Africans and declares that this outbreak of violence is an outrage and great blight upon civilization and world conscience.

SEC. 2. That immediately after the passage of this act, Sunday, April 3, 1960, be and is hereby set aside as a National Day of Mourning for those who lost their lives in their peaceful pursuit of their inherent and natural rights by this cruel massacre and that it also be a day of intercession for the abandonment of the inhuman and despicable apartheid policy pursued by the Government of the Union of South Africa.

SEC. 3. That the President of the Republic of Liberia be and is hereby authorized and empowered to proclaim and declare the same throughout the Republic of Liberia in consonance with the provisions of this joint resolution.

SEC. 4. This joint resolution shall take effect immediately and be published in handbills.

Any law to the contrary notwithstanding.
Approved March 25, 1960.

A PROCLAMATION BY THE PRESIDENT

"Whereas the Government of Liberia considers it proper and befitting to express its complete abhorrence for systematic, ruthless, cold-blooded and vile slaughter of helpless Africans in the Union of South Africa, who on March 21, 1960, while peacefully demonstrating against certain aspects of the inhuman, savage and internationally outlawed policy of apartheid such as practiced in the Union of South Africa; and

"Whereas the Legislature of Liberia sitting in the 1st session of the 44th Legislature of the Republic did pass a joint resolution authorizing the President of the Republic to proclaim Sunday, April 3, A.D. 1960, a day of mourning for the dead, victims of apartheid, and of intercession for relief of the Africans of South Africa from the baneful yoke of oppression, which resolution reads:

" 'Whereas the Government of Liberia in support of its Constitution, the Charter of the United Nations and the Declaration of Human Rights, which are definitely opposed to racial segregation as especially practiced within the Union of South Africa; and,

" 'Whereas the United Nations, since its organization, has continuously called upon the Union of South Africa to abandon its inhuman apartheid policy and racial segregation to no avail; and,

" 'Whereas the African peoples within the Union of South Africa, quite recently, in a peaceful manner demonstrated against the infringement of their natural and inherent rights; and,

" 'Whereas because of this demonstration, armed police of the Union of South Africa, in the pursuit of their ungodly desire to perpetuate their inhuman apartheid policy of racial discrimination, did deliberately, viciously and without any regard for the lives of Africans, fire upon, kill and wound a great number of the innocent, unarmed, and defenseless Africans; and

" 'Whereas the Legislature of Liberia, representing the Sovereign people of the Republic, having considered with grave abhorrence this violent outrage on part of the South African police upon the lives and persons of South Africa, which act, the said representatives of the people of this Republic, do vehemently condemn, deprecate and denounce: Now, therefore,

" '*It is enacted by the Senate and House of Representatives of the Republic of Liberia in Legislature assembled:*

" 'SECTION 1. That the Legislation of Liberia sitting in the 1st session of the 44th legislature expresses profund regrets for and condemnation of the vile and wicked massacre of innocent as well as unarmed and defenseless Africans and declares that this outbreak of violence is an outrage and great blight upon civilization and world conscience.

" 'SEC. 2. That immediately after the passage of this Act, Sunday, April 3, 1960, be and is hereby set aside as a National Day of Mourning for those who lost their lives in their peaceful pursuit of their inherent and natural rights by this cruel massacre and that it also be a Day of Intercession for the abandonment of the inhuman and despicable apartheid policy pursued by the Government of the Union of South Africa.

" 'SEC. 3. That the President of the Republic of Liberia be and is hereby authorized and empowered to proclaim and declare the same throughout the Republic of Liberia in consonance with the provisions of this joint resolution.

" 'SEC. 4. This Joint Resolution shall take effect immediately and be published in handbills.

" 'Any law to the contrary notwithstanding. Approved March 25, 1960'; and

"Whereas the Government and people of Liberia in support of their Constitution, the Charter of the United Nations and the Declaration of Human Rights, have always been opposed to Racial Segregation in any form, especially that as practised in the Union of South Africa: Now, therefore,

"I, William V. S. Tubman, President of the Republic of Liberia, by authority in me vested by the Act above cited, do hereby proclaim the 3d day of April A.D. 1960, a national day of mourning throughout and within the territorial confines of the Republic, for those who lost their lives in their peaceful pursuit of inherent and natural rights.

"I do also proclaim the 3d day of April to be a Day of Intercession for the abandonment of the inhuman and despicable apartheid policy practiced in the Union of South Africa.

"I hereby call upon all rectors and pastors of churches and all ministers of the gospel on the said day to have special services and to offer special prayers in commemoration of this day.

"And I do call upon all citizens and foreigners within our borders to observe the said 3d day of April 1960, as a National Day of Mourning and a Day of Intercession and to observe a minute of silence at 12 meridian in memory of those Africans in South Africa who have laid down their lives that right and justice may prevail."

Given under my hand and seal of the Republic in the city of Monrovia, this 26th day of March in the year of our Lord one thousand nine hundred and sixty and of the Independence of the Republic the One Hundred and Thirteenth.

WILLIAM V. S. TUBMAN.

By the President.

J. RUDOLPH GRIMES,
Secretary of State.

Labor Views Unemployment Insurance in 1960

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. ZELENKO. Mr. Speaker, under leave to extend my remarks, I take this opportunity to make a part of this RECORD a most significant address by Harold C. Hanover, president of the New York State AFL–CIO, at a meeting of the Albany Chapter of the International Association of Personnel in Employment Security held at Latham, N.Y., on April 6, 1960.

The address follows:

We of the New York State AFL–CIO, of course, have a particular interest in the employment security program and in your organization, because we believe that such a professional group as yours can serve not only as a center for the exchange of ideas, but it can do much to keep high and improve the standards of the profession in which you are engaged.

Further, your organization can provide and exercise a strong impetus toward a more effective employment security program that has such a direct impact on workers whom we represent and whose interests we, along with yourselves, seek to protect and improve, because it is a program designed to meet a basic social and economic need.

All of you as individuals and members of this association, I am sure, are mindful that employment security is an economic mainspring of the lives of more people, more frequently, more vitally and more fully than perhaps any other arm of Government, not excluding the Armed Forces.

You represent our State with every individual who comes to the division. For this reason we have, with you, a very special interest in an effective, humane, and clean-cut administration of the employment security laws. After all, the best way to kill a good law is to twist and distort it through prejudiced or inept administration. Likewise, the most effective way to kill a bad law is to enforce it strictly, honestly and fairly.

But what is a bad or a good law in the field of employment security? What are the objectives of unemployment insurance? I think it is an appropriate time to take stock of where we are as of now with the unemployment insurance program as compared with where we started, and to reflect on the part that this program should play in the future.

Dr. Arthur Larsen, the former Under Secretary of Labor and a most prominent authority on social insurance lists the following most important objectives of unemployment insurance:

1. To meet the personal income-loss problem of the unemployed and his family "by providing weekly cash payments in lieu of wages lost through temporary economic unemployment".

2. To maintain consumer purchasing power in the local community and in the Nation during such unemployment.

3. To "provide unemployment benefits in a way which will preserve the self-respect and complete freedom of the recipient and his family, and to place the cost ultimately upon the consumers of the product, rather than upon local taxpayers in the form of relief."

In evaluating our unemployment compensation system from the viewpoint of these objectives as stated, mind you, not by labor but a prominent spokesman and theoretician of the present administration in Washington, we have to look back a little. We will then find that with all its weaknesses and shortcomings, the unemployment compensation system now plays a significant role in our economic life and serves a social purpose in helping unemployed individuals and their families to some extent tide themselves over periods of temporary unemployment, aiding, in turn, the community, its shopkeepers and merchants.

During the 2 years, 1958 and 1959, over $900 million in benefits were paid out in New York State and, if the $98 million paid out in TUC and in extended State benefits are included, the unemployment insurance benefits total exceed $1 billion for these 2 years.

These benefits paid as a right, with no means test in any case, undoubtedly mark a distinct advance over the relief and work relief program to which we had to resort some 20 years ago when benefits were paid only in cases of proven need, and when there was some 20 percent unemployment.

However, while we have made some progress, it is well at the beginning of a new decade as we are setting new goals, to face up to a searching appraisal of the system. An analysis of the program reveals certain basic structural weaknesses which stem from some erroneous concepts that found their way into the unemployment insurance law.

The first major deficiency we see is the fact that benefit payments have steadily declined in value. In making this statement, I do not lose sight of the dollar increases in benefit payments that are cited to show the progress which has been made. In a program which is designed to provide wage-related benefits, however, statistics showing that average benefits have increased from $15 to $50 have little meaning unless related to what has happened to wages in the same period.

In 1939, the national average weekly wage in jobs covered by unemployment compensation was a little over $25. Most States—and New York was among them—provided maximum benefits of $15, which was 60 percent of the average weekly wage. The weekly wage loss suffered by the unemployed person receiving the benefit maximum was about $10 a week. Today the State average weekly wage in manufacturing is over $90 a week. Thus the maximum benefit of $50 will be 55 percent of the average weekly wage, as contrasted to 60 percent in 1939. The unemployed worker, who will be fortunate enough to receive the maximum benefit, still will suffer a weekly wage loss of over $40 as contrasted with $10 in 1939.

This serious inadequacy of the program is most strikingly shown during a recession period in the small portion of the total wage loss that is recovered through benefit payments. May I recall that this is also the view of the Advisory Council on Social Security which the Senate Committee on Finance appointed in 1947. This Committee, in which management, labor, the insurance industry and the general public were represented, unanimously pointed out in a survey in 1958 that not more than 25 percent of the wage loss caused by the unemployment of covered workers was compensated by unemployment benefits in preceding years.

As a result, unemployment compensation as it is today would have a very limited value as "the first line of defense" in compensating for income loss due to unemployment. In 1958, the survey estimated that only 20 percent of all wage loss due to unemployment was compensated by unemployment insurance, and even this may well be a high rather than a low estimate because there are some economists, for instance Prof. Richard Lester of Princeton University, who estimated than only 13 percent of the loss in wages had been compensated by unemployment benefits.

Another major factor in the total picture of the inadequacy of the unemployment insurance program is the limitation on the duration of benefits that denies benefits to thousands upon thousands of workers every year because they have exhausted their unemployment compensation rights and are no longer entitled to compensation even though they are still unemployed and otherwise eligible. In our State 176,500 workers exhausted their rights to regular unemployment compensation benefits in 1959 alone as compared with 70,000 in 1956—another post-recession year.

This policy of dropping an unemployed person after 26 weeks is as irrational as the policy of a tuberculosis sanitorium would be if it required discharging all patients after 6 months simply because statistics showed that tuberculosis should be cured in 6 months. What is even worse, statistics on unemployment do not give any sign whatsoever of improvement. On the contrary they not only show us an increase of unemployment in recent years but they distinctly warn us that higher levels of unemployment can be expected in the future. Structural changes related to automation and rapid technological development; speeding up of migration of industry; changes in the composition of our labor forces; failure of our economy to expand more rapidly to provide enough new job opportunities for those who are entering the labor force—all these factors are evident causes of a persistent rise in unemployment and only show how unreasonable it is to give automatic effect to a mathematical formula of 26 weeks of benefit duration.

Perhaps even more fantastic than the duration arrangements—and perhaps more serious in terms of the social damage—is the growing tendency in the legislature to increase maximum weekly benefits and at the same time to tighten up eligibility requirements for workers who become unemployed because of voluntary quits, refusal of employment and misconduct. Of course, a good unemployment compensation law should not pay benefits immediately to the man who in a moment of pique over some real or imagined grievance, walks off the job. Nor should it pay benefits to the man who wilfully provokes his own discharge, or who after a layoff from one job refuses to accept another just as good. To protect the fund from unemployment due to unreasonable acts of workers is one thing, but to pervert the intent of this law so as to produce complete forfeiture of benefits, is entirely different.

Unfortunately, our unemployment compensation law becomes more and more weighted with all manner of ingenious provisions designed specifically to disqualify a claimant whenever possible. Not only does he have to pick his way carefully through a tangle of redtape before he can prove his eligibility—but he must also expect his employer to put every obstacle in his way. And the law provides the employer with a built-in motive for doing so. This motive goes by the name of experience rating, a device responsible not only for washing the insurance feature out of unemployment compensation, but also for giving a few big corporations competitive advantage over smaller, less financially strong companies, and finally for inadequate financing and inadequate benefits in unemployment insurance.

The public is not sufficiently informed of these inequities of the system. It hears about the exceptional cases of fraud where an undeserving person is paid a benefit, but it is not told of the thousands and thousands of cases of disqualification based on arbitrary and capricious provisions of our State law. The public is subjected to poisonous propaganda that the whole unemployment insurance system is in danger because of thousands of loafers, quitters, schemers, and cheaters.

Actually, there is nothing new in charges of this kind. They remind me of charges hurled against the proposal to enact unemployment compensation early in the depression of the 1930's, to the effect that such a system would encourage people to quit their jobs in order to draw benefits. And yet the unemployment history of America shows that greatest unemployment has occurred during periods when there was no unemployment compensation whatsoever. Since we have had unemployment compensation, unemployment figures have never reached the heights of the long period when there was no national social security program of any kind.

The cynic may still wish to talk about individual cases rather than the statistical totals upon which programs are based. An

article that recently appeared in a leading American magazine is a special case in point. The author, a staff writer of the magazine, allegedly worked for more than a year to uncover that somewhere in Pittsburgh a retired man wrongfully picked up unemployment benefits; that a woman in New York improperly drew 9 weeks of unemployment compensation after she quit her job to become a bride; that in the last 3 years 170,000 cases of fraud were officially reported and that the take by gypsters amounted to more than $12 million.

I do not intend to go into polemic arguments with the writer. This is neither the right place nor the right time for it, but what I would like to say here is this:

Organized labor, of course, is opposed to deliberate fraud. We favor requiring the claimant who has obtained his benefits fraudulently to refund them, and, if penalties are imposed uniformly and fairly against both employers and employees who attempt deliberately to cheat the unemployment insurance fund, we do not oppose such punishment as fits the offense.

Thus, while labor does not condone, but condemns fraud when practiced by workers, it should be stressed that most fraud is committed not by claimants, but by employers. But this fact was completely disregarded by the pseudoscholarly author of this article, who felt fit to disregard study after study made in recent years that completely destroys the legend of excessive abuses in unemployment insurance.

These studies, made by Prof. John Kenneth Galbraith, Philip Booth, Chief of the Division of Program and Legislation, Bureau of Employment Security, U.S. Department of Labor; Dr. Joseph M. Becker, Research Associate of St. Louis University; the archconservative and probusiness magazine U.S. News & World Report, and finally the Division of Employment of the New York State Department of Labor, clearly indicate that there are very few people in the labor force who prefer idleness to work. Says Mr. Booth in his study entitled "Myths and Realities in Unemployment Insurance."

"In a program protecting more than 40 million workers, some 'chiselers' are bound to show up. But if we take account of benefit payments equaling as much as $2 billion a year, the amount of money going out in improper payments in comparison with proper payments is remarkably small. Neither the weekly amount of benefits nor the methods of administration make the system particularly inviting to chiselers."

Even this distorted and slanted recent magazine article bears out this conclusion. The take by gypsters of $12 million in 3 years rightfully makes its author indignant, but what, probably out of modesty, he does not mention is that those $12 million represent slightly more than one-thousandth of 1 percent of the total amount of about $7 billion paid in unemployment benefits in the respective years 1956–58.

But what about crooked employers? What about their delinquencies in reporting their tax liability and in paying their unemployment compensation taxes? One glance at official figures will tell us the shocking story:

The January 1960 statistical supplement to the official Labor Market and Employment Security Bulletin published by the U.S. Department of Labor shows that for the second quarter of 1959 alone, 43,067 employers, or 2 percent of employers required to report, were delinquent in reporting their tax liability and unpaid unemployment taxes amounted to $41,862,205.

The same report shows that for the same period of time, that is, the third quarter of 1959, only one-tenth of 1 percent, mind you, only one out of a thousand claimants was denied benefits because of refusal to take available work. Now compare these sets of figures:

A $41 million delinquency in tax payments by employers in 3 months compared with $12 million in improper benefits paid to workers in 3 years.

Delinquent employers totaling 2 percent as against one one-tenth of 1 percent claimants disqualified because of refusal of suitable work.

Forty-three thousand, sixty-seven delinquent employers reported in a period of 3 months alone and 170,000 delinquent employees reported over the span of 3 years.

And if this is still not enough, there is another report of the Treasury Department on delinquent employment taxes printed in the CONGRESSIONAL RECORD of March 28, 1960, (p. 6210). This report shows that in December 1959 there were 256,287 delinquent employer accounts for an amount of $216,439,000 in employment taxes alone, that is, money which had been withheld from the pay checks of the employees as income taxes, social security taxes, unemployment taxes, etc., and which therefore should be treated as trust funds. But none of us, I'm sure, will see the author of this article shedding tears about these 256,000 cases of embezzlement by employers in just 365 days.

Whether this writer collected all the facts he could and then drew a picture based on facts, or had a preconceived idea and collected only the facts to support it and fit the mold of the wishes of some employer organization, is neither here nor there.

I prefer to leave to you the answer to this question. But frankly speaking, I would like to suggest that we picture for ourselves a program geared to the needs of the sixties. In the light of shortcomings, inadequacies and contradictions now characterizing our unemployment compensation system, the logical goals for legislation in this area are obvious.

They are even more obvious in view of predictions made by economists that we can anticipate another recession by 1961 and possibly another one by 1965. The experience ever since 1953 has been that we have come out of recessions with higher levels of unemployment than before. We came out of the 1953 recession with a higher level of unemployment than we had before that. We seem to have come out of the 1957–58 recession with a still higher level of joblessness. If this same ratio persists, according to the forecast of some leading economists, we are going to hit 6 million, 7 million or even 8 million unemployed mark sometime within the next few years, and perhaps even more than that.

Should we then wait idly for another recession or should we rather fix the roof before it rains again? I think that now there is still time to carry out permanent improvements, not only with a view to mitigating individual hardships but also to aid our economy to better meet the many problems arising during a recession.

Among the most urgent improvements in State legislation which are vitally needed while the lessons of the recession are still fresh in our memory are:

1. Coverage should be broadened to protect all persons attached to the labor force not now covered.

2. The maximum duration of benefits should be increased to at least 39 weeks with provision for longer duration whenever the average unemployment in an area reaches recession levels, of say, 6 to 9 percent.

3. The weekly benefit amount should be established at about two-thirds of the State's average weekly wage in covered employment, with dependent allowances' to supplement the basic benefit schedule.

4. Eliminate harsh, restrictive, and arbitrary provisions in regard to eligibility and disqualifications, and improve the financing of benefit costs.

5. Substantial improvement of the employment service through: fully effective placement service geared to the needs of all kinds of workers in all occupational and industrial fields; the employment counseling service for the use of the people with the need to make vocational decisions; community labor market information which would also describe the national employment and unemployment situations; special services to meet the needs of such groups as veterans, young people, migratory workers and the handicapped.

I have enumerated a number of policies, which if adopted, would do much not only to alleviate present unemployment but go far to prevent future crises when large numbers of people are willing and able to work but unable to find it. This program will not be an easy one to get enacted, but you can be sure that labor will not give up its fight to improve unemployment compensation laws through State, and if necessary, Federal action. We firmly believe that every worker wants a job rather than unemployment benefits. If spokesmen of industry would spend less time in publicizing the question of fraudulent payments and more time in studying the adequacy of benefit provisions in terms of the needs of workers who are dependent on unemployment compensation and what happens to them when they are unemployed and are forced to get along on unemployment compensation, we believe they would do much to create a public attitude which will lead to the development of laws that will provide adequate unemployment compensation.

The Airspace Age

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. McDONOUGH. Mr. Speaker, the very capable publisher of the New Japanese American News of Los Angeles, Calif., Mr. Saburo Kido, has written a very commendable editorial on the progress the United States has recently made in the space race.

As a member of the House Science and Astronautics Committee, I have consistently been confident of the ability of the United States to equal and surpass Russian scientists in the space race.

I commend Mr. Kido for his favorable observations which conform with my own, and am pleased to include in my remarks his editorial:

THE AIRSPACE RACE

(By Saburo Kido)

The numerous successful shots being fired by the American team in the space race seem to overshadow the original sensation created by the Russian sputniks. Little is being heard from the Soviet side about their latest achievements.

The American scientists may have been holding things up because of the changes being made in the assignment of the work.

The work that is being carried on at the Vandenberg Air Force Base and at Cape Canaveral is verging on the spectacular these days. One after another, new instruments are being carried aloft. There is no doubt that the prestige of the United States is being regained rapidly.

On the other hand, there seems to be a suspicion that the Soviets may bring another surprise to offset the news that the Americans are creating these days.

There are other good news to bring encouragement to the American people. For a while, it seemed as if all the good scientists were in Soviet Russia and that our men were not able to match the Russians.

The Polaris firing from underwater is one of the major programs of the U.S. Navy. The success it achieved the other day by being fired from underwater was another new step toward the strength this country is attaining.

Furthermore, Congress is appropriating more money to speed up the research and experiments. If money is what the scientists and Government agencies need to catch up with the Russians, the people have clearly indicated that they are willing to see larger appropriations.

The change in emphasis toward missiles can be a dangerous risk. In other words, in national defense preparations, the shift can unbalance the soundness of the tactical forces.

The President was not afraid of criticisms when he refused to go ahead with the huge propeller-driven airplanes for the Air Force buildup. Today, his judgment is being vindicated. And when Congress wants to stir up controversy about the so-called lag in defense preparations, the President is standing his ground. He is making adjustments which are considered to be a sound approach instead of being panicked into a shift under hysteria.

The American progress in the missile race seems to be speeding up. The people and the world at large are beginning to find out that our scientists are not bad after all.

The Negro in American Church Society

EXTENSION OF REMARKS
OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, April 25, 1960

Mr. ROBERTSON. Mr. President, much has been said in this Chamber during this session about the place of the Negro in American society. Some Members have contended that the separation of the races in the South and elsewhere has been maintained by a dominant white majority as part of an evil design of oppression. Those who express this view apparently find it difficult to realize that any substantial number of Negro people would prefer to maintain their own racial integrity through their own institutions of worship, study and recreation.

To dispel these misconceptions, it seems appropriate to call the attention of the Members of the Senate to a recent article in the magazine of The Northern Neck Historical Society, written by the Honorable Robert O. Norris, Jr., a distinguished attorney, a noted historian and an able former member of the Virginia State Senate. The article shows that, prior to the Civil War and for some years thereafter, all of the Negroes in the Northern Neck area of Virginia were admitted as members to the white churches there. Between 1865 and 1870, the Negroes withdrew voluntarily and organized their own churches out of a natural desire for closer communion with God among members of their own race.

Mr. President, I ask unanimous consent for the insertion of the article in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HISTORY OF LEBANON BAPTIST CHURCH
LANCASTER COUNTY, VA.

(By Senator Robert O. Norris, Jr.)

According to Semple's History of Baptists in Virginia, members of this denomination first appeared in the southeastern part of the State about the year 1714, but it was not until Baptists began to come from New England about the year 1750 that the denomination began to really take form and grow in this State. The foundation of this denomination was laid in the Northern Neck by Lewis Lunsford, a native of Stafford County, who when not yet 18 years of age, began to preach and large crowds flocked to hear the wonderful boy, so remarkable were his talents and eloquence. He made his appearance in the lower Northern Neck about 1774 and in 1778 Morattico Church, the mother church of the Baptist denomination in the four lower Northern Neck counties, which is still in existence, was organized. The tradition is that this church was organized at a private home, "Morattico Hall," in Richmond County and that it received its name on account of this circumstance, although the church itself was located some 30 miles away. For many years prior to this time there had been a considerable congregation of Presbyterians in Lancaster and Northumberland Counties, which had once been ministered to by the celebrated Mr. Waddell, the blind preacher. By 1778 their local organization had very largely ceased to function and it is my opinion that these people contributed very largely to the foundation of the Baptist denomination in these parts.

It is the duty and should be the delight of the student of history to uncover the rubbish and accumulations of the years and to bring to the attention of the reader circumstances and personalities that have exercised a powerful control for good not only in their day and generation but upon the generations as they come and go for centuries thereafter. The philosophy of history is not so much a matter of dates and figures as it is of cause and effect and it is with this object in view that I shall discuss the history of this beloved old church.

On Saturday, September 4, 1841, a group of men and women, who were then members of Morattico Baptist Church, met at Corrottoman Meeting House, now known as Ottoman, withdrew from the mother church and organized Lebanon Baptist Church. From a perusal of the names of these 49 persons enrolled at the organization meeting, it is obvious that they embraced a large number of the leading citizens of the upper part of Lancaster County. The name of Rawleigh Dunaway, Sr., heads the list, who was then or had been high sheriff of the county. Included is the name of Thomas S. Dunaway, whose son was destined to be one of the leading Baptist ministers in the Virginia Assocation; Robert T. Dunaway, clerk of Lancaster County; William T. Jesse, Ralph H. Chilton, Samuel Gresham, Commonwealth's attorney of the county; Thomas D. Eubank, and many others whose names are household words in this section. It is interesting to read the covenant signed by these 49 devoted and sturdy pioneers, a part of which reads as follows:

"And with regards to one another we do hereby covenant and agree (reserving to ourselves respectively the right of conscience and our Christian liberty in general) that we will give ourselves mutually to each other as members of the same body; that we will endeavor to subject one to another in the Lord; to bear each other's well being, and to unite our efforts in the common cause of our Lord and Saviour, Jesus Christ."

On the same day William T. Jesse was elected clerk and Robert D. Dunaway, treasurer of the church, and commissioners were appointed to let out and superintend the building of a new brick church. On October 23, 1841, a committee was appointed to select a suitable place for their church, and reported that it be located on the "corner of land belonging to Brother Thomas S. Dunaway—who kindly offered to give to the church an acre—near Haynie's gate on the south side of the road leading from Farnham Church to Lancaster courthouse," which report was adopted and the location confirmed. Also on that day the following deacons were elected: Ralph H. Chilton, Robert T. Dunaway, Thomas S. Dunaway, and Thomas D. Eubank, and the committee on church building reported that it had contracted with Col. Thomas S. Dunaway to do the brick work for $920, the building to be 36 by 50 feet, which however was later changed to 30 by 50 feet. In 1842 Thomas W. Toby and Thomas S. Dunaway, licentiates, were requested to preach for the church, which they did until the end of the year.

It is interesting to know that Thomas W. Toby moved to this county from the State of Rhode Island bringing with him a letter from the Minister of the First Baptist Church of Bristol in that State. Therefore, it may be said that one of the first preachers to preach in the newly organized church was a man who brought with him the ideals and traditions of Roger Williams, the founder of the State of Rhode Island and who perhaps did most to advance the Baptist faith on the North American Continent. The new brick church in which we are now assembled, was completed and the dedicatory sermon preached by Dr. Jeremiah B. Jeter on the third Sunday in May 1843, and at the same time Elders Addison Hall and William H. Kirk accepted the joint pastorate of the church. Elder Hall was to continue this pastorate for 27 years and Elder Kirk continued as joint pastor until December 3, 1853, at which time he resigned in order to take up another charge.

In 1846 the first Sunday School was organized and opened with 10 teachers and from 40 to 50 pupils.

On Saturday before the first Sunday in August 1847, the Baptist Association met with the church for the first time.

In January 1849, it appearing that Col. Thomas S. Dunaway, then deceased, had executed a deed of gift for the land on which the church stood but had not delivered same, a committee was appointed to secure the deed from his administrator, Robert T. Dunaway. They secured this deed and later dissension developed in the congregation, which apparently was divided into two factions, with the result that in that year a number of the members withdrew from the church and organized Mount Pisgah Baptist Church which was to be located at Lancaster Courthouse. There ensued a sharp disagreement between Lebanon Church and Mount Pisgah in that the members of Mount Pisgah demanded a return to them of their contributions toward the building of Lebanon Church. Lebanon offered to turn over to the new organization the meeting house at Corotoman, which the new church refused, and offered in lieu thereof that the matter be arbitrated, to which Lebanon Church replied by saying that it in all modesty felt that it could attend to its own business without calling in foreign assistance and reaffirmed that it was the owner of Lebanon Church and would not agree to return to anyone any contributions or to admit that anyone other than the members of Lebanon Church had any interest in said church property. It is evident that Lebanon Church was triumphant in the controversy

for it appears that Mount Pisgah Church dissolved on October 11, 1850, and all of the members of that church with the exception of one or two immediately took membership in Lebanon.

By July 1859, the membership had increased to 185, 110 white and 75 colored, it then being the practice among all the churches to accept as members of the church those colored persons who desired to join. From 1859 to 1863 there are no minutes of the meetings but in 1863, a committee was appointed and this committee spread upon the minute book a history of the church during those years. In 1862 William T. Jesse resigned as clerk and was succeeded by Thomas D. Eubank, Jr., known to us as Dr. Tom Eubank. Two of the younger members of the church, who had patriotically volunteered to fight for their country in the War Between the States, Abner Revier and Thomas Denny, sacrificed their lives for their country in the terrific 7 days' battle before Richmond in 1862, and in the same year Thomas S. Dunaway, Jr., was ordained as a preacher.

On May 23, 1863, there is this notation in the minute book. "No meeting today in consequence of the presence of the public enemy." On April 23, 1864, Samuel Gresham and Thomas Rice were elected deacons in the place of Thomas D. Eubank, deceased, and Thomas S. Dunaway, Jr., who had been ordained to preach. At the meeting on October 22, 1864, it was necessary to elect a treasurer pro tem, for the reason that Edgar E. Dunaway, treasurer, and Thomas D. Eubank, Jr., clerk, were both absent in the military service of the country. On November 20, 1864, two members charged with desertion to the enemy were excluded from the church and many slaves, who had joined the public enemy, were also excluded.

In July 1865 a resolution was passed informing the members that they could not engage in the sale of ardent spirits and continue to hold their membership in the church. On November 24, 1866, resolutions were passed on the departure of Thomas S. Dunaway, who had been called to preach at the Baptist Church at Fredericksburg, Va. On December 22, 1866, Jessie Wiggins, colored freedman, was licensed to preach and the colored people were given the use of Corrottoman Meeting House during the months of winter and spring. On November 23, 1867, a general letter of dismissal was given all the colored members upon their request so that they could organize their own church.

On November 21, 1868, two additional deacons, Thomas D. Eubank, and Charles R. Kirk, were elected. In September 1869, A. B. Dunaway was elected clerk in place of R. W. Eubank, resigned. In August 1870, A. B. Dunaway, and William T. Marsh were elected deacons. In October 1870, the Reverend Addison Hall resigned as minister of the church and A. B. Dunaway was requested to preach until a new minister could be secured, which he agreed to do. On June 24, 1871, memorial resolutions were adopted on the death of the Reverend Addison Hall. On July 23, 1871, W. F. Dunaway and A. B. Dunaway were ordained and W. F. Dunaway was called to preach at Morattico and A. B. Dunaway became pastor of Lebanon and Farnham. On the same day a resolution was adopted thanking Maj. John Norris for "The real and handsome manner in which the pulpit of the church had been fitted up by him."

On October 21, 1871, John A. Rogers was elected deacon in the place of A. B. Dunaway, resigned.

On March 28, 1872, a mission Sunday school was established near the residence of Royston Marsh, which was undoubtedly the beginning of Providence Baptist Church.

On March 22, 1873, a resolution was passed denouncing dancing and on June 21, 1873, memorial resolutions were adopted on the death of Samuel Gresham, one of the founders of the church and for many years deacon and commonwealth attorney of the county. There was at that time 146 members of the church and 134 members of the Sunday school.

On September 27, 1873, Warner Eubank was elected deacon. In 1875 there appears to have been an epidemic of dancing that struck the younger members of the church and a very emphatic resolution was passed against "The giddy dance," and committees were appointed to notify the offenders that they must either stop dancing or that they would be excluded from the church. That same year the Rappahannock Baptist Association met with the church for the second time and Isaac H. Marsh was elected deacon.

In 1876 the number of members was 181 and the following year many of the members were given letters for the purpose of organizing Providence Baptist Church.

On March 23, 1876, A. B. Dunaway resigned as pastor to accept another call and the Reverend F. W. Claybrook was called and accepted.

In 1881 Frank Settle was elected clerk and Joseph Davenport deacon. In 1883, George Cottingham, Thornton B. Sampson, Frank Settle, and George Shackleford were elected deacons. In 1885 land was purchased from W. P. Haynie for a parsonage and a committee was appointed to build same. On February 28, 1886, F. W. Claybrook resigned as pastor and later the same year certain members requested letters from the church to organize Corrottoman Baptist Church. On June 12, 1887, James T. Eubank was called to preach at Lebanon and Corrottoman. In 1889 James T. Eubank resigned as pastor to accept another call and W. E. Wright was called as pastor for a short time.

In 1890 it was ordered that the spittoons be removed from the church and Rev. W. A. Street was called as pastor and accepted. Elder Street continued to act as pastor until 1900 which takes us out of the realm of history and brings us well within the memory of living members of the church.

During the first one-half century of the life of the church it appears that it was the custom among the members to use the church meetings as a forum for the trial and adjustment of all difficulties between the members and of all charges of moral delinquency on the part of the members. It is not only pathetic but amusing to learn from a reading of the minutes of the church meetings that some few of the members, who by reason of moral weakness were prone to yield to temptation and were inclined to look upon the wine too often when it was red or to indulge in the pastime known as gambling or to violate some other moral law of the church, would after due summons appear in church meetings and express their sorrow at having violated the laws of the church and ask that they be allowed to remain in fellowship, only to shortly thereafter yield again to temptation and be again cited to appear before the church. Violators were not excluded from the church unless they disregarded the citation and treated the proceedings with contempt or requested that they be excluded. Reference is made to a case in point when two of the members of the church (who were engaged in the mercantile business and who apparently conducted barrooms in connection with their merchandising establishments) were summoned to appear before the church and show cause why they should not be excluded from membership. One of them did appear and admitted that he was in error in conducting a barroom in connection with his merchandising business and that as soon as he disposed of his present supply of liquors, he would close up his barroom and not engage in the sale of strong liquors again. The other one paid no attention whatever to the summons and did not appear with the result that he was excluded from membership in the church, while the member who had promised to close up his barroom was permitted to continue in good standing. It should be stated that the member who had promised to close his barroom after he had disposed of his then supply of liquors measured up to his promise and continued for many years to be a leading member of the denomination.

Since the year 1900, the church has been served by a number of earnest, capable and devoted ministers, among whom can be named the following: Dr. Wayland F. Dunaway, who had returned to Lancaster County to spend the evening of his life, the Reverend E. M. Ramsey, the Reverend S. C. Walker, the Reverend George T. Schools, the Reverend J. L. Waldrop, the Reverend W. W. Shelton and the Reverend R. S. Whitescarver, who is the present minister, all of whom were and are untiring in their devotion to the arduous duties of a minister of four churches, including Lebanon.

The present deacons of the church are I. L. Forrester, John Marsh, Collin Marsh, Marvin Davenport, Charles Davenport, Edmond P. Christopher, T. T. Jackson, Jr., and Ford Warwick. The present clerk is Ford Warwick and the treasurer is Marvin Davenport. The superintendent of the Sunday school is Garland Forrester. The present minister, Rev. Roy Whitescarver, is a man of ability and untiring devotion to his duties and although he has come from a distant portion of the State, he has greatly endeared himself to the people of this section.

In 1954 Lebanon church entered upon a period of renovation, additions and repairs. A large, handsome educational building was added to the church, heat installed, new pews were placed in the church, and the entire interior was renovated. This effort on the part of the membership, had it been let to contract, would have cost many thousands of dollars. Fortunately, however, some of the members were themselves contractors and builders and they did a great deal of work themselves with the aid of the membership and with the assistance of a friend who kindly loaned them some money they were enabled to complete this addition and renovation without further expense and have now almost entirely paid off the loan. The exterior of the church has not been hurt by the addition of the educational building as the same style of architecture has been preserved in the addition. The interior of both the church and the educational building is of the same pattern and all who visit the church are impressed with the plain but handsome interior.

The church is at this time well organized and embraces in its membership a large majority of the people living in the surrounding country, for which the present minister, his predecessors, the board of deacons and officers of the church are entitled to large credit.

In conclusion, it must be said that a church is after all measured by its works, by the influence for good it has created, by the number of sons and daughters it has sent out into the world whose lives and deeds have tended toward the uplift of humanity and have encouraged the cultivation of the high and noble attributes of the human race. This old church has been the mother church of the upper part of Lancaster County, two other churches having sprung directly from its loins as well as all of the colored Baptist churches in the upper part of this country and another, Norwood Chapel, is in part the offspring of this church. It has contributed a number of men to the Baptist ministry of Virginia, all of whom became leaders of the Southern Baptist Association. Can one doubt but that all of these results have been inherited from those 49 pioneers who over 100 years ago signed a solemn

covenant and organized this church. Anyone who reads that covenant will realize that they were men and women of the highest integrity, of sturdy independence, actuated only by the desire to do right and imbued with a religious faith that enabled them to surmount all obstacles in the full and complete consummation of what they had set out to do. Anyone who reads the address of the committee of the united Baptist churches in Virginia to George Washington, the newly elected President of the United States, is forced to the conclusion that there were no more enthusiastic patriots among the American Colonies than were the Baptists and no more enthusiastic supporters of General Washington upon the field of battle than they; and anyone who reads the reply of President Washington must know that he cheerfully conceded that fact for he says:

"While I recollect with satisfaction that the religious society of which you are members have been throughout America uniformly and almost unanimously the firm friend to civil liberty and the preserving promoters of our glorious revolution, I cannot hesitate to believe that they will be faithful supporters of a free yet efficient general government."

It may be truly said that this old church has fully carried the burden that its organizers assumed in that it has always from its origin down to the present stood for the promotion and cultivation of those high and noble qualities of the human heart and mind, and in that its influence has always been exercised for the acquisition and promotion of the good things of life. My fond wish is that it may continue along the line that it has always worked, that it may always stand for the high, noble, and spiritual things of life and that it may always register its opposition to those things that debauch the human race, and that for centuries to come, here it may stand, under the spreading shade of the noble oaks that surround it, as a monument to the devotion of its founders and as a guidepost to the coming generations as they come and go.

Nixon Makes Friends in Labor

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. MICHEL. Mr. Speaker, I represent one of the finest diversified congressional districts in the Nation, in the heart of Illinois. We have some of the best farmlands in the country, producing some of the highest yields in grains and prize livestock. In the industrial center surrounding the Peoria-Pekin area, labor is well organized with 38 separate unions, including the largest United Auto Workers local in Illinois numbering some 19,000 members. It is important to me that our presidential nominee be sympathetic to the problems of the workingman and the farmer.

I know from personal conferences with DICK NIXON that he fulfills this requirement. He has some ideas of his own on a farm program which I am sure will be refined for presentation to the people at the appropriate time. The rank and file of organized labor stand to benefit by the election of DICK NIXON and I am sure he will be regarded as as good a friend of labor as I am in my own district where it would be impossible to be elected without a sizable vote from working men and women.

Mr. Speaker, I ask that a recent article of Victor Riesel entitled "NIXON Makes Friends in Labor" be printed at this point:

NIXON MAKES FRIENDS IN LABOR
(By Victor Riesel)

Nelson Rockefeller would have just cause for action against RICHARD NIXON if he sued the Vice President for alienating the affection of some of the Nation's most influential labor leaders. Perhaps "affection" is too strong a word. So make it "respect."

Whichever way you say it, the fact is that in a recent series of meetings the Vice President has turned some of his most bitter critics into the friendliest of enemies. If they are as fond of him in November as they are in May, the policymaking union chiefs will fight NIXON, but there'll be an unprofessional amount of padding in the gloves they throw at him.

Most recent of these unpublicized talks had an "Alice-in-Wonderland" touch. Into NIXON'S office in the Senate Building on Wednesday, April 6, walked a small group of labor leaders who had been Franklin Delano Roosevelt's close friends and who loved to call the late F.D.R. their "best business agent."

On that day—the morning after the Wisconsin primaries—there sat around NIXON'S desk such militant liberals as the sagacious David Dubinsky, the Ladies Garment Workers' chief; Arthur Goldberg, the man who has become known as the legal prophet of American labor; Alex Rose, the Hatters Union president who wears two hats, naturally, one being the leadership of New York's Liberal Party, and Jack Potofsky, leader of the Amalgamated Clothing Workers, long sophisticated politically, for theirs is the union created by the late Sidney Hillman.

The union men had come with Secretary of Labor James Mitchell, the Republican's minister with heavy portfolio to the world of labor. For 2 hours they talked politics. They heard the Vice President appear to predict that Senator JACK KENNEDY would get the Democratic nomination. They kidded NIXON about being on the wrong side. They nominated Jim Mitchell for Vice President on the Republican ticket.

They talked about trying to get a national minimum wage law of $1.25 an hour and heard NIXON say that the time would come. They spoke of the Forand bill for health aid to the aged and the "veep" was sympathetic to swift action on some sort of a formula which would make it possible for the older folk to pay hospital bills. They were grave about the threats from foreign imports.

After they left, they told each other and their personal friends that they had gone through the intricacies of modern labor's future problems and found NIXON "well informed and sympathetic." For most of them it was their first meeting with him since he had been booed by AFL delegates at the federation's 1954 convention. They said their personal picture of him was different from the image that had been projected.

NIXON'S ever-widening contact with labor is Jim Mitchell's doing. Day and night the Secretary has been working on his project of the politically impossible—swinging labor's top men closer to the Republican administration.

It was Mitchell, for example, who arranged AFL–CIO president George Meany's conference with President Eisenhower in the White House on April 26.

The conservatives in the Cabinet view this coming conversation with the enthusiasm the NAACP would show for awarding Governor Faubus a man-of-the-year medal. Secretary of Labor Mitchell knows this, of course. Yet he worked it all out with Meany at a private dinner on April 11. They were in Miami Beach and met at the Shamrock Isle Motel.

Meany wants President Eisenhower to sponsor a labor-management summit conference. The business people want to know what will be discussed and who will speak for industry before they walk into such a gathering—and before the White House sponsors one.

But it appears that there will be a summit at home. Labor knows it has Mitchell to thank and that Mitchell looks to DICK NIXON for advice and frequently consent. So it isn't likely that labor is going to really clobber these men come election time.

Census of Lead and Zinc Industries

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1960

Mr. METCALF. Mr. Speaker, a necessary tool in the mechanics of collective bargaining is the productivity index, the output per man-hour. Imbalance here affects the whole complex and delicate machinery.

Recently, President John Clark of the International Union of Mine, Mill and Smelter Workers detected such imbalance and called for a revision of U.S. Department of Labor estimates of employment in lead and zinc mining.

In a letter to Secretary of Labor Mitchell, the president of the nonferrous metal miners' union said recent surveys of lead and zinc mine employment by the U.S. Tariff Commission and Census Bureau indicate "upward bias" in Labor Department estimates.

Use of "biased" Department estimates in calculating productivity indexes tend to understate recent gains in output per hour of lead and zinc miners, Mr. Clark said, adding that it now appears that productivity in the industry was about 75 percent higher last year than in 1947, the base year of the Bureau of Labor statistics index.

The text of Mr. Clark's letter to Mr. Mitchell follows:

Recently the U.S. Tariff Commission in its latest report on lead and zinc, and the Census Bureau, in its preliminary summary of the 1958 Mineral Industries Census of the Lead and Zinc Ores Industries have reported the employment of production and development workers in the lead and zinc mining for recent years.

These data indicate an increasingly upward bias since 1956 in the Bureau of Labor Statistics estimates of employment of production and development workers in lead and zinc mining.

The Tariff Commission and Census Bureau data would appear to be comparable conceptually with the Bureau of Labor Statistics estimates, and should be more accurate because the former agencies did not employ sampling techniques.

Data from the three agencies are compared in the following table. Bureau of Labor Statistics estimates given here are the latest annual estimates available in pub-

lished form except for 1957 and 1959, where simple arithmetical averages of the first 9 months are presented for comparability with Tariff Commission data.

Average number of production workers employed in lead-zinc mining and milling as reported by Federal agencies

Year	Labor Department estimates	Census Bureau	Tariff Commission
1954	13,800	13,592	----------
1955	14,200	----------	----------
1956	14,900	----------	14,251
1957 (Jan.–Sept.)	14,700	----------	13,208
1958	10,500	8,682	8,566
1959 (Jan.–Sept.)	10,066	----------	7,983

This matter is of direct interest to my union because of the use we make of the Bureau of Labor Statistics productivity indexes in collective bargaining. In current negotiations with the northern Idaho lead-zinc mining operators we have had available Bureau of Labor Statistics productivity index numbers for this industry only through 1957. The data presented above indicate that the index number for 1957 is low, and we estimate roughly that the numbers for 1958 and 1959 on a 1947 base should be on the order of 165 and 175, if the Bureau's estimates were adjusted, say, to benchmark levels indicated for 1958 by both the Tariff Commission and the Census Bureau.

I am writing to ask that your Department give consideration to a revision of its employment estimates in lead-zinc mining in the light of the new data that are now at hand, and that the calculation of productivity index numbers be speeded up. It should be possible by this time to calculate index numbers for 1958 and 1959, as well as to check the numbers for 1957 and possibly 1956.

Time To Farm Effectively

SPEECH
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. PORTER. Mr. Speaker, I have introduced the Family Farm Income Act of 1960. In so doing I am supporting the legislation proposed by many of my colleagues who have expressed dissatisfaction with the administration's farm policy, including my colleague from eastern Oregon AL ULLMAN. Many variations of farm policy renovations have been introduced this Congress. From them I am hopeful that the hard-working Committee on Agriculture will report a bill which will solve the ever-mounting too long continued crisis in American agriculture.

Around us we watch as surplus commodities stockpile. We are told that in time of drought our surplus would be used up. It makes as much sense to pronounce solemnly that in the event of extreme heat the Potomac would dry up.

Our agriculture know-how is the best in the world. Our farmers produce more and more on less land. The administration's soil bank program has in no way alleviated the problem of overabundance. It is time for a change. It has been time for a change for a long, long time.

The Family Farm Income Act of 1960 is designed to raise family farm income while simultaneously reducing the cost to taxpayers.

Representative POAGE, the knowledgeable vice chairman of the Committee on Agriculture, calls this legislation a farmers' bill of rights. He says it answers the President's call to draft effective farm legislation. He has explored the bill completely with other farm experts and has already offered corrections which improve it.

It is not difficult to point out the trouble spots in agriculture today. One only has to look at the revealing drop in net farm income in 7 years. It has dropped from $15.3 billion in 1952 to $10.3 billion in 1959. The per capita farm income has failed to even remain at half that of the city resident. The parity ratio, the relationship of farm prices to other prices, has dropped from 100 percent in 1952 to 77 percent in 1960.

As my colleague, Representative GEORGE MCGOVERN, of South Dakota, noted in February, farm prices are down 16 percent from the 1952 figure while costs are up 11 percent. The squeeze is not new to the family farmer.

There are other trouble spots which have been recounted often in this House. Farm indebtedness is up $6.8 billion this year over 1952; interest charges have climbed. Representative MCGOVERN notes they are up 80 percent since 1952.

Statistics show that the farm population declined 3.5 million in 8 years. While this occurred the number of farm units dropped.

The legislation I have introduced has been designed to restore family farming to its rightful position.

It restores the farmers' bargaining power through self-imposed commodity regulations on production and marketing.

By balancing production with demand our national economic health would be strengthened. I believe that farmers can develop their own program to establish nationwide marketing quotas which will insure production to meet demand. I believe that it is possible to cut our reserve surpluses by 10 percent each year in an orderly program of distribution.

The bill I have introduced provides for the use of direct compensatory payments up to a maximum of $5,000 to any one producer to assure him a fair return for his marketing quota. This relief will be used only if needed. My farmer friends suggest that properly established marketing quotas will eliminate need for such compensatory payments.

Under this proposed bill each farm operator would have to place at least 10 percent of his tillable acres in a soil-building base. He could add to 30 percent more for which he would be compensated in payments of surplus Government-held feed grains rather than through cash payments as now established under the soil bank program. I think the two-pronged effect of such a system is obvious.

Under title II a new type of food distribution program is proposed. The Secretary of Health, Education, and Welfare is directed to increase the amount of high protein foods such as dairy, poultry, and meat products distributed to the needy, to institutions, and through the school lunch program. To carry out the program, the Secretary is directed to purchase any of the products which are not in the stocks of the Commodity Credit Corporation. Under the language of the bill:

> Whenever any donee eligible to receive commodities desires to do so, such commodities may be purchased on the local market in accordance with the regulations promulgated by the Secretary of Health, Education, and Welfare, thereby relieving the Government of the necessity of storing and transporting such commodities. The sum of $500 million per annum for each year is hereby authorized to be appropriated to carry out this section.

As proposed the estimated cost of the program would be limited to no more than 5 percent of the annual market value of each of the commodities participating in the program. It is estimated that the program would cost about one-tenth the sum now being spent—or $0.5 billion yearly as compared to today's $5.3 billion.

In discussing this legislation with my colleagues I am aware that amendments will be necessary. I understand, for example, that the dairy industry has a working marketing program and does not feel it is wise or necessary to change it. Changes in wheat marketing are needed. I know that revised bills include such provisions.

My purpose in joining with my colleagues is to lend support in an area which does affect every other area of our economy. A healthy and strong farm economy is not an impossibility.

Surplus food, stored in warehouses at high cost to the taxpayer, benefits no one.

Poor acreage confined to a soil bank program does not meet the need to take out of operation highly productive land. This sort of operation does little more than rob the taxpayer as well as cripple the farmer.

The taxpayer and the farmer demand a new, effective farm program. Piling up surpluses is no answer. The Family Farm Income Act of 1960 offers the best route out of a distressing situation.

Economic Picture Looks Brighter for Oneonta, N.Y., a Bright Spot in the Midst of Much New York State Unemployment

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the Oneonta Star of April 15, 1960. There is so much unemployment in so many parts of my district, and I have been fighting so hard here in Congress to deal with that problem, that it is a pleasure indeed to be able to report that the picture has brightened at least to some extent in the city of Oneonta. Let us hope that this trend continues, though we surely cannot afford to let even this bright spot lull us into any complacency. Oneonta has moved swiftly to promote the welfare of its people. I feel sure the effort is already beginning to pay off:

ONEONTA AREA ECONOMY BETTER THAN NATIONAL

It appears that Oneonta is a slight bright spot in a tarnished national employment picture.

While the Nation as a whole picked up another quarter of a million unemployed last month, Otsego and Delaware Counties actually showed a slight gain.

The excuse presented by the Labor Department for the national situation is that bad weather further reduced farm and construction work. Both those fields are important percentages of this area's employment and we certainly had the bad weather; still we are up.

With this encouragement at the start of a new season, the area seems ready to have a good year. Stable employment in the hard goods industries and stores is a good start. Construction on the $1.7 million phys-ed building at the college campus seems a sure bonus.

Nationally the picture is not supposed to be so bright even as good weather approaches. Steel is a problem; and if steel dips, can the auto industry be far behind? Our economy is so diversified today that a temporary weakness in either of those industries is felt throughout the land.

This sounds like a time for alertness among Government economists. We are supposed to be headed for a big national year but we shouldn't be so sure of it that we let a few small leaks in the dike get out of hand.

We've had enough of floods for one year.

He Hiked From Iowa

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 25, 1960

Mr. WOLF. Mr. Speaker, under leave to extend my remarks, I would like to bring to my colleagues attention an article which appeared in the Family Weekly, April 10, 1960.

This article points up the great desire of Vern Carrol, of Dubuque, Iowa, for strengthening Boys Clubs of America. He hiked from Dubuque to Fairbanks, Alaska, to help demonstrate the great need for establishing a Boys Club in that State—the only one with no Boys Club. Vern Carrol is to be congratulated for his fine work and enthusiasm in Boys Clubs of America.

The article follows:

HE HIKED FROM IOWA

Iowa to Alaska is some 4,000 miles, but a wiry, bearded man named Vern Carroll knows every step of the way because he recently covered it—on foot.

He went from Dubuque to Fairbanks, a march lasting almost 5 months, during which he slept under bridges and in culverts and enjoyed such delicacies as moose, porcupine, and wild berries when his store-bought groceries gave out.

"It was a wild, wonderful adventure, and I had a good, rough time of it," says Carroll. "The outdoor life made me feel like a man of 20 again, and I'd do it over if it'd help the boys."

"The boys" of whom the 49-year-old former truckdriver speaks are the youngsters who are members of Boys' Clubs of America. Carroll, a volunteer worker in the Dubuque club, staged his trek to dramatize the need for a club to be established in Alaska, the only State which doesn't have one. Orphaned as a boy himself, Carroll declares, "I've always been interested in kids, and while I've seen evil men I've never met a bad child."

The hiker started from Dubuque with some food, clothing, and camping gear stuffed into a golf cart, but he switched to a shoulder pack on the Alcan Highway. "All along the way people offered to pick me up, but when I explained I was walking in behalf of the boys' clubs, they'd wish me well and go ahead," says Carroll. "In fact, the only problem I had was dogs—they're not always as friendly as people."

His most memorable experience was in the Yukon. Picking berries one day, he glanced up to spy a bear foraging in the same bushes. "I moved on," he admits. Other times, incessant rains washed out his campsite, and he spent the nights trying to get warm and dry.

"As he goes through life, every man has to take some bitter with the sweet," Carroll wrote the Dubuque club from Alaska. "When you can do that, it makes a good man out of you, and I know all you lads will be real men some day."

The walk from State No. 29 to State No. 49 already has borne fruit: an Anchorage businessman named Henry Wolff has donated land for Alaska's first boys' club, and a number of carpenters have volunteered to erect the building.

What a Career Will Mean to Me

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. BRAY. Mr. Speaker, last Friday evening I had the honor of attending the Career Key Awards dinner sponsored by the Girls Clubs of America and Reader's Digest Foundation. This privilege came to me because a young lady from the Seventh District of Indiana, Miss Maryka Ruth Matthews, was among the nine finalists in the Career Key awards competition.

Miss Matthews is a freshman at Lawrence College in Appleton, Wis. She was graduated last year from Franklin High school, Franklin, Ind., where her scholastic record was almost perfect. In addition, she had been the editor of the yearbook, associate editor of the paper, president of the honor society, and vice president of four other groups. She was voted "best all-round girl" in her senior class.

I was further gratified to learn that Miss Matthews was selected from among the nine finalists as the winner. As part of the competition she had submitted an essay on her interest in a career, and I would like to enter it at this time:

WHAT A CAREER WILL MEAN TO ME
(By Maryka Ruth Matthews)

A career, to me, is a chance to make a contribution to humanity. It is my responsibility to mankind. I owe a debt for the privilege of being alive—for the sheer joy of living. It is as though I took out an I O U in order to be born. This document would say, "for the loan of one life and its talents, I owe you (humanity) a contribution."

Career comes from the word to run, as to run a race. I will be running that race and my goal will be to pay my debt. With this in mind I can never give up and say, "so what?" For I have been given the supreme gift—the gift of life—and though I can never hope to stamp my I O U and mark it paid in full, I must push on toward the goal.

I can't just work at any job. This career must be the particular thing for which I have a talent and for which I feel a call. As someone once said, "A call is seeing a need and feeling within oneself the ability to answer it." For that I must be prepared—prepared by an education which makes me aware of the world and its ideas.

My career won't be important because of the classes I teach or the lectures I give, but because of the lives I help to mold; it won't be important because of the papers I type, but because of the influence those papers have no people; it won't be important because I give vitamin A, or vitamin B, or prescribe penicillin, but because by giving these I help to rebuild life. It will be the total of my life, my debt, my responsibility—my career.

Alameda County Labor Editor Retires

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 21, 1960

Mr. COHELAN. Mr. Speaker, Robert Louis Burgess, editor of the East Bay Labor Journal in Alameda County, Calif., this week retires after years of service. It has been my personal privilege to count Mr. Burgess as one of my closest and dearest friends. He is also a man whose editorials and columns over the years have given Alameda County a great weekly newspaper.

Margaret Miller, staff writer for a competing newspaper, the Labor Review, also of Alameda County, has interviewed Mr. Burgess and written a profile on his life and times. I believe my colleagues in Congress will appreciate reading about an unusual man who has created a great tradition and, under permission to extend remarks, I submit Miss Miller's article for the RECORD. In it his competitor describes Mr. Burgess as her "illustrious colleague"—a tribute which Lou Burgess will appreciate above all others.

The article follows:

GADFLY EDITOR'S BEST STORY IS HIS OWN LIFE

(By Margaret Miller)

"I have to laugh when they call me a martyr. The international even set up a Louis Burgess martyr fund * * * and do you know it's still in existence?"

Lean and 69, the retiring editor of the East Bay Labor Journal settled back to enjoy the noiseless mirth of irony. He was being interviewed by a competitor in tribute to his character, his dedication, his unique contribution to independent labor editing and to the almost forgotten era of personal journalism.

Burgess has been the Newspaper Guild's first martyr since the big 1935 organizing drive in San Francisco. The work, he said, was mostly done "by a group of skilled Communist organizers on the Examiner, using people in the middle salary range, like me, as a front. My work was nominal—until it came time to face the boss."

Burgess was fired and blacklisted. Ten years later, when he went back to newspapering on the San Francisco Chronicle, Burgess devoted himself to driving Communists out of the Guild and CIO leadership. "I do have to give them credit though—they did a good job of organizing the union."

In the interim, Burgess felt more lucky than persecuted. A Time magazine headline "Guild Hero Fired" caught attention of a lieutenant of Secretary of Agriculture Henry Wallace. The article told of Burgess' years as a farmhand in Santa Clara County, and of his family's "following the lumber" from Florida to Georgia, Louisiana, Kentucky, and Oregon. "That's just the kind of a bozo we need out in that crazy State" this lieutenant told Wallace—"somebody with a farm background who can get along with labor, somebody who can mediate."

The wry half-smile crossed his thin lips again. "I mediated a fat salary. Right in the middle of the depression, when everyone else was out of work, I was traveling all over the State in a Government car."

He left the Government ("or rather the Government left me") in 1944, worked for the SF Chronicle and helped elect the anti-Communist guild slate headed by Sam Eubanks, still executive secretary. About this time the Alameda County AFL council decided a broken down newspaperman could do a better job of editing its paper than a broken down painter and Burgess, then 59, was asked to do it.

"My wife was against it. She was the daughter of a former secretary of the Building Trades Council in San Jose and she thought she knew how unions treated their employees. 'How can you work for 100,000 people?' she asked. 'I won't be working for 100,000 people,' I told her, 'I'll be working for just three wheels and I'll be the fourth.' We men have ways of putting a woman in her place."

This last was typically tongue in cheek, for Burgess says he has always sympathized with the lower classes—workers, Negroes, and women.

Every good editor must have deep convictions to sharpen his perception and burnish his humanity Burgess believes, but, despite his disconcerting honesty, his own ideas has been held on a leash, to allow his readers to keep pace with them. "I remembered William Allen White (one of the Nation's great editors) said that when he first started out he was determined to lead the pack and when he looked behind him the pack was out of sight. He was all alone. After that he made sure he was leading the pack," Burgess recounted.

Lou's guiding lights were set aglow in his early life and by his unorthodox education. His father was the keeper of the Tampa Beach, Fla., lighthouse when he was born, but a sawyer in the southern mills most of his life, earning $7 a day when most hands got 90 cents a day—"a real labor aristocrat," Lou observed. "The town treated the sawyer's son as the Duke of York." Lou himself worked in the mills as a setter. "My people were really carpetbaggers against secession. They came from Kentucky on the Ohio River, the line that divides good white bread from beaten biscuits," Lou explained when asked about his southern background in relation to his defense of equal rights.

Burgess remembers that his father had a Kentuckian's mixed attitudes. "He would sometimes go so far as to advocate social equality, but he always kept a big wrench at his bench, to wave around if somebody forgot to say "sir."

My first job at 14 was as boss of a gang of six Negroes loading a freight car, all grown men. I was told, in a loud voice so they could hear, "if those so-and-so's give you any trouble you jes come to me, and I'll give you my big pistol." The Negroes were cautious—caution is something everybody in the South is good at, black or white—but they had their fun. "Look at that big man up there," they'd joke. "Better do what he say, or he'll get his big horse pistol."

The boy was saved by the humanity of literature.

With only 5 weeks' schooling himself, Lou's father had been taught to read the classics by his own mother and was inspired by an account of how John Stuart Mill had educated his son. He taught young Louis Shakespeare, Virgil, MacCauley, Herbert Spencer. Burgess says the main literary influences on his life were three great epic poems: Virgil's "Aeneid," Dante's "Inferno," and Milton's "Paradise Lost," which deal with man's condition, his fate, and his purposes. "My most important philosophical influences were probably Thoreau, first (accounting for Burgess' deep appreciation of nature) and then Karl Marx, and Veblen, who de-Marxized me."

"I get terribly annoyed," Burgess said, "when people are horrified by the mention of Marxism. Everybody is influenced by Marx whether he knows it or not. Marxism is just economics."

As a young man, Burgess first became acquainted with economics, then, when he decided there were easier things to do than sawing up eucalyptus trees on Santa Clara County farms and went a year to College of Pacific, then in San Jose. "They were nice to me," he said, "even though I was not a high school graduate." Bookshops faced the park where orators spoke against God and for the single tax. Students gathered in their favorite shops, and Burgess found himself among followers of the Socialist Labor Party, who influenced him. "They demanded rigorous intellectual thinking, and I began to require it of myself. Somehow Virgil and Dante and Milton, all stirred up with hard thinking, made me what I am. I'm really a Jeffersonian liberal, you know."

At college Lou met a Stanford student who married him "against the better judgment of her parents" and went on to work as schoolteacher. Louis went back to farm work until he got a chance to work on the San Jose News. "I couldn't even write the English sentence," Burgess smiled. "Minnie taught me, after I was working at the trade."

The culture and conviction he put into those sentences won him the chance to write editorials, and he has been doing so ever since. He tackled the president of the local bar association on the issue of corruption ("I thought he would be a nice tiger shark to wrestle") and, as a pacifist, fell out with the American Legion. "I spent most of the time placating the groups I alienated in my editorial column," Burgess said. Once, while speaking to a Rotary club he noticed an important looking old man with an ear trumpet listening hard and scowling, and Burgess was sure this meeting marked the end for him on the News. After the speech the old man, the town banker and a pious Methodist, shuffled up to Burgess and declared loudly, "I know what's the matter with you young man, you're a Christian." "I was somewhat startled at the thought, but after that everything was all right."

How much of his almost quixotic independence Lou was able to express as an editorial writer for Hearst is a little vague, but Burgess found room for it at the East Bay Labor Journal. His front page column was aimed, he says, at proving that labor journalism can be good journalism, and at defending civil liberties. That he believes labor is mostly right goes without saying, but it was harder to express his antipathy to two "isms in the labor movement: pie-cardism and institutionalism" which, he feels, stunt the growth and repress the effective activity of the membership.

How, with such an orientation, did he hold onto enough institutional support to keep his job? "By edging, always edging. I'd see a crack and push through, wait for a story to hang my convictions on. And then I remembered the advice of the editor of the old (SF) Call, Fremont Older, whom I worshipped. 'Young man,' he told me in San Jose, 'always have one good hot controversy going—but never more than one.' "

Burgess had support from Oakland's anti-Hoffa Teamsters when he raised the issue of corruption before it was acceptable in the AFL-CIO hierachy to do so. "But you should have heard the howls when I printed the story of a police raid on a gambling setup in the basement of a union hall. It was on the front page of the Tribune but I was told I was giving labor a bad name. That's just silly." He once told a key building trades leader (later removed) that he was a crook and should get out of the labor movement. As a result of this kind of thing the council's publication committee was split 5-5 for a long time over the issue of firing Burgess.

Now that he is retiring, primarily to spend more time in East Palo Alto with his ailing wife, Burgess will edit the poems he has been writing easily and happily every day. He will spend time on the school board, for though "I have never been much at playing games with children—the ladies can play games with them—I am very much interested in their development." And he will do a nature study of Alameda Creek, "an antecedent stream that was here before the hills were." And now, with the San Ramon project, we're going to dump tons of sewage into it. Just think what man does in adjusting to his environment."

Yes, Lou Burgess, son of a sawyer, farm hand, guild martyr, and illustrious colleague. Man does do wonders.

The Terrible Cost of Inflation

EXTENSION OF REMARKS

OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. FLYNN. Mr. Speaker, American citizens and constituents in all of our districts are sincerely and vitally concerned about the effect that inflation will have and is having upon our country, our economy and the value of the property which American citizens own. It is well that the people of this country should be aroused, because it is only through an aroused citizenry that any-

thing effective can or will be done to stop the paralysis of inflation from engulfing and paralyzing the economy of our Nation.

This is an election year and matters of such great concern to the people will, during the coming campaign, be discussed openly and vigorously. It is well that this be done. I, as a Democratic Member of this body, place the blame for the inflation that already exists and for that which may come upon our Republican leadership. We had little or no inflation during the Korean war and after World War II because President Truman and the Democratic leadership inaugurated steps to prevent it. When the Republicans took office in 1952, they virtually invited inflation and are continuing today the very policies that have caused the inflation that presently exists. The Republicans refused to take steps to have the Federal Reserve bank support the bond market of the Treasury Department. The Federal Reserve bank then went on strike against the Government of the United States and refused to buy the 2½-percent bonds which the Government was issuing to finance its public debt. During the Democratic administration, steps were taken to force the Federal Reserve bank to support the Treasury Department. This resulted in the bond retaining the full value of 100 cents on the dollar and in interest remaining at 2½ percent on the public debt. Private interest rates follow the public interest rates and remain about 2 percent above. It, therefore, resulted in private interest rates ranging from 4 to 5 percent.

When the Federal Reserve Bank went on strike against the Treasury of the United States, it forced the Secretary of the Treasury to offer an increased rate of interest on the Government bonds. This policy continued with the Federal Reserve Bank continuing to keep pressure on the Secretary of the Treasury until they forced the interest rate on the long term bonds to the maximum legal limit of 4¼ percent. This drove the private interest rate to approximately 6 percent and in some cases 7 percent. The President of the United States then led the drive to secure for the bankers of this country a further increase in the interest rate; and has continued, to the present time, to put pressure on Congress to remove the 4¼ legal rate on long term Government bonds. To date, Congress has resisted this pressure but may possibly weaken before the end of this session. If Congress does weaken, it will mean that the interest rate on long-term Government bonds will increase, I believe, to at least 6 percent. This would bring the private interest rate to 8 or 9 percent. The result of the present interest increase is that the interest on the public, private, corporate, and municipal debt has increased by approximately $15 billion per year. These are all inflationary dollars, since neither the Government nor the people receive anything in return, either in the way of service or commodities for the additional interest that is paid. Inflation is also brought about by constant wage increases where employers pay more for the same productivity, and no one denies that wage increases have had an inflationary effect. The Government, however, and the Republican Party attempts to deny that the interest increase has had a deflationary effect. They are wrong. The Republicans issue news releases to the paper viewing with alarm the inflationary trend, and then inaugurate interest increase which is the most inflationary act that any government or people could permit at a time such as we are living in. This same party advocated the vault cash bill which gave without consideration to the Federal Reserve banks $15 billion worth of American bonds, and then required the taxpayers of America to repurchase these same bonds with further tax dollars to the tune of another $15 billion. This act also denies the U.S. Treasury the interest that it was receiving on the $15 billion worth of bonds which it has authorized to be turned over to the Federal Reserve bank without consideration. I ask each Representative in Congress if the people in your congressional district can afford to pay the taxes necessary to repurchase the $15 billion in bonds that the Republican Party wanted given without consideration to the Federal Reserve banks. I ask you if the people in your congressional districts can afford to pay the increased interest on the private and public debt to the tune of $15 billion per year that the Republican policy has brought about as a result of their permitting the Federal Reserve bank to strike against the Treasury of the United States.

I point out, too, that Republican administration increased the cost of operating the Department of Agriculture from slightly over $2 billion per year when they took over in 1952 to better than $7 billion per year at the present time. They removed the local committee jobs that were handled gratis by local committeemen on an honorary basis and replaced them with an army of bureaucrats drawing from $5,000 to $10,000 per year each. They have failed to improve the farm situation, but they are spending $5 billion inflationary dollars each year more than was being spent under the Democratic administration when the farmers were receiving 100 percent of parity for their produce. The Republican Party continues to engage in diversionary tactics to attempt to throw the blame for inflation upon the Democrats, while they yield to the big money interest and the banking interest and engage in consistent inflationary programs that injure the taxpayer and help only the banks.

I have recently received a communication from the St. Mark's Home and School Association which is located in my district. Those who prepared this resolution are sincere, honest, God-fearing Americans and who truly have at heart, the best interest and the welfare of this country and its people. They are thinking of the future of their children and of the American way of life and they have good reason to be concerned. I print at length the resolution received, as I believe that it testifies to the thinkings and feelings of the average American citizen in this country today.

RESOLUTION OF ST. MARK'S HOME AND SCHOOL ASSOCIATION

Whereas for nearly two decades, and particularly following World War II, the United States has experienced a sharp inflation of its currency, which inflation is still continuing; and

Whereas during the last decade the value of the U.S. dollar has been reduced more than half; and

Whereas if this trend continues it will seriously affect our economy, destroy our position as a leader in world affairs, aid Russia's avowed intention to destroy us as a democracy, and may even destroy the form of government under which we now live; and

Whereas such inflationary trend has already wreaked havoc upon many of our citizens who depend upon fixed incomes such as pensions and other like means of income, and has debilitated the savings of the older citizens who have frugally prepared for their old age and further inflation will wreak even further havoc upon them; and

Whereas one of the causes of such inflation has been the Federal Government's policy of refusing to live within its income, borrowing money for current expenses and increasing the legal debt limit; and

Whereas during times of war it may be necessary for the Government to borrow in order to meet extraordinary expenses, but to continue to do so in times of peace is against the rules of sound economy and against our tradition as a nation; and

Whereas our Government, by pursuing a policy of thrift and frugality can, we believe, live within its income, balance its budget and reduce its indebtedness, and by pursuing such a policy reduce the heavy burden of taxes as well: Now, therefore, we do hereby

Resolve, That we urge our elected Members of the Congress of the United States to use their voices, influence, and votes to reduce waste and extravagance in Government, to cease borrowing additional moneys with which to meet current expenses, to work for a balanced budget, and to refuse further raises in the debt limit except in cases of extreme emergency.

Dated at Kenosha, Wis., this 21st day of March A.D. 1960.

Mrs. LAWRENCE RUETZ,
President.

Attest:

Mrs. EDWARD W. JEANNAT,
Secretary.

The Religious Issue in American Politics

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. BOWLES. Mr. Speaker, most thoughtful people have been rightly alarmed at the proportions the issue of religion has suddenly assumed on the national political scene. Despite the best efforts of the primary candidates themselves to place the question in proper perspective, press reports have persistently tended to magnify its importance.

Under these circumstances, I think that Senator KENNEDY's remarkable address to the American Society of Newspaper Editors here in Washington last Thursday, April 21, deserves careful reading by every thoughtful American. His statement is forthright, unequivo-

cal, and in the highest traditions of American public service.

Let us hope that, once and for all, there will be an end to innuendo and distortion from whatever quarter they may spring. There are great public issues to be debated and discussed. The candidates themselves have been discussing them and want to continue to discuss them. Let us let them concentrate on the real issues and debate them fully and thoroughly, and with their own and the country's undivided attention.

Under leave to revise and extend my remarks, I submit for my colleagues' thoughtful attention Senator KENNEDY's address:

THE RELIGIOUS ISSUE IN AMERICAN POLITICS

(By the Honorable JOHN F. KENNEDY, to the American Society of Newspaper Editors, Washington, April 21, 1960)

I have decided, in view of current press reports, that it would be appropriate to speak with you today about what has widely been called the religious issue in American politics.

The phrase covers a multitude of meanings. There is no religious issue in the sense that any of the major candidates differ on the role of religion in our political life. Every presidential contender, I am certain, is dedicated to the separation of church and state, to the preservation of religious liberty, to an end to religious bigotry, and to the total independence of the officeholder from any form of ecclesiastical dictation.

Nor is there any real issue in the sense than any candidate is exploiting his religious affiliation. No one's candidacy, by itself, raises a religious issue. And I believe it is inaccurate to state that my candidacy created the issue—that, because I am replying to the bigots, I am now running on the religious issue in West Virginia—or that my statements in response to interrogation are fanning the controversy. I am not trying to be the first Catholic President, as some have written. I happen to believe I can serve my Nation as President—and I also happen to have been born a Catholic.

Nor am I appealing, as is too often claimed, to a so-called Catholic vote. Even if such a vote exists—which I doubt—I want to make one thing clear again: I want no votes solely on account of my religion. Any voter, Catholic or otherwise, who feels another candidate would be a superior President should support that candidate. I do not want any vote cast for me for such illogical and irrelevant reasons.

Neither do I want anyone to support my candidacy merely to prove that this Nation is not bigoted—and that a Catholic can be elected President. I have never suggested that those opposed to me are thereby anti-Catholic. There are ample legitimate grounds for supporting other condidates (though I will not, of course, detail them here).

Nor have I ever suggested that the Democratic Party is required to nominate me or face a Catholic revolt in November. I do not believe that to be true; I cannot believe our convention would act on such a premise, and I do believe that a majority of Americans of every faith will support the Democratic nominee, whoever he is.

WHAT IS THE ISSUE?

What, then, is the so-called religious issue in American politics today? It is not, it seems to me, my actual religious convictions, but a misunderstanding of what those convictions actually are. It is not the actual existence of religious voting blocs, but a suspicion that such voting may exist. And when we deal with such public fears and suspicions, the American press has a very grave responsibility.

I know the press did not create this religious issue. My religious affiliation is a fact—religious intolerance is a fact. And the proper role of the press is to report all facts that are a matter of public interest.

But the press has a responsibility, I think you will agree, which goes far beyond a reporting of the facts. It goes beyond lofty editorials deploring intolerance. For my religion is hardly, in this critical year of 1960, the dominant issue of our time. It is hardly the most important criterion, or even a relevant criterion, on which the American people should make their choice for Chief Executive. And the press, while not creating the issue, will largely determine whether or not it does become dominant; whether it is kept in perspective; whether it is considered objectively; whether needless fears and suspicions are stilled instead of aroused.

The members of the press should report the facts as they find them. But they should beware, it seems to me, of either magnifying this issue or oversimplifying it.

I spoke in Wisconsin, for example, on farm legislation, foreign policy, defense, civil rights, and several dozen other issues. But I rarely found them reported in the press, except when they were occasionally sandwiched in between descriptions of my handshaking, my theme song, family, haircut, and inevitably, my religion.

At almost every stop in Wisconsin I invited questions and the questions came—on price supports, labor unions, disengagement, taxes, and inflation. But these sessions were rarely reported in the press except when one topic was discussed: religion.

One article, in a news magazine for example, supposedly summing the primary up in advance, mentioned the word "Catholic" 20 times in 15 paragraphs—not mentioning even once dairy farms, disarmament, labor legislation, or any other issue. And, on the Sunday before the primary, the Milwaukee Journal featured a map of the State, listing county by county the relative strength of three types of voters—Democrats, Republicans, and Catholics.

PROBLEMS ARE STRESSED

Now we are in West Virginia. As reported to today's Washington Post, the great bulk of West Virginians paid very little attention to my religion until they read repeatedly in the Nation's press that this was the decisive issue in West Virginia. There are many serious problems in that State—problems big enough to dominate any campaign—but religion is not one of them.

I do not think that religion is the decisive issue in any State. I do not think it should be. And, recognizing my own responsibilities in that regard, I am hopeful that you will recognize yours also.

For the past month and years I have answered almost daily inquiries from the press about the religious issue. I want to take this opportunity to turn the tables—and to raise some questions for your thoughtful consideration.

First: Is the religious issue a legitimate issue in this campaign?

There is only one legitimate question underlying all the rest: Would you, as President of the United States, be responsive in any way to ecclesiastical pressures or obligations of any kind that might in any fashion influence or interfere with your conduct of that office in the national interest? I have answered that question many times. My answer was and is "No."

Once that question is answered, there is no legitimate issue of my religion. But there are, I think, legitimate questions of public policy—of concern to religious groups which no one should feel bigoted about raising, and to which I do not object answering. But I do object to being the only candidate required to answer those questions.

Federal assistance to parochial schools, for example, is a very legitimate issue actually before the Congress. I am opposed to it. I believe it is clearly unconstitutional. I voted against it on the Senate floor this year, when offered by Senator MORSE. But interestingly enough, I was the only announced candidate in the Senate who did so. Nevertheless I have not yet charged my opponents with taking orders from Rome.

THE ENVOY ISSUE

An ambassador to the Vatican could conceivably become a real issue again. I am opposed to it, and said so long ago. But even though it was last proposed by a Baptist President, I know of no other candidate who has been even asked about this matter.

The prospects of any President ever receiving for his signature a bill providing foreign aid funds for birth control are very remote indeed. It is hardly the major issue some have suggested. Nevertheless I have made it clear that I would neither veto nor sign such a bill on any basis except what I considered to be the public interest, without regard to my private religious views. I have said the same about bills dealing with censorship, divorce, our relations with Spain or any other subject.

These are legitimate inquiries about real questions which the next President may conceivably have to face. But these inquiries ought to be directed equally to all candidates. I have made it clear that I strongly support—out of conviction as well as constitutional obligation—the guarantees of religious equality provided by the first amendment—and I ask only that these same guarantees be extended to me.

Secondly, can we justify analyzing voters as well as candidates strictly in terms of their religion? I think the voters of Wisconsin objected to being categorized simply as either Catholics or Protestants in analyzing their political choices. I think they objected to being accosted by reporters outside of political meetings and asked one question only—their religion—not their occupation or education or philosophy or income—only their religion.

And I think they had a right to object. The flood of postprimary analyses on the so-called Catholic vote and Protestant vote—carefully shaped to conform with their author's preprimary predictions—would never be published in any competent statistical journal.

Only this week, I received a very careful analysis of the Wisconsin results. It conclusively shows two significant patterns of bloc voting: I ran strongest in those areas where the average temperature in January was 20 degrees or higher, and poorest in those areas where it was 14 degrees or lower—and that I ran well in the beech tree and basswood counties and not so well among the hemlock and pine.

Anyone who thinks these trends are merely coincidences of no relevance has never tried to campaign in Wisconsin in January. In any event, this analysis is being rushed to West Virginia, where I am assured that the winter is less severe and the basswood are abundant. It has been suggested, that to offset my apparent political handicaps I may have to pick a running mate from Maine or, preferably, Alaska.

KENNEDY DOUBTS ANALYSES

The facts of the matter are that this analysis stands up statistically much better than all the so-called analyses of the religious vote. And so do analyses of each county based on their distance from the Minnesota border, the length of their Democratic tradition and their inclusion in my campaign itinerary. I carried some areas with large proportions of voters who are Catholics—and I lost some. I carried some areas where Protestants predominate—and I lost some.

It is true that I ran well in cities—and large numbers of Catholics live in cities. But so do union members and older voters

and veterans and chess fans and basswood lovers. To say my support in the cities is due only to the religion of the voters is incapable of proof and an unfair indictment of their political maturity.

Of those Catholics who voted for me, how many did so on grounds of my religion; how many because they felt my opponent was too radical; how many because they resented the attacks on my record; how many because they were union members; how many for some other reason? I do not know. And the facts are that no one knows.

For the voters are more than Catholics, Protestants, or Jews. They make up their minds for many diverse reasons, good and bad. To submit the candidates to a religious test is unfair—to apply it to the voters themselves is divisive, degrading, and wholly unwarranted.

Third and finally: Is there any justification for applying special religious tests to one office only—the Presidency? Little or no attention was paid to my religion when I took the oath as Senator in 1953—as a Congressman in 1947—or as a naval officer in 1941. Members of my faith abound in public office at every level except the White House. What is there about the Presidency that justifies this constant emphasis upon a candidate's religion and that of his supporters?

The Presidency is not, after all, the British Crown, serving a dual capacity in both church and state. The President is not elected to be protector of the faith—or guardian of the public morals. His attendance at church on Sunday should be his business alone, not a showcase for the Nation.

On the other hand, we are in no danger of a one-man constitutional upheaval. The President, however intent he may be on subverting our institutions, cannot ignore the Congress—or the voters—or the courts. And our Highest Court, incidentally, has a long history of Catholic Justices, none of whom, as far as I know, was ever challenged on the fairness of his rulings on sensitive church-state issues.

Some may say we treat the Presidency differently because we have had only one previous Catholic candidate for President. But I am growing weary of that term. I am not the Catholic candidate for President. I do not speak for the Catholic church on issues of public policy—and no one in that church speaks for me. My record on aid to education, aid to Tito, the Conant nomination and other issues has displeased some prominent Catholic clergymen and organizations; and it has been approved by others. The fact is that the Catholic church is not a monolith—it is committed in this country to the principles of individual liberty—and it has no claim over my conduct as a public officer sworn to do the public interest.

So I hope we can see the beginning of the end of references to me as "the Catholic candidate" for President. Do not expect me to explain or defend every act or statement of every Pope or priest, in this country or some other, in this century or the last—and that includes the mayor of Dijon.

TWO ALTERNATIVES NOTED

I have tried to examine with you today the press' responsibility in meeting this religious issue. The question remains: What is my responsibility? I am a candidate. The issue is here. Two alternatives have been suggested:

1. The first suggestion is that I withdraw to avoid a "dangerous religious controversy"; and accept the Vice Presidential nomination in order to placate the so-called Catholic vote.

I find that suggestion highly distasteful. It assumes the worst about a country which prides itself on being more tolerant and better educated than it was in 1928. It assumes that Catholics are a pawn on the political chessboard, moved hither and yon, and somehow "bought off" by the party putting in the second spot a Catholic whom the party barred from the top for reasons of religion. And it forgets, finally, that such a performance would have an effect on our image abroad as well as our self-respect here at home.

Are we going to admit to the world that a Jew can be elected mayor of Dublin, a Protestant can be chosen Foreign Minister of France, a Moslem can serve in the Israeli Parliament—but a Catholic cannot be President of the United States? Are we to tell Chancellor Adenauer, for example, that we want him risking his all on our front lines; but that—if he were an American—we would never entrust him with our Presidency—nor would we accept our distinguished guest, General De Gaulle? Are we to admit to the world—worse still, are we to admit to ourselves—that one-third of our population is forever barred from the White House?

So I am not impressed by those pleas that I settle for the Vice Presidency in order to avert a religious spectacle. Surely those who believe it dangerous to elect a Catholic as President will not want him to serve as Vice President, a heartbeat away from the office.

2. The alternative is to proceed with the primaries, the convention, and the election. If there is bigotry in the country, then so be it—there is bigotry. If that bigotry is too great to permit the fair consideration of a Catholic who has made clear his complete independence and his complete dedication to separation of church and state, then we ought to know it.

But I do not believe that this is the case. I believe the American people are more concerned with a man's views and abilities than with the church to which he belongs. I believe that the Founding Fathers meant it when they provided in article VI of the Constitution that there should be no religious test for public office—a provision that brought not one dissenting vote, only the comment of Roger Sherman that it was surely unnecessary—"the prevailing liberality being a sufficient security against such tests." And I believe that the American people mean to adhere to those principles today.

But regardless of the political outcome, this issue is here to be faced. It is my job to face it frankly and fully. And it is your job to face it fairly, in perspective, and in proportion.

I am confident that the press and other media of this country will recognize their responsibilities in this area—to refute falsehood, to inform the ignorant, and to concentrate on the issues, the real issues, in this hour of the Nation's peril.

The Supreme Court has written that as public officials, "we are neither Jew nor gentile, neither Catholic nor agnostic. We owe equal attachment to the Constitution and are equally bound by our obligations whether we derive our citizenship from the earliest or latest immigrants to these shores * * * [for] religion is outside the sphere of political government."

We must all, candidates, press, and voters alike, dedicate ourselves to these principles—for they are the key to a free society.

Address Delivered by Vice President Nixon

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. REES of Kansas. Mr. Speaker, under unanimous consent granted by the House, I include herewith the text of the address delivered by Vice President NIXON at a meeting of the American Society of Newspaper Editors on Saturday, April 23. I am sure Members of the House and Senate will be interested in this forthright statement.

The address follows:

The first subject I would like to discuss today is one that is commanding major attention throughout the Nation. The second is one that deserves such attention.

I can dispose of the first subject quickly.

Is religion going to be an issue in this campaign?

The answer to that question is that religion will be an issue exactly to the extent that the candidates and those who support them continue to make it an issue.

There is only one way that I can visualize religion being a legitimate issue in an American political campaign. That would be if one of the candidates for the Presidency had no religious belief. While the candidates in this campaign have differences on other issues, they are all men who recognize and cherish, both in their personal and public lives, the religious and moral principles which are the very foundation of our American ideals. As far as I am concerned, this fact removes any excuse for continued discussion of a so-called religious issue in this campaign.

That is why I intend to put the emphasis today and throughout the campaign where I believe it belongs—on the issues which the American people should be considering—the vitally important questions which affect the very survival of our Nation and our civilization.

The second subject I would like to discuss today is such an issue—how should Americans appraise the impending summit conference?

Let us begin by considering the question of what yardstick should be used in judging the success or failure of this conference.

It is too generally supposed that the success of an international conference can be measured only in the amount of agreement that is reached, and agreement is too often equated with peace. This can be a serious and even fatal intellectual trap. The Summit at Munich resulted in agreement—but the agreement meant war, not peace. It meant war because it was based on the fiction that there was a limit to Hitler's ambition.

Consequently, as we approach this meeting, let us recognize that the success of a conference should be measured not in terms of whether there was an agreement but on whether the agreement was on the right things.

I do not mean by what I have said to endorse the view that meetings like this one can produce no constructive results and should therefore be avoided.

I believe it is vitally important for the United States and our allies to approach this conference as an opportunity rather than as, at best, something of a hazard from which the optimum result would be to leave us no worse off than before.

We should look upon the coming talks with the Soviets as a chance to champion and to achieve some affirmative fundamental objectives.

First, this conference provides an opportunity for us to make at least a beginning on practical arms control.

In this connection, we should concentrate on trying to get agreement on measures which would reduce the risk of war by miscalculation. Our Geneva proposal for prior notification of space vehicle launchings is the kind of step that might be agreed upon. We should also explore every avenue for breaking the logjam which bars the way to an enforcible nuclear test suspension agreement.

Fears have been expressed that the Soviets may try to make propaganda capital of their unspecific and completely unguaranteed proposal for general disarmament. If they do, there is no excuse whatever for us to be on the defensive against this kind of propaganda offensive. This conference will provide a world forum in which we can set the record straight.

We should emphasize that adoption of our general disarmament program with its effective controls will assure disarmament by deeds and not just by words.

We must make evident to the entire world that if the Soviets are willing to consider some progress toward the kind of open society which we in the West maintain, both disarmament and peace itself can become realizable objectives rather than hopeless dreams. The closed society of the Soviet Union is, in fact, the major barrier to the disarmament which the great majority of the people in all nations want.

Second, this conference provides an opportunity for "defusing" the Berlin crisis and for laying the groundwork for negotiations which would lead to a formal and definitive solution of that problem.

We must make clear at all times our steadfast determination that we can never enter into an agreement which would in any way jeopardize the right of the people of Berlin to choose and retain the kind of government they want.

Any Communist action, such as a separate Soviet treaty with East Germany, which purported to threaten our rights or those of the free people of Berlin will torpedo any prospect for progress toward the disarmament and reduction of tensions which Mr. Khrushchev insists he wants and which we also want.

Third, this conference affords a unique opportunity to demonstrate the confidence and unity of the Western Alliance.

Mr. Khrushchev seldom misses an opportunity to express his confidence in the ultimate triumph of his system. Here is an area where we can and should go him one better.

Our military position is strong and will remain so. The Soviets, in spite of their missile boasts, are conscious of the restraint our strength imposes on any aggressive designs they might have.

But it is in terms of non-military strength, the area of so-called peaceful competition which Mr. Krushchev discusses at every opportunity, that we have reason for the greatest confidence.

We can have no doubt after the President's recent trips through Asia and Latin America that the peoples of the world do not want totalitarianism. The leaders and people of the newly developing nations know that their own independence will die if the free West does not survive.

We should never cease to stress our faith that the future belongs to governments and ideologies firmly based on the principle of self-determination—a principle which applies to all people who want to be free whether in Europe, Asia, Africa, or the Americas.

We can make clear that we welcome the peaceful competition to which Mr. Khrushchev has challenged us. We should call on free people everywhere to mount the increased effort that this competition will require.

The summit conference in other words provides an opportunity for us to mobilize the moral and physical energies of the free world for the economic and ideological struggle which will go on through the last half of the 20th century.

Moreover, as the great forces of history are shaped the West is in a singularly providential situation as the summit approaches.

Never in the years since World War II when this fight for the survival of freedom and the dignity of mankind was forced upon us, has the West had such an array of leadership. At the head of the four nations most directly involved, the three that will sit at Paris and Germany, whose people are most immediately threatened, are men who command immense public confidence and prestige both at home and abroad. As the time for this conference nears, de Gaulle of France, Macmillan of Great Britain, Adenauer of Germany and our own President Eisenhower are fortified by the strongest national support which the West has yet produced.

We can rightly approach the summit with full confidence that the spokesmen of the free world, rather than Mr. Khrushchev, represent the tide of history.

And, as far as our own Nation is concerned, there has never been a time when Americans of both parties were more united than they are in this instance.

Mr. Khrushchev could make no greater miscalculation than to assume that President Eisenhower will be hamstrung in exerting strong leadership at Paris because we happen to be having a presidential election in the United States this fall.

In this connection, I recall a revealing conversation involving Mr. Khrushchev at the dinner in his honor given by the President at the White House. I introduced Senator LYNDON JOHNSON to Mr. Khrushchev by saying, "Senator JOHNSON, as you know, is the leader of the opposition party in the Senate." Mr. Khrushchev responded by saying, "Well, I've never been able to see any differences between your two parties in the United States."

He was certainly right in one respect. There is no difference between the two parties in their support of the President's uncompromising stand for the right of people everywhere to choose the kind of government they want and against those who by their aggressive policies would imperil or deny that right.

The summit finally provides an opportunity for us to clarify our position toward the Communist bloc during the kind of peaceful competition which Mr. Khrushchev invites.

We can and will make clear that the moral difference between our system and the Soviet system is fundamental and cannot be narrowed in any way by the dialog of peaceful competition. We can establish once again that we will not trade away our belief in that fundamental right of peoples to freely choose their own form of government.

At the same time we can make equally clear that we have come to Paris to make a determined effort to reduce the risks of atomic war and that we are ready for real progress toward control of armaments and an end to the recurring crises threatening atomic war.

We should demonstrate our willingness to participate in discussions which might attain these objectives at this summit conference and at other summit conferences in the future if they are needed.

What chance is there that any or all of these objectives can be partially or wholly attained at the summit? This depends primarily on Mr. Khrushchev.

Never before in history has a man had more responsibility for the fate of mankind in his hands than Mr. Khrushchev will have at this conference.

As I said in my farewell radio-television address to the Soviet people, "If he devotes his immense energies and talents to building a better life for the people of his own country, Mr. Khrushchev can go down in history as one of the greatest leaders the Soviet people have ever produced. But if he diverts the resources and talents of his people to the objective of promoting the communization of countries outside the Soviet Union he will only assure that both he and his people will continue to live in an era of fear, suspicion and tension."

What will Mr. Khrushchev's attitude be at Paris? There are strong reasons to believe that Mr. Khrushchev may actually want to make progress at this conference toward disarmament and in reaching settlement on some of the explosive issues which confront us. I think this may be his attitude not because he is motivated by what he scorns as sentimental idealism but because, realist that he is, he is concerned by some hard facts of international life.

What are the circumstances that tend to convince Mr. Khrushchev that disarmament and reduction of tensions are in his self-interest?

Mr. Khrushchev never fails to obtain satisfaction from pointing out the weaknesses and divisions which he believes plague the West. We must remember as the summit approaches that he, too, has problems.

There is the demonstration of freedom in action which free Berlin affords to the people of East Germany.

There is the unceasing restlessness of the satellites some of which are under intolerable state of occupation by foreign troops.

There are the natural desires of his own Soviet peoples for an increasing share of their limited productivity, so much of which now goes into armaments.

And while it is probably too early to conclude that he may be troubled by his Chinese ally, it is appropriate to call to your attention that our distinguished guest, President de Gaulle, has suggested that he may well be deeply concerned by the nightmare which is taking form on his long common border with China.

Finally, Mr. Khrushchev is bound to be influenced by the fact that he has seen, as we have, the diabolical enormity of nuclear weapons. Some of the Soviet nuclear devices have been among the dirtiest, radioactively speaking that have ever been exploded.

On the basis of my conversations with him, I am convinced that he is proud of what communism has done in the Soviet Union. He would prefer not to risk destruction of that progress.

And, as Chancellor Adenauer put it, while Mr. Khrushchev and his Communist colleagues will never cease to work for their basic objective of a Communist world, they would prefer that the world over which they rule will not be one of ruined cities and dead bodies.

In other words, Mr. Khrushchev believes he can accomplish his objective of world domination without war, that he can win more and lose less by peaceful competition than by resort to war.

These, then, are the stark realities which will be working at Paris in behalf of progress toward disarmament and the settlement of differences without war.

It is because the hard facts of international life are on the side of peace and disarmament that I believe that we can look to this conference and to the future not with starry-eyed complacency but with justifiable confidence that responsible world leaders will slowly but inevitably develop more effective methods for settling differences between nations without war.

Congress Labor a Mouse to the Negro

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. COHELAN. Mr. Speaker, an excellent article in Sunday's Washington Post discusses the effect of the recently

passed Civil Rights Act of 1960. Unfortunately, the author, George McMillan, finds that as far as the southern Negro is concerned only a few will be enfranchised as a result of our work. He does conclude, however, that our action was taken and is being measured against a new and heightened urgency in the integration crisis. We were moved to say at the time the bill was on the floor of the House, and we repeat, if this bill is good as far as it goes, it is also true that it does not go very far.

Against the background of today's world and the demands in our own country for full citizenship, Mr. McMillan's article should be read soberly and thoughtfully. We have further legislative work to do in this field. The article follows:

CONGRESS LABOR A MOUSE TO THE NEGRO

(By George McMillan)

AIKEN, S.C.—In 1957, Congress huffed and puffed and passed a civil rights bill. That was the bill that was going to lead to a "black revolution" at the ballot box. Now, 3 years later, there is no evidence that a single Negro gained his franchise as a direct result of that legislation.

Last week, Congress finished its work on another civil rights bill, and did plenty of huffing and puffing in the process. Yet it is almost certain that this bill, again designed ostensibly to give southern Negroes the ballot, will enfranchise only a handful of the thousands who are voteless today.

Apart from this similarity, there is one striking difference between them. The 1960 act is being measured against a new and heightened urgency in the integration crisis.

ONE MORE LEGALISM

To some, Congress' most recent effort must seem not so much pointless as tragically irrelevant. For what the 1960 bill does is create a new piece of legal machinery—new and complicated at a moment when it has become dramatically apparent that many southern Negroes are fed up with legalism.

Even if the 1960 bill were practical and effective, even if its enactment meant that new thousands of southern Negroes could go freely to the ballot box, it still would not be particularly pertinent.

The vote is a long-range gradual and evolutionary way of achieving social gains, and today it is plain that the southern Negro is looking for a speedier and more direct method of solving his dilemma. In fact, the Negro has had enough experience with the ballot since World War II to discover that in the South, at least, there is not much in it for him.

AN EMPTY BALLOT

Between 1947 and 1958, Negro registration in 11 Southern States grew from 595,000 to 1,303,827, according to the authoritative Southern Regional Council. But except for having won an important bargaining position for himself in Atlanta and a lesser one in a few other large Southern cities such as Nashville and Durham, the Negro can't show much for his nearly million and a half votes.

What really makes it difficult for the Negro to use his ballot in the South is not that he can't vote, but that he can't find anything to vote for.

There is, of course, a slate of candidates in most elections, but in this one-party region the candidates often stand for nothing more than constellations of friends and neighbors, as V. O. Key called the groupings in his definitive "Southern Politics."

Very often there are no issues at all, and more often than not there are no issues that involve the Negro's rights or interests.

DEDICATED INSTRUMENT

Indeed, the most fundamental truth in the whole voting rights picture is that southern politics is today, and almost always has been, an instrument whose principal purpose is the preservation of the racial status quo. It would be very unusual if the Negro did find a place for his vote in this world of candidates who are avowedly dedicated to keeping the Negro in his place.

The 1958 South Carolina gubernatorial election was a good example of the kind of reality the Negro voter must face. The successful candidate, the present Gov. Ernest Hollings, was opposed by Donald Russell, one-time president of the University of South Carolina and a long-time assistant of former Gov. James F. Byrnes.

Although both candidates were generally conservative by national standards, Russell was locally considered the candidate of the eggheads and reformers, as a newspaperman put it, while Hollings was considered to be the candidate of the long established organization which dominates the South Carolina Legislature.

Both Hollings and Russell issued allout prosegregation statements throughout the campaign. But toward the end, word somehow spread that Russell was going to get the Negro vote. To prevent a large anti-Negro white vote going to Hollings, Russell, or so say some observers, started an even heavier campaign against the Negro.

The result of RUSSELL's last-minute diatribes was that the Negroes voted for Hollings and made the margin of difference that defeated Russell and elected Hollings—in office, one of the South's most resolute opponents of change in racial status.

A TORTUOUS ROAD

It is this kind of irony that keeps the Southern Negro from fighting more vigorously for the ballot. In certain small counties of the South, where no other avenues of self-assertion are open, Negroes may press, under the 1960 act's provisions, for their voting rights. But at best, this would be a long, county-by-county legal fight.

The other titles in the 1960 bill—making it a Federal offense to obstruct Federal court orders, or to cross a State line to avoid prosecution for burning or bombing—these are deterrents, to be sure. But the suspects, investigated and apprehended by the FBI though they might be, would still be turned over to local courts for trial—and the record of convictions in the South recently has not been high.

Ultimately, the prospect is that where the Negro uses the 1960 civil rights bill to help him gain his rights, it will be the right to his self-respect that he wants more than it is his right to vote.

The new South of the past month or so is a South in which a young, rising generation of Negroes is showing that it is going to fight for its dignity—or, put another way, for the right to refuse to suffer any further personal indignities.

It is one of the curiosities of the racial struggle, and its eccentric progress, that today in the South, a lunchcounter seat is more important than the ballot.

Don't Gripe—Write

EXTENSION OF REMARKS

OF

HON. THOMAS F. JOHNSON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. JOHNSON of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I am enclosing an editorial which appeared recently in the Democratic Messenger of Snow Hill, Md. For many years this outstanding weekly newspaper has contributed timely editorials pertinent to the local community, State, and the Nation. I feel every Member of Congress will find the following editorial one to be appreciated:

DON'T GRIPE—WRITE

Your spokesmen in Washington are the two Senators from this State and the Representative from the First Maryland Congressional District.

This is true whether they represent the political party to which you belong or the opposing party. Once they have been elected to public office they represent all of the people.

But they cannot be expected to do a good job for you unless they understand your views and you, in turn, understand their problems. They need and want the opinions of their constituents.

It must be remembered that a public official's first obligation is to his constituents. Their views are always given first place in his thoughts. Accurate and useful information sent by voters in his district is always appreciated. When he hears from "back home" it shows him the people he knows are alive and interested in him and what he is doing.

Until we realize our Representatives welcome our views and we take the trouble to make them known, our relations in Washington will not be what they could be—or ought to be.

Remember, too, you don't have to wait until you have a complaint to register. Our elected officials are human, too, and a pat on the back is as appreciated by them as it is by you. The important thing is: Don't gripe—write.

The Village of Cooperstown, Resort Center of New York and the Home of Baseball, Plans for Future Progress and Development

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Otsego Farmer of April 16, 1960, which discusses the important action being taken in Cooperstown, N.Y., the beautiful scenic resort area in my district which is also world famous as the home of baseball, to plan for future progress and development. The action which this community is taking attests to the vigor and capability of its citizens and its leaders.

COOPERSTOWN'S FUTURE

Next week the citizens of Cooperstown and its immediate surrounding communities may well hold the future in their hands. That is when the campaign begins to raise funds for financing the work of the planning commission to study all angles of the business, economic, social, and, shall we say, traditional, future of this lakeside community.

Much has appeared in these columns during the past several months on the subject.

For instance it is clear that with the $14,000 to be raised the commission will retain the services of Blair Associates of Providence, R.I. and Syracuse, to make a complete survey of "where we are going."

We believe we are stating the matter correctly when we say that now the program is understood by the people of the community, there is very little opposition. Certainly, on the part of those who realize what is underway, support is universal and enthusiastic.

During these past years when Cooperstown, because of its history, tradition, and natural beauty has become one of the Mecca spots of the world we owe a debt to those who have gone before, and especially to the thousands who will visit here in the next decades, to see to it that nothing is lost—in fact that nothing ever may be lost to mar the charm of their visit.

We have all heard the beauties of the village and lake compared favorably to the finest in Switzerland and Scotland. When we go to the far places we certainly expect to find the famous landmarks of which we have always heard. Few communities excell this one in the number of its attractions but because we live here we are ampt to forget. Only when we talk with the stranger who has been saving his money and counting the days until he could set foot within our borders do we realize what we have and those are the things we must preserve in the face of the normal growth in population, business changes, and whatever the future may hold.

But more than that we frankly do not wish to be so overwhelmed by our visitors that we cannot properly accommodate them, nor do we want to suffer the ill effects that in some communities have despoiled the very benefits which their coming has brought. As a summer resort, as host to thousands, and as a wonderful place in which to live Cooperstown and its surrounding areas are hard to beat. So the aim of good planning must be above all else to protect the best interests of all the residents of this area.

We can't do this alone.

Planning must be objective and by those who have been expertly trained. This sort of thing has become a profession and has grown in importance in this country during the last decade. Many communities have found out to their sorrow that it is already almost too late.

Now is the time—for Cooperstown is not too late—but late enough.

Let's look forward, that we may have the kind of a future we know we should have.

When you stop to think of it, the cost is small—the possibilities are great.

"Darkness at Noon" Technique Collectivizes East German Farms

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. COHELAN. Mr. Speaker, the following article by Sebastian Haffner of the London Observer, reprinted in the Washington Post April 19, provides still additional information about recent developments in East Germany of pertinence to our continuing study of that still unsolved problem. I submit Mr. Maffner's article under permission to extend remarks:

"DARKNESS AT NOON" TECHNIQUE COLLECTIVIZES EAST GERMAN FARMS

(By Sebastian Haffner)

BERLIN.—Methods recalling Arthur Koestler's novel "Darkness at Noon" were applied on a mass scale in the recently completed collectivization drive in East Germany.

This emerges from the stories told by numerous new refugees from the East German villages as well as from admissions in the Communist provincial press of East Germany.

The collectivization, to which all independent peasant farmers of East Germany fell victim during the last 6 weeks, was not imposed by law or even by decree, but enforced by individual blackmail, in which the whole pressure that party, state and political police are capable of, is brought to bear relentlessly on each individual farmer till he breaks down. Thousands of individual tragedies were played out in the East German countryside in this "black spring" of 1960.

VILLAGES OCCUPIED

The operation always started with the "occupation" of a village by a group of trained party agitators, usually about 50 strong. They called on the peasants to surrender both their possessions and their personal services to a local collective.

Sometimes a village meeting was held, sometimes not. The real work of "patient persuasion" which provided the results was always done in subsequent home visits to the individual peasants, and enforced marathon talks which were never relaxed till the victim gave in.

It is admitted in many reports in the local Communist press that these visits were in most cases enforced against the active resistance of those visited. The peasants bolted their gates, loosed their dogs, tried to flee to the fields—all in vain. One agitator described how a peasant, after having been forced to let him in, listened to his talk "lying on the couch with his face turned to the wall, never uttering a word."

"But," the report triumphantly went on, "each day a little more of this thick layer of protection he had put on crumbled away."

STOCK ARGUMENT

The stock argument always used by the agitators was that by refusing to join the collective the farmer in question would declare himself "for Adenauer and against peace," and would henceforth have to be considered an enemy of the state.

If the farmer denied this, he was often in the ensuing political discussion trapped into making anti-Communist remarks and thereupon threatened with arrest and trial unless he signed on the dotted line. Sometimes arrests were actually carried out, and some farmers were given widely publicized deterrent sentences—of up to 14 years' hard labor—for exactly this offense.

PERSISTENCE PAYS

Often political blackmail was complemented by economic blackmail; for example, a peasant's driving license might be taken away because of alleged road unworthiness of his tractor, or his animals seized for an alleged deficit in his deliveries; he was then told that he had only to sign on for the collective to get driving license or animals back. Other resisting peasants were threatened with proceedings for alleged economic offenses (such as buying fodder in the black market, or having more or fewer animals than were declared at the last farm census) unless they signed on.

But always the chief means by which resistance was finally overcome was sheer wearing down through relentless insistence—the "Darkness at Noon" technique. The agitators never left off, kept at it for hours on end and unfailingly returned next day, sometimes alternating with each other, sometimes bringing in police officers as a reinforcement, sometimes camping in the house altogether. While a village was under this treatment, the local police were often reinforced from outside and extra precautions were taken against the flight of the inhabitants.

The process, which was at first slow—some villages occupied in January, February, or early March, resisted for weeks and even months—later gathered momentum, as the news of the irresistable campaign spread and an atmosphere of terror gripped the countryside. Peasants tended to surrender more quickly so as to save themselves weeks of unavailing mental torture.

Jobs for the Handicapped: Passports to Dignity

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 25, 1960

Mr. VAN PELT. Mr. Speaker, Miss Jane Gavin, a student at the Winneconne (Wis.) High School, was one of the four winners in writing a prize-winning essay entitled "Jobs for the Handicapped: Passports to Dignity."

I ask unanimous consent to extend my remarks and include Miss Gavin's essay. It is most heartening to know that our students are interested in this all-important subject and I am sure all the Members will find her paper most interesting and enlightening.

The essay follows:

JOBS FOR THE HANDICAPPED: PASSPORTS TO DIGNITY

(By Jane Gavin)

I am the conscience of the American people.

I live in a place called "Anytown, U.S.A." My town can be constantly moving, with flashing neons and huge brute factories lining the river that divides it into east and west sides. Or it can be just a sprinkling of stores somewhere on the plain, where silence is loud, and a shopping spree is a trip to the post office with an order blank from the big city catalog.

Either way, my town has people. Individuals of every size and description, running together to form the population. I've noticed something lately—the number of handicapped in my town is increasing. I suppose that's because many who would have died at birth, or in the emergency room of a hospital, are now saved; heaven and earth are moved to save them. Yes, I am proud of the advances my people have made in the field of medicine; glad that they might live today, who would have died yesterday.

But I am sad, a little angry, perhaps ashamed, because even though these others have helped them to live, they have, in most cases, neglected to give them a chance to attain a place in life. They aid them to exist; then desert them. I see this, and it disturbs me.

Regardless of what the afflicted have lost, they still retain that ultimately valuable asset—they are human beings. As human beings they want to be independent and to feel that they are part of the world. They don't want to be kept alive, then shut up in a dark room, something to be ashamed of, indulged, or pitied.

Let me tell you what I see when I look into some of the personnel offices in my town:

An average-looking young man is filling out an application blank for a job. He sits directly acress from a well-to-do businessman who watches him closely as he writes. Finished, he hands the paper to the man who smiles as he glances at it. Mentally, the man recalls past applicants, and suspects with pleasure that this clean-cut youth is surprisingly well qualified for the job. The man dismisses him, saying that he will let him know when he has looked over all the applications filed. As the young man rises and walks to the door, the man notices for the first time the empty, pinned-up sleeve. A thought of that boy learning to fill in an application blank with his left hand brings a choking mixture of pity and pride. Pity for that boy and his cross; and pride in the quiet way he was carrying it. But then a sudden shock interrupts this benevolent thought, and his brain shouts, "Courageous yes. But do you want him to be on your staff? Working for you?"

Now I'm asking you. What would you do if confronted with this problem? Would you turn away in embarrassment from the crippled who want a job, shrug your shoulders and say, "I can't afford to hire the handicapped. It's just not good business, and I am a businessman. Don't look at me with condenning eyes. I do feel sorry for him, but there is nothing I can do." (You see, I, your conscience, am ever present.)

Sorry, indeed. These handicapped don't want to be pampered, don't want sympathy; they don't need sympathy. They are insulted by the condescending pat on the head. What they want is something you, the American businessman, can give them. They want a chance, one chance, to prove themselves.

Give them that chance. You can't lose. Let me tell you why:

The majority of the handicapped who come to you for jobs do not come empty-handed. They bring with them the training they gained from counselors employed in the great State-Federal program of vocational rehabilitation. At these centers, their abilities are stressed, not their disabilities. The handicapped are guided in choosing an occupation that is within their capacities. They learn to use artificial limbs, to walk with braces, or to read lips—whatever is necessary to restore them to near-normal life. Did you ever stop to think that when you hire a person with glasses, you are hiring a handicapped person whose disability has been corrected by artificial means? This is somewhat like an artificial limb, yet you pause in doubt before hiring a person with an artificial arm, and never give a thought to accepting a person with glasses.

How can I make you see that it is not only your responsibility, but that it is to your advantage to hire the handicapped? You will find that they possess a perseverance and patience peculiar only to their breed. A fierce pride in their hard-earned skills makes them determined to succeed. A blind girl answering the telephone, or an accountant in a wheelchair will not cut your production rate. In fact, production is likely to be increased because of the low absence rates. When they feel wanted and needed, the handicapped respond like plants to the sun. Their enthusiasm and vitality spreads and increases the entire efficiency of your business. Another, and an important, benefit you will gain is in the reaction of people (customers) when they recognize the fact that you are hiring the handicapped.

The handicapped have a passport to dignity in their rehabilitation training. Listen to me, your conscience. Sign that passport; make them independent and useful. Tell the handicapped, "The job is yours," and see if you don't agree that a million dollars couldn't buy that happy smile. By the way, you'd be surprised how tall the handicapped are when they stand alone.

The Right To Live Decently, With Dignity and Self-Respect

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1960

Mr. PORTER. Mr. Speaker, it is evident that an increasing number of Americans are becoming aware that our older citizens have the right to live decently, with dignity and self-respect. They do not expect to live in castles, nor do they demand diamonds. Their needs are necessary but not numberless.

As they made today possible for us as well as our tomorrows it seems to me it is time for us to start thinking about them—not ourselves alone. I am encouraged by the growing interest in the field of medical care for older citizens. I bring to your attention two recent editorials dealing with this subject which have appeared in Oregon newspapers, under leave to extend my remarks in the RECORD.

[From the Medford (Oreg.) Mail Tribune, Apr. 17, 1960]

FORAND BILL ET AL.

Medical care for the 16 million or so Americans now aged 60 or more is one of today's most argued issues.

A great majority of this 16 million have below-average incomes, and at a time of life when they are more apt to need medical care than when they are younger.

Whether or not this session of Congress will pass a measure to provide Federal administration for medical care for oldsters, the issue will remain. For the proportion of older citizens in the Nation is large, and getting larger. And whether or not they can afford medical care, they can still vote.

We do not, as a matter of fact, understand the medical fraternity's violent opposition to such proposals as the Forand bill.

They assail it as a "foot in the door" for socialized medicine. This may have some truth to it. But if some provision such as the Forand bill, or a similar alternative, is not enacted, then the medical profession, in a few years, will be facing real socialized medicine.

One would think they could see this coming, and support a step which will provide medical care for older people, but still permit the doctors to retain their professional, independent status.

Not all doctors, incidentally, oppose the Forand bill or its alternatives as blindly and resolutely as does the American Medical Association.

One doctor recently wrote to the New York Times and compared the Forand proposal, which would operate through Social Security, with some of the so-called voluntary plans, which involves State governments and private insurance companies.

He came to this conclusion:

"The social security mechanism provides a method for collecting the required earmarked reserves, and also for spreading the risk of higher hospital costs in later life throughout the preceding years of employment."

The writer was George Baehr, M.D., a former member of the executive committee of the Commission on Financing of Hospital Care, sponsored by the American Hospital Association, and chairman of its committee on prepayment. He is now consultant to the Health Insurance Plan of Greater New York. The day is rapidly coming when the Federal Government will have a role in providing medical care for the aged. This simply is a political reality.

One would think that those who oppose the Forand bill would be doing everything they can to design a workable alternative; one with comparable benefits, comparable simplicity, and a comparable plan of equitable financing.

This is about their only chance of averting socialized medicine, perhaps on the British plan, which, despite the protestations of its opponents, is workable, and is supported strongly by a large majority of the people of Great Britain, if not by their doctors.—E.A.

[From the Portland (Oreg.) Journal, Apr. 12, 1960]

HEALTH CARE FOR AGED BURNING ISSUE

There is terrific pressure on the current Congress to develop a medical-health protection bill to help persons over 65 pay ever-increasing medical-hospital bills.

Democrats, backed by the AFL–CIO and the National Association of Social Workers, have brought out the Forand bill, which would extend social security payments by another one-half of 1 percent (shared by employers and employees) to provide health insurance for the elderly.

This bill, which set off a first-class hassle in both House and Senate, appears to be stymied in the House (is strongly opposed by the American Medical Association), and probably would invite a veto by President Eisenhower.

But the election-year pressure on the Congress and the administration is so great that seven liberal GOP Senators have introduced a new voluntary public-private health insurance bill designed to meet at least some of the President's opposition to the Forand bill.

In general, here's the difference between the two proposals:

The Forand bill, strongly supported in the recent report of the Oregon chapter of NASW to the legislative interim committee on public welfare, would add one-half of 1 percent to the present 3 percent paid by both employers and employees to pay the medical, surgical, hospital and nursing care bills of social security pensioners. This is branded "socialized medicine" by the AMA.

The counterproposal of Republican Senators, led by Senator JAVITS, would set up a voluntary health insurance program for the aged to be financed jointly by Federal and State governments and by social security recipients, who would pay from 50 cents to $13 a month for their share of the coverage, depending upon incomes. It is estimated that this plan, covering up to $10,000 for all purposes, would cost the Federal Government about $480 million, State governments about $640 million and voluntary subscribers $400 million per year. This assumes 70 percent signup and that States could either buy the coverage from insurance companies or provide it themselves.

In light of administration and AMA opposition to the Democratic Forand bill and the likelihood that the Congress could not muster sufficient strength to override a Presidential veto, it appears that some variation of the Republican (JAVITS) bill has the better chance of passage. But whatever way it falls, better health protection for the aged has become one of the burning issues of this presidential election year.

That's because of the growing recognition throughout the United States that a high percentage of the 15,500,000 persons past 65 cannot afford adequate medical-health care at today's inflated prices.

This is brought home by testimony before the legislative interim committee that the medical expenses of old-age assistance recipients in Oregon take two-thirds of the dollar Oregon spends for the medical care of all public assistance recipients—and there is growing evidence that this care is far from adequate.

Even those who oppose Federal health programs, which they term "socialized medicine," concede that something must be done to cope with the health problems of the aged. The Javits bill is at least a step in this direction.

Public Power Does Pay

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1960

Mr. METCALF. Mr. Speaker, over the years all of us have seen advertising by the commercial utilities seeking to convey the thought that "every time public power wins, you the taxpayer, lose."

The allegation that investment of public funds in multipurpose water resource development projects is not in the public interest is demonstrably false. These projects repay reimbursable costs with interest—and at a substantial saving to the consumer.

This was the subject of an article in the February 1960, issue of the Flathead Electric News, publication of the Flathead Electric Cooperative, Inc., of Kalispell, Mont. In that article, President Byron Graham, of the cooperative's board of directors, states that public power in 1959 cost the cooperative members $201,608.55 less than the same amount of power would have cost them prior to completion of Hungry Horse Dam.

In addition to the savings, this project, farthest-most upstream in the American portion of the Columbia River system, provides substantial flood control, reclamation, recreation, and fish and wildlife benefits.

The article follows:

PUBLIC POWER DOES PAY

(By Byron Graham, president of the board of directors of the Flathead Electric Cooperative)

Now that America is no longer in a shooting war with a neighboring country, the citizenry seems to be bending its vindictiveness against each other. There is a certain group of people, either for personal gain or for other reasons, that must seemingly be mad at someone. Witness the advertisements that have been appearing in certain periodicals during the past few years against public power. These paid headlines which have been costing someone millions of dollars annually, continually convey the thought that "Every time public power wins, you lose." The finger is pointed directly at you, the taxpayer. But who is the taxpayer? What is this all about, and how does it affect the people of the Flathead Valley?

When they talk about public power, they are referring to such Government financed enterprises as the Bonneville Power Administration, Hungry Horse Dam, and Grand Coulee Dam. After reviewing the financial reports, it is difficult to see where these dams have cost the American people anything. It is certainly impossible to find where they have extracted any money out of the pockets of our local people; and this is the group that we actually are concerned about.

Now, what has Hungry Horse Dam done for the people in Flathead Valley? That million-dollar advertising campaign certainly doesn't say anything about that; nor is their advertising agency in New York City concerned with our local problems.

HERE IS THE RECORD

Let's take a look at the ledger sheet from the point of view of a member of the Flathead Electric Cooperative. The cooperative purchases power generated at Hungry Horse Dam and together with other buyers, is repaying the Government's cost with interest.

As you probably know, the Flathead Electric Cooperative, as a distributor of electric energy, must purchase all the power its members use. In 1949, prior to the Hungry Horse Dam, the Flathead Electric Cooperative paid an average of 1.077 cents per kilowatt-hour for all energy purchased. Its local wholesale power bill at that time was $52,392, for 4,866,600 kilowatt-hours. For the year 1959, 10 years later, and after a period when everything else doubled in price, the Flathead Electric Cooperative paid $84,028 for 26,521,500 kilowatts-hours purchased from the Bonneville Power Administration. This is an average price of .317 cent per kilowatt-hour. If the cooperative paid the same unit price for the power consumed by its members in 1959, as it did in 1949, the wholesale power cost would have been in 1959 the tidy little sum of $285,636. There is no disputing the fact then, that the members of Flathead Electric Cooperative saved $201,608.55 during the year 1959 because of Hungry Horse Dam, can any of us say that Hungry Horse Dam cost us anything? It didn't me; did it you?

HERE IS THE RESULT

This saving in power cost has been passed on to the consumers of Flathead Electric. For instance, the average price paid by all consumers for electric service from the Flathead Electric Cooperative was 1.72 cents in 1959, as compared to a national average price on all REA's throughout the United States of 2.52 cents. In 1949, the average power user receiving service from Flathead Electric paid 3.49 cents per kilowatt-hour. In other words, patrons of the Flathead Electric Co-op paid approximately 100 percent more for their power in 1949 than they did in 1959.

Part of the reason for this reduction is due to the increased use of electricity. But, the average American uses more gasoline than he did in 1949. What has happened to the price of gasoline during the past 10 years? Gasoline prices increased, but not more than the price of other products that we buy, except electricity.

Electric power is penny cheap. Public power does pay, and it will continue to pay as long as we make beneficial use of electricity.

Algeria Is Seeking Self-Determination and Independence

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1960

Mr. PORTER. Mr. Speaker, last August 6 a group of U.S. Representatives, of which I was a member, urged the Government of France to enter into negotiations to end the 5-year Algerian war.

Today French Premier Charles de Gaulle is a visitor in our country. He has met and will meet with President Eisenhower. I hope they have included on their discussion agenda the struggle in Algeria today and ways and means of initiating a new era of friendship between the French and Algerian peoples.

Under leave to extend my remarks in the RECORD, I include the text of a letter sent April 14, 1960, by the spokesman of the Algerian Front of National Liberation in the United States, A. Chanderli, to the President of the United States:

APRIL 14, 1960.

The Honorable DWIGHT D. EISENHOWER,
President of the United States.

MR. PRESIDENT: In September 1959, the Provisional Government of the Algerian Republic and the Government of France, the two parties to the conflict in Algeria, both accepted the principle of self-determination as the basis for a peaceful settlement of a war now in its sixth year.

We recall that, on behalf of the U.S. Government, on September 17, 1959, you declared that the promise of self-determination was "completely in accord with our hopes to see proclaimed a just and liberal program for Algeria * * * it is our hope that it will lead to an early peace."

Seven months have passed and there are no prospects of an "early peace".

We most earnestly shared your hopes for an early peace, and during this time, have neglected no opportunity for its realization. On September 28, 1959, we announced our view that peace could, in fact, be immediate. In order to reach an agreement on a ceasefire, we called for pourparlers with the French Government to insure the honesty and fairness of the electoral process by which the Algerian people would freely decide their future, consistent with the often proclaimed U.S. support for genuinely free elections.

During the 14th session of the United Nations General Assembly, the U.S. Secretary of State, Christian A. Herter, referred to U.S. hopes that no action would be taken "which would prejudice the realization of a just and peaceful solution for Algeria such as is promised by General de Gaulle's far-reaching declaration with its provision for self-determination by the Algerian people." Thus, at the plenary session of the General Assembly on December 12, 1959, the United States refused to support a draft resolution urging "the holding of pourparlers with a view to arriving at a peaceful solution on the basis of the right to self-determination."

Until now, the French Government has refused the Algerian request for pourparlers to discuss the guarantees of the application of self-determination.

On February 29, 1960, in a renewed appeal for talks to bring about an immediate end to the war in Algeria, Ferhat Abbas, Premier of the Provisional Government of the Algerian Republic again called for "the immediate opening of pourparlers" and reaffirmed that "it is not a question of negotiations on the future of Algeria. This future will be what the Algerian people want it to be * * *. A democratic procedure, self-determination is indeed capable of solving the Algerian problem once and for all."

But France has now removed the substance from self-determination and is trying to revive the illusion of a military solution.

1. Speaking on January 29, 1960, the President of the French Republic assured the French army that "* * * When the time comes for the consultation, you will have to guarantee its complete and sincere free-

dom," thus denying the freedom of self-determination in Algeria.

2. During a special visit to the French Expeditionary Corps in Algeria, General de Gaulle declared on March 4, 1960:

"The Algerian problem will not be settled for a long time to come. The condition for this settlement is the definitive victory of the French army. * * * France must remain in Algeria."

3. A communique issued by the French Ministry of Information, on March 7, 1960, in behalf of the President of the French Republic prejudged the choice of the Algerian people by announcing: "General de Gaulle holds that the possibility of a majority vote for secession in Algeria is excluded." The menace of the partition of the Algerian nation was raised as follows: "* * * It would be necessary, under this detestable hypothesis, to proceed to a vast regrouping of the populations."

4. Speaking in Algeria on April 12, 1960, Mr. Michel Debré, Prime Minister of France, officially announced his government's intention to partition Algeria if, exercising their right to self-determination, the Algerian people chose independence from France. Mr. Debré declared: "There is not, there will not be, an abandonment of Algeria by France. In the unbelievable and disastrous hypothesis that a majority in Algeria should opt for secession, that would happen. * * * Secession would in truth mean partition."

This new policy set out by the President of the French Republic and his Prime Minister has shocked world public opinion, and even many French political leaders who have consistently supported his Government. Renewing the illusion of a military solution, this policy has closed the door to an early peace in Algeria.

In view of this French policy, the Provisional Government of the Algerian Republic declared on March 14, 1960 that "we will pursue the war of national liberation until the realization of our independence. Colonialism leaves us no other alternative."

At the same time, this declaration recalled the Algerian Provisional Government's conviction that it is "our duty not to neglect anything in order to arrive at a peaceful and negotiated settlement of the Algerian problem." Our recent declarations have fully demonstrated our desire not to miss any valid opportunity to put an end to the war. We affirm again our desire to reach a peaceful and just settlement on the basis of real self-determination for Algeria, in the interest of the people of both France and Algeria, and recall Premier Abbas' statement on February 29, 1960: "Since, as of now, peace is possible on the basis of free choice, no obstacle should remain insurmountable."

The visit of General de Gaulle to the United States occurs in the midst of preparations for a summit conference whose aim is to reduce international tensions and insure world peace and stability. In this context, we recall that as far back as June 28, 1957, the U.S. Secretary of State, the Honorable John Foster Dulles, affirmed that "a conflict such as now raging in Algeria clearly imposes a responsibility on the members of the world community." It is clear that today the full-scale war in Algeria places an even greater responsibility on the members of the world community.

In considering this responsibility, we note, with regret, that the United States has freely extended aid to France of a political, moral, financial, and military nature. The greatest part of this aid has been used by France in the pursuit of the colonial war against the Algerian people. In effect, the continuation of this American aid permits France to pursue the only war being waged in the world today, a war which violates the highest traditions upheld by the United States throughout its history. It is therefore clear that the President of the United States will contribute greatly to the return of peace in Algeria by stopping all further aid to France and by impressing upon the President of the French Republic that the United States can no longer accept the continuation of this tragic war which has already taken the lives of hundreds of thousands of our heroic people.

In the eyes of Africans, upon whose continent this war is being waged, and in the eyes of millions in the "world community," the United States bears a very grave responsibility for the continuation of this war and for the far-reaching consequences which its continuation will inevitably produce.

Today the colonial war in Algeria is a test which poses the greatest challenge to the United States, as the leader of the Western World, and to you, Mr. President, hailed throughout the world as a man of peace.

There can be no real peace in the world without peace in Algeria.

Respectfully yours,

A. CHANDERLI.

The Landrum-Griffin Bill

EXTENSION OF REMARKS
OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. FLYNN. Mr. Speaker, labor in the United States had during the 18th century and the first half of the 19th century a very stormy existence. It was a federally unregulated commodity when management-labor disputes arose. The only recourse that either side had to a responsible legal tribunal was in the event the criminal law was violated or in the event a situation existed which permitted the seeking of an injunction. The days from Samuel Gompers to William Green were hectic days for labor; days when working men and women found that they had no rights that could be protected in a court of justice and that the democracy for which this country was known throughout the world including the right to a fair trial did not exist when a labor dispute was involved. Criminal prosecution for violence was frequently prosecuted by management against individuals whose emotions caused them to violate the criminal law during their picketing operations. Management used the injunction to the fullest extent possible, but there was no legal tribunal prior to the passage of the Wagner Act during the Roosevelt administration in 1934 that could determine whether a bargaining unit existed among the employees and what union, if any, represented the employees. There was no law that required management to sit down with labor's representatives and bargain collectively on the issues involved in the labor dispute. Working men and women were thus powerless to demand better wages, hours or working conditions. The Wagner Act became the Magna Carta of the American working man and woman. For 25 years, American labor grew and prospered under the protective arm of the Wagner Act. Congress attempted to repeal it, to amend it out of existence, or in other ways to scuttle it. Nineteen States passed right-to-work laws which virtually repealed the Wagner Act insofar as those 19 States were concerned. Congress refused to appropriate adequate funds to permit the act to be administered properly throughout the United States. This required the Labor Relations Board to reject many classes of cases. These became known as the "no-man's land" cases because there remained no court to which the issues and disputes could be taken. However, basically the Wagner Act stood as a monumental bulwark for the protection of American working men and women as well as for the protection of employers in the event of unlawful or unfair claims by the working man and woman.

The enemies of labor scored in 1959 during the 86th Congress. They were able to blow up a national prejudice against certain labor leaders because of unfair or unscrupulous conduct in their individual cases and that developed a national hysteria and hatred against labor and the labor movement throughout the United States. This hysteria descended on Congress through a campaign carried on by the national chamber of commerce and the National Manufacturers Association in 1959 when Congress was considering a perfectly fair and reasonable bill which was designed to regulate labor just as the banks are regulated; to regulate it with the thought in mind of improving it and with no thought of injuring the labor movement. Honest labor and labor leaders were cooperating with the Congress in an attempt to pass a fair regulatory piece of legislation.

Hysteria among the people fomented by every known media of communication caused Congress to pass the now infamous Landrum-Griffin bill which did the following things:

First. Authorized the National Labor Relations Board on a permanent basis to continue limited operation of the National Labor Relations Board and to continue to refuse to act upon those classes of cases which fell within the "no-man's land" cases. This meant that the National Labor Relations Board could permanently give up jurisdiction over management or labor grievances as was provided for in the Wagner Act. This was a repeal of the Wagner Act insofar as it affected those cases.

Second. The cases involved in the "no-man's land" dispute affected 90 percent of the employers of the United States and approximately 30 percent of the working men and women of the United States.

Third. The above constituted an emasculation of the Wagner Act and was an absolute repeal of the Wagner Act insofar as it applied to 90 percent of the employers and 30 percent of the employees of this Nation.

Fourth. The Landrum-Griffin bill requires the payment of excessive bonding fees to a chosen few insurance companies. This excessive expense will be a burden to many trade unions in this country.

Fifth. The Landrum-Griffin bill permits both unions and employers to be

sued for union or nonunion activity. One employer in my district at Whitewater, Wis., is now being sued for $1½ million because of antiunion activity. Many unions throughout the country are similarly being sued.

Sixth. Because of the removal of the jurisdiction of the National Labor Relations Board from labor disputes involving merchants doing business in every city in this country, it has made these merchants "prey" of whatever demands James Hoffa may make upon them when he organizes them into his union. I mention this because the bill was passed for the purpose of controlling James Hoffa and, as a matter of fact, it has given to him a large field where he can work without the fear of any Federal control or intervention and beyond the veil of the National Labor Relations Board.

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 21, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of April 23, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

The Mutual Security Act, authorizing foreign aid funds for fiscal 1961, saw history simply repeating itself as the House debated and passed it this week. We heard the same arguments for and against, the same damning criticisms of waste and mismanagement in the program. Yet, the spending goes on and on. The debate pointed up once more that the program needs review and reprograming before continuation; that Congress has lost more control of the yearly military expenditures and Development Loan Fund; that dictators, government leaders, and industrialists abroad are helped while the people, nation by nation, are all too frequently overlooked; that the bureaucracy in the ICA keeps the program self-perpetuating; that mistakes are being condoned and repeated instead of corrected.

What is the cost of foreign aid yearly? Who knows? The requests which some of us have regularly made for review and study go unheeded as we rush headlong into more programs and bigger spending. According to figures submitted by Georgia's Representative J. L. PILCHER and Representative OTTO PASSMAN of Louisiana, there is already $8.1 billion in the aid "pipeline" as yet unobligated or expended. This doesn't take into account our contribution of agricultural surpluses, the total of military construction, investments in six or more international banks, foreign currencies we own, cost of the surplus excess property, or offshore procurement costs. So now we authorize another $1.3 billion in economic aid, plus $2.7 billion of military and Development Loan Fund amounts. Mind you, if we never spent another dime on foreign aid, we'd still have to get up about $3.5 billion a year just to pay the interest charges on the money we have already poured into the program.

A few mistakes or instances of waste—even more than a few—should not condemn such a program as foreign aid, but examples of error, waste, mismanagement, lack of objectives, overprograming, and underplanning in our programs is almost endless. Thus we have found ourselves often aiding potential enemies while alienating our friends. Some basic truths cannot be wished away. It remains a fact that, as a nation, we cannot spend ourselves rich nor can we buy friends. Too, however altruistic our aims and motions, we are not sufficiently rich to supply the world's material needs. If we spread ourselves too thinly trying, we can only weaken or bankrupt ourselves, and in the process appear absurdly foolish in the eyes of those we're trying to help and who look to us for leadership.

Our job then, it seems to us, is threefold: First, to help others help themselves; second, to foster and preserve institutions and governments which share our dedication to freedom; and, third, to keep ourselves economically strong. Only with such a hardheaded, realistic "aid" program can we win respect and influence people. I sincerely believe that our present foreign aid program fails basically in all these objectives and needs a thorough replanning and overhauling.

My recommendations of a year-ago on foreign aid (recounted in my newsletter then are still so timely that I repeated them in floor argument this year: (1) That our traditional generous private charity and governmental grants to relieve disaster be continued; that we encourage the expansion of our private missionary efforts; (2) that in countries which we are morally obligated to defend and which are directly threatened with Red aggression, military assistance—for the time being—should be continued, but on a realistic basis; (3) that foreign aid which directly or indirectly promotes governments that are hostile to our constitutional concepts of government be terminated immediately; (4) that so long as governmental foreign aid is continued, the recipient should pay a part of the cost of the proposed project; that our aid should terminate when the conditions on which that request is based have been remedied; that private technical, scientific, and educational assistance be extended only to friendly peoples who seek our aid on a cash or loan basis; (5) that until foreign aid in terminated, the Congress take steps properly to exercise close supervision and control over the manner in which all foreign aid funds are being spent; that all future economic aid, plus what can be salvaged from unexpended foreign aid funds, be diverted to and handled by the Export-Import Bank (6) that the $3.9 billion requested for the fiscal year 1960 be reduced $2 billion and that each year thereafter foreign aid be substantially reduced until terminated within 3 years; and (7) that military matters be left to our military and foreign affairs be left to the State Department, and their existing organizations, so we can dismantle the huge 50,000-person foreign aid bureaucracy, and stop the duplication of efforts.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Profile of a Citizen

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an article paying tribute to the Honorable John J. Griffin, a distinguished citizen of the city of St. Louis, Mo. This article appeared in the Friday, March 25, 1960, issue of the St. Louis Review, official newspaper of the archdiocese of St. Louis.

Being personally acquainted with Colonel Griffin and having known him well over a period of 25 years, I am in a position to subscribe fully with the substance of this appraisal of his character and citizenry.

I personally know of the tremendous devotion Colonel Griffin has had to the task of developing good citizenship in his home community, his State, and in the Nation. He has given unselfishly of his time and effort to joining in any movement that has this as its goal. Always an outspoken foe of communism and un-American groups, I am certain that his zeal and his efforts have accomplished much good.

I feel that Colonel Griffin through his years of devoted service to this Nation fully merits the high commendation given to him in the article which is herewith presented.

The article follows:

PROFILE OF A CITIZEN

(By Glen Soellner)

Nine years ago a tall, wiry man with a shock of iron gray hair stepped to the speaker's rostrum at a meeting of the Rotary Club in De Soto, Mo., and delivered this opinion:

"The definition of a citizen that I like is the one given in Webster's: 'a person, native or naturalized, who owes allegiance to a government and is entitled to protection from it.'"

He elaborated: "A good citizen is one who not only accepts the protection that the government offers to him, but realizes that with such acceptance there comes a responsibility to meet the obligation imposed by the acceptance of such blessings."

This talk was reprinted in Vital Speeches of the Day, a semimonthly publication originating in New York. Among other speeches contained in the same issue of the magazine was one made by then Secretary of State Dean Acheson dealing with the country's foreign policy.

The speaker whose words ranked—in the editor's opinion—alongside those of the Secretary of State in importance, was Col. John J. Griffin, KGCHS. Born in St. Louis, June 14, 1890, the son of Michael James Griffin and Mary Anglin, he was educated at Holy Angels parochial school, McKinley High, St. Louis University School of Law, and St. Louis Business College.

The initials affixed to the name indicate he is a Knight of the Grand Cross of the Holy Sepulcher, the highest rank obtainable in this ancient equestrial order. His wife, the former Mary Harkins, is a Lady of the Holy Sepulcher, and his son, John J. (Jack) Griffin, recently was appointed a Knight of the Holy Sepulcher by Pope John XXIII.

This would indicate that Colonel Griffin and has family have fulfilled in some degree their responsibility to their church.

The "colonel" prefixed to his name is an honorary title bestowed by four different Missouri Governors. In addition, he is an "admiral" in the Nebraska Navy, appointed by the Governor of that State.

These titles reflect in a measure the manner in which Colonel Griffin has discharged his responsibility to his country.

Colonel Griffin, nearing age 70, was and still is an outspoken foe of communism and other un-American groups. He was threatened with death on more than one occasion by the Ku Klux Klan, the Black Shirts, and the Reds.

"Thank God, they're gone and I'm still here," the colonel said, sitting relaxed and smiling opposite the reporter. His healthy complexion and upright posture, despite a coronary attack which curtailed his activities some years ago, were visual proof of his continued participation in and enjoyment of the things that make for the good life.

President and principal owner of the International Engineering & Supply Co., during his active career, Colonel Griffin also served as an officer of some six banks and loan companies. Recently he became vice president of a new bank at High Ridge.

His wartime activities included the chairmanship of the city and county draft boards; offices with the Industrial Manpower Commission, Defense Transportation, Americanism Committee, American War Dads, Greek War Relief, Home Guards, and many others.

The Catholic High School Board, National Foundation for Infantile Paralysis, Light Opera Guild, State Eleemosynary Board, State Athletic Commission, State Board of Training Schools and scores of other civic and religious groups had the benefit of his guidance.

The House of Good Shepherd, the St. Vincent de Paul Society, the Council of Catholic Men, the Holy Name Society, and the Knights of Columbus are among organizations with which he is still affiliated.

Aside from his work for his church and country, the project perhaps dearest to the colonel's heart and the one upon which he now devotes the major share of his time is securing employment for the physically handicapped. He is chairman of the Missouri committee and a member of President Eisenhower's advisory council.

The Klan, the Hitlerites, the Communists, and the johnny-come-lately POAU (Protestants and Other Americans United for the Separation of Church and State) are all dangerous, Colonel Griffin observed. But he is opposed to suppressing such organizations.

"If they can be suppressed, so can we," he explained. "If we tell the American people the truth, their good common sense will take care of such phoney organizations as these. They hide behind patriotic motives in order to vent their hatred on other citizens. They are like termites that work in the dark—the light of day and the truth will kill them."

Colonel Griffin went into the Little Egypt area of southern Illinois when the Ku Klux Klan was rampant there and made public speeches exposing them. He attended their hooded meetings and rose to his feet to challenge their assertions. He was in Herrin engineering plans for a new Catholic church on the day that the chief klansman and the sheriff shot and killed each other in a gun duel in a hotel lobby.

The colonel made a speech at Jefferson Barracks on Decoration Day prior to World War II, when the so-called Black Shirts who espoused nazism were said to have been 25,000-strong in Missouri. He advocated closing German consulates, which he claimed were payoff agents for subversive elements.

He took up the fight against communism when Russia was America's ally and it was unpopular to speak against them. "I took the stand that it would be silly not to realize that the U.S.S.R. had helped us in the war but I also maintained that this had given them no lease on America," the colonel recalled.

The Klan and the Black Shirts sent word to Colonel Griffin that "it will be unhealthy for you to continue that kind of talk." The Communists named a committee of three to kill him.

"They would telephone my home and threaten that if I went to a certain meeting I wouldn't come back. My wife stayed home and got these calls but she never once urged me not to go. She was with me all the way."

The Communists paid for an 8-week program on a St. Louis radio station during which they described Colonel Griffin as an undesirable citizen.

The colonel endured the abuse and persisted in his efforts because he felt that "if these people were successful in their effort to destroy liberty and freedom they would also destroy the dignity of man," he said.

Colonel Griffin left his impress wherever he went. Named to the State athletic commission by Governor Stark, he immediately suspended all promoters', fighters', and officials' licenses. Police reports were obtained on all applicants for new licenses and the undesirable element was eliminated from the sport. The board headed by the colonel drew up a new set of regulations which is still used, with some modifications.

Appointed to the State eleemosynary board, he took action to have Catholic and Protestant chaplains assigned to the State mental hospitals for the first time. Moving to the State Board of Training Schools, he again had chaplains assigned and set up 1-hour courses in religion in the cottages in which the young people were confined.

"We called them courses in moral ethics," he remembered. "If we had called them religion courses the people would have screamed their heads off."

Colonel Griffin's interest in helping the physically handicapped obtain employment stemmed from his selective service experience. He found that veterans were facing difficulties in getting their jobs back after discharge.

"We formed a committee of 200 to anticipate the day when the lads would return and would have their jobs waiting for them. Our main task was to acquaint employers with their legal responsibility to their former employees. Then our thoughts turned

to those servicemen who had lost a leg or an arm. How could we get jobs for them?"

The committee drew up a program for the employment of physically handicapped veterans, and 3 years later when President Roosevelt established a national program it was patterned after the one in Missouri. Later the State program was broadened to include all handicapped persons.

Colonel Griffin went into every community in Missouri where the 31 State employment security offices are located and chose "the most influential man in the community as voluntary chairman," he said. "The roster of these volunteers could be a 'Who's Who of Missouri.'"

These chairmen formed local committees composed of a cross-section of each community and made up of chamber of commerce, veteran, employment, newspaper, radio, union, and religious representatives.

Among obstacles that were overcome was a Missouri law which held employers responsible for permanent disability damages when a person with one eye, arm, or leg lost another eye, arm, or leg in their service. This was changed so that the employer became responsible only for that portion of the injury sustained while in his employ. Other States adopted this legislation since that date.

Labor leaders were prevailed upon to issue cards to qualified handicapped persons, and personnel people were persuaded to relax their restrictions which were so stiff that men who couldn't find employment for physical reasons still were judged suitable for military service.

"The chamber of commerce was valuable in the latter respect," Colonel Griffin said. "We contacted the top brass, and orders were issued that accomplished what we were seeking."

So successful is the program that the St. Louis office alone has obtained jobs for some 25,000 handicapped persons, and an estimated 2 million now are working at full-time jobs and at the prevailing wage in the United States.

"There is no charity or sentimentality in the program," the chairman declared. "We are frank to say that if they can't do the job as well as the nonhandicapped, don't keep them."

That these people are able to do the jobs to which they are assigned is evidenced by manufacturers, unions, and employers who say that their employment has led to increased production, a decrease in absenteeism, and a decrease in accidents, he said.

An example of how handicapped people are fitted to the jobs which they are capable of performing was offered by a boiler firm which experienced difficulty with employees taking sick leave.

"Helpers who bucked rivets on the inside of the boilers got sick from the constant noises," the colonel said. Even earplugs didn't help. The firm talked to us and we sent them deaf people. They were perfect for the job. They knew it was time to quit when the vibrations stopped."

Colonel Griffin cited other instances in which deaf, dumb, blind, armless, and legless people demonstrated competency exceeding that of people without handicaps.

His committee's task is to create opportunities for employment of the handicapped, he pointed out. Actual employment is conducted through the State employment office.

Only the materialistic benefits that are realized from increased payrolls, payment of taxes, and other tangible results of the program are counted, the colonel said. "We don't add up the spiritual benefits, but we know they are there."

Why would a man stand up and be counted when he knew that he took his life in his hands by doing so?

Colonel Griffin, mellowed by the passage of the years but possessing still the undiminished zeal for the things in which he believes, answered in this fashion:

"I feel that the only salvation for the world is for our people to keep their minds and their hearts on a program for God and country."

Why would a man devote so many hours to civic tasks that are frequently thankless?

Colonel Griffin answered this qeustion in 1951 when he spoke to the Rotarians at De Soto and reminded them that a good citizen is one who realizes his responsibility to his government for the blessings he receives from it.

The West Indies Federation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. MULTER. Mr. Speaker, a new nation, the first to come into being in the Western Hemisphere since the creation of Panama in 1903, is taking shape in the Caribbean Sea. The birth of the new Federation of the West Indies on January 3, 1958, was a significant day in the political history of the New World. April 22 marks the second anniversary of the inauguration of the federation's legislature. This occasion is of great significance to the people of the British West Indies, for it means the translation into reality of their greatest ideal—federation. They have come to see in this federation their hopes for the future. It marks, also, the final stage in the progress of these people to full self-government.

Geographically, the new federation is the only one of its kind in the world today, for its 3 million people do not share one territory but live in 13 islands scattered over 550,000 miles of Caribbean water. The islands forming the federation vary considerably in size, population, and the degree of economic development. For instance, Jamaica, with an area of 4,411 square miles, has more than 1½ million people, and a large number of well-established industries; while Montserrat is an island of 32 square miles in extent, with a population of some 14,000 living almost entirely on agriculture. Despite many obstacles, the federation's members are determined to guide this new nation to secure independence, within the British Commonwealth.

Welded together under a federal form of government the 13 islands can become a prosperous, vigorous political unit. They have come to realize that it is clearly impossible in the modern world to achieve and maintain full selfgovernment on their own, and be strong enough to stand against present day economic pressures.

Here in the United States, we should look forward to a mutually happy relationship with the new federation. They already look toward the "big country to the north" for understanding and support. This sentiment was clearly expressed by the Honorable Sir Grantley Adams, Prime Minister of the West Indies, not too long ago when he stated that:

The fact that we share the same language and similar forms of government with both Canada and the United States will be of immense benefit to us in future years. The United States with its massive global commitments has been fully aware that quite nearby there is a new federation with many problems. Our discussions with the United States have led to an appreciation of our varying points of views, and we feel that if we should feel the need to urge our point of view more strongly it would not occasion any abeyance of the civilized norms that we have established.

Already the United States has extended economic assistance to the federation. A new cooperative service agreement was signed in June 1959, providing for ICA technical cooperation activities throughout the federation. U.S. technicians are now studying the problems of these islands. Moreover, last March a multimillion-dollar grant was given to the West Indies Federation under our foreign aid program. Thus, with the wholehearted efforts of the British West Indians and with some expert guidance and support the West Indies Federation should be able to cope more easily with its problems and develop into an enterprising new nation.

On this day of national commemoration I want to extend to the West Indies Government and its people my best wishes and congratulations.

Seventy-fifth Anniversary of Minneapolis Retail Grocers' Association

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. JUDD. Mr. Speaker, one of the most effective local trade organizations it has been my privilege to observe in action is the Minneapolis Retail Grocers' Association, which has just celebrated its 75th anniversary.

To inform grocers of new products, new food store equipment, new merchandising operations, and to develop and place into effect programs benefiting both merchant and consumer, were the major purposes which brought about its formation.

More than a hundred retail grocers and meat dealers met together shortly after 10 p.m. on April 4, 1885, in the old Produce Exchange Building on Hennepin Avenue, Minneapolis, to form their organization, elect officers, and set up committees for future meetings and activities.

Many of the merchants were tired out from the work done during that long Saturday; hours in those days extending to 10 o'clock at night.

First president of the association was Wesley Neill, an energetic and eloquent

merchant. Other officers were H. S. Mallin and A. G. Moshier, vice presidents, F. H. Aldrich, treasurer, and E. S. Winters and L. B. Hopper, respectively, secretary and assistant secretary.

In its long and distinguished history, the Minneapolis Retail Grocers' Association was a leader in the fight for the passage of the Pure Food and Drug Act; pioneer in State and city programs for the passage of legislation safeguarding the public health, and took an active part in the civic and business activities of the community.

The Minneapolis Retail Grocers' Association is one of the oldest food trade organizations in the United States; and it played a leading role in 1893 in the formation of the National Association of Retail Grocers, and in 1897 the Retail Grocers' and General Merchants' Association of Minnesota.

During three quarters of a century the association has pioneered in working for sound progress in retail merchandising methods that have enabled our merchants in Minneapolis to provide better food to consumers under more sanitary and efficient arrangement, and with better working conditions for workers in the industry. For many years its able, effective and public-spirited executive secretary has been Mr. Edward Straus. The people of my district join me in extending congratulations to the Minneapolis Retail Grocers' Association for the fine work it has accomplished, and very best wishes for the years ahead.

The Washington (D.C.) Evening Star Offers a Statesmanlike Solution to Controversy Over Administration Plan To Destroy the Historic Buildings Near the White House in the Nation's Capital

---

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, the Washington, D.C., Evening Star, in an editorial today offers a statesmanlike solution to the controversy over the administration proposal to destroy the historic buildings on Lafayette Square across the street from the White House in the Nation's Capital.

Three new buildings are involved in a construction tieup. They are a new home for the Civil Service Commission, a joint headquarters for the Federal Aviation Agency, and the National Aeronautics and Space Agency and a combined Court of Claims and Court of Customs and Patent Appeals building.

The Evening Star editorial says in part:

> There is still time to save at least two of these buildings from being postponed for another year, however. Both Public Works Committees previously have endorsed the Civil Service and Aviation-Space buildings, so that reapproval now could be accomplished quickly, without necessity of further hearings. The court building has controversial aspects that might call for longer consideration.

On the other hand, the Washington, D.C., Post displays, in an editorial today, considerable displeasure over the action of the Members of the House of Representatives in sustaining a point of order made by an able and conscientious Member and cutting nearly $65 million from the appropriations bill for the three buildings which are not yet approved as required by a recent act of the Congress.

The Washington, D.C., Post does the just cause of replacing the unsightly and hazardous temporary buildings remaining from World Wars I and II no good by casually lumping with them the Dolly Madison House and the other historic buildings on Lafayette Square, some of which have gracefully endured for more than 150 years.

The Nation's Capital actually is faced with a situation comparable in some respects to that surrounding Carnegie Hall, the world-famous music center established in the late 1800's by Andrew Carnegie. What is missing is a Mayor Robert Wagner, a Governor Nelson Rockefeller, and a citizens' committee headed by an Isaac Stern and numbering among its members Mrs. Franklin D. Roosevelt, Sol Hurok, Mrs. Marshall Field, Fritz Kreisler, Jascha Heifetz, Arthur Rubinstein, Dame Myra Hess, Marian Anderson, Leopold Stokowski, Leonard Bernstein, and Van Cliburn.

New York City has dozens of legitimate theaters, Washington, D.C., has only the National Theater and the Arena Stage now that the Shubert Theater has thoughtlessly been razed to make way for a parking lot.

The closer any historic building is to the White House the more imminent becomes its destruction. The Old State, War, Navy Building, the Dolly Madison House, the Benjamin Tayloe House, the Belasco Theater are all within a block of the White House and all are marked for early destruction.

In Philadelphia things are far different. There the Federal Government is spending during the years 1950–61 over $15 million to preserve historic buildings and has established Independnece National Historic Park to assist in these worthy preservation endeavors.

The administration is more interested in preserving the ancient treasures of the Nile Valley, than in preserving our own historic treasures right in the front yard of the White House. A new amendment to the Mutual Security Act will help save the Nile treasures—and they should be saved—which otherwise would soon be lost forever under the impounded waters of the Aswan Dam. The amendment will permit the U.S. Government to contribute up to one-third of the cost of the big international salvage program which is expected to cost as much as $90 million in all.

The great buildings fronting on Lafayette Square can serve present and future generations of Americans in many ways and, with proper administration, can advance our country's cultural development and education. Here is an opportunity, unique in our history, for the Congress to make good on its past legislative enactments to provide in the Nation's Capital a National Conservatory of Music, 1891, a School of Arts, 1860, and an American National Theater and Academy, 1935.

A letter in the Washington (D.C.) Evening Star of April 24, 1960, written by Dr. Frederick Fall, director, Washington Civil Opera Association, and the Washington Civic Orchestra declares:

> Progress should not exclude the saving of national treasures. Little official realization is being given to historic preservation by governmental Washington. A building is as important to save as a rare book or a manuscript of a symphony. The older cultures of Europe know this—as do millions of Americans. In fact everyone knows it but a few isolated bureaucrats in the Federal Government. * * * This is important for our Government officials to keep in mind at this time when the U.S.S.R. is spending millions to depict Americans as cultureless barbarians.

A telegram which has just reached my desk puts the importance of saving the historic buildings on Lafayette Square in these significant terms:

> We respectfully request early hearings before Public Works Committees on S. 3279, S. 3280, and S. 3403 introduced by Senators MORSE, KENNEDY, HUMPHREY, HENNINGS, GRUENING, and DOUGLAS to save historic Lafayette Square buildings including Lafayette Square Opera House, badly needed as a national home for the Performing Arts. Lafayette Square buildings among most historic in city. The old opera house is easily restorable, and, while the United States spends millions to restore opera houses abroad, it should take action to do at least a little for opera and other performing arts in our Nation's Capital.
>
> Carl Levin and O. Roy Chalk, Cochairmen, Citizens Committee for Opera; Robert Richman, President, Institute of Contemporary Arts; Virginia Hansford Russell, National Wildlife Federation and District of Columbia Federation of Women's Clubs; Hobert Spalding, President, Opera Society of Washington.

Senator KENNEDY (S. 3280), Senator HUMPHREY (S. 3403), and Senator MORSE (S. 3279), for himself and Senators HENNINGS, HUMPHREY, GRUENING, and DOUGLAS, have introduced bills to save the historic buildings on Lafayette Square. Related bills have been introduced by Senators MURRAY, MANSFIELD, and DOUGLAS, and by my able colleague from Delaware [Mr. MCDOWELL] and myself in this House.

Senator JOHN SHERMAN COOPER has written a fine letter, which I would like to include at this point in my remarks, saying it is a "shame to destroy Lafayette Square."

U.S. SENATE,
COMMITTEE ON PUBLIC WORKS,
April 25, 1960.

Hon. FRANK THOMPSON, Jr.,
Old House Office Building.

DEAR CONGRESSMAN: Thank you for your recent message, cosigned by Congressman MCDOWELL, urging that early hearings be held on S. 3280 and S. 3279, which would preserve the Dolly Madison House and other historical buildings on the east side of Lafayette Square.

I, too, am interested in this subject, and I think it is a shame to destroy Lafayette Square. As a member of the Senate Committee on Public Works, I have asked the chairman for an opportunity to speak on this legislation before action on it is taken by the committee.

I appreciate knowing of your interest in this subject.

With kind regards, I am,

Sincerely yours,

JOHN SHERMAN COOPER.

There are, to my mind, some very serious doubts as to whether the location of the Court of Claims and the Court of Customs and Patent Appeals, on Lafayette Square is really the bargain to the Federal Government which its proponents would have us believe.

In the first place, the Federal Government paid $400,000 for the Belasco Theater and approximately $1 million for the buildings which comprised the Cosmos Club which included the Dolly Madison House and the Benjamin Tayloe House, which would be destroyed.

Now, I have been advised by the distinguished chief judge of the U.S. Tax Court, J. E. Murdock, as recently as April 13, 1960, that the General Services Administration has been endeavoring for over 6 years to provide a courthouse at some appropriate place to house the Court of Claims, the Court of Customs and Patent Appeals and the Tax Court of the United States.

The Tax Court believes that such a building, housing all three courts, as proposed in several of the bills in the Senate which are before the Senate Public Works Committee, would be the most economical and efficient solution to the problem of housing these three courts.

The very interesting question now presents itself, if the administration proposal to provide a building for only two of the courts seeking office space is accepted by the Congress, will we shortly be faced with a request by the General Services next year to provide space for the U.S. Tax Court?

I include as part of my remarks the extremely important letter I have received from Chief Judge J. E. Murdock which should be carefully studied by the Public Works Committees of the Senate and House:

TAX COURT OF THE UNITED STATES,
Washington, D.C., April 13, 1960.

Hon. FRANK THOMPSON, Jr.,
House of Representatives,
House Office Building, Washington, D.C.

DEAR MR. THOMPSON: The Tax Court of the United States is much interested in H.R. 11691 introduced by you and would like to be included therein along with the Court of Claims and the Court of Customs and Patent Appeals.

The General Services Administration has been endeavoring for over 6 years to provide a courthouse at some appropriate place to house the Court of Claims, the Court of Customs and Patent Appeals, and the Tax Court of the United States. The Tax Court believes that such a building would be the most economical and efficient solution to the problem of housing these three courts. It has cooperated at all times with the General Services Administration in an effort to obtain such a building.

The Court of Customs and Patent Appeals has cooperated until recently on this project. The Court of Claims, however, has always resisted being included in such a building and has endeavored to obtain a building for itself alone.

S. 3279 and S. 3280 introduced in the Senate on March 24, 1960, would provide for the building of adequate facilities to house the Court of Claims, the Court of Customs and Patent Appeals, and the Tax Court of the United States. I have read that Senator CHAVEZ called off the hearings on S. 3279 and S. 3280 as the result of the agreement of the Court of Claims and the Court of Customs and Patent Appeals to be housed in a building to be constructed for them on the site of the Dolly Madison House on Lafayette Square. This would leave the Tax Court without housing facilities.

Both the Tax Court and the Court of Customs and Patent Appeals are presently housed in the Internal Revenue Building. The General Services Administration and the Internal Revenue Service want the two courts out of that building because the space is needed for the Internal Revenue Service. The Commissioner of Internal Revenue is a party respondent to every tax case coming before the Tax Court, and the independence of the court would be more apparent if it were not housed in the same building with one of its litigants, and particularly in a building named the Internal Revenue Building. The Tax Court has occupied a good part of the second floor of the Internal Revenue Building ever since it was built. It needs a little more space than it presently occupies, which is about 60,000 square feet in all.

I hope that you will see fit to amend your bill to include the Tax Court along with the other two courts, all of which need housing in this city. I would be pleased to discuss this subject with you.

Very truly yours,

J. E. MURDOCK,
Chief Judge.

The Reserve Program

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I include a column from the Fort Wayne News-Sentinel which contains much food for serious thought with respect to our Reserve program:

Every physically fit young man in the United States today, as too many persons do not know, must serve actively in the armed services from 6 months up to 2 years or longer, and then must serve in the Active Reserve 1 night a week and attend a 2 weeks' reservist camp for from 2 years up to 5 years.

This is not a voluntary deal, but a compulsory one, and unfortunately in the case of many young Americans is a great financial hardship on them, in addition to being a factor that works against them from the standpoint of civilian employment.

Most employers allow the reservists to have a leave of absence without pay to attend these compulsory summer Reserve camps, which means that many young married men with families have to try to support themselves and their families during this Reserve period on what amounts to a mere pittance. They become financial hardship cases in many instances. It is an inconvenience from the standpoint of an employer offering the standard 2-week vacation.

NO VACATION FOR YEARS

If the employee takes his 2-week vacation and the 2 weeks for Reserve camp, he is off the job for 4 weeks. So many employers require the employee to take his vacation and Reserve activity together. This means that for 2 to 5 years, a lot of young Americans, needing vacations and wanting them, won't get them.

So what happens? Many young men with compulsory military service hanging over their heads are disfavored as prospective employees before they are drafted, and after they have served out their hitches, they are still suffering a disadvantage as a prospective employee for 2 to 5 years.

In addition to all this being a heavy lien on the personal liberty of hundreds of thousands of young Americans each year during a time of peace, when most of our allies are not conscripting soldiers, it also represents a questionable expenditure of taxpayer money in billions of dollars.

The only reason why there hasn't been a nationwide objection to the hold which the military has over the country is that quirk in human nature, which leads so many exservicemen to say, "I was opposed to it, but I had to go through it, so why shouldn't everyone?" It's like a man falsely arrested and thrown into jail saying, "I was the victim of an injustice, so why shouldn't everyone be the victim of a similar injustice."

RESERVISTS CAN'T COMPLAIN

It's a great thing to be a civilian in an age when millions of Americans either because of active duty or Active Reserve status are in no position to complain about anything, lest they receive punishment in one form or another for complaining.

If you were to poll all the reservists up and down the country to try getting an answer to the question, "Is the good obtained worth the cost?" you wouldn't get an honest answer, because there is fear abroad. There is fear of recrimination from the military which indeed can be rough.

It is frightening to realize that we have in the country today a system of peacetime military conscription of the sort which prompted many of our ancestors to leave Europe and come here, but which Europe today doesn't have.

Armenian Martyrs Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. MULTER. Mr. Speaker, April 24 marks the beginning of the tragedy of the Armenian people in Turkey during the First World War.

Forty-five years ago, while most of the world was in the throes of that destructive war, the Turkish Government began its work of massacring the Armenians. This was so carefully and secretly organized that the existence of such a plan became clear only on April 24 when leading Armenians in all walks of public life were suddenly arrested and sent in small batches to places for execution. Once these leaders were put out of the way, the extermination of the entire Armenian population in the country was relatively easy. During the succeeding several months more than 600,-

000 Armenians were put to death, and almost as many more saved their lives by escaping to neighboring countries.

That act of the Ottoman Turks, in their attempt to uproot the Armenians, was an act of genocide that almost succeeded, and which has been universally condemned by the civilized peoples. Today we pay tribute to the memory of the victims of that crime, the Armenian martyrs of World War I.

Cleveland International Program Welcomes 83 Foreign Youth Leaders and Social Workers

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mrs. BOLTON. Mr. Speaker, again this year the city of Cleveland has opened its doors to 83 foreign guests for 4 months of study and work in the United States. These visitors are here under the auspices of the Cleveland International Program for Youth Leaders and Social Workers, a voluntary enterprise undertaken by the citizens of Cleveland to promote mutual understanding between the people of the United States and foreign countries.

Now in its fifth year, the program has gradually expanded from 25 West German youth in 1956 to 70 participants from 17 countries in 1959. This year young people from 18 countries will have opportunity to attend classes at Western Reserve University, live in private American homes, and serve as camp counselors or group workers in social agencies, community centers, and children's camps throughout the country.

Mr. Speaker, as this unusual program should be of wide interest, I include the Department of State press release on the program at this point in the RECORD:

CITY OF CLEVELAND TO WELCOME FOREIGN YOUTH LEADERS AND SOCIAL WORKERS UNDER ANNUAL EXCHANGE PROGRAM

The city of Cleveland will welcome 83 foreign guests on April 21 to begin the 5th consecutive year of the Cleveland International Program for Youth Leaders and Social Workers.

Representing 18 countries in Europe, Latin America, the Middle East, and south Asia, the visiting youth leaders and social workers will spend 4 months of study and work in the United States. The Cleveland international program is a voluntary citizens' enterprise devoted to the promotion of mutual understanding between the people of the United States and the peoples of other countries.

The citizens of Cleveland have made financial contributions to support their program and have volunteered free hospitality, room, and board for the participants during their stay in Cleveland. The Department of State is cooperating in the program by providing for the international travel for most of the participants as well as tuition for a special 6-week course at Western Reserve University.

The visitors will spend the first 6 weeks attending classes at the School of Applied Social Sciences at Western Reserve University. The lectures will be designed to give the visitors an introduction into the dynamics of American group work with special emphasis on the diversity of cultural factors.

While attending school in Cleveland, each visitor will live in three different private homes. The host families will represent a cross section of the different social, racial, and religious groups of the United States.

After their 6 weeks of study, the youth leaders and social workers will disperse to different cities of the United States to work as camp counselors or group workers in social agencies, community centers, and children's camps. These assignments are designed to provide the visitors with close personal and professional contacts with American college students, youth leaders, and social workers, and to give them working experiences in group leadership with American children and adults.

At the end of August, the group will be reunited in Washington, D.C., at the invitation of the State Department for 2 days of discussions of their experiences and visits to Federal agencies prior to their return home.

The Cleveland international program began in 1956 with 25 visiting youth leaders from West Germany. The program has expanded since then, and in 1959 included 70 participants from 17 countries. The 18 countries represented this year are: Argentina, 2; Austria, 3; Denmark, 4; Finland, 6; France, 8; Germany, 21; Greece, 3; India, 4; Israel, 2; Italy, 3; Lebanon, 2; Mexico, 2; Netherlands, 7; Norway, 3; Sweden, 8; Syria, 2; Turkey, 2; Yugoslavia, 1.

For the Elderly

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. MONAGAN. Mr. Speaker, in the field of health care for the elderly much heat has been generated and much confusion has been created in recent weeks.

I feel, however, that the welfare of our elder citizens is too important to allow this discussion to degenerate into an exchange of epithet and catchwords.

A recent editorial from the Waterbury Republican—Waterbury, Conn., April 17, 1960—has come as a welcome, calm, and measured contribution to the serious discussion of this vital problem and for the instruction of Members of the House I am happy to append the editorial herewith:

[From the Waterbury (Conn.) Republican, Apr. 17, 1960]

FOR THE ELDERLY

"We note straws in what seems on the way to becoming a prevailing wind."

There is a lot of current political advocacy of the Forand bill or something like it to ease the lot of the ailing elderly. This is belated, but we daresay appreciated, concern for an age group that could use a little more consideration than it has been getting.

Laments over inflation, for instance, in all the run it has had of recent years, have always mentioned in terms of condolence those trying to stretch a fixed income over today's high prices. That means, of course, primarily, the elderly. Steadily more rigid retirement rules at one end of their age bracket and medicine's wonders in prolonging life at the other have been adding to the number of pensioners and those living off investments. The extent to which, in modern society, we are at last beginning to think in terms of doing something besides talk about senior citizens' plight is because politicians have finally discovered that the neglected elders add up to a substantial segment of the population—all with votes.

So Congress is stirring in their behalf, and presidential hopefuls are falling over each other to show their concern. In the St. Louis Post-Dispatch, Bill Mauldin recently satirized this trend by showing in a cartoon several of the leading candidates lined up at respectful Boy Scout salute vying for the honor of escorting the aged female voter across the street, and this was indeed an apt commentary on this present solicitude.

The man or woman over 60, or 65, is particularly at the mercy of the price squeeze and, as recognized by the Forand bill, is also at the age when he stands more in need than his juniors of protection against impoverishment through catastrophic illness. He has deserved our concern for longer than the late awakening politicos have been willing to give it to him.

Specific proposals to do anything for the elderly conjures up unhappy memories of Townsendism and other ill-conceived grabs at the National Treasury, but in terms of simple justice instead of impractical sentiment their case is a persuasive one. On the basis of current political interest some recognition of their plight would seem to be rather plainly in the cards.

Marshall University

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. HECHLER. Mr. Speaker, one of the great training grounds for leadership in the State of West Virginia and the Nation is Marshall College at Huntington, W. Va. This outstanding mid-Ohio Valley educational center now fully deserves to enjoy a graduation of its own and become Marshall University in name as well as in fact.

Over a century and a quarter ago, Marshall College was established in 1837. Since 1930 the size of her student body enrollment has leaped from 1,059 to 4,035. More than 14,000 fully accredited degrees have been awarded to a growing army of alumni. And the college now offers more than 30 major fields of study within 3 separate colleges.

Marshall College's distinguished president, Dr. Stewart H. Smith, recently told the West Virginia State Board of Education that "Marshall College will be formally accorded university status is inevitable. The college has reached a degree of complexity and educational stature that clearly places it in the category with such institutions as Western Michigan, Bowling Green, Northern Illinois, and many other smaller universities. Unbiased observers of the progress of higher education in West Virginia will be quick to recognize that it is only through the formal designation of Marshall as a university that the institution can, through intelligent planning and orderly

development, occupy its necessarily vital role in the future of higher education in our State."

In 1957, a report made by Dr. Earl W. Anderson, chairman of the Department of Education at Ohio State University, and Dr. C. W. Kreger, provost of Miami University, recommended university status for Marshall College.

The Anderson-Kreger report stated:

It is almost certain that increases in enrollments and new demands on the part of students, prospective students, business, industry and government will necessitate changes in the administrative organization of the college. In the future there may be created such new divisions as a college of commerce, a college of applied science and greatly expanded graduate and undergraduate offerings both on and off the campus. Marshall College has now reached a degree of complexity and educational eminence that takes it out of the "college" class as an institution of higher education.

In view of this fact and in view of the impending growth which simply cannot be averted or ignored, it is strongly recommended that the West Virginia Board of Education give immediate and serious consideration to changing the institutional designation of Marshall from "college" status to "university" status by changing the name to Marshall State University.

The projected enrollment figures for Marshall show 5,500 by 1965, 7,600 by 1970 and 12,000 by 1980.

Three colleges already exist at Marshall: the Teachers College, College of Arts and Sciences, and Graduate School. Under a proposal by President Smith, a fourth college will be the College of Applied Science.

Mr. Speaker, I would like at this point to include an able editorial from the Parthenon, Marshall College student newspaper, dated December 15, 1959:

A PLEA FOR UNIVERSITY STATUS

More than 100 years of service to the State of West Virginia.

More than 14,000 fully accredited degrees awarded to a growing army of alumni.

More than 30 major fields of study within 3 colleges—Teachers' College, College of Arts and Sciences, and Graduate School.

In 20 years Marshall College's enrollment has more than doubled; a greater increase is expected in the next two decades.

These and other reasons have forced President Stewart H. Smith to ask recognition and designation of the college as "Marshall State University."

It is a multipurpose institution. It deserves the honor that the State of West Virginia can bestow upon it.

"Too small," some special-interest groups may cry out.

But the facts are otherwise. More than 100 universities in the United States show enrollments less than Marshall's.

But why can't it be satisfied with being a good college?

Out-of-State educators, who certainly can't be accused of prejudice, came to Marshall several years ago, studied a complex of educational programs, and concluded: "Marshall College has now reached a degree of complexity and educational eminence that clearly takes it out of the 'college' class. It is strongly recommended that the West Virginia Board of Education give immediate and serious consideration to changing the institutional designation from 'college' to 'university' status."

This occurred 2 years ago. The need has grown ever greater since then.

Dr. Smith summed it up well in his recommendation:

"Unbiased observers of the progress of higher education in West Virginia will be quick to recognize that it is only through the formal designation of Marshall as a university that the institution can, through intelligent planning and orderly development, occupy its necessarily vital role in the future of higher education in our State."

And, remember, changing the name of Marshall does not change the price tag on the cost of education. Even if Marshall is denied university status, reorganization is necessary and growth is a certainty.

The Parthenon believes that the 4,000 students and thousands of alumni in West Virginia join with President Smith in asking university status. We believe that many residents in the southern part of the State share our dream.

We beseech our State legislators, grant us this honor.

We feel, as do outstanding educators, that it is inevitable—that it is a necessity.

Mr. Speaker, I believe it would be in the best interest of education generally if university status could be granted to Marshall. I certainly shall do my best to work for this goal.

The United States Helps Communism in South Africa

EXTENSION OF REMARKS

OF

HON. JOHN J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1960

Mr. FLYNT. Mr. Speaker, recently persons in high places in the U.S. Government hav apparently felt the necessity to make statements relative to the conduct of the internal affairs of foreign governments. Much has been written and too much has been said by U.S. officials concerning those matters.

In my opinion affairs of other governments are internal matters in which the governments themselves are concerned and it is improper to say the least for officials of the U.S. Government to inject their views and their opinions. This is especially true in regard to strictly internal affairs of foreign governments.

There appeared in an April 19, 1960, issue of the Thomaston (Ga.) Free Press an editorial entitled "The United States Helps Communism in South Africa." This editorial succinctly sets forth information and facts which explain some of the difficulties being experienced by the Government of the Union of South Africa, and gives reasons for certain action which has been taken by the South African Government in its efforts to maintain order and prevent the agitation, turmoil, and strife which have been so prevalent. Under leave to extend my remarks, I include the text of that editorial:

[From the Thomaston (Ga.) Free Press, Apr. 19, 1960]

THE UNITED STATES HELPS COMMUNISM IN SOUTH AFRICA

The racial strife in South Africa has been so coupled with the attitude taken by national news media in this country toward racial strife here that a distorted view has been given the public on the South African's trouble.

Last week the South African Government made an official statement about the passes which stirred up the trouble in South Africa and also gave facts to reveal clearly that the Communists are helping stir up that country's trouble.

What disturbs us is the fact that the radio and TV commentators, anxious to get the following of Negroes in this country by sympathizing with Negroes in South Africa, are actually aiding and abetting the cause of communism there.

See what the officials of South Africa have to say, as quoted in U.S. News & World Report, and draw your own conclusion:

Native tribesmen and white agitators, some of them Communists, have been stirring up discontent over certain legal provisions—among them the reference-book system (passes)—for some time.

Theoretical humanitarians at home and abroad, and also Communist media seeking sensation, overemphasized the incidents in order to create the impression that there was general discontent among nonwhites; these people became instruments in the spread of communism.

Two tribal organizations in South Africa fighting for favor have been using the demonstrations to further their own cause.

The result of this agitation was that the tribesmen got out of hand and attacked the police. The basic purpose of both tribal organizations is to achieve the fall of the Government and the recent demonstrations must be regarded as single steps in that direction.

The agitators threatened the tribesmen with murder, assault, and arson if their reference (pass) books were not destroyed or left at home. There was violence against nonstriking Negroes by the agitators.

To maintain law and order, the police were obligated to take action. Such action was necessary to reassure orderly and peace-loving tribesmen who were in the majority and who could not otherwise be protected from intimidation.

The situation, according to South Africa's Government, is under control now.

But in the case of the pass books, here's the truth of the matter: The pass book system was instituted in its present form in 1950. Apart from personal details—for example, name, date of birth, photograph, etc.—the pass book contains information concerning influx control, employment, and tax payment.

The intention behind the pass books was to simplify matters for the Negroes as greatly as possible, to do away with the need for carrying on his person a number of documents which very often become mutilated or stolen as he moves from place to place, as often happens. Now all relevant details are conveniently noted in the handy and durable pass book. White citizens of Africa may also be required to produce documents such as birth certificates, tax receipts, etc., but since they are more settled they are better able to hold such documents in safekeeping.

Pass books for the Negroes contains indentification useful in identifying a pensioner or the holder of a post office savings-bank account. It also is a permit to reside in a specific urban area and this is intended to protect urban Negroes and their children against uncontrolled influx of workers from rural and tribal territories. It also serves as a service contract and insures just and equitable treatment for Negro workers.

The much-maligned pass book system, in fact, serves the interest of the Negroes themselves.

These facts help to point up our interference, though unofficially, in South Africa's current trouble while we have not, in the past, had the true facts of the matter.

Extending Social Security

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. MACHROWICZ. Mr. Speaker, much is being said and written at this time on the subject of providing health insurance for the aged. There are many opinions, both pro and con, as to the necessity of this Congress to provide the means to establish health benefits for the aged, through the social security system.

In this respect, I would like to call to the attention of this Congress a statement which appeared in the New York Times on Friday, April 22, 1960, with respect to the voluntary system of health insurance for the aged.

The statement to which I refer is as follows:

[From the New York Times, Apr. 22, 1960]

EXTENDING SOCIAL SECURITY—PROVISION OF HEALTH BENEFITS FOR AGED IS FAVORED

To the EDITOR OF THE NEW YORK TIMES:

Exactly 25 years ago, on April 20, 1935, the House of Representatives passed the bill which later that year became the Social Security Act. When that law's constitutionality was upheld by the Supreme Court of the United States, Justice Cardozo declared:

"The hope behind this statute is to save men and women from the rigors of the poorhouse as well as from the haunting fear that such a lot awaits them when journey's end is near."

The hope so eloquently expressed by Cardozo has been largely fulfilled. Social security payments are not munificent; rising prices have outrun increased benefits. There are still unmet needs, like medical care. But basically the social security system has brought both security and dignity to our retired workers in their twilight years. Can there be any question that America is a better America because of the wisdom and the foresight of the Congress 25 years ago?

It seems almost incredible to reread some of the arguments raised against the proposed law in 1935. An Ohio businessman told the Senate Finance Committee that the bill "will permanently weaken the fiber of the American people" and "the downfall of Rome started with corn laws, and legislation of that type."

OPPOSITION TO EXPANSION

Even more incredible, however, is the fact that similar arguments are being used today to defeat a natural, necessary extension of the social security program to provide health benefits for our older citizens. Again it is attacked as socialization, as vast governmental bureaucracy, as compulsion, as regimentation.

To meet these charges a number of Republican Senators, including those from New York, have introduced a so-called voluntary system of health insurance for the aged. Laudable though their objectives may be, their plan cannot do what social insurance can do. It would require Federal appropriations, from general revenues, of half a billion dollars, even greater appropriations from the States and substantial payments directly from beneficiaries except for those meeting stringent income tests. Use of private insurance carriers would mean draining off large amounts from potential benefits.

On this anniversary of the social security system it is appropriate to point out that only social insurance can really effectively meet such needs as health care for the elderly. Only through lifetime contributions by all the people can the risk be properly distributed.

Experience with retirement benefits under social security should allay all fears that a compulsory system means the end of our economic system, of the insurance industry, or of our democratic way of life. Social insurance has strengthened all of these, rather than the reverse.

HYMAN H. BOOKBINDER,
Legislative Representative, American Federation of Labor and Congress of Industrial Organizations.

Bills To Amend the Federal Trade Commission Act

EXTENSION OF REMARKS
OF
HON. TOBY MORRIS
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. MORRIS, of Oklahoma. Mr. Speaker, today I have introduced in the House of Representatives of the United States bills identical to H.R. 8841 by Congressman STEED, of Oklahoma, and H.R. 10235 by Congressman PATMAN, of Texas. These bills would amend the Federal Trade Commission Act.

The objectives of these bills are to provide assistance to small business in its struggle to overcome unfair trade practices in industry and commerce.

The hearings, which have been conducted by the House Small Business Committee's Special Subcommittee on Small Business Problems in the Dairy Industry, have made it clear that the practice of selling dairy products at unreasonably low prices and frequently as "loss leaders" far below the level of cost, is widespread. Only a few days ago, it was reported that a large concern was selling milk in Florida at 1 cent per half gallon. Other instances have been brought to the attention of Members of Congress where milk has been retailing at less than one-quarter of the cost of producing the product. Small business concerns are much alarmed about this practice and its effect toward eliminating them and creating monopolies in this great industry. Many States have enacted legislation to combat this practice of selling at prices below cost. Courts have upheld the State laws, but due to the fact that the law of any State does not reach beyond the State line, it can have no application to transactions in interstate commerce. Therefore, the need for Federal legislation on the subject to fill this void is apparent. It is believed that H.R. 10235 will fill this need, and, as I have stated, today I have introduced a companion bill identical to H.R. 10235.

Also, it is apparent that there is need for legislation which would provide small businessmen with immediate, effective relief from these destructive practices. H.R. 10235 will strengthen the substantive law to provide relief, but it leaves untouched the procedural law. Small businessmen need immediate, injunctive relief from these destructive practices. Therefore, one of the bills I have introduced today is identical with the provisions of H.R. 8841. It would empower the Federal Trade Commission to enter temporary cease and desist orders while the issues under its complaint are being litigated. In this way, many small business concerns could be saved during the prolonged litigation of cases which involve sales at prices below cost.

I feel deeply that this legislation, or at least something along this line, is badly needed.

Alfred Kohlberg: A Great American

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1960

Mr. SCHERER. Mr. Speaker, Alfred Kohlberg was a friend of mine. He was an able and wise counselor to those of us who have been engaged as members of the Un-American Activities Committee in investigating the machinations of the Communist apparatus in the United States so that we might recommend legislation to the Congress to deal with the threats to our internal security.

Alfred Kohlberg died the other day. I would like to eulogize this great American. However, Forrest Davis, the extremely capable columnist of the Cincinnati Enquirer, and George Sokolsky, who knew Alfred Kohlberg much longer and better than I, have in recent columns written about him. Under unanimous consent I insert in the RECORD what Forrest Davis and George Sokolsky have said about Alfred Kohlberg on his passing:

A MERCHANT WHO BEGAN A CRUSADE

(By George E. Sokolsky)

Alfred Kohlberg was an American merchant who traded with Nationalist China. His specialty was textiles. He joined the Institute of Pacific Relations and found therein something which contradicted his experience.
